Jane P. Mallor has been a member of the Business Law faculty at Kelley School of Business, Indiana University, since 1976. She has a B.A. from Indiana University and a J.D. from Indiana University School of Law. She has been admitted to the Indiana Bar, the Bar of the Southern District of Indiana, and the Bar of the U.S. Supreme Court. She is a member of the Academy of Legal Studies in Business.

Professor Mallor has taught a range of courses, including an introductory legal environment course and a graduate-level legal concepts course, real estate law, university pedagogy courses for business doctoral students, and an online law and ethics graduate course. She is a member of Indiana University's Faculty Colloquium for Excellence in Teaching and was a Lilly Postdoctoral Teaching Fellow. She has won a number of teaching awards, including the Amoco Foundation Award for Distinguished Teaching, the Dow Technology Teaching Award, and the Innovative Teaching Award. Her research has focused primarily on punitive damages, product liability, and employment rights. Her work has been published in law reviews such as *Hastings Law Journal*, *North Carolina Law Review*, *American Business Law Journal*, and *Notre Dame Lawyer*.

A. James Barnes, J.D. Professor of Public and Environmental Affairs and Adjunct Professor of Law at Indiana University, Bloomington. He previously served as Dean of the School of Public and Environmental Affairs, and has taught business law at Indiana University and Georgetown University. His teaching interests include commercial law, environmental law, alternative dispute resolution, law and public policy, and ethics and the public official. He is the co-author of several leading books on business law.

From 1985 to 1988 Professor Barnes served as the deputy administrator of the U.S. Environmental Protection Agency. From 1983 to 1985 he was the EPA general counsel and in the early 1970s served as chief of staff to the first administrator of EPA. Professor Barnes also served as a trial attorney in the U.S. Department of Justice and as general counsel of the U.S. Department of Agriculture. For six years, from 1975 to 1981, he had a commercial and environmental law practice with the firm of Beveridge and Diamond in Washington, D.C.

Professor Barnes is a Fellow of the National Academy of Public Administration, the Chair of EPA's Environmental Finance Advisory Board, and a member of the U.S. Department of Energy's Environmental Management Advisory Board. From 1992 to 1998 he was a member of the Board of Directors of the Long Island Lighting Company (LILCO). He received his B.A. from Michigan State University and a Juris Doctor degree, *cum laude*, from Harvard Law School.

Thomas Bowers Thomas Bowers is the Argosy Gaming Faculty Fellow in the Kelley School of Business at Indiana University, Bloomington. Focusing primarily on the law of business organizations, securities regulation, professional responsibilities, and ethical and rational decision making, Dr. Bowers has taught three courses in the Kelley School's top-ranked Accounting Graduate Program. In 2005, he received the Kelley School's Innovative Teaching Award for his work with the GAP. In addition, his students and colleagues have honored him with 23 outstanding teaching awards. He joined the faculty at Indiana University in 1977 after obtaining a B.S. in finance *summa cum laude* from The Ohio State University and a J.D. from New York University. He is also Director of the Kelley MBA Sports & Entertainment Academy.

Arlen W. Langvardt Professor of Business Law, joined the faculty of Indiana University's Kelley School of Business in 1985. Professor Langvardt earned a B.A. (*summa cum laude*) from Hastings College and a J.D. (with distinction) from the University of Nebraska. From 1981 to 1985, he was a trial attorney with firms in Nebraska. He tried cases in a variety of legal areas, including tort, contract, constitutional, and miscellaneous commercial cases.

Professor Langvardt has received several teaching awards at the graduate and undergraduate levels. His graduate teaching assignments have included Legal Concepts and Trends Affecting Business, Managing Legal and Ethical Risk, Legal Issues in Marketing Management, and Legal Issues in the Arts. His undergraduate teaching assignments have included Legal Environment of Business, Legal Aspects of Marketing, Law and the Arts, and Personal Law. From 2000 through 2009, Professor served as chair of the Kelley School's Department of Business Law.

Professor Langvardt's wide-ranging research interests are reflected in his articles on such topics as intellectual property, commercial speech, medical malpractice, and other healthcare-related subjects. He has published numerous articles in journals such as the *Minnesota Law Review*, the *American Business Law Journal*, the *Journal of Marketing*, the *Trademark Reporter*, the *Journal of Law, Technology & Policy*, and the *University of Pennsylvania Journal of Business Law*. Professor Langvardt has won several research awards from professional associations, including the Holmes/Cardozo and Hoerber Awards from the Academy of Legal Studies in Business and the Ladas Memorial Award from the Brand Names Education Foundation.

This is the Fourteenth UCC Edition (and the twentieth overall edition) of a business law text that first appeared in 1935. Throughout its over 70 years of existence, this book has been a leader and an innovator in the fields of business law and the legal environment of business. One reason for the book's success is its clear and comprehensive treatment of the standard topics that form the traditional business law curriculum. Another reason is its responsiveness to changes in these traditional subjects and to new views about that curriculum. In 1976, this textbook was the first to inject regulatory materials into a business law textbook, defining the "legal environment" approach to business law. Over the years, this textbook has also pioneered by introducing materials on business ethics, corporate social responsibility, global legal issues, and e-commerce law. The Fourteenth Edition continues to emphasize change by integrating these four areas into its pedagogy.

Continuing Strengths

The Fourteenth UCC Edition continues the basic features that have made its predecessors successful. They include:

- **Comprehensive Coverage.** We believe that the text continues to excel both in the number of topics it addresses and the depth of coverage within each topic. This is true both of the basic business law subjects that form the core of the book and also of the regulatory and other subjects that are said to constitute the "legal environment" curriculum.
- **Style and Presentation.** This text is written in a style that is direct, lucid, and organized, yet also relatively relaxed and conversational. For this reason, we often have been able to cover certain topics by assigning them as reading without lecturing on them. As always, key points and terms are emphasized; examples, charts, figures, and concept summaries are used liberally; and elements of a claim and lists of defenses are stated in numbered paragraphs.
- **Case Selection.** We try very hard to find cases that clearly illustrate important points made in the text, that should interest students, and that are fun to teach. Except when older decisions are landmarks or continue to best illustrate particular concepts, we also try to select recent cases. Our collective in-class teaching experience with recent editions has helped us determine which of those cases best meet these criteria.
- **AACSB Curricular Standards.** The AACSB's curriculum standards say that both undergraduate and MBA curricula should include ethical and global issues; should address the influence of political, social, legal and regulatory, environmental, and technological issues on business; and should also address the impact of demographic diversity on organizations. In addition to its obvious emphasis on legal and regulatory issues, the book contains considerable material on business ethics, the legal environment for

international business, and environmental law, as well as Ethics in Action boxes. By putting legal changes in their social, political, and economic context, several text chapters enhance students' understanding of how political and social changes influence business and the law. For example, Chapter 4 discusses the ethical issues of recent years, and Chapter 43 addresses the credit crunch of 2008–2009 and options backdating. Chapter 51's discussion of employment discrimination law certainly speaks to the subject of workplace diversity. Finally, the Fourteenth UCC Edition examines many specific legal issues involving e-commerce and the Internet.

Features The Fourteenth Edition continues 10 features introduced by previous editions:

Opening Vignettes precede the chapter discussion in order to give students a context for the law they are about to study. Many opening vignettes raise issues that come from the corporate social responsibility crisis that students have read about the last few years. Others place students in the position of executives and entrepreneurs making management decisions and creating new business.

Ethics in Action boxes are interspersed where ethical issues arise, asking students to consider the ethics of actions and laws. The ethics boxes often ask students to apply their learning from Chapter 4, the chapter on ethical and rational decision making. The boxes also feature the most important corporate social responsibility legislation of the last 20 years, the Sarbanes–Oxley Act of 2002.

Cyberlaw in Action boxes discuss e-commerce and Internet law at the relevant points of the text.

The Global Business Environment boxes address the legal and business risks that arise in international business transactions, including being subject to the laws of other countries. By the integration of the global business environment boxes in each chapter, students are taught that global issues are an integral part of business decision making.

Log On boxes direct students to Internet sites where they can find additional legal and business materials that will aid their understanding of the law.

Online Research Boxes close each chapter by challenging students to use their Internet research skills to expand their understanding of the chapter.

Concept Reviews appear throughout the chapters. These Concept Reviews visually represent important concepts presented in the text to help summarize key ideas at a glance and simplify students' conceptualization of complicated issues.

Cases include the judicial opinions accompanying court decisions. These help to provide concrete examples of the rules stated in the text, and to provide a real-life application of the legal rule.

Problem Cases are included at the end of each chapter to provide review questions for students.

Key Terms are bolded throughout the text and defined in the Glossary at the end of the text for better comprehension of important terminology.

Important Changes in This Edition

In this edition, there are many new cases, the text has been thoroughly updated, and a good number of problem cases have been replaced with new ones. The cases continue to include both hypothetical cases as well as real-life cases so that we can target particular issues that deserve emphasis. The Fourteenth UCC Edition continues the development of components that were added to the text's previous edition. Examples of these components are as follows:

- Chapter 2 includes a discussion of the new federal rules governing discovery of electronically stored information.
- The **Sarbanes–Oxley Act of 2002** is covered thoroughly. This important legislation that intends to rein in corporate fraud is featured prominently in Chapters 4, 43, 45, and 46.
- Chapter 4, “Business Ethics, Corporate Social Responsibility, Corporate Governance, and Critical Thinking,” contains a logical exposition of ethical thinking and sections with guidelines for making ethical decisions and resisting requests to act unethically.
- Chapter 8 includes, as new text cases, recent Supreme Court decisions on patent law. Chapter 8 also includes new material on the Trademark Dilution Revision Act of 2006.
- The contracts chapters integrate e-commerce issues at various points. Examples include treatments of the proposed Uniform Computer Information Transactions Act in Chapter 9, shrinkwrap and clickwrap contracts in Chapter 10, and digital or electronic signatures in Chapter 16.
- Chapter 20 includes a new section on the preemption and regulatory compliance defenses in product liability cases, and features the Supreme Court's recent *Riegel* decision in that section.
- Chapters 35 and 36 cover the new *Restatement (Third) of Agency*.
- Chapters 37 to 44 include business planning materials that help persons creating partnerships, LLPs, corporations, and other business forms. New materials give practical solutions that help business planners determine the compensation of partners in an LLP, ensure a return on investment for shareholders, anticipate management problems in partnerships and corporations, and provide for the repurchase of owners' interests in partnerships and corporations.
- Chapter 40 gives greater emphasis to the law affecting limited liability companies and covers the Revised Uniform Limited Liability Company Act.
- Recent Supreme Court cases, such as *Massachusetts v. EPA* (Chapter 52), have been integrated in this edition.
- Materials in Chapter 43 on complying with management duties give practical advice to boards of directors as well as consultants and investment bankers assisting corporate management. These materials help managers make prudent business decisions.
- Legal and ethical issues arising from the credit crunch of 2008–2009 and options backdating are addressed in Chapter 43. Included is a criminal options backdating case, *U.S. v. Jensen*.
- The latest case by Disney shareholders against former CEO Michael Eisner also is included in Chapter 43.
- Chapter 44 includes a new case, *Brodie v. Jordan*, in which the Supreme Court of Connecticut fashioned rights for a minority shareholder.
- The recent U.S. Supreme Court case, *Stoneridge Investment Partners, LLC v. Scientific–Atlanta, Inc.*, was added in Chapter 45. The case is the latest on the issue of aiding and abetting under Securities Exchange Act Rule 10b–5.
- The professional liability chapter, Chapter 46, was updated with three new text cases on issues ranging from liability for negligent misrepresentation to the definition of scienter under Rule 10b–5.
- Chapter 46 covers the liability of professionals in general, with emphasis on investment bankers, securities brokers, and securities analysts. The chapter is relevant not only to students studying accounting and auditing, but also to finance majors and MBA students who will work in the consulting and securities industries.
- Chapter 45 includes recent SEC changes that expand the communications permitted during registered offerings of securities.
- Chapter 48 contains new text material discussing recent amendments to the Consumer Product Safety Act.
- Chapter 49 includes, as a new text case, the recent *Leegin* decision, in which the Supreme Court held that vertical minimum price-fixing would be treated under the rule of reason rather than as a per se violation of the Sherman Act.

Acknowledgments

We would like to thank the many reviewers who have contributed their ideas and time to the development of this text. Our sincere appreciation to the following:

A Guided Tour

A New Kind of Business Law

The 14th Edition of **Business Law** continues to focus on global, ethical, and e-commerce issues affecting legal aspects of business. The new edition contains a number of new features as well as an exciting new supplements package. Please take a few moments to page through some of the highlights of this new edition.

chapter 2

THE RESOLUTION OF PRIVATE DISPUTES

Victoria Wilson, a resident of Illinois, wishes to bring an invasion of privacy lawsuit against XYZ Co. because XYZ used a photograph of her, without her consent, in an advertisement for one of the company's products. Wilson will seek money damages of \$150,000 from XYZ, whose principal offices are located in New Jersey. A New Jersey newspaper was the only print media outlet in which the advertisement was published. However, XYZ also placed the advertisement on the firm's Web site. This Web site may be viewed by anyone with Internet access, regardless of the viewer's geographic location.

Consider the following questions regarding Wilson's case as you read Chapter 2:

- Where, in a geographic sense, may Wilson properly file and pursue her lawsuit against XYZ?
- Must Wilson pursue her case in a state court, or does she have the option of litigating in federal court?
- Assuming that Wilson files her case in a state court, what strategic option may XYZ exercise if it acts promptly?
- Regardless of the court in which the case is litigated, what procedural steps will occur as the lawsuit proceeds from beginning to end?
- If Wilson requests copies of certain documents in XYZ's files, does XYZ have a legal obligation to provide the copies? What if Wilson requests copies of e-mails written by XYZ employees? Is XYZ legally required to provide the copies? What ethical obligations attend Wilson's making, and XYZ's responses to, such requests?

OPENING VIGNETTES

Each chapter begins with an opening vignette that presents students with a mix of real-life and hypothetical situations and discussion questions. These stories provide a motivational way to open the chapter and get students interested in the chapter content.

CHAPTER 43 UPDATED IN RESPONSE TO THE 2008 FINANCIAL CRISIS

Legal and ethical issues arising from the credit crunch of 2008–2009 and options backdating are addressed in Chapter 43. Included is a criminal options backdating case, *U.S. v. Jensen*.

United States v. Jensen

537 F. Supp. 2d 1069 (N.D. Cal. 2008)

On March 18, 2006, The Wall Street Journal published an article analyzing how some companies were granting stock options to their executives. According to the article, companies issued a suspiciously high number of options at times when the stock price hit a periodic low, followed by a sharp price increase. The odds of these well-timed grants occurring by chance alone were astronomical—less likely than winning the lottery. Eventually it was determined that such buy-low, sell-high returns simply could not be the product of chance. In testimony before Congress, Professor Erik Lie identified three potential strategies to account for these well-timed stock option grants. The first strategy included techniques called “spring-loading” and “bullet-dodging.” The practice of “spring-loading” involved timing a stock option grant to precede an announcement of good news. The practice of “bullet-dodging” involved timing a stock option grant to follow an announcement of bad news. A second strategy included manipulating the flow of information—timing corporate announcements to match known future grant dates. A third strategy, backdating, involved cherry-picking past, and relatively low, stock prices to be the official grant date. Backdating occurs when the option's grant date is altered to an earlier date with a lower, more favorable price to the recipient.

A company grants stock options to its officers, directors, and employees at a certain “exercise price,” giving the recipient the right to buy shares of the stock at that price, once the option vests. If the stock price rises after the date of the grant, the options have value. If the stock price falls after the date of the grant, the options have no value. Options with an exercise price equal to the stock's market price are called “at-the-money” options. Options with an exercise price lower than the stock's market price are called “in-the-money” options. By granting in-the-money, backdated options, a company effectively grants an employee an instant opportunity for profit.

Granting backdated options has important accounting consequences for the issuing company. For financial reporting purposes, companies granting in-the-money options have to recognize compensation expenses equal to the difference between the market price and the exercise price. APB 25 is the accounting rule that governed stock-based compensation through June 2005; it required companies to recognize this compensation expense for backdated options. For options granted at-the-money, a company did not have to recognize any compensation expenses under APB 25.

Backdating stock options by itself is not illegal. Purposefully backdated options that are properly accounted for and disclosed are legal. On the other hand, the backdating of options that is not disclosed or does not result in the recognition of a compensation expense is fraud.

A motive for fraudulent backdating may be to avoid recognizing a compensation expense, or a hit to the earnings, all the while awarding in-the-money options. To accomplish the fraud, those responsible assign an earlier date to the stock

CYBERLAW IN ACTION BOXES

In keeping with today's technological world, these boxes describe and discuss actual instances of how e-commerce and the Internet are affecting business law today.

CYBERLAW IN ACTION

Does the federal Computer Fraud and Abuse Act provide a basis for a lawsuit when the defendant allegedly misappropriated trade secret information from a database owned by the plaintiff? In *Garelli Wong & Associates, Inc. v. Nichols*, 2008 U.S. Dist. LEXIS 3288 (N.D. Ill. 2008), the court gave "no" as the answer.

Garelli Wong, a provider of accounting and financial personnel services, created a database containing confidential client tracking information. The firm took steps to maintain the confidentiality of the information and thereby obtain the competitive advantage that the information provided. The case arose when William Nichols, a former employee of Garelli Wong and a corporation that had later acquired the firm, allegedly used some of the confidential information in the database after he had taken a job with a competing firm. Nichols's supposed use of the information allegedly breached a contract he had entered into with Garelli Wong when he was employed there. Garelli Wong and the successor corporation sued Nichols in federal court, contending that his actions violated the Consumer

- (ii) intentionally accesses a protected computer without authorization, and as a result of such conduct, recklessly causes damage; or
- (iii) intentionally accesses a protected computer without authorization, and as a result of such conduct, causes damage . . . and
- (5)(B)(i) by conduct described in clause (i), (ii), or (iii) of subparagraph (A), caused . . . loss to 1 or more persons during any 1-year period . . . aggregating at least \$5,000 in value.

The court noted that in view of the above language, a plaintiff must properly plead both *damage* and *loss* in order to allege a civil CFAA violation. A definition section of the CFAA defines *damage* as "impairment to the integrity or availability of data, a program, a system, or information." Applying these definitions, the court agreed with Nichols that even if he used information in the database, he did not impair the integrity or availability of the information or the database. Accordingly, the court held that the CFAA does not extend to cases in which trade secret information is merely used—even if in violation of a contract or state trade secret law—because such conduct by itself does not constitute *damage* as that term is

Ethics in Action

Enron employee Sherron Watkins received considerable praise from the public, governmental officials, and media commentators when she went public in 2002 with her concerns about certain accounting and other business practices of her employer. These alleged practices caused Enron and high level executives of the firm to undergo considerable legal scrutiny in the civil and criminal arenas.

In deciding to become a whistle-blower, Sherron Watkins no doubt was motivated by what she regarded as a moral obligation. The decision she made was more highly publicized than most decisions of that nature, but was otherwise of a type that many employees have faced and will continue to face. You may be among those persons at some point in your career. Various questions, including the ones set forth below, may therefore be worth pondering. As you do so, you may find it

useful to consider the perspectives afforded by the ethical theories discussed in Chapter 4.

- When an employee learns of apparently unlawful behavior on the part of his or her employer, does the employee have an ethical duty to blow the whistle on the employer?
- Do any ethical duties or obligations of the employee come into conflict in such a situation? If so, what are they, and how does the employee balance them?
- What practical consequences may one face if he or she becomes a whistle-blower? What role, if any, should those potential consequences play in the ethical analysis?
- What other consequences are likely to occur if the whistle is blown? What is likely to happen if the whistle isn't blown? Should these likely consequences affect the ethical analysis? If so, how?

ETHICS IN ACTION BOXES

These boxes appear throughout the chapters and offer critical thinking questions and situations that relate to ethical/public policy concerns.

THE GLOBAL BUSINESS ENVIRONMENT BOXES

Since global issues affect people in many different aspects of business, this material now appears throughout the text instead of in a separate chapter on international issues. This feature brings to life global issues that are affecting business law.

The Global Business Environment

At varying times since the 1977 enactment of the Foreign Corrupt Practices Act, the United States has advocated the development of international agreements designed to combat bribery and similar forms of corruption on at least a regional, if not a global, scale. These efforts and those of other nations sharing similar views bore fruit during the past decade.

In 1996, the Organization of American States (OAS) adopted the Inter-American Convention Against Corruption (IACAC). When it ratified the IACAC in September 2000, the United States joined 20 other subscribing OAS nations. The IACAC prohibits the offering or giving of a bribe to a government official in order to influence the official's actions, the solicitation or receipt of such a bribe, and certain other forms of corruption on the part of government officials. It requires subscribing nations to make changes in their domestic laws, in order to make those laws consistent with the IACAC. The United States has taken the position that given the content of the Foreign Corrupt Practices Act and other U.S. statutes prohibiting the offering and solicitation of bribes as well as various other forms of corruption, its statutes already are consistent with the IACAC.

The Organization for Economic Cooperation and Development (OECD) is made up of 29 nations that are leading exporters. In 1997, the OECD adopted the Convention on

Combating Bribery of Officials in International Business Transactions. The OECD Convention, subscribed to by the United States, 28 other OECD member nations, and five non-member nations, prohibits the offering or giving of a bribe to a government official in order to obtain a business advantage from the official's action or inaction. It calls for subscribing nations to have domestic laws that contain such a prohibition. Unlike the IACAC, however, the OECD neither prohibits the government official's solicitation or receipt of a bribe nor contains provisions dealing with the other forms of official corruption contemplated by the IACAC.

In 1999, the Council of Europe adopted the Criminal Law Convention on Corruption, which calls upon European Union (EU) member nations to develop domestic laws prohibiting the same sorts of behaviors prohibited by the IACAC. Many European Union members have signed on to this convention, as have three nonmembers of the EU. One of those is the United States.

Because the IACAC, the OECD Convention, and the Criminal Law Convention are relatively recent developments, it is too early to determine whether they have been effective international instruments for combating bribery and similar forms of corruption. Much will depend upon whether the domestic laws contemplated by these conventions are enforced with consistency and regularity.

For a great deal of information about the U.S. Supreme Court and access to the Court's opinions in recent cases, see the Court's Web site at <http://www.supremecourtus.gov>.

LOG ON BOXES

These appear throughout the chapters and direct students, where appropriate, to relevant Web sites that will give them more information about each featured topic. Many of these are key legal sites that may be used repeatedly by business law students and business professionals alike.

CONCEPT REVIEW

| The First Amendment | | |
|--|-------------------------------------|--|
| Type of Speech | Level of First Amendment Protection | Consequences When Government Regulates Content of Speech |
| Noncommercial | Full | Government action is constitutional only if action is necessary to fulfillment of compelling government purpose. Otherwise, government action violates First Amendment. |
| Commercial <i>(nonmisleading and about lawful activity)</i> | Intermediate | Government action is constitutional if government has substantial underlying interest, action directly advances that interest, and action is no more extensive than necessary to fulfillment of that interest (i.e., action is narrowly tailored). |
| Commercial <i>(misleading or about unlawful activity)</i> | None | Government action is constitutional. |

CONCEPT REVIEWS

These boxes visually represent important concepts presented in the text to help summarize key ideas at a glance and simplify students' conceptualization of complicated issues.

ONLINE RESEARCH PROBLEMS

These end-of-chapter research problems drive students to the Internet and include discussion questions so they can be used in class or as homework.

Online Research

Josephson Institute Center for Business Ethics

Josephson Institute Center for Business Ethics is a leading source of materials for businesses and executives who want to act ethically.

- Locate the Josephson Web site.
- Find "The Seven-Step Path to Better Decisions" and the "Six Pillars of Character."
- List the "Obstacles to Ethical Decision Making: Rationalizations."

Bombliss v. Cornelsen

824 N.E.2d 1175 (Ill. App. 2005)

Ron and Catherine Bombliss were dog breeders who lived in Illinois. They bred Tibetan mastiffs, as did Oklahoma residents Anne and Jim Cornelsen. When Anne Cornelsen telephoned the Bomblisses and said she was ready to sell two litters of Tibetan mastiff puppies, Ron Bombliss expressed interest in purchasing two females of breeding quality.

A Tibetan mastiff named Mulan was the mother of one of the two litters of puppies the Cornelsens were offering for sale. Mulan was co-owned by Richard Eichhorn. Pursuant to an agreement containing a written guarantee that Mulan was free of genetic defects, Eichhorn provided Mulan to the Cornelsens for breeding purposes. The agreement between Eichhorn and the Cornelsens entitled Eichhorn to odd-numbered pups from Mulan's first two litters. However, in the event a genetic defect became apparent, Eichhorn would not receive any puppies. According to the complaint filed by the Bomblisses in the case described below, Anne Cornelsen was angry with Eichhorn because Mulan was infected with roundworms and ticks when Eichhorn delivered the dog to the Cornelsens. Anne allegedly told the Bomblisses that she wanted to prevent Eichhorn from getting any of Mulan's pups.

In January 2002, the Bomblisses traveled to Oklahoma to see the puppies. During their visit, they observed that Mulan and some of her pups appeared sick and worm-infested. They urged Anne to get the sick puppies to the veterinarian immediately. The Bomblisses selected one healthy female from each litter and paid the agreed price with the understanding that the Cornelsens would guarantee the puppies as breeding stock, free from genetic diseases or defects, for three years. According to the Bomblisses' complaint, Anne waited two weeks to take one of the sick pups to the veterinarian. It was then confirmed

CASES

The cases in each chapter help to provide concrete examples of the rules stated in the text. A list of cases appears at the front of the text.

PROBLEMS AND PROBLEM CASES

Problem cases appear at the end of each chapter for student review and discussion.

Problems and Problem Cases

1. Law enforcement officers arrived at a Minnesota residence in order to execute arrest warrants for Andrew Hyatt. During the officers' attempt to make the arrest, Hyatt yelled something such as "Go ahead, just shoot me, shoot me," and struck one of the officers. Another officer then called for assistance from City of Anoka, Minnesota, police officer Mark Yates, who was elsewhere in the residence with his leashed police dog, Chips. Yates entered the room where Hyatt was, saw the injured officer's bloodied face, and observed Hyatt standing behind his wife (Lena Hyatt). One of the officers acquired the impression that Lena may have been serving as a shield for her husband. When Andrew again yelled "Shoot me, shoot me" and ran toward the back of the room, Yates released Chips

from the leash. Instead of pursuing Andrew, Chips apprehended Lena, taking her to the ground and performing a "bite and hold" on her leg and arm. Yates then pursued Andrew, who had fled through a window. When Yates later re-entered the room, he released Chips from Lena and instructed another officer to arrest her on suspicion of obstruction of legal process. Lena was taken by ambulance to a hospital and treated for lacerations on her elbow and knee. She later sued the City of Anoka, seeking compensation for medical expenses and pain and suffering. Her complaint alleged liability on the basis of Minnesota's dog bite statute, which read as follows:

"If a dog, without provocation, attacks or injures any person who is acting peaceably in any place where the person may lawfully be, the owner of the dog is liable

YOU BE THE JUDGE

We have indicated where you can consider completing relevant You Be the Judge case segments.

Instructor and Student Supplements

INSTRUCTOR'S MANUAL

The Instructor's Manual, written by the authors, consists of objectives, suggestions for lecture preparation, recommended references, answers to problems and problem cases, and suggested answers to the Online Research Problems and Opening Vignettes. It also includes answers to the Student Study Guide questions and information/teaching notes for You Be the Judge case segments.

YOU BE THE JUDGE

You Be the Judge Online video segments include 18 hypothetical business law cases. All of the cases are based on real cases from our Business Law texts. Each case allows you to watch interviews of the plaintiff and defendant before the courtroom argument, see the courtroom proceedings, view relevant evidence, read other actual cases relating to the issues in the case, and then create your own ruling. After your verdict is generated, view what an actual judge ruled (unscripted) in the case and then get the chance to defend or change your ruling.

POWERPOINT® PRESENTATION ("BASIC" AND "DETAILED" VERSIONS)

The PowerPoint presentation is authored by Pamela S. Evers, Attorney and Associate Professor, University of North Carolina Wilmington. It has been significantly enhanced based on reviewer feedback to now include over 1,100 slides that provide lecture outline material, important concepts and figures in the text, photos for discussion, hyperlinks, and summaries of the cases in the book. Notes are also provided within the PowerPoint presentations for students and instructors to augment information and class discussion. Questions are included to use with the classroom performance system as well.

Supplements

TEST BANK

The Test Bank consists of true-false, multiple choice, and short essay questions in each chapter. Approximately 50 questions are included per chapter. Questions adapted from previous CPA exams are also included and highlighted to help Account-ing students review for the exam.

STUDENT STUDY GUIDE

The Student Study Guide, has been revised and expanded for the 14th Edition by Evan Scheffel. The guide follows the text chapter by chapter, giving chapter outlines, lecture hints, and an outline of how each chapter topic fits into the larger Business Law course. Questions for review are also included to help students better retain concepts and put their learning into practice.

ONLINE LEARNING CENTER

www.mhhe.com/mallor14e The Online Learning Center (OLC) is a Web site that follows the text chapter by chapter. The 14th Edition OLC contains case updates, quizzes and review terms for students to study from, downloadable supplements for the in-structors, links to professional resources for students and professors, and links to video clips to use for discussion.

The screenshot shows the 'Information Center' for 'BUSINESS LAW: The Ethical, Global, and E-Commerce Environment, 14th Edition'. It lists authors: James P. Mallor (Indiana University - Bloomington), A. James Barnes (Indiana University - Bloomington), L. Thomas Bowers (Indiana University - Bloomington), and Arlen W. Langvardt (Indiana University - Bloomington). The ISBN is 0073377643 and the copyright year is 2010. A link is provided to 'Save 30% by purchasing an eBook'. A 'PowerWeb' logo is also visible. The interface includes navigation tabs for 'Home', 'Log out', and 'eBook'.

chapter I

THE NATURE OF LAW

Assume that you have taken on a management position at MKT Corp. If MKT is to make sound business decisions, you and your management colleagues must be aware of a broad array of legal considerations. These may range, to use a nonexhaustive list, from issues in contract, agency, and employment law to considerations suggested by tort, intellectual property, securities, and constitutional law. Sometimes legal principles may constrain MKT's business decisions; at other times, the law may prove a valuable ally of MKT in the successful operation of the firm's business.

Of course, you and other members of the MKT management group will rely on the advice of in-house counsel (an attorney who is an MKT employee) or of outside attorneys who are in private practice. The approach of simply "leaving the law to the lawyers," however, is likely to be counterproductive. It often will be up to nonlawyers such as you to identify a potential legal issue or pitfall about which MKT needs professional guidance. If you fail to spot the issue in a timely manner and legal problems are allowed to develop and fester, even the most skilled attorneys may have difficulty rescuing you and the firm from the resulting predicament. If, on the other hand, your failure to identify a legal consideration means that you do not seek advice in time to obtain an advantage that applicable law would have provided MKT, the corporation may lose out on a beneficial opportunity. Either way—that is, whether the relevant legal issue operates as a constraint or offers a potential advantage—you and the firm cannot afford to be unfamiliar with the legal environment in which MKT operates.

This may sound intimidating, but it need not be. The process of acquiring a working understanding of the legal environment of business begins simply enough with these basic questions:

- What major types of law apply to the business activities and help shape the business decisions of firms such as MKT?
- What ways of examining and evaluating law may serve as useful perspectives from which to view the legal environment in which MKT and other businesses operate?
- What role do courts play in making or interpreting law that applies to businesses such as MKT and to employees of those firms, and what methods of legal reasoning do courts utilize?
- What is the relationship between legal standards of behavior and notions of **ethical** conduct?

Types and Classifications of Law

The Types of Law

Constitutions Constitutions, which exist at the state and federal levels, have two general functions.¹ First, they set

up the structure of government for the political unit they control (a state or the federal government). This involves creating the branches and subdivisions of the government and stating the powers given and denied to each. Through its **separation of powers**, the U.S. Constitution establishes the Congress and gives it power to legislate or *make* law in certain areas, provides for a chief executive (the president) whose function is to execute or *enforce* the laws, and helps create a federal judiciary to *interpret* the laws. The U.S. Constitution also structures the relationship between the federal government and the states. In the process, it

¹Chapter 3 discusses constitutional law as it applies to government regulation of business.

respects the principle of **federalism** by recognizing the states' power to make law in certain areas.

The second function of constitutions is to prevent other units of government from taking certain actions or passing certain laws. Constitutions do so mainly by prohibiting government action that restricts certain individual rights. The Bill of Rights to the U.S. Constitution is an example.

Statutes Statutes are laws created by elected representatives in Congress or a state legislature. They are stated in an authoritative form in statute books or codes. As you will see, however, their interpretation and application are often difficult.

Throughout this text, you will encounter state statutes that were originally drafted as **uniform acts**. Uniform acts are model statutes drafted by private bodies of lawyers and/or scholars. They do not become law until a legislature enacts them. Their aim is to produce state-by-state uniformity on the subjects they address. Examples include the Uniform Commercial Code (which deals with a wide range of commercial law subjects), the Revised Uniform Partnership Act, and the Revised Model Business Corporation Act.

Common Law The **common law** (also called judge-made law or case law) is law made and applied by judges as they decide cases not governed by statutes or other types of law. Although common law exists only at the state level, both state courts and federal courts become involved in applying it. The common law originated in medieval England and developed from the decisions of judges in settling disputes. Over time, judges began to follow the decisions of other judges in similar cases, called **precedents**. This practice became formalized in the doctrine of *stare decisis* (let the decision stand). As you will see later in the chapter, *stare decisis* is not completely rigid in its requirement of adherence to precedent. It is flexible enough to allow the common law to evolve to meet changing social conditions. The common law rules in force today, therefore, often differ considerably from the common law rules of earlier times.

The common law came to America with the first English settlers, was applied by courts during the colonial period, and continued to be applied after the Revolution and the adoption of the Constitution. It still governs many cases today. For example, the rules of tort, contract, and agency discussed in this text are mainly common law rules. In some instances, states have codified (enacted into statute) some parts of the common law. States and the federal government also have passed statutes superseding the common law in certain situations. As discussed in Chapter 9, for example, the states have established special rules for contract cases involving the sale of goods by enacting Article 2 of the Uniform Commercial Code.

This text's torts, contracts, and agency chapters often refer to the *Restatement*—or *Restatement (Second)* or (*Third*)—rule on a particular subject. The *Restatements* are collections of common law (and occasionally statutory) rules covering various areas of the law. Because they are promulgated by the American Law Institute rather than by courts, the *Restatements* are not law and do not bind courts. However, state courts often find *Restatement* rules persuasive and adopt them as common law rules within their states. The *Restatement* rules usually are the rules followed by a majority of the states. Occasionally, however, the *Restatements* stimulate changes in the common law by suggesting new rules that the courts later decide to follow.

Because the judge-made rules of common law apply only when there is no applicable statute or other type of law, common law fills in gaps left by other legal rules if sound social and public policy reasons call for those gaps to be filled. Judges thus serve as policy makers in formulating the content of the common law. In the *Gribben* case, which follows shortly, the Supreme Court of Indiana surveys the relevant legal landscape and concludes that there was no need to develop a new common law rule to fill the supposed legal gap at issue in the case. A later section in the chapter will focus on the process of **case law reasoning**, in which courts engage when they make and apply common law rules.

Gribben v. Wal-Mart Stores, Inc.

824 N.E.2d 349 (Ind. Sup. Ct. 2005)

Chapters 6 and 7 of the text deal with torts, a branch of the law focusing on behavior that violates recognized legal standards and causes harm to another person. When a tort allegedly occurs, the harmed party (the plaintiff) is entitled to take legal action against the party whose behavior caused the harm (the defendant). Various intentional torts are addressed in Chapter 6. Chapter 7 examines a different type of tort, known as negligence. You will see in Chapter 7 that key inquiries in negligence cases are whether the defendant failed to exercise reasonable care and, if so, whether the plaintiff experienced harm as a

result. Most tort cases are governed by common law (i.e., judge-made law). As noted earlier in this chapter, common law is state law, but both state courts and federal courts become involved in applying it. (Chapter 2 will provide an overview of the state court and federal court systems.)

This case arose when Patricia Gribben sustained injuries as the result of a fall at a store owned by Wal-Mart Stores, Inc. In an effort to recover monetary compensation for her injuries, Gribben filed a negligence lawsuit against Wal-Mart in a federal court, the United States District Court for the Southern District of Indiana. (Gribben could have sued Wal-Mart in state court, but exercised the option of bringing the case in federal court under a jurisdictional principle that will be explained in Chapter 2.) Later, Gribben sought to add to her case against Wal-Mart a claim for spoliation of evidence, because Wal-Mart had failed to preserve a surveillance videotape that, according to Gribben, would have helped support her negligence claim. The term “spoliation of evidence” is used to refer to situations in which evidence potentially relevant to a lawsuit is either destroyed or discarded. The federal magistrate to whom Gribben’s case was assigned concluded that it was uncertain whether Indiana common law recognized a claim for spoliation of evidence. Therefore, the magistrate employed a procedure, allowed by Indiana law, under which the federal court certifies a question to the Supreme Court of Indiana (the highest court in the Indiana state court system) and asks that court for guidance on the question. The question certified by the federal court asked whether a spoliation of evidence claim is, or should be, allowed under Indiana common law. What follows is an edited version of the Supreme Court of Indiana’s opinion regarding the certified question.

Dickson, Justice

The United States District Court for the Southern District of Indiana has certified . . . the following question of Indiana law: Does Indiana law recognize a claim for “first-party” spoliation of evidence; that is, if a [defendant] negligently or intentionally destroys or discards evidence that is relevant to a tort action [against the defendant], does the plaintiff in the tort action have an additional cognizable claim against the [defendant] for spoliation of evidence? In her certification order, [the federal magistrate] asserts that there is no controlling Indiana precedent and that courts in other [states] vary greatly [on this question]. The [certified] question is specifically limited to “first-party” spoliation, as distinguished from “third-party” spoliation. The former refers to spoliation of evidence by a party to the principal litigation, and the latter to spoliation by a nonparty.

The plaintiff [Gribben] asserts that Indiana should recognize an independent tort claim for intentional first-party spoliation of evidence. While the certified question includes both negligent and intentional destruction of evidence, the plaintiff here claims only intentional spoliation. She argues that spoliation and the underlying cause of action should be tried together and, if the jury finds intentional spoliation related to a relevant issue, the jury should be instructed to find for the plaintiff on that issue.

[Gribben] contends that a tort of intentional spoliation arises from standard Indiana jurisprudence regarding the existence of a duty of care, and that the tort is needed to discourage the growing occurrence of spoliation and its erosion of both the ability of courts to do justice and public confidence in legal processes. She argues that existing sanctions are insufficient deterrence to the practice of intentional destruction of evidence, and that any systemic burden upon courts and juries that might result from recognizing this new tort would be overwhelmingly

outweighed by the importance of stopping cheating and assuring the availability of evidence to enable the fact finder to make a fair and informed decision.

The defendant [Wal-Mart] urges that Indiana’s existing procedural and evidentiary safeguards are an adequate deterrent without adopting a new tort. It also contends that recognizing a new tort of spoliation would involve the speculative nature of harm and damages, significantly increase costs of litigation, cause jury confusion, result in duplicative and burdensome proceedings, be subject to abuse, and make collateral issues the focus of many disputes.

Already existing under Indiana law are important sanctions that not only provide remedy to persons aggrieved, but also deterrence to spoliation of evidence by litigants and their attorneys. It is well established in Indiana law that intentional first-party spoliation of evidence may be used to establish an inference that the spoliated evidence was unfavorable to the party responsible. *E.g., Cahoon v. Cummings*, 734 N.E.2d 535, 545 (Ind. Sup. Ct. 2000) (involving a jury instruction permitting the inference). Potent responses also exist under [an Indiana trial procedure rule] authorizing trial courts to respond to discovery violations with such sanctions “as are just,” which may include, among others, ordering that designated facts be taken as established, prohibiting the introduction of evidence, dismissal of all or any part of an action, rendering a judgment by default against a disobedient party, and payment of reasonable expenses including attorney fees. We further note that [according to the Indiana Rules of Professional Conduct,] attorneys involved in destruction or concealment of evidence face penalties including disbarment. In addition, the destruction or concealment of evidence, or presentation of false testimony related thereto, may be criminally prosecuted [under Indiana’s criminal statutes] as a felony for perjury or obstruction of justice.

Absent these sanctions, however, Indiana case law is inconsistent regarding whether one party to a civil action may obtain the relief sought therein solely based on the opposing party's intentional destruction of evidence. In 1941, this court expressed disfavor of such a claim, as did our Court of Appeals in 1991. [The Indiana Court of Appeals is a lower court in relation to the state's Supreme Court, so decisions of the Court of Appeals are not binding on the Supreme Court.] But two other cases from our Court of Appeals have [offered indications to the contrary, though in special circumstances not necessarily present here]. In light of Indiana's inconclusive case law, we agree with [the federal magistrate] that there is no controlling Indiana precedent as to the questions presented.

Courts uniformly condemn spoliation. [They regard it as improper, unjustifiable, and a threat to the judicial system's integrity.] Several [states], including West Virginia, Alaska, Montana, the District of Columbia, Illinois, New Mexico, and Ohio, recognize evidence spoliation as a cognizable tort. But several other [states] considering the issue, among them Florida, Mississippi, Arkansas, California, Iowa, Texas, Alabama, Georgia, Kansas, and Arizona, have rejected spoliation as an independent tort.

Notwithstanding the important considerations favoring the recognition of an independent tort of spoliation by parties to litigation, we are persuaded that these are minimized by existing remedies and outweighed by the attendant disadvantages [as noted by Wal-Mart]. We thus determine the common law of Indiana to be that, if an alleged tortfeasor negligently or intentionally destroys or discards evidence that is relevant to a tort action, the plaintiff in the tort action does not have an additional independent cognizable claim against the tortfeasor for spoliation of evidence under Indiana law. It may well be that the fairness and integrity of outcome and the deterrence of evidence destruction may require an additional tort remedy when evidence is destroyed or impaired by persons that are not parties to litigation and thus not subject to existing remedies and deterrence. But the certified question is directed only to first-party spoliation, and we therefore decline to address the issue with respect to third-party spoliation.

We answer the . . . certified question in the negative: Indiana law does not recognize a claim for "first-party" negligent or intentional spoliation of evidence.

Certified question answered; independent tort claim for first-party spoliation of evidence disallowed.

Equity The body of law called **equity** historically concerned itself with accomplishing "rough justice" when common law rules would produce unfair results. In medieval England, common law rules were technical and rigid and the remedies available in common law courts were too few. This meant that some deserving parties could not obtain adequate relief. As a result, separate equity courts began hearing cases that the common law courts could not resolve fairly. In these equity courts, procedures were flexible, and rigid rules of law were deemphasized in favor of general moral maxims.

Equity courts also provided several remedies not available in the common law courts (which generally awarded only money damages or the recovery of property). The most important of these *equitable remedies* was—and continues to be—the **injunction**, a court order forbidding a party to do some act or commanding him to perform some act. Others include the contract remedies of **specific performance** (whereby a party is ordered to perform according to the terms of her contract), **reformation** (in which the court rewrites the contract's terms to reflect the parties' real intentions), and **rescission** (a cancellation

of a contract in which the parties are returned to their precontractual position).

As was the common law, equity principles were brought to the American colonies and continued to be used after the Revolution and the adoption of the Constitution. Over time, however, the once-sharp line between law and equity has become blurred. Nearly all states have abolished separate equity courts and have enabled courts to grant whatever relief is appropriate, whether it be the legal remedy of money damages or one of the equitable remedies discussed above. Equitable principles have been blended together with common law rules, and some traditional equity doctrines have been restated as common law or statutory rules. An example is the doctrine of unconscionability discussed in Chapter 15.

Administrative Regulations and Decisions As Chapter 47 reveals, the administrative agencies established by Congress and the state legislatures have acquired considerable power, importance, and influence over business. A major reason for the rise of administrative agencies was the collection of social and economic problems created

by the industrialization of the United States that began late in the 19th century. Because legislatures generally lacked the time and expertise to deal with these problems on a continuing basis, the creation of specialized, expert agencies was almost inevitable.

Administrative agencies obtain the ability to make law through a *delegation* (or grant) of power from the legislature. Agencies normally are created by a statute that specifies the areas in which the agency can make law and the scope of its power in each area. Often, these statutory delegations are worded so broadly that the legislature has, in effect, merely pointed to a problem and given the agency wide-ranging powers to deal with it.

The two types of law made by administrative agencies are **administrative regulations** and **agency decisions**. As do statutes, administrative regulations appear in a precise form in one authoritative source. They differ from statutes, however, because the body enacting regulations is not an elected body. Many agencies have an internal courtlike structure that enables them to hear cases arising under the statutes and regulations they enforce. The resulting agency decisions are legally binding, though appeals to the judicial system are sometimes allowed.

Treaties According to the U.S. Constitution, **treaties** made by the president with foreign governments and approved by two-thirds of the U.S. Senate are “the supreme Law of the Land.” As will be seen, treaties invalidate inconsistent state (and sometimes federal) laws.

Ordinances State governments have subordinate units that exercise certain functions. Some of these units, such as school districts, have limited powers. Others, such as counties, municipalities, and townships, exercise various governmental functions. The enactments of counties and municipalities are called **ordinances**; zoning ordinances are an example.

Executive Orders In theory, the president or a state’s governor is a chief executive who enforces the laws but has no law-making powers. However, these officials sometimes have limited power to issue laws called **executive orders**. This power normally results from a legislative delegation.

Priority Rules Because the different types of law conflict, rules for determining which type takes priority are necessary. Here, we briefly describe the most important such rules.

1. According to the principle of **federal supremacy**, the U.S. Constitution, federal laws enacted pursuant to it, and treaties are the supreme law of the land. This means that federal law defeats conflicting state law.
2. Constitutions defeat other types of law within their domain. Thus, a state constitution defeats all other state laws inconsistent with it. The U.S. Constitution, however, defeats inconsistent laws of whatever type.
3. When a treaty conflicts with a federal statute over a purely domestic matter, the measure that is later in time usually prevails.
4. Within either the state or the federal domain, statutes defeat conflicting laws that depend on a legislative delegation for their validity. For example, a state statute defeats an inconsistent state administrative regulation.
5. Statutes and any laws derived from them by delegation defeat inconsistent common law rules. Accordingly, either a statute or an administrative regulation defeats a conflicting common law rule. *Trentadue v. Gorton*, which follows, illustrates the application of this principle. In addition, the *Trentadue* court utilizes a statutory interpretation technique addressed later in this chapter.

Trentadue v. Gorton

738 N.W.2d 664 (Mich. Sup. Ct. 2007)

Margarette Eby resided in a Flint, Michigan, home that she had rented from Ruth Mott. In 1986, Eby was murdered at the residence. Eby’s murder remained unsolved until 2002, when DNA evidence established that Jeffrey Gorton had committed the crime. At the time of the murder, Gorton was an employee of his parents’ corporation, which serviced the sprinkler system on the grounds surrounding the residence where Eby lived. Gorton was convicted of murder and was sentenced to life imprisonment.

In August 2002, plaintiff Dayle Trentadue, Eby’s daughter and the personal representative of her estate, filed a complaint against Gorton and various other defendants. The other defendants included Gorton’s parents, their corporation, the personal representative of Mott’s estate (Mott having died in 1999), the property management company that provided services to Mott, and two of Mott’s employees. The claim against Gorton alleged battery resulting in death. Regarding the other

defendants, the plaintiff alleged negligent hiring and monitoring of Gorton, negligence in allowing access to the area that led to Eby's residence, and negligence in failing to provide adequate security at the residence.

Each defendant except Gorton sought dismissal of the claims against them on the theory that the plaintiff's action was barred by Michigan's three-year statute of limitations for wrongful death actions. (Statutes of limitations require that a plaintiff who wishes to make a legal claim must file her lawsuit within a designated length of time after her claim accrues. Normally a claim accrues at the time the legal wrong was committed. The length of time set forth in statutes of limitation varies, depending upon the type of claim and the state whose law controls. If the plaintiff does not file her lawsuit within the time specified by the applicable statute of limitations, her claim cannot lawfully be pursued.) In particular, the defendants other than Gorton argued that Trentadue's case should be dismissed because her claim accrued when Eby was killed in 1986—meaning that the 2002 filing of the lawsuit occurred long after the three-year limitations period had expired. Trentadue asserted, on the other hand, that a common law rule known as the “discovery rule” should be applied so as to suspend the running of the limitations period until 2002, when she learned the identity of Eby's killer. Under the discovery rule argued for by Trentadue, the 2002 filing of the lawsuit would be seen as timely because the running of the limitations period would have been tolled—in other words, suspended—until the 2002 discovery that Gorton was the killer.

The trial court held that the common law discovery rule applied to the case and that, accordingly, Trentadue's lawsuit was filed in a timely manner. The Michigan Court of Appeals affirmed, concluding that the discovery rule coexists with the applicable statute of limitations and that because Trentadue could not have been aware of a possible cause of action against the defendants until the 2002 discovery that Gorton was Eby's killer, the statute of limitations did not bar Trentadue from proceeding with her case. The defendants other than Gorton appealed to the Supreme Court of Michigan.

Corrigan, Judge

This wrongful death case requires us to consider whether the common-law discovery rule, which allows tolling of the statutory period of limitations when a plaintiff could not have reasonably discovered the elements of a cause of action within the limitations period, can operate to toll the period of limitations, or whether Michigan Compiled Laws (MCL) 600.5827, which has no such provision, alone governs the time of accrual of the plaintiff's claims. The applicable statute of limitations in a wrongful death case is MCL 600.5805(10), which states: “The period of limitations is three years after the time of the death or injury for all other actions to recover damages for the death of a person, or for injury to a person or property.” Thus, the period of limitations runs three years from “the death or injury.”

Moreover, MCL 600.5827 defines the time of accrual for actions subject to the limitations period in MCL 600.5805(10). It provides: “Except as otherwise expressly provided, the period of limitations runs from the time the claim accrues. The claim accrues at the time provided in sections 5829 to 5838, and in cases not covered by these sections the claim accrues at the time the wrong upon which the claim is based was done regardless of the time when damage results.” This is consistent with MCL 600.5805(10) because it indicates that the claim accrues “at the time the wrong upon which the claim is based was done.”

[Other MCL sections provide] for tolling of the period of limitations in certain specified situations. These are actions alleging professional malpractice, actions alleging medical malpractice, actions brought against certain defendants alleging injuries from unsafe property, and actions alleging that a person who may be liable for the claim fraudulently concealed the

existence of the claim or the identity of any person who is liable for the claim. Significantly, none of these tolling provisions covers this situation—tolling until the identity of the tortfeasor is discovered.

Trentadue contends, however, that, notwithstanding these statutes, when the claimant was unaware of any basis for an action, the harsh result of barring any lawsuit because the period of limitations has expired can be avoided by the operation of a court-created discovery rule, sometimes described as a common-law rule. Under a discovery-based analysis, a claim does not accrue until a plaintiff knows, or objectively should know, that he has a cause of action and can allege it in a proper complaint. Accordingly, Trentadue argues that her claims did not accrue until she discovered that Gorton was the killer because, before that time, she could not have known of and alleged each element of the claims. We reject this contention because the statutory scheme is exclusive and thus precludes this common law practice of tolling accrual based on discovery in cases where none of the statutory tolling provisions apply.

It is axiomatic that the Legislature has the authority to abrogate the common law. Further, if a statutory provision and the common law conflict, the common law must yield. Accordingly, this Court has observed: “In general, where comprehensive legislation prescribes in detail a course of conduct to pursue and the parties and things affected, and designates specific limitations and exceptions, the legislature will be found to have intended that the statute supersede and replace the common law dealing with the subject matter.” [Case citation omitted.]

As we have explained, the relevant sections of the [Michigan statutes] comprehensively establish limitations periods, times

of accrual, and tolling for civil cases. MCL 600.5827 explicitly states that a limitations period runs from the time a claim accrues “[e]xcept as otherwise expressly provided.” Accordingly, the statutes designate specific limitations and exceptions for tolling based on discovery, as exemplified by [the sections dealing with malpractice claims and claims regarding unsafe property]. The [statutory] scheme also explicitly supersedes the common law, as can be seen in the area of medical malpractice, for instance, where this court’s pre-statutory applications of the common-law discovery rule were superseded by MCL 600.5838a, in which the legislature codified the discovery rule for medical malpractice cases.

Finally, MCL 600.5855 is a good indication that the legislature intended the scheme to be comprehensive and exclusive. MCL 600.5855 provides for essentially unlimited tolling based on discovery when a claim is fraudulently concealed. If we may simply apply an extra-statutory discovery rule in any case not addressed by the statutory scheme, we will render § 5855 effectively meaningless. For, under a general extra-statutory discovery rule, a plaintiff could toll the limitations period simply by claiming that he reasonably had no knowledge of the tort or the identity of the tortfeasor. He would never need to establish that the claim or tortfeasor had been fraudulently concealed.

Since the legislature has exercised its power to establish tolling based on discovery under particular circumstances, but has not provided for a general discovery rule that tolls or delays the time of accrual if a plaintiff fails to discover the elements of

a cause of action during the limitations period, no such tolling is allowed. Therefore, we conclude that courts may not employ an extra-statutory discovery rule to toll accrual in avoidance of the plain language of MCL 600.5827. Because the statutory scheme here is comprehensive, the legislature has undertaken the necessary task of balancing plaintiffs’ and defendants’ interests and has allowed for tolling only where it sees fit. This is a power the legislature has because such a statute of limitations bears a reasonable relationship to the permissible legislative objective of protecting defendants from stale or fraudulent claims. Accordingly, the lower courts erred when they applied an extra-statutory discovery rule to allow plaintiff to bring her claims 16 years after the death of her decedent. When the death occurred, the “wrong upon which the claim is based was done.”

We hold that the plain language of MCL 600.5827 precludes the use of a broad common-law discovery rule to toll the accrual date of claims to which this statute applies. Here, the wrong was done when Eby was murdered in 1986. MCL 600.5827 was in effect at that time. Accordingly, plaintiff’s claims accrued at the time of Eby’s death. The legislature has evinced its intent that, despite this tragedy, the defendants [other than Gorton] may not face the threat of litigation 16 years later, merely because the plaintiff alleges she could not reasonably discover the facts underlying their potential negligence until 2002.

Judgment of Court of Appeals reversed and case remanded for further proceedings.

Classifications of Law Three common classifications of law cut across the different types of law. These classifications involve distinctions between (1) criminal law and civil law; (2) substantive law and procedural law; and (3) public law and private law. One type of law might be classified in each of these ways. For example, a burglary statute would be criminal, substantive, and public; a rule of contract law would be civil, substantive, and private.

Criminal and Civil Law **Criminal law** is the law under which the government prosecutes someone for committing a crime. It creates duties that are owed to the public as a whole. **Civil law** mainly concerns obligations that private parties owe to each other. It is the law applied when one private party sues another. The government, however, may also be a party to a civil case. For example, a city may sue, or be sued by, a construction contractor. Criminal penalties (e.g., imprisonment or fines) differ

from civil remedies (e.g., money damages or equitable relief). Although most of the legal rules in this text are civil law rules, Chapter 5 deals specifically with the criminal law.

Even though the civil law and the criminal law are distinct bodies of law, the same behavior will sometimes violate both. For instance, if A commits an intentional act of physical violence on B, A may face both a criminal prosecution by the state and B’s civil suit for damages.

Substantive Law and Procedural Law **Substantive law** sets the rights and duties of people as they act in society. **Procedural law** controls the behavior of government bodies (mainly courts) as they establish and enforce rules of substantive law. A statute making murder a crime, for example, is a rule of substantive law. The rules describing the proper conduct of a trial, however, are procedural. This text focuses on substantive law. Chapters 2 and 5,

however, examine some of the procedural rules governing civil and criminal cases.

Public and Private Law **Public law** concerns the powers of government and the relations between government and private parties. Examples include constitutional law, administrative law, and criminal law. **Private law** establishes a framework of legal rules that enables parties to set the rights and duties they owe each other. Examples include the rules of contract, property, and agency.

Jurisprudence

The various types of law sometimes are called *positive law*. Positive law comprises the rules that have been laid down (or posited) by a recognized political authority. Knowing the types of positive law is essential to an understanding of the American legal system and the topics discussed in this text. Yet defining *law* by listing these different kinds of positive law is no more complete or accurate than defining “automobile” by describing all the vehicles going by that name. To define law properly, some say, we need a general description that captures its essence.

The field known as **jurisprudence** seeks to provide such a description. Over time, different schools of jurisprudence have emerged, each with its own distinctive view of law.

Legal Positivism One feature common to all types of law is their enactment by a governmental authority such as a legislature or an administrative agency. This feature underlies the definition of law adopted by the school of jurisprudence known as **legal positivism**. Legal positivists define law as the *command of a recognized political authority*. As the British political philosopher Thomas Hobbes observed, “Law properly, is the word of him, that by right hath command over others.”

The commands of recognized political authorities may be good, bad, or indifferent in moral terms. To legal positivists, such commands are valid law regardless of their “good” or “bad” content. In other words, positivists see legal validity and moral validity as entirely separate questions. Some (but not all) positivists say that every properly enacted positive law should be enforced and obeyed, whether just or unjust. Similarly, positivist judges usually try to enforce the law as written, excluding their own moral views from the process.

Natural Law At first glance, legal positivism’s “law is law, just or not” approach may seem to be perfect common sense. It presents a problem, however, for it

could mean that *any* positive law—no matter how unjust—is valid law and should be enforced and obeyed so long as some recognized political authority enacted it. The school of jurisprudence known as **natural law** takes issue with legal positivism by rejecting the positivist separation of law and morality.

Natural law adherents usually contend that some higher law or set of universal moral rules binds all human beings in all times and places. The Roman statesman Marcus Cicero described natural law as “the highest reason, implanted in nature, which commands what ought to be done and forbids the opposite.” Because this higher law determines what is ultimately good and ultimately bad, it serves as a criterion for evaluating positive law. To Saint Thomas Aquinas, for example, “every human law has just so much of the nature of law, as it is derived from the law of nature.” To be genuine law, in other words, positive law must resemble the law of nature by being “good”—or at least by not being “bad.”

Unjust positive laws, then, are not valid law under the natural law view. As Cicero put it: “What of the many deadly, the many pestilential statutes which are imposed on peoples? These no more deserve to be called laws than the rules a band of robbers might pass in their assembly.” An “unjust” law’s supposed invalidity does not translate into a natural law defense that is recognized in court, however.

Although a formal natural law defense is not recognized in court, judges may sometimes take natural law-oriented views into account when interpreting the law. As compared with positivist judges, judges influenced by natural law ideas may be more likely to read constitutional provisions broadly in order to strike down positive laws they regard as unjust. They also may be more likely to let morality influence their interpretation of the law. Of course, neither judges nor natural law thinkers always agree about what is moral and immoral—a major difficulty for the natural law position. This difficulty allows legal positivists to claim that only by keeping legal and moral questions separate can we obtain stability and predictability in the law.

American Legal Realism To some, the debate between natural law and legal positivism may seem unreal. Not only is natural law unworkable, such people might say, but sometimes positive law does not mean much either. For example, juries sometimes pay little attention to the legal rules that are supposed to guide their decisions, and prosecutors have discretion concerning whether to enforce criminal statutes. In some legal proceedings, moreover, the background, biases, and values

of the judge—and not the positive law—determine the result. An old joke reminds us that justice sometimes is what the judge ate for breakfast.

Remarks such as these typify the school of jurisprudence known as **American legal realism**. Legal realists regard the law-in-the-books as less important than the *law in action*—the conduct of those who enforce and interpret the positive law. American legal realism defines law as the *behavior of public officials (mainly judges) as they deal with matters before the legal system*. Because the actions of such decision makers—and not the rules in the books—really affect people’s lives, the realists say, this behavior is what deserves to be called law.

It is doubtful whether the legal realists have ever developed a common position on the relation between law and morality or on the duty to obey positive law. They have been quick, however, to tell judges how to behave. Many realists feel that the modern judge should be a social engineer who weighs all relevant values and considers social science findings when deciding a case. Such a judge would make the positive law only one factor in her decision. Because judges inevitably base their decisions on personal considerations, the realists assert, they should at least do this honestly and intelligently. To promote this kind of decision making, the realists have sometimes favored fuzzy, discretionary rules that allow judges to decide each case according to its unique facts.

Sociological Jurisprudence **Sociological jurisprudence** is a general label uniting several different approaches that examine law within its social context. The following quotation from Justice Oliver Wendell Holmes is consistent with such approaches:

The life of the law has not been logic: it has been experience. The felt necessities of the time, the prevalent moral and political theories, intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow-men, have had a good deal more to do than the syllogism in determining the rules by which men should be governed. The law embodies the story of a nation’s development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics.²

Despite these approaches’ common outlook, there is no distinctive sociological definition of law. If one were attempted, it might go as follows: *Law is a process of social ordering reflecting society’s dominant interests and values*.

Different Sociological Approaches By examining examples of sociological legal thinking, we can add substance to the definition just offered. The “dominant interests” portion of the definition is exemplified by the writings of Roscoe Pound, an influential 20th-century American legal philosopher. Pound developed a detailed and changing catalog of the social interests that press on government and the legal system and thus shape positive law. An example of the definition’s “dominant values” component is the *historical school* of jurisprudence identified with the 19th-century German legal philosopher Friedrich Karl von Savigny. Savigny saw law as an unplanned, almost unconscious, reflection of the collective spirit of a particular society. In his view, legal change could only be explained historically, as a slow response to social change.

By emphasizing the influence of dominant social interests and values, Pound and Savigny undermine the legal positivist view that law is nothing more than the command of some political authority. The early 20th-century Austrian legal philosopher Eugen Ehrlich went even further in rejecting positivism. He did so by identifying two different “processes of social ordering” contained within our definition of sociological jurisprudence. The first of these is positive law. The second is the “living law,” informal social controls such as customs, family ties, and business practices. By regarding both as law, Ehrlich sought to demonstrate that positive law is only one element within a spectrum of social controls.

The Implications of Sociological Jurisprudence

Because its definition of law includes social values, sociological jurisprudence seems to resemble natural law. Most sociological thinkers, however, are concerned only with the *fact* that moral values influence the law, and not with the goodness or badness of those values. Thus, it might seem that sociological jurisprudence gives no practical advice to those who must enforce and obey positive law.

Sociological jurisprudence has at least one practical implication, however: a tendency to urge that the law must change to meet changing social conditions and values. In other words, the law should keep up with the times. Some might stick to this view even when society’s values are changing for the worse. To Holmes, for example, “[t]he first requirement of a sound body of law is, that it should correspond with the actual feelings and demands of the community, whether right or wrong.”

²Holmes. *The Common Law* (1881).

Other Schools of Jurisprudence During approximately the past 30 years, legal scholars have fashioned additional ways of viewing law, explaining why legal rules are as they are, and exploring supposed needs for changes in legal doctrines. For example, the *law and economics* movement examines legal rules through the lens provided by economic theory and analysis. This movement's influence has extended beyond academic literature, with law and economics-oriented considerations, factors, and tests sometimes appearing in judicial opinions dealing with such matters as contract, tort, or antitrust law.

The *critical legal studies* (CLS) movement regards law as inevitably the product of political calculation (mostly of the right-wing variety) and long-standing class biases on the part of lawmakers, including judges. Articles published by CLS adherents provide controversial assessments and critiques of legal rules. Given the thrust of CLS and the view it takes of lawmakers, however, one would be hard-pressed to find CLS adherents in the legislature or the judiciary.

Other schools of jurisprudence that have acquired notoriety in recent years examine law and the legal system from the vantage points of particular groups of persons or sets of ideas. Examples include the feminist legal studies perspective and the gay legal studies movement.

The Functions of Law

In societies of the past, people often viewed law as unchanging rules that deserved obedience because they were part of the natural order of things. Most lawmakers today, however, treat law as a flexible tool or instrument for the accomplishment of chosen purposes. For example, the law of negotiable instruments discussed later in this text is designed to stimulate commercial activity by promoting the free movement of money substitutes such as promissory notes, checks, and drafts. Throughout the text, moreover, you see courts manipulating existing legal rules to achieve desired results. One strength of this *instrumentalist* attitude is its willingness to adapt the law to further the social good. A weakness, however, is the legal instability and uncertainty those adaptations often produce.

Just as individual legal rules advance specific purposes, law as a whole serves many general social functions. Among the most important of those functions are:

1. *Peacekeeping.* The criminal law rules discussed in Chapter 5 further this basic function of any legal system. Also, as Chapter 2 suggests, the resolution of private disputes serves as a major function of the civil law.
2. *Checking government power and promoting personal freedom.* Obvious examples are the constitutional restrictions examined in Chapter 3.
3. *Facilitating planning and the realization of reasonable expectations.* The rules of contract law discussed in Chapters 9–18 help fulfill this function of law.
4. *Promoting economic growth through free competition.* The antitrust laws discussed in Chapters 48–50 are among the many legal rules that help perform this function.
5. *Promoting social justice.* Throughout this century, government has intervened in private social and economic affairs to correct perceived injustices and give all citizens equal access to life's basic goods. Examples include the employer–employee regulations addressed in Chapter 51.
6. *Protecting the environment.* The most important federal environmental statutes are discussed in Chapter 52.

Obviously, the law's various functions can conflict. The familiar clash between economic growth and environmental protection is an example. Chapter 5's cases dealing with the constitutional aspects of criminal cases illustrate the equally familiar conflict between effective law enforcement and the preservation of personal rights. Only rarely does the law achieve one end without sacrificing others. In law, as in life, there generally is no such thing as a free lunch. Where the law's objectives conflict, lawmakers may try to strike the best possible balance among those goals. This suggests limits on the law's usefulness as a device for promoting particular social goals.

Legal Reasoning

This text seeks to describe important legal rules affecting business. As texts generally do, it states those rules in what lawyers call “black letter” form, using sentences saying that certain legal consequences will occur if certain events happen. Although it provides a clear statement of the law's commands, this black letter approach can be misleading. It suggests definiteness, certainty, permanence, and predictability—attributes the law frequently lacks. To illustrate, and to give you some idea how lawyers and judges think, we now discuss the two most important kinds of legal reasoning: **case law reasoning**

Ethics in Action

Some schools of jurisprudence discussed in this chapter—most notably *natural law* and the various approaches lumped under the *sociological jurisprudence* heading—concern themselves with the relationship between law and notions of morality. These schools of jurisprudence involve considerations related to key aspects of ethical theories that will be explored in Chapter 4, which addresses ethical issues arising in business contexts.

Natural law's focus on rights thought to be independent of positive law has parallels in ethical theories that are classified under the *rights theory* heading. In its concern over unjust

laws, natural law finds common ground with the ethical theory known as *justice theory*. When subscribers to sociological jurisprudence focus on the many influences that shape law and the trade-offs involved in a dynamic legal system, they may explore considerations that relate not only to rights theory or justice theory but also to two other ethical theories, *utilitarianism* and *profit maximization*. As you study Chapter 4 and later chapters, keep the schools of jurisprudence in mind. Think of them as you consider the extent to which a behavior's probable legal treatment and the possible ethical assessments of it may correspond or, instead, diverge.

and **statutory interpretation**.³ However, we first must examine legal reasoning in general.

Legal reasoning is basically deductive, or syllogistic. The legal rule is the major premise, the facts are the minor premise, and the result is the product of combining the two. Suppose a state statute says that a driver operating an automobile between 55 and 70 miles per hour must pay a \$50 fine (the rule or major premise) and that Jim Smith drives his car at 65 miles per hour (the facts or minor premise). If Jim is arrested, and if the necessary facts can be proved, he will be required to pay the \$50 fine. As you will now see, however, legal reasoning often is more difficult than this example would suggest.

Case Law Reasoning In cases governed by the common law, courts find the appropriate legal rules in prior cases called *precedents*. The standard for choosing and applying prior cases to decide present cases is the doctrine of *stare decisis*, which states that like cases should be decided alike. That is, the present case should be decided in the same way as past cases presenting the same facts and the same legal issues. If no applicable precedent exists, the court is free to develop a new common law rule to govern the case, assuming the court believes that sound public policy reasons call for the development of a new rule. When an earlier case may seem similar enough to the present case to constitute a precedent but the court deciding the present case nevertheless identifies a meaningful difference between the cases, the court *distinguishes* the earlier decision.

Because every present case differs from the precedents in some respect, it is always possible to spot a factual distinction. For example, one could attempt to distinguish a prior case because both parties in that case had black hair,

whereas one party in the present case has brown hair. Of course, such a distinction would be ridiculous, because the difference it identifies is insignificant in moral or social policy terms. A valid distinction involves a widely accepted ethical or policy reason for treating the present case differently from its predecessor. Because people disagree about moral ideas, public policies, and the degree to which they are accepted, and because all these factors change over time, judges may differ on the wisdom of distinguishing a prior case. This is a source of uncertainty in the common law, but it gives the common law the flexibility to adapt to changing social conditions.⁴

When a precedent has been properly distinguished, the common law rule it stated does not control the present case. The court deciding the present case may then fashion a new common law rule to govern the case. Consider, for instance, an example involving the employment-at-will rule, the prevailing common law rule regarding employees in the United States. Under this rule, an employee may be fired at any time—and without any reason, let alone a good one—unless a contract between the employer and the employee guaranteed a certain duration of employment or established that the employee could be fired only for certain recognized legal causes. Most employees are not parties to a contract containing such provisions. Therefore, they are employees-at-will. Assume that in a precedent case, an employee who had been doing good work challenged his firing, and that the court hearing the case ruled against him on the basis of the employment-at-will rule. Also assume that in a later case, a fired employee has challenged her dismissal. Although the fired employee would appear to be subject to the employment-at-will rule applied in the seemingly similar precedent case, the court deciding the later case

³The reasoning courts employ in constitutional cases resembles that used in common law cases, but often is somewhat looser. See Chapter 3.

⁴Also, though they exercise the power infrequently, courts sometimes completely *overrule* their own prior decisions.

nevertheless identifies an important difference: that in the later case, the employee was fired in retaliation for having reported to law enforcement authorities that her employer was engaging in seriously unlawful business-related conduct. A firing under such circumstances appears to offend public policy, notwithstanding the general acceptance of the employment-at-will rule. Having properly distinguished the precedent, the court deciding the later case would not be bound by the employment-at-will rule set forth in the precedent and would be free to develop a public policy–based exception under which the retaliatory firing would be deemed wrongful. (Chapter 51 will reveal that courts in a number of states have adopted such an exception to the employment-at-will rule.)

The *Hagan* case, which follows, provides a further illustration of the process of case law reasoning. In *Hagan*, the Florida Supreme Court scrutinizes various precedents as it attempts to determine whether Florida’s courts should retain, modify, or abolish a common law rule under which a plaintiff in a negligence case could not recover damages for emotional harm unless she also sustained some sort of impact that produced physical injuries—that is, injuries to her body. (Negligence law is discussed in depth in Chapter 7.) Ultimately, the court determines that under circumstances of the sort presented in the case, damages for emotional distress should be recoverable even in the absence of a physical injury–producing impact.

Hagan v. Coca-Cola Bottling Co.

776 So. 2d 275 (Fla. Sup. Ct. 2000)

Linda Hagan and her sister Barbara Parker drank from a bottle of Coke which they both agreed tasted flat. Hagan then held the bottle up to a light and observed what she and Parker thought was a used condom with “oozy stringy stuff coming out of the top.” Both women were distressed that they had consumed some foreign material, and Hagan immediately became nauseated. The bottle was later delivered to Coca-Cola for testing. Concerned about what they had drunk, the women went to a health care facility the next day and were given shots. The medical personnel at the facility told them they should be tested for HIV. Hagan and Parker were then tested and informed that the results were negative. Six months later, both women were again tested for HIV, and the results were again negative.

Hagan and Parker brought a negligence action against Coca-Cola. Coca-Cola’s beverage analyst testified at trial that he had initially thought, as Hagan and Parker had, that the object in the bottle was a condom. However, upon closer examination, he concluded that the object was a mold, and that, to a “scientific certainty,” the item floating in the Coke bottle was not a condom. At the conclusion of the trial, the jury returned a verdict in favor of the plaintiffs, awarding \$75,000 each to Hagan and Parker. The trial court reduced the jury award to \$25,000 each to Hagan and Parker. Both sides appealed to the Fifth District Court of Appeal.

The appellate court reversed the jury awards and concluded that under case law concerning the impact rule, Hagan and Parker had not established a claim because neither had suffered a physical injury. Under a special procedure allowed by Florida law, certain dissenting and concurring appellate court judges sent a certified question to the state Supreme Court asking whether the impact rule should be abolished or amended in Florida.

Anstead, Judge

We have for review a decision from the Fifth District Court of Appeal in which the court certified a question to be of great public importance: Should the impact rule be abolished or amended in Florida? Because we conclude that there was an impact here and the impact rule does not bar the claim, we rephrase the certified question [to ask whether] the impact rule preclude[s] a claim for damages for emotional distress caused by the consumption of a foreign substance in a beverage product where the plaintiff suffers no accompanying physical injuries[.]

Hagan and Parker (hereinafter “appellants”) assert that a person should not be barred from recovering damages for emotional distress caused by the consumption of a beverage containing a foreign substance simply because she suffered distress but did not suffer any additional physical injury at the

time of consumption. Therefore, appellants contend that the “impact rule” should not operate to preclude relief under the circumstances of this case. We agree with appellants and hold that the impact rule does not apply to cases where a plaintiff suffers emotional distress as a direct result of the consumption of a contaminated beverage.

We begin by acknowledging that although many states have abolished the “impact rule,” several states, including Florida, still adhere to the rule. This court, while acknowledging exceptions, has accepted the impact rule as a limitation on certain claims as a means for “assuring the validity of claims for emotional or psychic damages.” *R. J. v. Humana of Florida, Inc.* (1995). Generally stated, the impact rule requires that before a plaintiff may recover damages for emotional distress, she must demonstrate that the emotional stress suffered flowed from

injuries sustained in an impact. Notwithstanding our adherence to the rule, this Court has noted several instances where the impact rule should not preclude an otherwise viable claim.

For example, this Court modified the impact rule in bystander cases by excusing the lack of a physical impact. In such cases, recovery for emotional distress would be permitted where one person suffers “death or significant discernible physical injury when caused by psychological trauma resulting from a negligent injury imposed on a close family member within the sensory perception of the physically injured person.” *Champion v. Gray* (1985). We also have held that the impact rule does not apply to claims for intentional infliction of emotional distress, wrongful birth, negligence claims involving stillbirth, and bad faith claims against an insurance carrier.

We believe that public policy dictates that a cause of action for emotional distress caused by the ingestion of a contaminated food or beverage should be recognized despite the lack of an accompanying physical injury. In *Doyle v. Pillsbury Co.* (1985), for example, this Court observed that the impact rule would not bar a cause of action for damages caused by the ingestion of a contaminated food or beverage. There, the plaintiffs, Mr. and Mrs. Doyle, opened a can of peas and observed an insect floating on top of the contents. Mrs. Doyle jumped back in alarm, fell over a chair and suffered physical injuries. The plaintiffs sued the Pillsbury Company, Green Giant Company, and Publix Supermarkets, alleging negligence, strict liability, and breach of warranty. The trial court granted summary judgment in favor of the defendants, finding that the impact rule barred the plaintiffs’ cause of action, and the intermediate appellate court affirmed.

On review, this Court approved of the outcome but disapproved of the application of the impact rule. We initially recognized that ingestion of a food or drink product is a necessary prerequisite to a cause of action against restaurants, manufacturers, distributors and retailers of food. In doing so, we impliedly found that ingestion of a foreign food or substance constitutes an impact. [We wrote:]

This ingestion requirement is grounded upon foreseeability rather than the impact rule. The public has become accustomed to believing in and relying on the fact that packaged foods are fit for consumption. A producer or retailer of food should foresee that a person may well become physically or mentally ill after consuming part of a food product and then discovering a deleterious foreign object, such as an insect or rodent, in presumably wholesome food or drink. The manufacturer or retailer must expect to bear the costs of the resulting injuries. The same foreseeability is lacking where a person simply observes the foreign object and suffers injury after the observation. The mere observance of unwholesome food cannot be equated to consuming a portion of the same. We should not impose virtually unlimited liability in such cases. When a claim is based on an inert foreign object

in a food product, we continue to require ingestion of a portion of the food before liability arises. Because Mrs. Doyle never ingested any portion of the canned peas, the trial court properly granted summary judgment against the Doyles.

Other jurisdictions have reached a similar conclusion, one, in fact, involving virtually the same facts presented here. In *Wallace v. Coca-Cola Bottling Plants, Inc.*, [Me. (1970)], the plaintiff drank from a Coke bottle which contained an unwrapped condom. The plaintiff became ill after he returned home and thought about his experience. The Maine Supreme Court held that where the plaintiff demonstrates a causal relationship between the negligent act and the reasonably foreseeable mental and emotional suffering by a reasonably foreseeable plaintiff, damages for emotional suffering are recoverable despite the lack of a “discernable trauma from external causes.” The court found that such requirements had been met: “The foreign object was of such a loathsome nature it was reasonably foreseeable its presence would cause nausea and mental distress upon being discovered . . . The mental distress was manifested by the vomiting.”

Several years later [in *Culbert v. Sampson Supermarkets Inc.*, 444 A.2d 433 [Me. (1982)], the Maine Supreme Court overruled *Wallace* to the extent that it had required a plaintiff to demonstrate actual physical manifestations of the mental injury. In overruling any physical injury requirement, the court noted that it could have permitted recovery in *Wallace* even under the impact rule because the condom had come in contact with the plaintiff. We find the reasoning of the Maine Supreme Court to be instructive, and consistent with our analysis in *Doyle*, to the extent it concludes that a plaintiff may recover for emotional injuries caused by the consumption of a contaminated food or beverage despite the lack of an additional physical injury.

As this Court [has] recognized [before], the impact rule does not apply where emotional damages are a “consequence of conduct that itself is a freestanding tort apart from any emotional injury.” *Tanner v. Hartog*, (1997). [W]e hold that a plaintiff need not prove the existence of a physical injury in order to recover damages for emotional injuries caused by the consumption of a contaminated food or beverage. [T]hose who market foodstuffs should foresee and expect to bear responsibility for the emotional and physical harm caused by someone consuming a food product that is contaminated by a foreign substance. Further, since we have concluded that there was an impact in the case at hand by the ingestion of a contaminated substance, and the impact rule does not bar the action, we decline to rule on the broader question posed by the district court’s certified question.

Intermediate appellate court decision reversed, and case remanded.

CYBERLAW IN ACTION

Section 230 of the Communications Decency Act (CDA), a federal statute, provides that “[n]o provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider.” Although § 230 appears in a statute otherwise designed to protect minors against online exposure to indecent material, the broad language of § 230 has caused courts to apply it in contexts having nothing to do with indecent expression.

For instance, various courts have held that § 230 protects providers of an interactive computer service (ICS) against liability for defamation when a user of the service creates and posts false, reputation-harming statements about someone else. (ICS is defined in the statute as “any information service, system, or access software provider that provides or enables computer access by multiple users to a computer server.”) With courts so holding, § 230 has the effect of superseding a common law rule of defamation that anyone treated as a publisher or speaker of defamatory material is liable to the same extent as the original speaker or writer of that material. Absent § 230, ICS providers could sometimes face defamation liability under the theory that they are publishers of statements made by someone else. (You will learn more about defamation in Chapter 6.) This application of § 230 illustrates two concepts noted earlier in the chapter: first, that federal law overrides state law when the two conflict; and second, that an applicable statute supersedes a common law rule.

Cases in other contexts have required courts to utilize statutory interpretation techniques discussed in this chapter as they determine whether § 230’s shield against liability applies. For example, two recent cases presented the question whether § 230 protects Web site operators against liability for alleged Fair Housing Act (FHA) violations based on material that appears on their sites. The FHA states that it is unlawful to “make, print, or publish,” or to “cause” the making, printing, or publishing, of notices, statements, or advertisements that “with respect to the sale or rental of a dwelling[,] . . . indicate[] any preference, limitation, or discrimination based on race,

color, religion, sex, handicap, familial status, or national origin, or an intention to make any such preference, limitation, or discrimination.” A civil rights organization sued Craigslist, Inc., which operates a well-known electronic forum for those who wish to buy, sell, or rent housing and miscellaneous goods and services. The plaintiff alleged that Craigslist users posted housing-related statements such as “No minorities” and “No children,” and that those statements constituted FHA violations on the part of Craigslist.

In *Chicago Lawyers Committee for Civil Rights Under Law, Inc. v. Craigslist, Inc.*, 519 F.3d 666 (7th Cir. 2008), the U.S. Court of Appeals for the Seventh Circuit affirmed the district court’s dismissal of the plaintiff’s complaint. The Seventh Circuit held that a “natural reading” of § 230 of the CDA protected Craigslist against liability. The statements that allegedly violated the FHA were those of users of the electronic forum—meaning that Craigslist would be liable only if it were treated as a publisher or speaker of the users’ statements. The plain language of § 230, however, prohibited classifying Craigslist, Inc., as a publisher or speaker of the content posted by the users. Neither did Craigslist “cause” users to make statements of the sort prohibited by the FHA. Using a commonsense interpretation of the word “cause,” the court concluded that merely furnishing the electronic forum was not enough to implicate Craigslist in having “cause[d]” the users’ statements. There were no facts indicating that Craigslist suggested or encouraged statements potentially running afoul of the FHA.

Less than a month after the decision just discussed, the U.S. Court of Appeals for the Ninth Circuit decided *Fair Housing Council of San Fernando Valley v. Roommate.com, LLC*, 2008 U.S. App. LEXIS 7066 (9th Cir. 2008). There, the court held that § 230 of the CDA did not protect Roommate.com against FHA liability for allegedly discriminatory housing-related statements posted by users of Roommate.com’s electronic forum. An edited version of that decision appears nearby in the text. After reading it, compare it to the *Craigslist* decision summarized above. Given the different outcomes reached in the two cases, are the two decisions simply inconsistent, or can they be harmonized?

Statutory Interpretation Because statutes are written in one authoritative form, their interpretation might seem easier than case law reasoning. However, this is not so. The natural ambiguity of language serves as one reason courts face difficulties when interpreting statutes. The problems become especially difficult when statutory words are applied to situations the legislature did not foresee. In some instances, legislators may deliberately use ambiguous language when they are unwilling or unable to deal specifically with each situation the statute

was enacted to regulate. When this happens, the legislature expects courts and/or administrative agencies to fill in the details on a case-by-case basis. Other reasons for deliberate ambiguity include the need for legislative compromise and legislators’ desire to avoid taking controversial positions.

To deal with the problems just described, courts use various techniques of statutory interpretation. As you will see shortly, different techniques may dictate different results in a particular case. Sometimes judges employ

the techniques in an instrumentalist or result-oriented fashion, emphasizing the technique that will produce the result they want and downplaying the others. It is therefore unclear which technique should control when different techniques yield different results. Judges have considerable latitude in this regard.

Plain Meaning Courts begin their interpretation of a statute with its actual language. If the statute's words have a clear, common, accepted meaning, courts often employ the *plain meaning rule*. This approach calls for the court to apply the statute according to the usual meaning of its words, without concerning itself with anything else.

Legislative History and Legislative Purpose Courts sometimes refuse to follow a statute's plain meaning when its legislative history suggests a different result. Almost all courts resort to legislative history when the statute's language is ambiguous. A statute's legislative history includes the following sources: reports of investigative committees or law revision commissions that led to the legislation; transcripts or summaries of hearings of legislative committees that originally considered the legislation; reports issued by such committees; records of legislative debates; reports of conference committees reconciling two houses' conflicting versions of the law; amendments or defeated amendments to the legislation; other bills not passed by the legislature but proposing similar legislation; and discrepancies between a bill passed by one house and the final version of the statute.

Sometimes a statute's legislative history provides no information or conflicting information about its meaning, scope, or purposes. Some sources prove to be more authoritative than others. The worth of debates, for instance, may depend on which legislator (e.g., the sponsor of the bill or an uninformed blowhard) is quoted. Some sources are useful only in particular situations; prior unpassed bills and amendments or defeated amendments are

examples. Consider, for instance, whether mopeds are covered by an air pollution statute applying to "automobiles, trucks, buses, and other motorized passenger or cargo vehicles." If the statute's original version included mopeds but this reference was removed by amendment, it is unlikely that the legislature wanted mopeds to be covered. The same might be true if six similar unpassed bills had included mopeds but the bill that was eventually passed did not, or if one house had passed a bill including mopeds but mopeds did not appear in the final version of the legislation.

Courts use legislative history in two overlapping but distinguishable ways. They may use it to determine what the legislature thought about the specific meaning of statutory language. They may also use it to determine the overall aim, end, or goal of the legislation. In this second case, they then ask whether a particular interpretation of the statute is consistent with this legislative purpose. To illustrate the difference between these two uses of legislative history, suppose that a court is considering whether our pollution statute's "other motorized passenger or cargo vehicles" language includes battery-powered vehicles. The court might scan the legislative history for specific references to battery-powered vehicles or other indications of what the legislature thought about their inclusion. However, the court might also use the same history to determine the overall aims of the statute, and then ask whether including battery-powered vehicles is consistent with those aims. Because the history probably would reveal that the statute's purpose was to reduce air pollution from internal combustion engines, the court might well conclude that battery-powered vehicles should not be covered.

Two statutory interpretation cases follow. In *Fair Housing Council v. Roommate.com*, the court carefully examines the relevant statutory language and considers the purposes underlying it. In *General Dynamics Land Systems, Inc. v. Cline*, the Supreme Court interprets a major employment discrimination statute by relying heavily on its legislative history and purpose.

Fair Housing Council of San Fernando Valley v. Roommate.com, LLC 2008 U.S. App. LEXIS 7066 (9th Cir. 2008)

Roommate.com, LLC ("Roommate") operated a Web site designed to match people renting out spare rooms with people looking for a place to live. At the time of the litigation referred to below, Roommate's Web site featured approximately 150,000 active listings and received roughly a million page views a day.

Before subscribers could search listings or post housing opportunities on Roommate's Web site, they had to create profiles. This process required subscribers to answer a series of questions. Besides requesting basic information such as name,

location, and e-mail address, Roommate required each subscriber to disclose his or her sex and sexual orientation, and whether he or she would bring children to a household. Each subscriber was further required to describe his or her preferences in roommates with respect to the same three criteria: sex, sexual orientation, and whether children would be brought to the household. The Roommate site also encouraged subscribers to provide “Additional Comments” describing themselves and their desired roommate in an open-ended essay. After a new subscriber completed the application, Roommate would assemble his or her answers into a profile page. The profile page displayed the subscriber’s pseudonym, description, and preferences, as divulged through answers to Roommate’s questions.

Roommate’s subscribers were able to choose between two levels of service. Those using the site’s free service level could create their own personal profile page, search the profiles of others, and send personal e-mail messages. They could also receive periodic e-mails from Roommate, informing them of available housing opportunities matching their preferences. Subscribers who paid a monthly fee also gained the ability to read e-mails from other users, and to view other subscribers’ “Additional Comments.”

The Fair Housing Councils of the San Fernando Valley and San Diego (“Councils”) sued Roommate in federal court, alleging that Roommate’s activities violated the federal Fair Housing Act (“FHA”), 42 U.S.C. § 3601 et seq. The FHA prohibits, in the sale or rental of housing, discrimination on the basis of “race, color, religion, sex, familial status, or national origin.” The FHA also includes a provision that makes it unlawful to

make, print, or publish, or cause to be made, printed, or published, any notice, statement, or advertisement, with respect to the sale or rental of a dwelling that indicates any preference, limitation, or discrimination based on race, color, religion, sex, handicap, familial status, or national origin, or an intention to make any such preference, limitation, or discrimination.

In their lawsuit, Councils claimed that Roommate was effectively a housing broker doing online what it could not lawfully do off-line. Roommate argued, however, that it was immune from liability under § 230 of the federal Communications Decency Act, which provides that “[n]o provider . . . of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider.” The district court agreed, reasoning that imposition of liability on Roommate for a violation of the FHA would depend upon classifying Roommate as a publisher or speaker but that § 230 prohibited such an outcome. The district court therefore dismissed Councils’ FHA claim without determining whether Roommate violated the FHA. Councils appealed to the U.S. Court of Appeals for the Ninth Circuit.

Kozinski, Chief Judge

We plumb the depths of the immunity provided by § 230 of the Communications Decency Act of 1996 (“CDA”).

Section 230 of the CDA immunizes providers of interactive computer services against liability arising from content created by third parties: “No provider . . . of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider.” This grant of immunity applies only if the interactive computer service provider is not also an “information content provider,” which is defined as someone who is “responsible, in whole or in part, for the creation or development of” the offending content. Section 230 defines an “interactive computer service” as “any information service, system, or access software provider that provides or enables computer access by multiple users to a computer server.” Today, the most common interactive computer services are websites. Councils do not dispute that Roommate’s website is an interactive computer service.

A website operator can be both a service provider and a content provider. If it passively displays content that is created entirely by third parties, then it is only a service provider with

respect to that content. But as to content that it creates itself, or is “responsible, in whole or in part” for creating or developing, the website is also a content provider. Thus, a website may be immune from liability for some of the content it displays to the public but be subject to liability for other content.

Section 230 was prompted by a state court case holding Prodigy responsible for a libelous message posted on one of its financial message boards. *See Stratton Oakmont v. Prodigy Servs. Co.*, 1995 N.Y. Misc. LEXIS (N.Y. Sup. Ct. 1995). The court there found that Prodigy had become a “publisher” under state law because it voluntarily deleted some messages from its message boards “on the basis of offensiveness and ‘bad taste,’” and was therefore legally responsible for the content of defamatory messages that it failed to delete. Under the reasoning of *Stratton Oakmont*, online service providers that voluntarily filter some messages become liable for all messages transmitted, whereas providers that bury their heads in the sand and ignore problematic posts altogether escape liability. Prodigy claimed that the “sheer volume” of message board postings it received made manual review of every message impossible; thus, if it were forced to choose between taking responsibility for all

messages and deleting no messages at all, it would have to choose the latter course.

In passing § 230, Congress sought to spare interactive computer services this grim choice by allowing them to perform some editing on user-generated content without thereby becoming liable for all defamatory or otherwise unlawful messages that they didn't edit or delete. In other words, [as the statute's legislative history indicates,] Congress sought to immunize the *removal* of user-generated content, not the *creation* of content.

With this backdrop in mind, we examine three specific functions performed by Roommate that are alleged to violate the FHA.

1. Councils first argue that the questions Roommate poses to prospective subscribers during the registration process violate the FHA. Councils allege that requiring subscribers to disclose their sex, family status and sexual orientation “indicates” an intent to discriminate against them, and thus runs afoul of the FHA. Roommate created the questions and choice of answers, and designed its website registration process around them. Therefore, Roommate is undoubtedly the “information content provider” as to the questions and can claim no immunity for posting them on its website, or for forcing subscribers to answer them as a condition of using its services.

Here, we must determine whether Roommate has immunity under the CDA because Councils have at least a plausible claim that Roommate violated the FHA by merely posing the questions. We need not decide whether any of Roommate's questions actually violate the FHA. [We leave that issue] for the district court on remand. Rather, we examine the scope of plaintiffs' substantive claims only insofar as necessary to determine whether § 230 immunity applies. However, we note that asking questions certainly *can* violate the FHA. For example, a real estate broker may not inquire as to the race of a prospective buyer, and an employer may not inquire as to the religion of a prospective employee. If such questions are unlawful when posed face-to-face or by telephone, they don't magically become lawful when asked electronically online. [Section 230 of the CDA] was not meant to create a lawless no-man's-land on the Internet.

Councils also claim that requiring subscribers to answer the questions as a condition of using Roommate's services unlawfully “cause[s]” subscribers to make a “statement . . . with respect to the sale or rental of a dwelling that indicates [a] preference, limitation, or discrimination,” in violation of [the FHA]. The CDA does not grant immunity for inducing third parties to express illegal preferences. Roommate's own acts—posting the questionnaire and requiring answers to it—are entirely its doing and thus § 230 of the CDA does not apply to them. Roommate is entitled to no immunity [against this asserted basis of liability].

2. Councils also charge that Roommate's development and display of subscribers' discriminatory preferences is unlawful. Roommate publishes a “profile page” for each subscriber on its website. The page describes the client's personal information—such as his sex, sexual orientation and whether he has children—as well as the attributes of the housing situation he seeks.

The content of these pages is drawn directly from the registration process. For example, Roommate requires subscribers to specify, using a drop-down menu provided by Roommate, whether they are “Male” or “Female” and then displays that information on the profile page. Roommate also requires subscribers who are listing available housing to disclose whether there are currently “Straight male(s),” “Gay male(s),” “Straight female(s)” or “Lesbian(s)” living in the dwelling. Subscribers who are seeking housing must make a selection from a drop-down menu, again provided by Roommate, to indicate whether they are willing to live with “Straight or gay” males, only with “Straight” males, only with “Gay” males or with “No males.” Similarly, Roommate requires subscribers listing housing to disclose whether there are “Children present” or “Children not present” and requires housing seekers to say “I will live with children” or “I will not live with children.” Roommate then displays these answers, along with other information, on the subscriber's profile page. This information is obviously included to help subscribers decide which housing opportunities to pursue and which to bypass. In addition, Roommate itself uses this information to channel subscribers away from listings where the individual offering housing has expressed preferences that aren't compatible with the subscriber's answers.

[It is correct to conclude] that Roommate's subscribers are information content providers who create the profiles by picking among options and providing their own answers. But the fact that users are information content providers does not preclude Roommate from *also* being an information content provider by helping “develop” at least “in part” the information in the profiles. Here, the part of the profile that is alleged to offend the Fair Housing Act and state housing discrimination laws—the information about sex, family status and sexual orientation—is provided by subscribers in response to Roommate's questions, which they cannot refuse to answer if they want to use defendant's services. By requiring subscribers to provide the information as a condition of accessing its service, and by providing a limited set of pre-populated answers, Roommate becomes much more than a passive transmitter of information provided by others; it becomes the developer, at least in part, of that information. And § 230 provides immunity only if the interactive computer service does not “creat[e] or develop[]” the information “in whole or in part.”

Roommate does much more than provide options [to subscribers as they provide information for their profiles]. To begin

with, Roommate asks discriminatory questions. The FHA makes it unlawful to ask certain discriminatory questions for a very good reason: Unlawful questions solicit (a.k.a. “develop”) unlawful answers. Not only does Roommate ask these questions, Roommate makes answering the discriminatory questions a condition of doing business. This is no different from a real estate broker in real life saying, “Tell me whether you’re Jewish or you can find yourself another broker.” When a business enterprise extracts such information from potential customers as a condition of accepting them as clients, it is no stretch to say that the enterprise is responsible, at least in part, for developing that information.

Similarly, Roommate is not entitled to CDA immunity for the operation of its search system, which filters listings, or of its email notification system, which directs emails to subscribers according to discriminatory criteria. Roommate designed its search system so it would steer users based on the preferences and personal characteristics that Roommate itself forces subscribers to disclose. If Roommate has no immunity for asking the discriminatory questions, as we concluded above, it can certainly have no immunity for using the answers to the unlawful questions to limit who has access to housing.

For example, a subscriber who self-identifies as a “Gay male” will not receive email notifications of new housing opportunities supplied by owners who limit the universe of acceptable tenants to “Straight male(s),” “Straight female(s)” and “Lesbian(s).” Similarly, subscribers with children will not be notified of new listings where the owner specifies “no children.” Councils charge that limiting the information a subscriber can access based on that subscriber’s protected status violates the FHA. It is, Councils allege, no different from a real estate broker saying to a client: “Sorry, sir, but I can’t show you any listings on this block because you are [gay/female/black/a parent].” If such screening is prohibited when practiced in person or by telephone, we see no reason why Congress would have wanted to make it lawful to profit from it online.

Roommate’s search function is similarly designed to steer users based on discriminatory criteria. Roommate’s search engine thus differs materially from generic search engines such as Google, Yahoo! and MSN Live Search, in that Roommate designed its system to use allegedly unlawful criteria so as to limit the results of each search, and to force users to participate in its discriminatory process. In other words, Councils allege that Roommate’s search is designed to make it more difficult or impossible for individuals with certain protected characteristics to find housing—something the law prohibits. By contrast, ordinary search engines do not use unlawful criteria to limit the scope of searches conducted on them, nor are they designed to achieve illegal ends—as Roommate’s search function is alleged

to do here. Therefore, such search engines play no part in the “development” of any unlawful searches.

3. Councils finally argue that Roommate should be held liable for the discriminatory statements displayed in the “Additional Comments” section of profile pages. At the end of the registration process, on a separate page from the other registration steps, Roommate prompts subscribers to “tak[e] a moment to personalize your profile by writing a paragraph or two describing yourself and what you are looking for in a roommate.” The subscriber is presented with a blank text box, in which he can type as much or as little about himself as he wishes. Such essays are visible only to paying subscribers.

Subscribers provide a variety of provocative, and often very revealing, answers. The contents range from subscribers who “[p]ref[er] white Male roommates” or require that “[t]he person applying for the room MUST be a BLACK GAY MALE” to those who are “NOT looking for black muslims.” Some common themes are a desire to live without “drugs, kids or animals” or “smokers, kids or druggies,” while a few subscribers express more particular preferences, such as preferring to live in a home free of “psychos or anyone on mental medication.” Some subscribers are just looking for someone who will get along with their significant other or [will hold certain religious beliefs].

Roommate publishes these comments as written. It does not provide any specific guidance as to what the essay should contain, nor does it urge subscribers to input discriminatory preferences. Roommate is not responsible, in whole or in part, for the development of this content, which comes entirely from subscribers and is passively displayed by Roommate. Without reviewing every essay, Roommate would have no way to distinguish unlawful discriminatory preferences from perfectly legitimate statements. Nor can there be any doubt that this information was tendered to Roommate for publication online. This is precisely the kind of situation for which § 230 was designed to provide immunity.

We must keep firmly in mind that this is an immunity statute we are expounding, a provision enacted to protect websites against the evil of liability for failure to remove offensive content. Websites are complicated enterprises, and there will always be close cases where a clever lawyer could argue that *something* the website operator did encouraged the illegality. Such close cases, we believe, must be resolved in favor of immunity, lest we cut the heart out of § 230 by forcing websites to face death by ten thousand duck-bites, fighting off claims that they promoted or encouraged—or at least tacitly assented to—the illegality of third parties. Where it is very clear that the website directly participates in developing the alleged illegality—as it is clear here with respect to Roommate’s questions, answers, and the resulting profile pages—immunity will be lost. But in cases of

enhancement by implication or development by inference—such as with respect to the “Additional Comments” here—§ 230 must be interpreted to protect websites not merely from ultimate liability, but from having to fight costly and protracted legal battles.

[This decision’s] message to website operators is clear: If you don’t encourage illegal content, or design your website to require users to input illegal content, you will be immune. We believe that this distinction is consistent with the intent of Congress to preserve the free-flowing nature of Internet speech and commerce without unduly prejudicing the enforcement of other important state and federal laws. When Congress passed § 230 it didn’t intend to prevent the enforcement of all laws online;

rather, it sought to encourage interactive computer services that provide users *neutral* tools to post content online to police that content without fear that through their [screening of offensive material], they would become liable for every single message posted by third parties on their website.

In light of our determination that the CDA does not provide immunity to Roommate for all of the content of its website and email newsletters, we remand for the district court to determine in the first instance whether the alleged actions for which Roommate is not immune violate the FHA.

District court’s decision reversed in part and affirmed in part, and case remanded for further proceedings.

General Dynamics Land Systems, Inc. v. Cline 540 U.S. 581 (U.S. Sup. Ct. 2004)

Section 623 of the federal Age Discrimination in Employment Act (ADEA) makes it unlawful for an employer of at least 20 persons “to fail or refuse to hire or to discharge any individual or otherwise discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual’s age.” According to another ADEA section, the protection against discrimination afforded by § 623 applies only when the affected individual is at least 40 years of age.

A pre-1997 collective bargaining agreement between the United Auto Workers (UAW) and General Dynamics Land Systems, Inc., called for General Dynamics to furnish health benefits to retired employees who had worked for the company for a qualifying number of years. In 1997, however, the UAW and General Dynamics entered into a new collective bargaining agreement that eliminated the obligation of General Dynamics to provide health benefits to employees who retired after the effective date of the new agreement, except for then-current workers who were at least 50 years old at the time of the agreement. Employees in that 50-and-over category would still receive health benefits when they retired.

Dennis Cline was among the General Dynamics employees who were dissatisfied with the new collective bargaining agreement because they were under 50 years of age when the agreement was adopted, and thus would not receive health benefits when they retired. Although they were under 50 years old, Cline and the other employees who later became plaintiffs in the case described below were all at least 40 years of age. They therefore met the ADEA’s minimum age threshold. In a proceeding before the Equal Employment Opportunity Commission (EEOC), Cline and the other plaintiffs asserted that the 1997 collective bargaining agreement violated the ADEA, because the plaintiffs were within the ADEA’s protected class of persons (those at least 40 years of age) and because the agreement discriminated against them “with respect to . . . compensation, terms, conditions, or privileges of employment, because of [their] age” (quoting section 623 of the ADEA). The age discrimination alleged by the plaintiffs was that under the terms of the agreement, their under-50 age was the basis for denying them the more favorable treatment to be received by persons 50 years of age or older. Agreeing with this view of the case, the EEOC invited General Dynamics and the union to settle informally with Cline and the other plaintiffs (hereinafter referred to collectively as “Cline”).

When no settlement occurred, Cline sued General Dynamics for a supposed violation of the ADEA. The federal district court dismissed the case. Cline appealed, and the U.S. Court of Appeals for the Sixth Circuit reversed. The Sixth Circuit reasoned that the prohibition of section 623, covering discrimination against “any individual . . . because of such individual’s age,” was so clear on its face that if Congress had meant to limit its coverage to protect only the older worker against the younger, it would have said so. The United States Supreme Court then granted General Dynamics’ petition for writ of certiorari (i.e., the Supreme Court agreed to decide the case).

Souter, Justice

The Age Discrimination in Employment Act forbids discriminatory preference for the young over the old. The question in this case is whether it also prohibits favoring the old over the young.

The common ground in this case is the generalization that the ADEA's prohibition covers "discriminat[ion] . . . because of [an] individual's age," [if the discrimination] helps the younger by hurting the older. In the abstract, the phrase is open to an argument for a broader construction, since reference to "age" carries no express modifier and the word could be read to look two ways. This more expansive possible understanding does not, however, square with the natural reading of the whole provision prohibiting discrimination, and in fact Congress's interpretive clues speak almost unanimously to an understanding of discrimination as directed against workers who are older than the ones getting treated better.

Congress chose not to include age within discrimination forbidden by Title VII of the Civil Rights Act of 1964 [, which prohibits employment discrimination on the basis of race, color, sex, religion, or national origin]. Instead [Congress] called for a study of the issue by the Secretary of Labor, who concluded that age discrimination was a serious problem [centering around] disadvantage to older individuals from arbitrary and stereotypical employment distinctions (including then-common policies of age ceilings on hiring). . . . [T]he Secretary ultimately took the position that arbitrary discrimination against older workers was widespread and persistent enough to call for a federal legislative remedy. [The Secretary's report] was devoid of any indication that the Secretary had noticed unfair advantages accruing to older employees at the expense of their juniors.

[Congress then began considering legislation dealing with employment-related age discrimination.] Extensive House and Senate hearings ensued. The testimony at the hearings [focused] on unjustified assumptions about the effect of age on ability to work. [In addition, the hearings] specifically addressed higher pension and benefit costs as heavier drags on hiring workers the older they got. The record thus reflects the common facts that an individual's chances to find and keep a job get worse over time; as between any two people, the younger is in the stronger position, the older more apt to be tagged with demeaning stereotype. Not surprisingly, from the voluminous records of the hearings, we have found . . . nothing suggesting that any workers were registering complaints about discrimination in favor of their seniors.

Nor is there any such suggestion in the introductory provisions of the ADEA. [The congressional findings set forth in the introductory provisions] stress the impediments suffered by "older workers . . . in their efforts to retain . . . and especially

to regain employment," the burdens of "arbitrary age limits regardless of potential for job performance," the costs of "otherwise desirable practices [that] may work to the disadvantage of older persons," and "the incidence of unemployment, especially long-term unemployment [, which] is, relative to the younger ages, high among older workers." The statutory objects [specified in the ADEA] were "to promote employment of older persons based on their ability rather than age; to prohibit arbitrary age discrimination in employment; [and] to help employers and workers find ways of meeting problems arising from the impact of age on employment." In sum, . . . all the findings and statements of objectives are either cast in terms of the effects of age as intensifying over time, or are couched in terms that refer to "older" workers, explicitly or implicitly relative to "younger" ones.

Such is the setting of the ADEA's core substantive provision, § 623, prohibiting employers and certain others from "discriminat[ion] . . . because of [an] individual's age," [assuming the individual is at least 40 years of age.] The prefatory provisions and their legislative history [of the ADEA] make a case that we think is beyond reasonable doubt, that the ADEA was concerned to protect a relatively old worker from discrimination that works to the advantage of the relatively young.

Nor is it remarkable that the record is devoid of any evidence that younger workers were suffering at the expense of their elders, let alone that a social problem required a federal statute to place a younger worker in parity with an older one. Common experience is to the contrary, and the testimony, reports, and congressional findings simply confirm that Congress used the phrase "discriminat[ion] . . . because of [an] individual's age" the same way that ordinary people in common usage might speak of age discrimination any day of the week. One commonplace conception of American society in recent decades is its character as a "youth culture," and in a world where younger is better, talk about discrimination because of age is naturally understood to refer to discrimination against the older.

This same, idiomatic sense of the statutory phrase is confirmed by the statute's restriction of the protected class to those 40 and above. If Congress had been worrying about protecting the younger against the older, it would not likely have ignored everyone under 40. The youthful deficiencies of inexperience and unsteadiness invite stereotypical and discriminatory thinking about those a lot younger than 40, and prejudice suffered by a 40-year-old is not typically owing to youth, as 40-year-olds sadly tend to find out. The enemy of 40 is 30, not 50. Thus, the 40-year threshold makes sense as identifying a class requiring protection against preference for their juniors, not as defining a class that might be threatened by favoritism toward seniors.

[Cline argues, however,] that the statute’s meaning is plain when the word “age” receives its natural and ordinary meaning and the statute is read as a whole giving “age” the same meaning throughout. [Cline makes] the dictionary argument that “age” means the length of a person’s life, with the phrase “because of such individual’s age” stating a simple test of causation: “discriminat[ion] . . . because of [an] individual’s age” is treatment that would not have occurred if the individual’s span of years had been longer or shorter. The case for this reading calls attention to the other instances of “age” in the ADEA that are not limited to old age, such as [the section that] gives an employer a defense to charges of age discrimination when “age is a bona fide occupational qualification.” Cline argues that if “age” meant old age, [the section just quoted] would then provide a defense (old age is a bona fide qualification) only for an employer’s action that on our reading would never clash with the statute (because preferring the older is not forbidden).

The argument rests on two mistakes. First, it assumes that the word “age” has the same meaning wherever the ADEA uses it. But this is not so, and Cline simply misemploys the presumption that identical words used in different parts of the same act are intended to have the same meaning. The presumption of uniform usage relents when a word used has several commonly understood meanings among which a speaker can alternate in the course of an ordinary conversation, without being confused or getting confusing.

“Age” is that kind of word. [T]he word “age” standing alone can be readily understood either as pointing to any number of

years lived, or as common shorthand for the longer span and concurrent aches that make youth look good. Which alternative was probably intended is a matter of context; we understand the different choices of meaning that lie behind a sentence [such as] “Age can be shown by a driver’s license,” and the statement, “Age has left him a shut-in.” So it is easy to understand that Congress chose different meanings at different places in the ADEA, as the different settings readily show. Hence the second flaw in Cline’s argument for uniform usage: it ignores the cardinal rule that statutory language must be read in context, [because] a phrase gathers meaning from the words around it. The point here is that we are not asking an abstract question about the meaning of “age”; we are seeking the meaning of the whole phrase “discriminate . . . because of such individual’s age,” where it occurs in the ADEA.

Here, regular interpretive method leaves no serious question. The word “age” takes on a definite meaning from being in the phrase “discriminat[ion] . . . because of such individual’s age,” occurring as that phrase does in a statute structured and manifestly intended to protect the older from arbitrary favor for the younger. We see the text, structure, purpose, and history of the ADEA . . . as showing that the statute does not mean to stop an employer from favoring an older employee over a younger one.

Judgment of Sixth Circuit Court of Appeals reversed in favor of General Dynamics.

General Public Purpose Occasionally, courts construe statutory language in the light of various *general public purposes*. These purposes are not the purposes underlying the statute in question; rather, they are widely accepted general notions of public policy. For example, the Supreme Court once used the general public policy against racial discrimination in education as an argument for denying tax-exempt status to a private university that discriminated on the basis of race.

Prior Interpretations Courts sometimes follow prior cases and administrative decisions interpreting a statute, regardless of the statute’s plain meaning or legislative history. The main argument for following these prior interpretations is to promote stability and certainty by preventing each successive court that considers a statute from adopting its own interpretation. The courts’ willingness to follow a prior interpretation depends on

such factors as the number of past courts adopting the interpretation, the authoritative nature of those courts, and the number of years that the interpretation has been followed.

Maxims Maxims are general rules of thumb employed in statutory interpretation. There are many maxims, which courts tend to use or ignore at their discretion. One example of a maxim is the *ejusdem generis* rule, which says that when general words follow words of a specific, limited meaning, the general language should be limited to things of the same class as those specifically stated. Suppose that the pollution statute quoted earlier listed 12 types of gas-powered vehicles and ended with the words “and other motorized passenger or cargo vehicles.” In that instance, *ejusdem generis* probably would dictate that battery-powered vehicles not be included.

Limits on the Power of Courts By now, you may think that anything goes when courts decide common law cases or interpret statutes. Many factors, however, discourage courts from adopting a freewheeling approach. Their legal training and mental makeup cause judges to be likely to respect established precedents and the will of the legislature. Many courts issue written opinions, which expose judges to academic and professional criticism if the opinions are poorly reasoned. Lower court judges may be discouraged from innovation by the fear of being overruled by a higher court. Finally, political factors inhibit judges. For example, some judges are elected, and even judges with lifetime tenure can sometimes be removed.

An even more fundamental limit on the power of courts is that they cannot make or interpret law until

parties present them with a case to decide. In addition, any such case must be a real dispute. That is, courts generally limit themselves to genuine, existing “cases or controversies” between real parties with tangible opposing interests in the lawsuit. Courts generally do not issue *advisory opinions* on abstract legal questions unrelated to a genuine dispute, and do not decide *feigned controversies* that parties concoct to seek answers to such questions. Courts may also refuse to decide cases that are insufficiently *ripe* to have matured into a genuine controversy, or that are *moot* because there no longer is a real dispute between the parties. Expressing similar ideas is the doctrine of **standing to sue**, which normally requires that the plaintiff have some direct, tangible, and substantial stake in the outcome of the litigation.

The Global Business Environment

Just as statutes may require judicial interpretation when a dispute arises, so may treaties. The techniques that courts use in interpreting treaties correspond closely to the statutory interpretation techniques discussed in this chapter. *Olympic Airways v. Husain*, 540 U.S. 644 (U.S. Sup. Ct. 2004), furnishes a useful example.

In *Olympic Airways*, the U.S. Supreme Court was faced with an interpretation question regarding a treaty, the Warsaw Convention, which deals with airlines’ liability for passenger deaths or injuries on international flights. Numerous nations (including the United States) subscribe to the Warsaw Convention, a key provision of which provides that in regard to international flights, the airline “shall be liable for damages sustained in the event of the death or wounding of a passenger or any other bodily injury suffered by a passenger, if the accident which caused the damage so sustained took place on board the aircraft or in the course of any of the operations of embarking or disembarking.” A separate provision imposes limits on the amount of money damages to which a liable airline may be subjected.

The *Olympic Airways* case centered around the death of Dr. Abid Hanson, a severe asthmatic, on an international flight operated by Olympic. Smoking was permitted on the flight. Hanson was given a seat in the nonsmoking section, but his seat was only three rows in front of the smoking section. Because Hanson was extremely sensitive to secondhand smoke, he and his wife, Rubina Husain, requested various times that he be allowed, for health reasons, to move to a seat farther away from the smoking section. Each time, the request was denied by an Olympic flight attendant. When smoke from the smoking section began to give Hanson difficulty, he used a new inhaler and walked toward the front of the plane to get

some fresher air. Hanson went into respiratory distress, whereupon his wife and a doctor who was on board gave him shots of epinephrine from an emergency kit that Hanson carried. Although the doctor administered CPR and oxygen when Hanson collapsed, Hanson died. Husain, acting as personal representative of her late husband’s estate, sued Olympic in federal court on the theory that the Warsaw Convention made Olympic liable for Hanson’s death. The federal district court and the court of appeals ruled in favor of Husain.

In considering Olympic’s appeal, the U.S. Supreme Court noted that the key issue was one of treaty interpretation: whether the flight attendant’s refusals to reseat Hanson constituted an “accident which caused” the death of Hanson. Noting that the Warsaw Convention itself did not define “accident” and that different dictionary definitions of “accident” exist, the Court looked to a precedent case, *Air France v. Saks*, 470 U.S. 392 (U.S. Sup. Ct. 1985), for guidance. In the *Air France* case, the Court held that the term “accident” in the Warsaw Convention means “an unexpected or unusual event or happening that is external to the passenger.” Applying that definition to the facts at hand, the Court concluded in *Olympic Airways* that the repeated refusals to reseat Hanson despite his health concerns amounted to unexpected and unusual behavior for a flight attendant. Although the refusals were not the sole reason why Hanson died (the smoke itself being a key factor), the refusals were nonetheless a significant link in the causation chain that led to Hanson’s death. Given the definition of “accident” in the Court’s earlier precedent, the phrasing, the Warsaw Convention, and the underlying public policies supporting it, the Court concluded that the refusals to reseat Hanson constituted an “accident” covered by the Warsaw Convention. Therefore, the Court affirmed the decision of the lower courts.

State and federal **declaratory judgment** statutes, however, allow parties to determine their rights and duties even though their controversy has not advanced to the point where harm has occurred and legal relief may be necessary. This enables them to determine their legal position without taking action that could expose them to liability. For example, if Darlene believes that something she plans to do would not violate Earl's copyright on a work of authorship but she recognizes that he may take a contrary view, she may seek a declaratory judgment on the question rather than risk Earl's lawsuit by proceeding to do what she had planned. Usually, a declaratory judgment is awarded only when the parties' dispute is sufficiently advanced to constitute a real case or controversy.

APPENDIX

Reading and Briefing Cases Throughout this text, you will encounter cases—the judicial opinions accompanying court decisions. These cases are highly edited versions of their much longer originals. What follows are explanations and pointers to assist you in studying cases.

1. Each case has a *case name* that includes at least some of the parties to the case. Because the order of the parties may change when a case is appealed, do not assume that the first party listed is the plaintiff (the party suing) and the second the defendant (the party being sued). Also, because some cases have many plaintiffs and/or many defendants, the parties discussed in the court's opinion sometimes differ from those found in the case name.
 2. Each case also has a *citation*, which includes the volume and page number of the legal reporter in which the full case appears, plus the year the case was decided. *General Dynamics v. Cline*, for instance, begins on page 581 of volume 540 of the United States Reports (the official reporter for U.S. Supreme Court decisions), and was decided in 2004. (Each of the many different legal reporters has its own abbreviation. The list is too long to include here.) In the parenthesis accompanying the date, we also give you some information about the court that decided the case. For example, "U.S. Sup. Ct." is the United States Supreme Court, "3d Cir." is the U.S. Court of Appeals for the Third Circuit, "S.D.N.Y." is the U.S. District Court for the Southern District of New York, "Minn. Sup. Ct."
- is the Supreme Court of Minnesota, and "Mich. Ct. App." is the Michigan Court of Appeals (a Michigan intermediate appellate court). Chapter 2 describes the various kinds of courts.
3. At the beginning of each case, there is a *statement of facts* containing the most important facts that gave rise to the case.
 4. Immediately after the statement of facts, we give you the case's *procedural history*. This history tells you what courts previously handled the case you are reading, and how they dealt with it.
 5. Next comes your major concern: the *body of the court's opinion*. Here, the court determines the applicable law and applies it to the facts to reach a conclusion. The court's discussion of the relevant law may be elaborate; it may include prior cases, legislative history, applicable public policies, and more. The court's application of the law to the facts usually occurs after it has arrived at the applicable legal rule(s), but also may be intertwined with its legal discussion.
 6. At the very end of the case, we complete the procedural history by stating the court's *decision*. For example, "Judgment reversed in favor of Smith" says that a lower court judgment against Smith was reversed on appeal. This means that Smith's appeal was successful and Smith wins.
 7. The cases' main function is to provide concrete examples of rules stated in the text. (Frequently, the text tells you what point the case illustrates.) In studying law, it is easy to conclude that your task is finished once you have memorized a black letter rule. Real-life legal problems, however, seldom present themselves as abstract questions of law; instead, they are hidden in particular situations one encounters or particular actions one takes. Without some sense of a legal rule's real-life application, your knowledge of that rule is incomplete. The cases help provide this sense.
 8. You may find it helpful to *brief* the cases. There is no one correct way to brief a case, but most good briefs contain the following elements: (1) a short statement of the relevant facts; (2) the case's prior history; (3) the question(s) or issue(s) the court had to decide; (4) the answer(s) to those question(s); (5) the reasoning the court used to justify its decision; and (6) the final result. Using "P" and "D" for the plaintiff and defendant, a brief of the *General Dynamics* case might look this way:

General Dynamics v. Cline

Facts Under a pre-1997 collective bargaining agreement between the United Auto Workers (UAW) and

General Dynamics, retired employees of General Dynamics received health benefits from the company if they had worked there a sufficiently long period of time. A 1997 agreement between the UAW and General Dynamics eliminated this company obligation as to employees who retired after the 1997 effective date of the agreement, except for workers who were already at least 50 years old when the agreement took effect. The latter workers would still receive health benefits when they retired. Because Cline, an employee of General Dynamics, was under 50 at the time of the 1997 agreement, he supposedly would not receive health benefits when he retired. However, Cline was at least 40 years of age—the minimum age necessary for a worker to be protected by the Age Discrimination in Employment Act (ADEA), which bars discrimination in a broad range of employment matters “because of [the] age” of the allegedly discriminated-against individual.

History Cline (P) sued General Dynamics (D), alleging that the 1997 collective bargaining agreement violated the ADEA by discriminating against him “because of [his] age.” P argued there was age discrimination because the fact that he was under 50 years old in 1997 meant that when he retired, he would not receive the health benefits that were still being guaranteed, upon retirement, to workers who were 50 or older in 1997. P lost in the federal district court, but the court of appeals reversed. D appealed to the U.S. Supreme Court.

Issue Is the ADEA’s ban on employment discrimination on the basis of “age” violated when the supposed discrimination works in favor of employees who are

older and against employees who are younger but are at least 40 years old?

Holding No, there is no ADEA violation in such a situation.

Reasoning Even though the literal language of the relevant ADEA section’s prohibition of employment discrimination “because of . . . age” could be read as allowing an ADEA claim even when an employer’s age-based action favors older workers over younger workers, the statute should not be read that way. The social context in which the ADEA was enacted, the legislative history of the ADEA, and the congressional findings in the introductory sections of the ADEA all indicate that when the relevant ADEA section banned discrimination “because of . . . age,” Congress was concerned about the persistent problem posed by employers who took age-based actions favoring younger workers over older workers. Nothing indicates that Congress was worried about employers’ age-based actions that favored older employees, even when the disadvantaged younger employees were within the class of persons the ADEA normally protects (persons at least 40 years of age). In addition, a commonsense reading of the statutory context in which the “discrimination . . . because of such individual’s age” language appeared bolsters the conclusion that Congress meant only to prohibit age-based employment discrimination that favored younger persons at the expense of older ones. Congress did not seek to stop employers from favoring older employees over younger workers.

Result Court of appeals decision reversed. D wins.

Problems and Problem Cases

1. Law enforcement officers arrived at a Minnesota residence in order to execute arrest warrants for Andrew Hyatt. During the officers’ attempt to make the arrest, Hyatt yelled something such as “Go ahead, just shoot me, shoot me,” and struck one of the officers. Another officer then called for assistance from City of Anoka, Minnesota, police officer Mark Yates, who was elsewhere in the residence with his leashed police dog, Chips. Yates entered the room where Hyatt was, saw the injured officer’s bloodied face, and observed Hyatt standing behind his wife (Lena Hyatt). One of the officers acquired the impression that Lena may have been serving as a shield for her husband. When Andrew again yelled “Shoot me, shoot me” and ran toward the back of the room, Yates released Chips

from the leash. Instead of pursuing Andrew, Chips apprehended Lena, taking her to the ground and performing a “bite and hold” on her leg and arm. Yates then pursued Andrew, who had fled through a window. When Yates later re-entered the room, he released Chips from Lena and instructed another officer to arrest her on suspicion of obstruction of legal process. Lena was taken by ambulance to a hospital and treated for lacerations on her elbow and knee. She later sued the City of Anoka, seeking compensation for medical expenses and pain and suffering. Her complaint alleged liability on the basis of Minnesota’s dog bite statute, which read as follows:

“If a dog, without provocation, attacks or injures any person who is acting peaceably in any place where the person may lawfully be, the owner of the dog is liable

in damages to the person so attacked or injured to the full amount of the injury sustained. The term “owner” includes any person harboring or keeping a dog but the owner shall be primarily liable. The term “dog” includes both male and female of the canine species.”

In defense, the city argued that the dog bite statute does not apply to police dogs and municipalities that own them. Was the city correct?

2. As part of its collective bargaining agreement with the United Steelworkers of America, the Kaiser Aluminum and Chemical Company established an on-the-job craft training program at its Gramercy, Louisiana, plant. The selection of trainees for the program was generally based on seniority, but the selection guidelines included an affirmative action feature under which at least 50 percent of the new trainees had to be black until the percentage of black skilled craft workers in the plant approximated the percentage of blacks in the local labor force. The purposes of the affirmative action feature were to break down old patterns of racial segregation and hierarchy, and to open up employment opportunities for blacks in occupations that had traditionally been closed to them. Kaiser employee Brian Weber, who was white, applied for the program but was rejected. He would have qualified for the program had the affirmative action feature not existed. Weber sued Kaiser and the union in federal district court, arguing that the racial preference violated Title VII of the Civil Rights Act of 1964. Section 703(a) of the Act states: “It shall be an unlawful employment practice for an employer . . . to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual’s race, color, religion, sex, or national origin.” Section 703(d) includes a similar provision specifically forbidding racial discrimination in admission to apprenticeship or other training programs. Weber won his case in the federal district court and in the federal court of appeals. Kaiser and the union appealed to the U.S. Supreme Court. Did the affirmative action feature of the training program violate Title VII’s prohibition of employment discrimination on the basis of race?
3. The Freedom of Access to Clinic Entrances Act (FACE), a federal statute, provides for penalties against anyone who “by force or threat of force or by physical obstruction . . . intentionally injures, intimidates, or interferes . . . with any person . . . in order to intimidate such person . . . from obtaining or providing reproductive health services.” Two persons, Lynch and Moscinski, blocked access to a clinic that offered such services. The federal government sought an injunction barring Lynch and Moscinski from impeding access to, or coming within 15 feet of, the clinic. In defense, the defendants argued that FACE protects the taking of innocent human life, that FACE is therefore contrary to natural law, and that, accordingly, FACE should be declared null and void. A federal district court issued the injunction after finding that Lynch and Moscinski had violated FACE by making entrance to the clinic unreasonably difficult. On appeal, the defendants maintained that the district court erred in not recognizing their natural law argument as a defense. Were the defendants correct?
4. The Anti-Drug Abuse Act of 1988 provides that each “public housing agency shall utilize leases which . . . provide that any criminal activity that threatens the health, safety, or right to peaceful enjoyment of the premises by other tenants or any drug-related criminal activity on or off such premises, engaged in by a public housing tenant, any member of the tenant’s household, or any guest or other person under the tenant’s control, shall be cause for termination of tenancy.” Department of Housing and Urban Development (HUD) regulations implementing the Act authorize local public housing authorities to evict tenants for drug-related activity of persons listed in the statute even if the tenants did not know of the activity. The Oakland Housing Authority (OHA) instituted eviction proceedings in state court against four tenants, alleging that they had violated a lease provision obligating tenants to “assure that . . . any member of the household, a guest, or another person under the tenant’s control, shall not engage in . . . any drug-related criminal activity on or near the premises.” Allegedly, the respective grandsons of tenants Lee and Hill were caught smoking marijuana in the apartment complex parking lot, and the daughter of tenant Rucker was found with cocaine and a crack cocaine pipe three blocks from Rucker’s apartment. In addition, on three instances within a two-month period, 75-year-old tenant Walker’s caregiver and two others were found with cocaine in Walker’s apartment. Lee, Hill, and Rucker claimed to have been unaware of their grandsons’ and daughter’s illegal drug abuse, and Walker fired his caregiver upon receiving the eviction notice. In response to OHA’s actions, the four tenants just mentioned filed suit in federal court,

arguing that the Anti-Drug Abuse Act should not be interpreted as authorizing the eviction of innocent tenants (i.e., tenants who did not know of the drug activity on or near the premises). Were the tenants correct?

5. The Federal Tort Claims Act (FTCA) waives the federal government's sovereign immunity concerning claims arising out of torts committed by federal employees. Therefore, the government generally can be sued for tort claims based on wrongful actions by federal employees. However, there are exceptions to this waiver of sovereign immunity. Where an exception applies, a tort claim cannot be brought against the government. One of the exceptions to the sovereign immunity waiver is set forth in FTCA § 2680(c). This exception is for "any claim arising in respect of the assessment or collection of any tax or customs duty, or the detention of any . . . property by any officer of customs or excise or any other law enforcement officer." When a prisoner was transferred from a federal prison in Georgia to another federal prison in Kentucky, he noticed that several items of religious and nostalgic significance were missing from his bags of personal property, which had been shipped to the new facility by the Federal Bureau of Prisons (FBOP). Alleging that FBOP officers had lost his property, petitioner filed suit under the FTCA. The district court dismissed the claim, concluding that it was barred by § 2680(c) and its broad reference to "any other law enforcement officer." The U.S. Court of Appeals for the Eleventh Circuit affirmed. In doing so, the Eleventh Circuit rejected the prisoner's argument that the statutory phrase "any officer of customs or excise or any other law enforcement officer" applies only to officers enforcing customs or excise laws and not to the FBOP officers (who obviously were not acting as enforcers of customs or excise laws). The prisoner appealed to the U.S. Supreme Court. In rejecting the prisoner's argument, did the Eleventh Circuit correctly interpret § 2680(c)?
6. As noted in the preceding problem case, the Federal Tort Claims Act (FTCA) waives the federal government's sovereign immunity concerning claims arising out of torts committed by federal employees. This waiver of sovereign immunity allows tort claims based on wrongful actions by federal employees, except when an exception to the waiver applies (in which event a tort claim cannot be brought or pursued against the government). One of the exceptions to the sovereign immunity waiver is set forth in FTCA § 2680(b). This exception is for "loss, miscarriage, or negligent transmission of letters or postal matter." Barbara Dolan was injured when she tripped and fell over packages and letters that a U.S. Postal Service (USPS) mail carrier left on the porch of her home. Dolan sued the USPS under the FTCA on the theory that the USPS mail carrier had been negligent—in other words, had failed to use reasonable care—in leaving the items of mail on the porch. The USPS argued that the case should be dismissed because it fell within § 2680(b)'s reference to claims arising out of "negligent transmission of letters or postal matter." Agreeing with this argument, the district court dismissed the case. The U.S. Court of Appeals for the Third Circuit affirmed. Dolan appealed to the U.S. Supreme Court, arguing that the lower courts had erroneously interpreted § 2680(b). Were the lower courts correct in their interpretation of § 2680(b)? Was Dolan's claim barred by the "negligent transmission of letters or postal matter" language?
7. Many states and localities used to have so-called Sunday Closing laws—statutes or ordinances forbidding certain business from being conducted on Sunday. A few may still have such laws. Often, these laws have not been obeyed or enforced. What would an extreme legal positivist tend to think about the duty to enforce and obey such laws? What would a natural law exponent who strongly believes in economic freedom tend to think about this question? What about a natural law adherent who is a Christian religious traditionalist? What observation would almost any legal realist make about Sunday Closing laws? With these laws looked at from a sociological perspective, finally, what social factors help explain their original passage, their relative lack of enforcement today, and their continued presence on the books despite their lack of enforcement?
8. Assume that you are a trial court judge in Nebraska's state court system and that *Sigler v. Patrick* is one of the civil cases you must decide. Your research has revealed that the critical issue in *Sigler* is the same issue presented in *Churchich v. Duda*, a 1996 decision of the Supreme Court of Nebraska (the highest court in the Nebraska system). The *Churchich* decision established a new common law rule for Nebraska. Your research has also revealed that in 2007, the Nebraska legislature enacted a statute that states a rule different from the common law rule established

in *Churchich*. You believe, however, that the 2007 statute offers an unwise rule, and that the common law rule set forth in *Churchich* amounts to much better public policy. In deciding the *Sigler* case, are you free to apply the *Churchich* rule? Why or why not?

9. One wheel of a pre-1916 automobile manufactured by the Buick Motor Company was made of defective wood. Buick could have discovered the defect had it made a reasonable inspection after it purchased the wheel from another manufacturer. Buick sold the car to a retail dealer, who then sold it to MacPherson. While MacPherson was driving his new Buick, the defective wheel collapsed and he was thrown from the vehicle. Was Buick, which did not deal directly with MacPherson, liable for his injuries?
10. In 1997, the Drudge Report, a free Internet gossip page hosted by America Online (AOL), reported that Sidney Blumenthal, a Clinton Administration aide, had a “spousal abuse past that [had] been effectively covered up.” Blumenthal and his wife then brought a defamation action against AOL and Matt Drudge, the operator of the Drudge Report. Although Drudge posted the content that appeared on the Drudge Report, AOL retained certain editorial rights in regard to the page. The Blumenthals took the position that the editorial rights retained by AOL made AOL a publisher of the Drudge Report’s statements and, as such, a liable party in addition to Drudge under the common law of defamation. AOL argued, however,

that § 230 of the federal Communications Decency Act protected it against liability. Section 230 states that “[n]o provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider.” How did the court rule? Did AOL face potential liability under the common law of defamation, or did § 230 of the Communications Decency Act protect AOL against liability?

Online Research

Statutory Interpretation

Statutory interpretation was critical to the Supreme Court of Colorado’s resolution of a 2007 case, *Pringle v. Valdez*. Using an online source or sources, locate the *Pringle* decision. Then do the following:

1. Read Justice Bender’s majority opinion and prepare a case brief of the sort described in this chapter’s appendix on “Reading and Briefing Cases.”
2. Read the dissenting opinion authored by Justice Coats. Then prepare a one-page essay that (a) summarizes the principal arguments made in the dissenting opinion; (b) sets forth your view on which analysis—the majority opinion’s or the dissenting opinion’s—is better; and (c) provides the reasons for the view you have expressed in (b).

chapter 2

THE RESOLUTION OF PRIVATE DISPUTES

Victoria Wilson, a resident of Illinois, wishes to bring an invasion of privacy lawsuit against XYZ Co. because XYZ used a photograph of her, without her consent, in an advertisement for one of the company's products. Wilson will seek money damages of \$150,000 from XYZ, whose principal offices are located in New Jersey. A New Jersey newspaper was the only print media outlet in which the advertisement was published. However, XYZ also placed the advertisement on the firm's Web site. This Web site may be viewed by anyone with Internet access, regardless of the viewer's geographic location.

Consider the following questions regarding Wilson's case as you read Chapter 2:

- Where, in a geographic sense, may Wilson properly file and pursue her lawsuit against XYZ?
- Must Wilson pursue her case in a state court, or does she have the option of litigating in federal court?
- Assuming that Wilson files her case in a state court, what strategic option may XYZ exercise if it acts promptly?
- Regardless of the court in which the case is litigated, what procedural steps will occur as the lawsuit proceeds from beginning to end?
- If Wilson requests copies of certain documents in XYZ's files, does XYZ have a legal obligation to provide the copies? What if Wilson requests copies of e-mails written by XYZ employees? Is XYZ legally required to provide the copies? What ethical obligations attend Wilson's making, and XYZ's responses to, such requests?

BUSINESS LAW COURSES examine many substantive legal rules that tell us how to behave in business and in society. Examples include the principles of contract, tort, and agency law, as well as those of many other legal areas addressed later in this text. Most of these principles are applied by courts as they decide civil cases involving private parties. This chapter lays a foundation for the text's discussion of substantive legal rules by examining the court systems of the United States and by outlining how civil cases proceed from beginning to end. The chapter also explores related subjects, including *alternative dispute resolution*, a collection of processes for resolving private disputes outside the court systems.

State Courts and Their Jurisdiction

The United States has 52 court systems—a federal system plus a system for each state and the District of Columbia. This section describes the various types of state courts.

It also considers the important subject of *jurisdiction*, something a court must have if its decision in a case is to be binding on the parties.

Courts of Limited Jurisdiction Minor criminal cases and civil disputes involving small amounts of money or specialized matters frequently are decided in *courts of limited jurisdiction*. Examples include traffic courts, probate courts, and small claims courts. Such courts often handle a large number of cases. In some of these courts, procedures may be informal and parties often argue their own cases without representation by attorneys. Courts of limited jurisdiction often are not courts of record—meaning that they may not keep a transcript of the proceedings conducted. Appeals from their decisions therefore require a new trial (a trial *de novo*) in a trial court.

Trial Courts Courts of limited jurisdiction find the relevant facts, identify the appropriate rule(s) of law, and combine the facts and the law to reach a decision.

State trial courts do the same, but differ from inferior courts in two key ways. First, they are not governed by the subject-matter restrictions or the limits on civil damages or criminal penalties that govern courts of limited jurisdiction. Cases involving significant dollar amounts or major criminal penalties usually begin, therefore, at the trial court level. Second, trial courts are courts of record that keep detailed records of hearings, trials, and other proceedings. These records become important if a trial court decision is appealed. The trial court's fact-finding function may be handled by the judge or by a jury. Determination of the applicable law, however, is always the judge's responsibility. In cases pending in trial courts, the parties nearly always are represented by attorneys.

States usually have at least one trial court for each county. It may be called a circuit, superior, district, county, or common pleas court. Most state trial courts can hear a wide range of civil and criminal cases, with little or no subject-matter restriction. They may, however, have civil and criminal divisions. If no court of limited jurisdiction deals with these matters, state trial courts may also contain other divisions such as domestic relations courts or probate courts.

Appellate Courts State appeals (or appellate) courts generally decide only legal questions. Instead of receiving new evidence or otherwise retrying the case, appellate courts review the record of the trial court proceedings. Although appellate courts correct legal errors made by the trial judge, they usually accept the trial court's findings of fact. Appellate courts also may hear appeals from state administrative agency decisions. Some states have only one appeals court (usually called the supreme court), but most also have an intermediate appellate court. The U.S. Supreme Court sometimes hears appeals from decisions of the state's highest court.

Jurisdiction and Venue The party who sues in a civil case (the plaintiff) cannot sue the defendant (the party being sued) in whatever court the plaintiff happens to prefer. Instead, the chosen court—whether a state court or a federal court—must have **jurisdiction** over the case. Jurisdiction is a court's power to hear a case and to issue a decision binding on the parties. In order to render a binding decision in a civil case, a court must have not only subject-matter jurisdiction but also in personam jurisdiction or in rem jurisdiction. Even if a court has jurisdiction, applicable **venue** requirements

must also be satisfied in order for the case to proceed in that court.

Subject-Matter Jurisdiction Subject-matter jurisdiction is a court's power to decide the *type* of dispute involved in the case. Criminal courts, for example, cannot hear civil matters. Similarly, a \$500,000 claim for breach of contract cannot be pursued in a small claims court.

In Personam Jurisdiction Even a court with subject-matter jurisdiction cannot decide a civil case unless it also has either **in personam jurisdiction** or **in rem jurisdiction**. In personam jurisdiction is based on the residence, location, or activities of the defendant. A state court has in personam jurisdiction over defendants who are citizens or residents of the state (even if situated out-of-state), who are within the state's borders when process is served on them (even if nonresidents),¹ or who consent to the court's authority (for instance, by entering the state to defend against the plaintiff's claim).² The same principle governs federal courts' in personam jurisdiction over defendants.

In addition, most states have enacted "long-arm" statutes that give their courts in personam jurisdiction over certain out-of-state defendants. Under these statutes, nonresident individuals and businesses become subject to the jurisdiction of the state's courts by, for example, doing business within the state, contracting to supply goods or services within the state, or committing a tort (a civil wrong) within the state. Some long-arm statutes are phrased with even broader application in mind. Federal law, moreover, permits federal courts to rely on state long-arm statutes as a basis for obtaining in personam jurisdiction over nonresident defendants.

Even if a long-arm statute applies, however, a state or federal court's assertion of in personam jurisdiction over an out-of-state defendant is subject to federal due process standards. The *Bombliss* case, which follows shortly, addresses long-arm statute and due process issues arising in a context involving Internet communications. For further discussion of in personam jurisdiction issues, see the *Internet Solutions* case and the Global Business Environment box, both of which appear later in the chapter.

¹Service of process is discussed later in the chapter.

²In many states, however, out-of-state defendants may make a *special appearance* to challenge the court's jurisdiction without consenting to the court's authority.

Bombliss v. Cornelsen

824 N.E.2d 1175 (Ill. App. 2005)

Ron and Catherine Bombliss were dog breeders who lived in Illinois. They bred Tibetan mastiffs, as did Oklahoma residents Anne and Jim Cornelsen. When Anne Cornelsen telephoned the Bomblisses and said she was ready to sell two litters of Tibetan mastiff puppies, Ron Bombliss expressed interest in purchasing two females of breeding quality.

A Tibetan mastiff named Mulan was the mother of one of the two litters of puppies the Cornelsens were offering for sale. Mulan was co-owned by Richard Eichhorn. Pursuant to an agreement containing a written guarantee that Mulan was free of genetic defects, Eichhorn provided Mulan to the Cornelsens for breeding purposes. The agreement between Eichhorn and the Cornelsens entitled Eichhorn to odd-numbered pups from Mulan's first two litters. However, in the event a genetic defect became apparent, Eichhorn would not receive any puppies. According to the complaint filed by the Bomblisses in the case described below, Anne Cornelsen was angry with Eichhorn because Mulan was infected with roundworms and ticks when Eichhorn delivered the dog to the Cornelsens. Anne allegedly told the Bomblisses that she wanted to prevent Eichhorn from getting any of Mulan's pups.

In January 2002, the Bomblisses traveled to Oklahoma to see the puppies. During their visit, they observed that Mulan and some of her pups appeared sick and worm-infested. They urged Anne to get the sick puppies to the veterinarian immediately. The Bomblisses selected one healthy female from each litter and paid the agreed price with the understanding that the Cornelsens would guarantee the puppies as breeding stock, free from genetic diseases or defects, for three years. According to the Bomblisses' complaint, Anne waited two weeks to take one of the sick pups to the veterinarian. It was then confirmed that the pup had pneumonia. Approximately one month later, Anne posted a message in a Tibetan mastiff chat room on the Internet. In the message, Anne sought advice as to why a three-month-old pup from Mulan's litter was critically ill, even though it had been wormed. She subsequently posted messages stating that she believed the puppy suffered from a genetic disease, and that all of the puppies from the same litter should be spayed or neutered rather than used for breeding. Nevertheless, in April 2002, Anne completed American Kennel Club (AKC) registration papers for Mohanna, one of the sick puppy's littermates that had been sold to plaintiffs in January. These papers, which Anne mailed to the Bomblisses' home in Illinois, stated that Mohanna was "for breeding."

After learning of Anne's chat room postings, the Bomblisses had blood tests done on Mohanna. The tests indicated that Mohanna had no genetic disorders. The Bomblisses later sued the Cornelsens in an Illinois court on various legal theories, including tortious interference with prospective business advantage. The various claims made by the plaintiffs centered around contentions that the defendants knowingly published false statements about Mohanna's genetic line in order to retaliate against Eichhorn, and that, as a consequence, the plaintiffs' negotiations with several potential puppy customers had fallen through. The plaintiffs also alleged that they were denied membership in Internet discussion groups, and that the defendants' comments harmed their reputations.

Because the defendants were residents of Oklahoma and because they believed that the Illinois long-arm statute did not apply, they asked the Illinois trial court to dismiss the complaint for lack of in personam jurisdiction. When the trial court granted the defendants' request, the plaintiffs appealed to the Illinois Court of Appeals.

McDade, Justice

The issue we are asked to determine is whether this state's long-arm statute permits Illinois courts to exercise personal jurisdiction over the Oklahoma defendants.

Specific jurisdiction refers to jurisdiction over a defendant in a suit arising out of or related to the defendant's contacts with the forum. Plaintiffs argue that specific in personam jurisdiction is established . . . because the Cornelsens intentionally directed tortious activities at the Illinois plaintiffs [and] because the assertion of jurisdiction comports with the due process clauses of the Illinois and United States Constitutions. Relevant to our inquiry are the following provisions of the Illinois long-arm statute:

(a) Any person, whether or not a citizen or resident of this State, who in person or through an agent does any

of the acts hereinafter enumerated, thereby submits such person, and, if an individual, his or her personal representative, to the jurisdiction of the courts of this State as to any cause of action arising from the doing of any of such acts:

* * * *

(2) The commission of a tortious act within this State;

* * * *

(c) A court may also exercise jurisdiction on any other basis now or hereafter permitted by the Illinois Constitution and the Constitution of the United States.

Subsection (c) [of the long-arm statute] has been interpreted to mean that if contacts between the defendant and Illinois are sufficient to satisfy due process under the state and federal

constitutions, no further inquiry is necessary to satisfy the statute. Accordingly, if the constitutional guarantees of due process are satisfied in this case, we need not determine whether plaintiffs have established jurisdiction under the alternative “tortious act” provision.

The assertion of specific in personam jurisdiction satisfies federal due process guarantees so long as the defendant has sufficient “minimum contacts” with the forum state, such that maintaining an action there comports with “traditional notions of fair play and substantial justice.” *International Shoe Co. v. Washington*, 326 U.S. 310 (1945). “Minimum contacts” must involve acts by which the defendant purposefully avails himself of the privilege of conducting activities within the forum state, thereby invoking the benefits and protection of its laws. *Hanson v. Denckla*, 357 U.S. 235 (1958). The defendant’s conduct with respect to the forum state must be such that he would reasonably anticipate being haled into that state’s court. *World-Wide Volkswagen Corp. v. Woodson*, 444 U.S. 286 (1980). The factors a court must consider include (1) whether the defendant has sufficient minimum contacts with the forum state, (2) whether the cause of action arises out of these contacts, and (3) whether it is reasonable to require the defendant to litigate in the forum state. *Burger King Corp. v. Rudzewicz*, 471 U.S. 462 (1985). We analyze each factor in turn.

When the parties have a contractual relationship, minimum contacts may be shown by the parties’ negotiations preceding their agreement, the course of dealing between the parties, the terms of the agreement and foreseeable future consequences arising out of the agreement. Where the defendant is shown to have deliberately engaged in significant activities within the forum state or created ongoing obligations with a resident of the forum state, the defendant has accepted the privilege of doing business with the forum state, and it is not unreasonable to require him to litigate there.

In this case, plaintiffs allege that defendants telephoned plaintiffs at their residence in Illinois and initiated negotiations for the sale of pick-of-the-litter “breeding quality” puppies. After plaintiffs [visited Oklahoma, purchased Mohanna and another puppy, and] returned to Illinois, defendants forwarded AKC registration papers through the United States postal service to plaintiffs’ Illinois residence. [The mailed papers] documented Mohanna’s lineage and [stated] that she was sold “for breeding purposes.” If the only contacts defendants had with Illinois consisted of a single telephone call and one mailing in connection with their sale of the two pups to plaintiffs, we might agree with the trial court that plaintiffs failed to establish sufficient minimum contacts to satisfy due process. But, plaintiffs insist, there was more.

Plaintiffs allege, and defendants agree, that defendants maintain an interactive commercial website advertising their

pups and encouraging visitors to communicate with them about potential purchases of puppies via a direct link to defendants’ e-mail address. Moreover, plaintiffs allege, defendants’ publication of untrue statements about Mohanna’s lineage in Tibetan mastiff chat rooms constitutes activity in Illinois. According to plaintiffs, defendants’ statements targeted Mohanna and her littermates and falsely indicated that no genetically sound puppies would result from breeding Mohanna.

The type of Internet activity that is sufficient to establish personal jurisdiction remains an emerging area of jurisprudence. For ease of analysis, a “sliding scale” approach has been adopted. *Zippo Manufacturing Co. v. Zippo Dot Com, Inc.*, 952 F. Supp. 1119 (W.D. Pa. 1997). At one end, jurisdiction may be asserted if the [nonresident] defendant transacts business in [the forum state] via an interactive website where contracts are completed online and the defendant derives profits directly from web-related activity. At the opposite end of the scale, jurisdiction does not attach where the nonresident maintains a passive website that merely provides information about the defendant’s products. Between these types of websites lies a third category that is interactive, in that it allows customers [in whatever states they are located] to communicate regarding the defendant’s services or products. This third category may or may not be sufficient to assert in personam jurisdiction, depending on the level of interactivity and the commercial nature of the information exchanged.

It is clear to us that defendants’ website falls within the third category. If defendants’ commercial website inviting prospective puppy purchasers to communicate with them by e-mail were the full extent of their Internet activity, we would not find sufficient purposeful contacts with Illinois to assert long-arm jurisdiction. However, the pleadings at issue establish that defendants’ activity in the Tibetan mastiff chat rooms also concerned the dog breeding business and should be considered, especially since defendants’ messages in the chat rooms pertained to the lineage of plaintiffs’ AKC-registered, “breeding quality” pup in Illinois. In our opinion, the totality of defendants’ activities in Illinois, including (1) the contract negotiations and follow-up AKC registration of Mohanna, (2) maintenance of a commercial interactive website, and (3) use of Tibetan mastiff chat rooms to reach potential customers of Tibetan mastiff breeders, including plaintiffs, were of sufficient quantity and quality to constitute minimum contacts in Illinois under federal due process analysis.

Next, we must consider whether plaintiffs’ cause of action arose out of defendants’ contacts with Illinois. This question is easily resolved in plaintiffs’ favor. Plaintiffs’ primary complaint is of tortious interference with prospective business advantage. According to the complaint, defendants’ initial contact was by telephone, offering to sell “pick-of-the-litter” female pups to

plaintiffs. They followed up on the agreement with a contact by mail, forwarding AKC registration papers to plaintiffs' home showing that Mohanna was "for breeding." They subsequently published allegedly false information about Mohanna's lineage in Internet chat rooms targeting Tibetan mastiff owners and breeders, again reaching into Illinois and adversely affecting plaintiffs' Illinois dog-breeding operation. Accordingly, it is clear that defendants' contacts with Illinois gave rise to plaintiffs' cause of action.

Next, we consider whether it is reasonable to require defendants to litigate in Illinois. Again, several factors guide this inquiry: (1) the burden on the defendant of defending the action in the forum state; (2) the forum state's interest in adjudicating the dispute; (3) the plaintiff's interest in obtaining effective relief; (4) the interstate judicial system's interest in obtaining the most efficient resolution of the action; and (5) the shared interests of the several states in advancing fundamental social policies. *World-Wide Volkswagen* [cited earlier]. If the plaintiff has established that the defendant purposely directed his activities at the forum state, it is the defendant's burden to show that litigating the dispute in that state would be unreasonable. *Burger King* [cited earlier].

Here, plaintiffs have shown that defendants purposely directed their activities at Illinois by initiating negotiations with regard to the sale of two pups. Defendants also purposely posted messages in Internet chat rooms impugning the genetic integrity of Mohanna and her littermates. Even if, as plaintiffs allege, defendants' primary purpose was to cover up a breach of their contractual obligation with Eichhorn in California, they

reasonably should have anticipated that messages to other Tibetan mastiff breeders and owners would cause economic damage to plaintiffs' Illinois dog-breeding enterprise. Under the circumstances, it was defendants' burden to show that litigating the cause in Illinois would be unreasonable. This, they have not done.

First, defendants have not shown that it would be unduly burdensome for them to defend this action in Illinois. It would appear that most of the documentary evidence and some of the witnesses are situated in Illinois. The inconvenience to defendants of litigating here is no more burdensome to them than the inconvenience of litigating in Oklahoma would be to plaintiffs. Turning to the second factor, Illinois has a strong interest in providing its residents with a convenient forum. Third, any damages sustained by plaintiffs would have affected their interests in Illinois. And, finally, defendants have advanced no compelling argument for finding that litigating the cause in Oklahoma would serve the interstate judicial system, or that the shared interests of both states in advancing fundamental social policies would be better served by litigating in Oklahoma.

In sum, we [conclude] that the Illinois court's assertion of in personam jurisdiction over the Cornelsens does not offend federal due process concerns. For [essentially] the same reasons that in personam jurisdiction does not offend the federal constitution's due process protections, we also . . . conclude that the assertion of in personam jurisdiction comports with this state's due process guaranty.

Trial court's dismissal for lack of in personam jurisdiction reversed, and case remanded for further proceedings.

In Rem Jurisdiction In rem jurisdiction is based on the presence of *property* within the state. It empowers state courts to determine rights in that property even if the persons whose rights are affected are outside the state's in personam jurisdiction. For example, a state court's decision regarding title to land within the state is said to bind the world.³

³Another form of jurisdiction, *quasi in rem jurisdiction* or *attachment jurisdiction*, also is based on the presence of property within the state. Unlike cases based on in rem jurisdiction, cases based on quasi in rem jurisdiction do not necessarily determine rights in the property itself. Instead, the property is regarded as an extension of the out-of-state defendant—an extension that sometimes enables the court to decide claims unrelated to the property. For example, a plaintiff might attach the defendant's bank account in the state where the bank is located, sue the defendant on a tort or contract claim unrelated to the bank account, and recover the amount of the judgment from the account if the suit is successful.

Venue Even if a court has jurisdiction, it may be unable to decide the case because **venue** requirements have not been met. Venue questions arise only after jurisdiction is established or assumed. In general, a court has venue if it is a territorially fair and convenient forum in which to hear the case. Venue requirements applicable to state courts typically are set by state statutes, which normally determine the county in which a case must be brought. For instance, the statute might say that a case concerning land must be filed in the county where the land is located, and that other suits must be brought in the county where the defendant resides or is doing business. If justice so requires, the defendant may be able to obtain a *change of venue*. This can occur when, for example, a fair trial would be impossible within a particular county.

Role of Forum Selection Clauses Contracts sometimes contain a clause reciting that disputes between the

parties regarding matters connected with the contract must be litigated in the courts of a particular state. Such a provision is known as a **forum selection clause**. Depending on its wording, a forum selection clause may have the effect of addressing both jurisdiction and venue issues. Although forum selection clauses may appear in agreements whose terms have been hammered out by the parties after extensive negotiation, they fairly often are found in form agreements whose terms were not the product of actual discussion or give-and-take. For example, an Internet access provider (IAP) may include a forum selection clause in a so-called “clickwrap” document that sets forth the terms of its Internet-related services—terms to which the IAP’s subscribers are deemed to have agreed by virtue of utilizing the IAP’s services. Forum selection clauses, whether expressly bargained for or included in a clickwrap agreement, are generally enforced by courts unless they are shown to be unreasonable in a given set of circumstances. Assume, for instance, that the IAP’s terms of services document calls for the courts of Virginia to have “exclusive jurisdiction” over its subscribers’ disputes with the company, but that a subscriber sues the IAP in a Pennsylvania court. Unless the subscriber performs the difficult task of demonstrating that application of the clickwrap agreement’s forum selection clause would be unreasonable, the Pennsylvania court will be likely to dismiss the case and to hold that if the subscriber wishes to litigate the claim, he or she must sue in an appropriate Virginia court.

Federal Courts and Their Jurisdiction

Federal District Courts In the federal system, lawsuits usually begin in the federal district courts. As do state trial courts, the federal district courts determine both the facts and the law. The fact-finding function may be entrusted to either the judge or a jury, but determining the applicable law is the judge’s responsibility. Each state

is designated as a separate district for purposes of the federal court system. Each district has at least one district court, and each district court has at least one judge.

District Court Jurisdiction There are various bases of federal district court civil jurisdiction. The two most important are **diversity jurisdiction** and **federal question jurisdiction**. One traditional justification for diversity jurisdiction is that it may help protect out-of-state defendants from potentially biased state courts. *Diversity jurisdiction* exists when (1) the case is between citizens of different states, and (2) the amount in controversy exceeds \$75,000. For an example, see the *Internet Solutions* case, which follows shortly. Diversity jurisdiction also exists in certain cases between citizens of a state and citizens or governments of foreign nations, if the amount in controversy exceeds \$75,000. Under diversity jurisdiction, a corporation normally is a citizen of both the state where it has been incorporated and the state where it has its principal place of business.

Federal question jurisdiction exists when the case arises under the Constitution, laws, or treaties of the United States. The “arises under” requirement normally is met when a right created by federal law is a basic part of the plaintiff’s case. There is no amount-in-controversy requirement for federal question jurisdiction.

Diversity jurisdiction and federal question jurisdiction are forms of subject-matter jurisdiction. Even if one of the two forms exists, a federal district court must also have in personam jurisdiction in order to render a decision that is binding on the parties. As noted earlier in the chapter, the analysis of in personam jurisdiction issues in the federal court system is essentially the same as in the state court systems. Further limiting the plaintiff’s choice of federal district courts are the federal system’s complex venue requirements, which are beyond the scope of this text.

The *Internet Solutions* case, which follows, illustrates the application of diversity jurisdiction and in personam jurisdiction principles in the federal court system.

Internet Solutions Corp. v. Marshall 2008 U.S. Dist. LEXIS 28261 (M.D. Fla. 2008)

Internet Solutions Corp. (ISC), a Nevada corporation, has its principal place of business in Orlando, Florida. ISC, which operates various employment recruiting and Internet advertising Web sites, sued Tabatha Marshall, a resident of the State of Washington, in the U.S. District Court for the Middle District of Florida. In its lawsuit, ISC alleged that on her Web site, Marshall made false and defamatory statements asserting that ISC engaged in ongoing criminal activity, scams, and phishing. According to ISC, these statements caused injury to ISC’s business in Florida. Marshall filed a motion to dismiss the case because, in her view, neither subject matter nor in personam jurisdiction existed.

Conway, District Judge

[Marshall's motion to dismiss presents the question] whether the district court has subject matter jurisdiction in the case at bar [and the question] whether the district court can exercise in personam jurisdiction over the nonresident defendant pursuant to [Florida law] and the Due Process Clause of the U.S. Constitution.

Pursuant to 28 U.S.C. § 1332, subject matter jurisdiction is proper in federal court when there is a matter in controversy between citizens of different states and . . . "the matter in controversy exceeds the sum or value of \$75,000." [The damages sought by ISC make this a] case involv[ing] a controversy that exceeds the sum or value of \$75,000. ISC is a Nevada corporation, which has its principal place of business in Orlando, Florida. Marshall is a private individual who resides in the State of Washington. Therefore, pursuant to 28 U.S.C. § 1332, this court has subject matter jurisdiction based on diversity of citizenship.

[The court now turns to the in personam jurisdiction question.] A district court's determination of in personam jurisdiction over a nonresident defendant generally entails a two-part inquiry. First, the court must determine whether the exercise of jurisdiction is appropriate under [the state's] long-arm statute. Second, the court must determine whether there are sufficient minimum contacts with the forum state to satisfy the Due Process Clause of the U.S. Constitution and traditional notions of fair play and substantial justice. See *International Shoe Co. v. Washington*, 326 U.S. 310 (1945). [Both parts of the] two-part inquiry must be satisfied before the court can properly exercise in personam jurisdiction over a nonresident defendant.

[Florida's long-arm statute and precedent cases indicate that in personam jurisdiction] may be found in certain instances where an out-of-state defendant commits a tort that produces an injury in Florida. ISC bears the burden of establishing a prima facie case of in personam jurisdiction through the long-arm statute. ISC contends that Marshall committed tortious conduct through her website, which caused injury to ISC's business in Florida. Specifically, ISC alleges that Marshall made false and defamatory statements on her website which harmed ISC's reputation in the community, deterred third persons from associating with ISC, and [adversely affected] ISC's business revenues.

Marshall has not adequately rebutted ISC's allegation of long-arm jurisdiction based on the claim that the tort was committed in Florida and that injury resulted in Florida. [An affidavit submitted by Marshall] explains the lack of minimum contacts that Marshall has with Florida, asserts that Marshall has never done business in Florida, denies directing any communications into Florida, and denies committing any tort in Florida. The affidavit does not discuss the issue of an

injury resulting to ISC's business in Florida. It does not adequately refute that a tort was committed in Florida. [In] simply conclud[ing] that Marshall did not commit any tort in the State of Florida[,] Marshall's affidavit is insufficient to shift to ISC the burden of producing evidence supporting jurisdiction.

Therefore, the court finds that ISC has satisfied its [first] burden and assumes that there is jurisdiction under Florida's long-arm statute for the purposes of deciding the instant motion. However, the in personam jurisdiction inquiry does not end here. The court must now assess whether ISC has established the existence of sufficient minimum contacts and whether Due Process is otherwise satisfied.

[D]ue process requires that in order to subject a defendant to a judgment in personam [in a state in which she does not reside, she must] have certain minimum contacts with [the forum state, so that] the maintenance of the suit does not offend traditional notions of fair play and substantial justice. See *International Shoe*. The plaintiff bears the burden of establishing . . . that the constitutional requirement of minimum contacts has been satisfied.

[In *Posner v. Essex Ins. Co.*, 178 F.3d 1209 (11th Cir. 1999), the U.S. Court of Appeals for the Eleventh Circuit] adopted a three-part test to determine whether the minimum contacts requirement has been satisfied. First, "the contacts must be related to the plaintiff's cause of action." Second, "the contacts must involve some act by which the defendant purposefully avails itself of the privilege of conducting activities within the forum." Third, "the defendant's contacts with the forum must be such that the defendant should reasonably anticipate being haled into court there."

ISC contends that Marshall committed tortious acts by posting defamatory comments on her website and targeting individuals in Florida. ISC further alleges that Marshall's conduct resulted in contact or communications "into" Florida. However, "the minimum contacts must be 'purposeful' contacts." [Case citation omitted.] In *Calder v. Jones*, the United States Supreme Court found that an alleged single tortious act by a National Enquirer editor and reporter in Florida was sufficient to satisfy minimum contacts with the forum state of California. *Calder v. Jones*, 465 US 783, 789–790, 104 S. Ct. 1482, 79 L. Ed. 2d 804 (1984). The two National Enquirer employees were Florida residents who were sued in California for libel. The court reasoned that the writers purposefully availed themselves by specifically targeting a California audience, making large distributions into California, and publishing articles about a California resident. The court further explained that the alleged tortious conduct was purposeful and calculated to cause injury in California, and therefore the editors must have reasonably anticipated being haled into a California court.

Unlike *Calder*, in the case at bar there is no evidence that Marshall specifically targeted Florida residents. Marshall's website was not only made available to Florida residents, but the website was equally accessible to persons in all states. Under the *Calder* analysis, even if Marshall's alleged tortious conduct occurred or resulted in injury in Florida, the single tortious act would not be sufficient to satisfy minimum contacts absent a showing of purposeful availment. According to Marshall's affidavit, her contacts with Florida were nearly nonexistent. Marshall [states] that she does not own or lease property in the state of Florida, does not operate a business of any kind, and has only visited Florida on one occasion (which had no connection to her website). ISC has not provided evidence to the contrary. Besides, the website postings do not establish any Florida-specific postings or conduct by Marshall, [who] denies directing any communications into Florida.

In addition, the postings do not specifically mention Florida or its residents nor do they amount to purposeful availment. "The requirement for purposeful minimum contacts helps [to] ensure that non-residents have fair warning that a particular activity may subject them to litigation within the forum." [Case citation omitted.] Marshall's conduct is distinguishable from the purposeful contacts made in the *Calder* case. Marshall has not made Florida-specific contacts. The mere fact that Marshall's

website was accessible to residents everywhere and a resident of Florida responded does not amount to purposeful availment.

ISC contends that Marshall should have known that her conduct would subject her to litigation in the court's jurisdiction. The fact that Marshall posted comments on her website which were accessible to residents everywhere does not indicate that Marshall could reasonably anticipate being haled into a Florida court. Based on the information presented, there is nothing to support [a conclusion] that Marshall should reasonably anticipate being called before a Florida court to answer for her alleged conduct.

Marshall's affidavit rebuts ISC's claim that there is jurisdiction under the minimum contacts requirement. [The] affidavit . . . was sufficient to shift the burden back to ISC[, which] did not refute or provide supporting evidence that there were minimum contacts. [Because] ISC has failed to meet its burden of establishing sufficient minimum contacts, . . . the court determines that exercising in personam jurisdiction over Marshall would not comport with the requirements of Due Process or the traditional notions of fair play and substantial justice. [Therefore,] in personam jurisdiction over the nonresident defendant in this court would be improper.

Defendant's motion granted and case dismissed.

Concurrent Jurisdiction and Removal The federal district courts have *exclusive jurisdiction* over some matters. Patent cases, for example, must be litigated in the federal system. Often, however, federal district courts have *concurrent jurisdiction* with state courts—meaning that both state and federal courts have jurisdiction over the case. For example, a plaintiff might assert state court in personam jurisdiction over an out-of-state defendant or might sue in a federal district court under that court's diversity jurisdiction. A state court, moreover, may sometimes decide cases involving federal questions. Where concurrent jurisdiction exists and the plaintiff opts for a state court, the defendant has the option to *remove* the case to an appropriate federal district court, assuming the defendant acts promptly.

Specialized Federal Courts The federal court system also includes certain specialized federal courts, including the Court of Federal Claims (which hears claims against the United States), the Court of International Trade (which is concerned with tariff, customs,

import, and other trade matters), the Bankruptcy Courts (which operate as adjuncts of the district courts), and the Tax Court (which reviews certain IRS determinations). Usually, the decisions of these courts can be appealed to a federal court of appeals.

Federal Courts of Appeals The U.S. courts of appeals do not engage in fact-finding. Instead, they review only the legal conclusions reached by lower federal courts. As Figure 1 shows, there are 13 circuit courts of appeals: 11 numbered circuits covering several states each; a District of Columbia circuit; and a separate federal circuit.

Except for the Court of Appeals for the Federal Circuit, the most important function of the U.S. courts of appeals is to hear appeals from decisions of the federal district courts. Appeals from a district court ordinarily proceed to the court of appeals for that district court's region. Appeals from the District Court for the Southern District of New York, for example, go to the Second Circuit Court of Appeals. The courts of appeals also hear

Figure 1 The Thirteen Federal Judicial Circuits

| Federal Circuit (<i>Washington, D.C.</i>) | | | |

appeals from the Tax Court, from many administrative agency decisions, and from some Bankruptcy Court decisions. The Court of Appeals for the Federal Circuit hears a wide variety of specialized appeals, including some patent and trademark matters, Court of Federal Claims decisions, and decisions by the Court of International Trade.

The U.S. Supreme Court The United States Supreme Court, the highest court in the land, is mainly an appellate court. It therefore considers only questions of law when it decides appeals from the federal courts of appeals and the highest state courts.⁴ Today, most appealable decisions from these courts fall within the Supreme Court's *certiorari* jurisdiction, under which the Court has discretion whether to hear the appeal. The Court hears

only a small percentage of the many appeals it is asked to decide under its *certiorari* jurisdiction.

Nearly all appeals from the federal courts of appeals are within the Court's *certiorari* jurisdiction. Appeals from the highest state courts are within the *certiorari* jurisdiction when (1) the validity of any treaty or federal statute has been questioned; (2) any state statute is challenged as repugnant to federal law; or (3) any title, right, privilege, or immunity is claimed under federal law. The Supreme Court usually defers to the states' highest courts on questions of state law and does not hear appeals from those courts if the case involves only such questions.

In certain rare situations, the U.S. Supreme Court has **original jurisdiction**, which means that it acts as a trial court. The Supreme Court has *original and exclusive* jurisdiction over all controversies between two or more states. It has *original*, but not *exclusive*, jurisdiction over cases involving foreign ambassadors, ministers, and like parties, controversies between the United States and a state, and cases in which a state proceeds against citizens of another state or against aliens.

⁴In special situations that do not often arise, the Supreme Court will hear appeals directly from the federal district courts.

The Global Business Environment

The in personam jurisdiction issues addressed earlier in the chapter also arise when a resident of the United States initiates legal action in the United States against a defendant from another country. *Benton v. Cameco Corp.*, 375 F.3d 1070 (10th Cir. 2004), furnishes a useful example.

A Colorado resident, Oren Benton, and a Canadian firm, Cameco Corp., entered into a Memorandum of Understanding (MOU) that called for Benton to purchase uranium from Cameco for purposes of resale. The MOU also set forth the key terms of a planned joint venture involving uranium trading activities. The transactions contemplated by the MOU did not take place, however, because Cameco's board of directors did not approve them. Benton later sued Cameco in federal district court in Colorado, asserting claims for breach of contract and tortious interference with existing and prospective business relationships. After determining that Cameco did not have sufficient contacts with Colorado to allow the court to exercise in personam jurisdiction over the Canadian firm, the district court granted Cameco's motion to dismiss. On appeal, the U.S. Court of Appeals for the Tenth Circuit concluded that Cameco did have the requisite minimum contacts with Colorado but that the district court's dismissal should be affirmed anyway, because "traditional notions of fair play and substantial justice" counseled against an exercise of in personam jurisdiction over Cameco.

The Tenth Circuit regarded the minimum contacts issue as a close call but based its conclusion that minimum contacts existed between Cameco and the state of Colorado on the basis of this combination of facts: the Canadian firm's supposed contract with a Colorado resident, Benton; the separate transactions that Cameco had engaged in with Benton during earlier years; the parties' contract negotiations, which, through the use of the telephone and mailed communications, had a connection with Colorado; the further connection with Colorado that would have resulted if contract performance had occurred; and the fact that Cameco sent representatives to Colorado to check on Benton's business. Because Benton's claim arose out of Cameco's contacts with Colorado, the facts just noted would have been sufficient to support in personam jurisdiction of the specific variety pursuant to Colorado's long-arm statute, if not for another critical requirement. (Specific jurisdiction is discussed more fully in the *Bombliss* case, which appears earlier in the chapter.) The other requirement was that an attempt to exert in personam jurisdiction over a nonresident defendant must be consistent with "traditional notions of fair play and substantial justice." See *International Shoe Co. v. Washington*, 326 U.S. 310 (U.S. Sup. Ct. 1945); *Asahi Metal Industry Co. v. Superior Court*, 480 U.S. 102 (U.S. Sup. Ct. 1987). In order to make the necessary determination regarding "fair play and substantial justice," the Tenth Circuit applied five factors drawn from precedent cases.

First, the court considered the burden on Cameco of having to litigate the case in what was, for the Canadian firm, a foreign forum. Important when a U.S. plaintiff files suit in

the plaintiff's home state or federal district against a U.S. defendant from a different state, this factor assumes added significance when a defendant from another country is sued in the United States. In the latter situation, the court stressed, "great care and reserve should be exercised" before [in personam] jurisdiction is exercised over the defendant" (quoting *Asahi*). The Tenth Circuit regarded the burden on Cameco as substantial, given that the firm's principal offices were in Saskatchewan, it had no offices, property, or employees in Colorado, and it was not licensed to do business there. If in personam jurisdiction were held to exist in this case, Cameco's officers and employees would not only have to travel to Colorado for trial but also litigate the case before judges who were unfamiliar with Canadian law (which the parties, in the MOU, had agreed would be controlling). The first factor, therefore, weighed against a conclusion that in personam jurisdiction should exist as to Cameco.

Second, the Tenth Circuit examined the forum state's interest in resolving the dispute. Although Colorado had an interest in providing a dispute-resolution forum for a Colorado resident (Benton), the parties' agreement that Canadian law would govern their dispute meant that the second factor did not substantially favor either party.

Third, the court considered whether the plaintiff could receive convenient and effective relief in a forum other than the U.S. court he chose. Because Canadian law governed the parties' dispute and because there was no showing that the inconvenience of traveling to Canada for trial would cause undue hardship to Benton, the Tenth Circuit concluded that the third factor favored Cameco and weighed against an exercise of in personam jurisdiction by the U.S. court.

Fourth, the court focused on whether Colorado was the most efficient place for the litigation to be conducted. The court observed that many of the witnesses in the dispute would be affiliated with Cameco and would thus be located in Canada, that the supposed wrong—the Cameco board's failure to approve the transactions contemplated by the MOU—occurred in Canada, and that Canadian law would govern the case. The Tenth Circuit therefore concluded that it would not be more efficient to litigate the case in Colorado than in Canada.

Fifth (and finally), the court considered whether an exercise of in personam jurisdiction would affect important Canadian policy interests. The Tenth Circuit noted that precedent cases required it to look carefully at whether allowing the case to proceed in the U.S. court would interfere with Canada's sovereignty. The court regarded an exertion of in personam jurisdiction over Cameco as likely to affect Canadian policy interests and interfere with Canada's sovereignty, mainly because Cameco was a Canadian firm and Canadian law was to govern the dispute. With most of the five "reasonableness factors" operating in Cameco's favor, the Tenth Circuit held that even though Cameco possessed minimum contacts with Colorado, "an exercise of in personam jurisdiction over Cameco would offend traditional notions of fair play and substantial justice."

Civil Procedure

Civil procedure is the set of legal rules establishing how a civil lawsuit proceeds from beginning to end.⁵ Because civil procedure sometimes varies with the jurisdiction in question,⁶ the following presentation summarizes the most widely accepted rules governing civil cases in state and federal courts. Knowledge of these basic procedural matters will be useful if you become involved in a civil lawsuit and will help you understand the cases in this text.

In any civil case, the *adversary system* is at work. Through their attorneys, the litigants take contrary positions before a judge and possibly a jury. To win a civil case, the plaintiff must prove each element of his, her, or its claim by a *preponderance of the evidence*.⁷ This standard of proof requires the plaintiff to show that the greater weight of the evidence—by credibility, not quantity—supports the existence of each element. In other words, the plaintiff must convince the fact-finder that the existence of each factual element is more probable than its nonexistence. The attorney for each party presents his or her client’s version of the facts, tries to convince the judge or jury that this version is true, and attempts to rebut conflicting factual allegations by the other party. Each attorney also seeks to persuade the court that his or her reading of the law is correct.

Service of the Summons A **summons** notifies the defendant that he, she, or it is being sued. The summons typically names the plaintiff and states the time within which the defendant must enter an *appearance* in court (usually through an attorney). In most jurisdictions, it is accompanied by a copy of the plaintiff’s complaint (which is described below).

The summons is usually served on the defendant by an appropriate public official after the plaintiff has filed her case. To ensure that the defendant is properly notified, statutes, court rules, and constitutional due process guarantees set standards for proper service of the summons. For example, personal delivery to the defendant almost always meets these standards. Many jurisdictions also permit the summons to be left at the defendant’s home or place of business. Service to corporations often may be accomplished by delivery of the summons to the firm’s

managing agent. Many state long-arm statutes permit out-of-state defendants to be served by registered mail. Although inadequate service of process may sometimes defeat the plaintiff’s claim, the defendant who participates in the case without making a prompt objection to the manner of service will be deemed to have waived the objection.

The Pleadings The **pleadings** are the documents the parties file with the court when they first state their respective claims and defenses. They include the **complaint**, the **answer**, and, in some jurisdictions, the **reply**. Traditionally, the pleadings’ main function was to define and limit the issues to be decided by the court. Only those issues raised in the pleadings were considered part of the case, amendments to the pleadings were seldom permitted, and litigants were firmly bound by allegations or admissions contained in the pleadings. Although many jurisdictions retain some of these rules, most have relaxed them significantly. The main reason is the modern view of the purpose of pleading rules: that their aim is less to define the issues for trial than to give the parties general notice of each other’s claims and defenses.

The Complaint The complaint states the plaintiff’s claim in separate, numbered paragraphs. It must allege sufficient facts to show that the plaintiff would be entitled to legal relief and to give the defendant reasonable notice of the nature of the plaintiff’s claim. The complaint also must state the remedy requested.

The Answer Unless the defendant makes a successful motion to dismiss (described below), he must file an answer to the plaintiff’s complaint within a designated time after service of the complaint. The amount of time is set by applicable law, with 30 to 45 days being typical. The answer responds to the complaint paragraph by paragraph, with an admission or denial of each of the plaintiff’s allegations.

An answer may also include an **affirmative defense** to the claim asserted in the complaint. A successful affirmative defense enables the defendant to win the case even if all the allegations in the complaint are true and, by themselves, would have entitled the plaintiff to recover. For example, suppose that the plaintiff bases her lawsuit on a contract that she alleges the defendant has breached. The defendant’s answer may admit or deny the existence of the contract or the assertion that the defendant breached it. In addition, the answer may make assertions that, if proven, would provide the defendant an affirmative defense on the basis of fraud committed by the plaintiff during the contract negotiation phase.

⁵Criminal procedure is discussed in Chapter 5.

⁶In the following discussion, the term *jurisdiction* refers to one of the 50 states, the District of Columbia, or the federal government.

⁷In a criminal case, however, the government must prove the elements of the alleged crime beyond a reasonable doubt. This standard of proof is discussed in Chapter 5.

Furthermore, the answer may contain a **counterclaim**.⁸ A counterclaim is a *new* claim by the defendant arising from the matters stated in the complaint. Unlike an affirmative defense, it is not merely an attack on the plaintiff's claim, but is the defendant's attempt to obtain legal relief. In addition to using fraud as an affirmative defense to a plaintiff's contract claim, for example, a defendant might counterclaim for damages caused by that fraud.

The Reply In some jurisdictions, the plaintiff is allowed or required to respond to an affirmative defense or a counterclaim by making a reply. The reply is the plaintiff's point-by-point response to the allegations in the answer or counterclaim. In jurisdictions that do not allow a reply to an answer, the defendant's new allegations are automatically denied. Usually, however, a plaintiff who wishes to contest a counterclaim must file a reply to it.

Motion to Dismiss Sometimes it is evident from the complaint or the pleadings that the plaintiff does not have a valid claim. In such a situation, it would be wasteful for the litigation to proceed further. The procedural device for ending the case at this early stage is commonly called the **motion to dismiss**. This motion often is made after the plaintiff has filed her complaint. A similar motion allowed by some jurisdictions, the **motion for judgment on the pleadings**, normally occurs after the pleadings have been completed. A successful motion to dismiss means that the defendant wins the case. If the motion fails, the case proceeds.

The motion to dismiss may be made on various grounds—for example, inadequate service of process or lack of jurisdiction. The most important type of motion to dismiss, however, is the motion to dismiss for failure to state a claim upon which relief can be granted, sometimes called the **demurrer**. This motion basically says “So what?” to the factual allegations in the complaint. It asserts that the plaintiff cannot recover even if all of his allegations are true because no rule of law entitles him to win on those facts. Suppose that Potter sues Davis on the theory that Davis's bad breath is a form of “olfactory pollution” entitling Potter to recover damages. Potter's

complaint describes Davis's breath and the distress it causes Potter in great detail. Even if all of Potter's factual allegations are true, Davis's motion to dismiss almost certainly will succeed. There is no rule of law allowing the “victim” of another person's bad breath to recover damages from that person.

Discovery When a civil case begins, litigants do not always possess all of the facts they need to prove their claims or establish their defenses. To help litigants obtain the facts and to narrow and clarify the issues for trial, the state and federal court systems permit each party to a civil case to exercise **discovery** rights. The discovery phase of a lawsuit normally begins when the pleadings have been completed. Each party is entitled to request information from the other party by utilizing the forms of discovery described in this section. Moreover, for civil cases pending in federal court, the Federal Rules of Civil Procedure require each party to provide the other party certain basic information at an early point in the case, even though the other party may not have made a formal discovery request.

Discovery is available for information that is not subject to a recognized legal privilege and is relevant to the case or likely to lead to other information that may be relevant. Information may be subject to discovery even if it would not ultimately be admissible at trial under the legal rules of evidence. The scope of permissible discovery is thus extremely broad. The broad scope of discovery stems from a policy decision to minimize the surprise element in litigation and to give each party the opportunity to become fully informed regarding facts known by the opposing party. Each party may then formulate trial strategies on the basis of that knowledge.

The *deposition* is one of the most frequently employed forms of discovery. In a deposition, one party's attorney conducts an oral examination of the other party or of a likely witness (usually one identified with the other party). The questions asked by the examining attorney and the answers given by the deponent—the person being examined—are taken down by a court reporter. The deponent is under oath, just as he or she would be if testifying at trial, even though the deposition occurs on a pretrial basis and is likely to take place at an attorney's office or at some location other than a courtroom. Some depositions are videotaped.

Interrogatories and *requests for admissions* are among the other commonly utilized forms of discovery. Interrogatories are written questions directed by the plaintiff to the defendant, or vice versa. The litigant on whom interrogatories are served must provide written

⁸In appropriate instances, a defendant also may file a *cross claim* against another defendant in the plaintiff's suit, or a *third-party complaint* against a party who was not named as a defendant in the plaintiff's complaint.

answers, under oath, within a time period prescribed by applicable law (30 days being typical). Requests for admissions are one party's written demand that the other party admit or deny, in writing, certain statements of supposed fact or of the application of law to fact, within a time period prescribed by law (30 days again being typical). The other party's failure to respond with an admission or denial during the legal time period is deemed an admission of the statements' truth or accuracy.

Requests for production of documents or other physical items (e.g., videotapes, photographs, and the like) are a discovery form employed by the parties in many civil cases. What about e-mail and other electronically stored information? For a discussion of the discoverability of such items, see the Cyberlaw in Action box that appears later in the chapter.

When the issues in a case make the opposing litigant's physical or mental condition relevant, a party may seek discovery in yet another way by filing a *motion for a court order requiring* that the opponent undergo a *physical or mental examination*. With the exception of the discovery form mentioned in the previous sentence, discovery generally takes place without a need for court orders or other judicial supervision. Courts become involved, however, if a party objects to a discovery request on the basis of privilege or other recognized legal ground, desires an order compelling a noncomplying litigant to respond to a discovery request, or seeks sanctions on a party who refused to comply with a legitimate discovery request or abusively invoked the discovery process. In the *Allstate* case, the court rejects Allstate's objections to the opposing parties' request for documents from the insurer's files.

Allstate Indemnity Co. v. Ruiz

2005 Fla. LEXIS 612 (Fla. Sup. Ct. 2005)

One month after securing insurance coverage from Allstate Indemnity Co. for their Chevrolet Blazer, Joaquin and Paulina Ruiz purchased an Oldsmobile Cutlass. They instructed Allstate agent Paul Cobb to add that vehicle to the policy. Cobb added the Cutlass to the policy but mistakenly deleted the Blazer. The Ruizes were not notified that the Blazer was no longer covered under their insurance policy.

Joaquin Ruiz was later involved in an accident while driving the Blazer. When the Ruizes submitted a claim for collision coverage, Allstate denied payment, asserting that the Blazer was not covered under the policy. The Ruizes filed suit, alleging that Cobb and Allstate had been negligent in deleting the Blazer from the insurance policy, and that Allstate had engaged in bad faith and unfair claim settlement practices in violation of a Florida statute. After the filing of the lawsuit, Allstate admitted its obligation to provide collision coverage. Even though the basic coverage issue was resolved, the bad faith claim remained pending.

In connection with the bad faith claim, the Ruizes sought discovery of certain documents, including Allstate's claim and investigative file and materials, Allstate internal manuals, and Cobb's file regarding the bad faith claim. Allstate refused to supply the requested documents, so the Ruizes asked the trial court to compel production of them. After reviewing the documents sought by the Ruizes, the trial judge ordered that the documents be provided to them because the documents contained relevant information regarding Allstate's handling of the underlying insurance claim. The judge also determined that the requested documents did not constitute work product or attorney-client communications and thus were not exempt from disclosure during the discovery process. (Because communications between an attorney and his or her client are privileged, they are not subject to discovery. Work product is a term used to describe documents and materials prepared by an attorney and his or her client in anticipation of litigation. In general, work product is not subject to discovery.)

Allstate appealed to Florida's intermediate court of appeals, arguing that the dispute over the Ruizes' insurance coverage was immediately apparent when Allstate refused to make payment, that litigation was anticipated at all pertinent times, and that all of the material sought by the Ruizes was nondiscoverable work product. The appellate court concluded that several requested items were not protected work product and therefore were properly discoverable, including Cobb's statement of January 7, 1997; computer diaries and entries from the date Joaquin Ruiz reported the accident on December 28, 1996, through January 10, 1997; and a January 7, 1997, memorandum from an Allstate insurance adjustor to her boss. However, the appellate court determined that the balance of the documents sought by the Ruizes were prepared by Allstate in anticipation of litigation and were thus nondiscoverable work product. Both parties were dissatisfied with the appellate court's decision, the Ruizes because some of what they sought was held nondiscoverable and Allstate because some of what it sought to withhold was held discoverable. The Supreme Court of Florida granted Allstate's request for review.

Lewis, Justice

The instant action causes us to review and revisit previous decisions regarding discovery issues that arise in bad faith insurance litigation. Section 624.155 of the Florida Statutes was designed and intended to provide a civil remedy for any person damaged by an insurer's conduct, including "not attempting in good faith to settle claims when, under all the circumstances, it could and should have done so, had it acted fairly and honestly toward its insured and with due regard for her or his interests." Fla. Stat. § 624.155(1)(b)(1). As implied by the statute, bad faith actions do not exist in a vacuum. A necessary prerequisite for any bad faith action is an underlying claim for coverage or benefits or an action for damages which the insured alleges was handled in bad faith by the insurer.

It is precisely this two-tiered nature of bad faith actions that engenders the discovery battles so often waged in bad faith litigation, and is at the heart of the matter now before the Court. Allstate asserts that work product protection should extend to and envelop the entire claim file and all files, whatever the name, in the underlying coverage or damage matter or dispute, including an extension into any bad faith litigation which may flow from the processing or litigating of the underlying claim. The insureds and injured third parties, on the other hand, often and logically seek disclosure of actual events in the claim processing as reflected in the studies, notes, memoranda, and other documentation comprising the claim file type material because such information is certainly material and relevant, if not crucial, to any intelligent and just resolution of the bad faith litigation. They assert that this is precisely the evidence upon which a "bad faith" determination is made. As the insureds succinctly posit, how is one to ever determine whether an insurance company has processed, analyzed, or litigated a claim in a fair, forthright, and good faith manner if access is totally denied to the underlying file materials that reflect how the matter was processed and contain the direct evidence of whether the claim was processed in "good" or "bad" faith? In other words, it is asserted that the claim litigation file material constitutes the best and only evidence of an insurer's conduct.

To resolve this bad faith discovery dispute, we must first review the nature of bad faith actions and case law pertaining to discovery. There are two distinct but very similar types of bad faith actions that may be initiated against an insurer: first-party and third-party. Third-party bad faith actions have a long and established pedigree, having been recognized at common law in this state since 1938. Third-party bad faith actions arose in response to the argument that there was a practice in the insurance industry of rejecting without sufficient investigation or consideration claims presented by third parties against an insured, thereby exposing the insured individual to judgments exceeding the coverage limits of the policy while the insurer

remained protected by a policy limit. With no actionable remedy, insureds in this state and elsewhere were left personally responsible for the excess judgment amount. This concern gave life to the concept that insurance companies had an obligation of good faith and fair dealing. Florida courts recognized common law third-party bad faith actions in part because the insurers had the power and authority to litigate or settle any claim, and thus owed the insured a corresponding duty of good faith and fair dealing in handling these third-party claims.

Traditionally and historically, the courts in this state did not, however, recognize a corresponding common law first-party action that would protect insured individuals and enable them to seek redress of harm against their insurers for the wrongful processing or denial of their own first-party claims or failure to deal fairly in claims processing. This void existed notwithstanding that insurers had the same incentive to deny an insured's first-party claim as may have existed with regard to the refusal to settle a claim presented by a third party against an insured. In both contexts, the insurer's ultimate responsibility could not exceed the policy limits in the absence of a viable bad faith cause of action.

However, with the enactment of § 624.155 in 1982, . . . the Florida Legislature resolved this inequity and recognized the power disparity as it created a statutory first-party bad faith cause of action for first-party insureds, thereby eliminating the disparity in the treatment of insureds aggrieved by an act of bad faith on the part of their insurers regardless of the nature of the type of claim presented. [T]his statutory remedy essentially extended the duty of an insurer to act in good faith and deal fairly in those instances where an insured seeks first-party coverage or benefits under a policy of insurance. It was pursuant to this provision that the Ruizes filed the statutory first-party bad faith action at issue in the instant proceeding.

Even though the enactment of § 624.155 ushered out the distinction between first- and third-party statutory claims for the purposes of initiating bad faith actions, some court decisions have continued to draw inappropriate distinctions in defining the parameters of discovery in those bad faith actions. In the context of both statutory and common law third-party bad faith actions for failure to settle a claim, discovery of the insurer's underlying claim file type material is permitted over the objections of work product protection.

By contrast, the rule permitting discovery of materials contained in claim type files in third-party bad faith actions has not been consistently applied in first-party bad faith actions. It appears that this inconsistency has resulted from and been engendered by a misdescription of the nature of the parties' relationship in first-party actions as being totally adversarial, an outdated pre-statutory analysis, as opposed to applying the responsibilities that have traditionally flowed in the third-party

context, which are now codified for first-party actions. The Legislature has mandated that insurance companies act in good faith and deal fairly with insureds regardless of the nature of the claim presented, whether it be a first-party claim or one arising from a claim against an insured by a third party.

[A]ny distinction between first- and third-party bad faith actions with regard to discovery purposes is unjustified and without support under § 624.155 and creates an overly formalistic distinction between substantively identical claims. [S]ection 624.155 very clearly provides first-party claimants, upon compliance with statutory requirements, the identical opportunity to pursue bad faith claims against insurers as has been the situation in connection with third-party claims for decades at common law. The Legislature has clearly chosen to impose on insurance companies a duty to use good faith and fair dealing in processing and litigating the claims of their own insureds as insurers have had in dealing with third-party claims. Thus, there is no basis to apply different discovery rules to the substantively identical causes of action.

[T]o continue to recognize any such distinction and restriction would not only hamper but would impair the viability of first-party bad faith actions in a manner that would thwart the legislative intent in creating the right of action in the first instance. Just as we have concluded in the context of third-party actions, we conclude that the claim file type material presents virtually the only source of direct evidence with regard to the essential issue of the insurance company's handling of the insured's claim. Given the Legislature's recognition of the need to require that insurance companies deal fairly and act in good faith and the decision to provide insureds the right to institute first-party bad faith actions against their insurers, there is simply no logical or legally tenable basis upon which to deny access to

the very information that is necessary to advance such action but also necessary to fairly evaluate the allegations of bad faith—information to which they would have unfettered access in the third-party bad faith context. We therefore hold, as does the substantial weight of authority elsewhere on the question, that the claim file is and was properly held producible in this first-party case.

[W]e determine that the [court of appeals] was correct in affirming the trial court's decision to compel the production of [the documents the trial court ordered to be produced]. We have reservations, however, with regard to the balance of the [appellate] court's determination, which reversed the trial court's decision to compel the production of other [requested documents]. Our review of the record reveals that [the other requested] documents included handwritten notes evaluating coverage issues, internal letters and memoranda drafted in September of 1997 regarding coverage issues, and other items that do appear to be relevant, discoverable, [and] not entitled to protection, and [that appear] to pertain to Allstate's conduct with regard to the coverage dispute. While we remand . . . for a careful review of each document requested in light of this holding, such documentation would appear to be freely discoverable in the bad faith action. In accordance with our decision today, work product protection that may otherwise be afforded to documents prepared in anticipation of litigation of the underlying coverage dispute does not automatically operate to protect such documents from discovery in the ensuing, or accompanying, bad faith action.

Court of appeals decision denying production of certain requested documents reversed, and case remanded for further proceedings.

Documents and similar items obtained through the discovery process may be used at trial if they fall within the legal rules governing admissible evidence. The same is true of discovery material such as answers to interrogatories and responses to requests for admissions. If a party or other witness who testifies at trial offers testimony that differs from her statements during a deposition, the deposition may be used to impeach her—that is, to cast doubt on her trial testimony. A litigant may offer as evidence the deposition of a witness who died prior to trial or meets the legal standard of unavailability to testify in person. In addition, selected parts or all of the deposition of the opposing party or of certain persons affiliated with the opposing party may be used as evidence

at trial, regardless of whether such a deponent is available to testify “live.”

Participation in the discovery process may require significant expenditures of time and effort, not only by the attorneys but also by the parties and their employees. Parties who see themselves as too busy to comply with discovery requests may need to think seriously about whether they should remain a party to pending litigation. The discovery process may also trigger significant ethical issues, such as those associated with uses of discovery requests simply to harass or cause expense to the other party, or the issues faced by one who does not wish to hand over legitimately sought material that may prove to be damaging to him or to his employer.

CYBERLAW IN ACTION

In recent years, the widespread uses of e-mail and information presented and stored in electronic form have raised questions about whether, in civil litigation, an opposing party's e-mails and electronic information are discoverable to the same extent as conventional written or printed documents. With the Federal Rules of Civil Procedure and comparable discovery rules applicable to state courts having been devised prior to the explosion in e-mail use and online activities, the rules' references to "documents" no doubt contemplated traditional on-paper items. Courts, however, frequently interpreted "documents" broadly, so as to include e-mails and certain electronic communications within the scope of what was discoverable.

Even so, greater clarity on the discoverability issue seemed warranted—especially as to electronic material that might be less readily classifiable than e-mails as "documents." Various states responded by updating their discovery rules to include electronic communications within the list of discoverable items. So did the Federal Judicial Conference. In Federal Rules of Civil Procedure amendments proposed by the Judicial Conference and ratified by Congress in 2006, "electronically stored information" became a separate category of discoverable material. The *electronically stored information (ESI)* category is broad enough to include e-mails and similar communications as well as electronic business records, Web pages, dynamic databases, and a host of other material existing in electronic form. So-called "E-Discovery" has become a standard feature of civil litigation because of the obvious value of having access to the opposing party's e-mails and other electronic communications.

Discovery regarding ESI occurs in largely the same manner as discovery regarding conventional documents. The party seeking discovery of ESI serves a specific request for production on the other. The served party must provide the requested ESI if it is relevant, is not protected by a legal privilege (e.g., the attorney-client privilege), and is reasonably accessible. Court involvement becomes necessary only if the party from whom discovery is sought fails to comply or raises an objection on lack of relevance, privilege, or burdensomeness grounds. The Federal Rules allow the party seeking discovery of ESI to request not only copies of the requested material but also, where appropriate, the ability to test or sample the ESI. The party seeking discovery of ESI may also specify the form in which the requested copies should appear (e.g., hard copies, electronic files, searchable CD, direct access to database, etc.). The party from whom discovery is sought may object to the specified form, in which event the court may have to resolve the dispute. If the party requesting discovery does not specify a form, the other party must provide the requested electronic material in a form that is reasonably usable.

The Federal Rules provide that if the requested electronic material is "not reasonably accessible because of undue burden or cost," the party from whom discovery is sought need not provide the material. When an objection along those lines is filed, the court decides whether the objection is valid in light of the particular facts and circumstances. For instance, if requested e-mails now appear only on backup tapes and searching those tapes would require the expenditures of significant time, money, and effort, are the requested e-mails "not reasonably accessible because of undue burden or costs"? Perhaps, but perhaps not. The court will rule, based on the relevant situation. The court may deny the discovery request, uphold the discovery request, or condition the upholding of the discovery request on the requesting party's covering part or all of the costs incurred by the other party in retrieving the requested ESI and making it available. When a party fails or refuses to comply with a legitimate discovery request and the party seeking discovery of ESI has to secure a court order compelling the release of the requested material, the court may order the noncompliant party to pay the attorney's fees incurred by the requesting party in seeking the court order. If a recalcitrant party does not abide by a court order compelling discovery, the court may assess attorney's fees against that party and/or impose evidentiary or procedural sanctions such as barring that party from using certain evidence or from raising certain claims or defenses at trial.

The above discussion suggests that discovery requests regarding ESI may be extensive and broad-ranging, with logistical issues often attending those requests. In recognition of these realities, the Federal Rules seek to head off the sorts of disputes outlined in the previous paragraph by requiring the parties to civil litigation to meet, at least through their attorneys, soon after the case is filed. The meeting's goal is development of a discovery plan that outlines the parties' intentions regarding discovery of ESI and sets forth an agreement on such matters as the form in which the requested ESI will be provided. If the parties cannot agree on certain issues concerning discovery of ESI, the court will have to become involved to resolve the disputes.

The discoverability of electronically stored information makes it incumbent upon businesses to retain and preserve such material not only when litigation to which the material may be related has already been instituted, but also when potential litigation might reasonably be anticipated. Failure to preserve the electronic communications could give rise to allegations of evidence spoliation and, potentially, sanctions imposed by a court. (For further discussion of legal and ethical issues concerning spoliation, see the *Gribben* case in Chapter 1 and this chapter's Ethics in Action box.)

Finally, given the now-standard requests of plaintiffs and defendants that the opposing party provide access to relevant e-mails, one should not forget this important piece of advice: Do not say anything in an e-mail that you would not say in a formal written memo or in a conversation with someone. There is a too-frequent tendency to think that because e-mails tend

to be informal in nature, one is somehow free to say things in an e-mail that he or she would not say in another setting. Many individuals and companies have learned the hard way that comments made in their e-mails or those of their employees proved to be damning evidence against them in litigation and thus helped the opposing parties to win the cases.

Summary Judgment **Summary judgment** is a device for disposing of relatively clear cases without a trial. It differs from a demurrer because it involves factual determinations. To prevail, the party moving for a summary judgment must show that (1) there is no genuine issue of material (legally significant) fact, and (2) she is entitled to judgment as a matter of law. A moving party satisfies the first element of the test by using the pleadings, relevant discovery information, and affidavits (signed and sworn statements regarding matters of fact) to show that there is no real question about any significant fact. She satisfies the second element by showing that, given the established facts, the applicable law clearly mandates that she win.

Either or both parties may move for a summary judgment. If the court rules in favor of either party, that party wins the case. (The losing party may appeal, however.) If the parties' summary judgment motions are denied, the case proceeds to trial. The judge may also grant a partial summary judgment, which settles some issues in the case but leaves others to be decided at trial.

The Pretrial Conference Depending on the jurisdiction, a **pretrial conference** is either mandatory or held at the discretion of the trial judge. At this conference, the judge meets informally with the attorneys for both litigants. He or she may try to get the attorneys to stipulate, or agree to, the resolution of certain issues in order to simplify the trial. The judge may also urge them to convince their clients to settle the case by coming to an agreement that eliminates the need for a trial. If the case is not settled, the judge enters a pretrial order that includes the attorneys' stipulations and any other agreements. Ordinarily, this order binds the parties for the remainder of the case.

The Trial Once the case has been through discovery and has survived any pretrial motions, it is set for trial. The trial may be before a judge alone (i.e., a bench trial), in which case the judge makes findings of fact and reaches

conclusions of law before issuing the court's judgment. If the right to a jury trial exists and either party demands one, the jury finds the facts. The judge, however, continues to determine legal questions.⁹ During a pretrial jury screening process known as *voir dire*, biased potential jurors may be removed for cause. In addition, the attorney for each party is allowed a limited number of *peremptory challenges*, which allow him to remove potential jurors without having to show bias or other cause.

Trial Procedure At either a bench trial or a jury trial, the attorneys for each party make opening statements that outline what they expect to prove. The plaintiff's attorney then presents her client's case-in-chief by calling witnesses and introducing documentary evidence (relevant documents and written records, e-mails, videotapes, and other evidence having a physical form). The plaintiff's attorney asks questions of her client's witnesses in a process known as direct examination. If the plaintiff is an individual person rather than a corporation, he is very likely to testify. The plaintiff's attorney may choose to call the defendant to testify. In this respect, civil cases differ from criminal cases, in which the Fifth Amendment's privilege against self-incrimination bars the government from compelling the defendant to testify. After the plaintiff's attorney completes direct examination of a witness, the defendant's lawyer cross-examines the witness. This may be followed by redirect examination by the plaintiff's attorney and recross examination by the defendant's lawyer.

Once the plaintiff's attorney has completed the presentation of her client's case, defense counsel presents his client's case-in-chief by offering documentary evidence

⁹The rules governing availability of a jury trial are largely beyond the scope of this text. The U.S. Constitution guarantees a jury trial in federal court cases "at common law" whose amount exceeds \$20. Most states have similar constitutional provisions, often with a higher dollar amount. Also, Congress and the state legislatures have chosen to allow jury trials in various other cases.

Ethics in Action

The broad scope of discovery rights in a civil case will often entitle a party to seek and obtain copies of e-mails, records, memos, and other documents and electronically stored information from the opposing party's files. In many cases, some of the most favorable evidence for the plaintiff will have come from the defendant's files, and vice versa. If your firm is, or is likely to be, a party to civil litigation and you know that the firm's files contain materials that may be damaging to the firm in the litigation, you may be faced with the temptation to alter or destroy the potentially damaging items. This temptation poses serious ethical dilemmas. Is it morally defensible to change the content of records or documents on an after-the-fact basis, in order to lessen the adverse effect on your firm in pending or probable litigation? Is document destruction or e-mail deletion ethically justifiable when you seek to protect your firm's interests in a lawsuit?

If the ethical concerns are not sufficient by themselves to make you leery of involvement in document alteration or destruction, consider the potential legal consequences for yourself and your firm. The much-publicized collapse of the Enron Corporation in 2001 led to considerable scrutiny of the actions of the Arthur Andersen firm, which had provided auditing and consulting services to Enron. An Andersen partner, David Duncan, pleaded guilty to a criminal obstruction of justice charge that accused him of having destroyed, or having instructed Andersen employees to destroy, certain Enron-related records in order to thwart a Securities and Exchange Commission (SEC) investigation of Andersen. The U.S. Justice Department also launched an obstruction of justice prosecution against Andersen on the theory that the firm altered or destroyed records pertaining to Enron in order to impede the SEC investigation. In 2002, a jury found Andersen guilty of obstruction of justice. Although the Andersen conviction was overturned by the U.S. Supreme Court in 2005 because the trial judge's instructions to the jury on relevant principles of law had been impermissibly vague regarding the critical issue of criminal intent, a devastating effect on the firm had already taken place.

Of course, not all instances of document alteration or destruction will lead to criminal prosecution for obstruction of justice. Other consequences of a noncriminal but clearly severe nature may result, however, from document destruction that interferes with legitimate discovery requests in a civil case. In such instances, courts have broad discretionary authority to impose appropriate sanctions on the document-

destroying party. These sanctions may include such remedies as court orders prohibiting the document-destroyer from raising certain claims or defenses in the lawsuit, instructions to the jury regarding the wrongful destruction of the documents, and court orders that the document-destroyer pay certain attorney's fees to the opposing party. The *Gribben* case, which appears in Chapter 1, discusses some of the consequences just mentioned—consequences that the *Gribben* court regarded as severe enough to make a separate tort claim for spoliation of evidence unnecessary.

What about the temptation to simply refuse to cooperate regarding an opposing party's lawful request for discovery regarding material in one's possession? Although a refusal to cooperate seems less blameworthy than destruction or alteration of documents, extreme instances of recalcitrance during the discovery process may cause a party to experience adverse consequences similar to those imposed on parties who destroy or alter documents. Recent litigation between Ronald Perelman and the Morgan Stanley firm provides an illustration. Perelman had sued Morgan Stanley on the theory that the investment bank participated with Sunbeam Corp. in a fraudulent scheme that supposedly induced him to sell Sunbeam his stake in another firm in return for Sunbeam shares whose value plummeted when Sunbeam collapsed. During the discovery phase of the case, Perelman had sought certain potentially relevant e-mails from Morgan Stanley's files. Morgan Stanley repeatedly failed and refused to provide this discoverable material, and in the process ignored court orders to provide the e-mails.

Eventually, a fed-up trial judge decided to impose sanctions for Morgan Stanley's wrongful conduct during the discovery process. The judge ordered that Perelman's contentions would be presumed to be correct and that the burden of proof would be shifted to Morgan Stanley, so that Morgan Stanley would have to disprove Perelman's allegations. In addition, the trial judge prohibited Morgan Stanley from contesting certain allegations made by Perelman. The jury later returned a verdict in favor of Perelman and against Morgan Stanley for \$604 million in compensatory damages and \$850 million in punitive damages. The court orders sanctioning Morgan Stanley for its discovery misconduct undoubtedly played a key role in Perelman's victory, effectively turning a case that was not a sure-fire winner for Perelman into just that. The case illustrates that a party to litigation may be playing with fire if he, she, or it insists on refusing to comply with legitimate discovery requests.

and the testimony of witnesses. The same process of direct, cross-, redirect, and recross-examination is followed, except that the examination roles of the respective lawyers are reversed. After the plaintiff and defendant

have presented their cases-in-chief, each party is allowed to present evidence rebutting the showing made by the other party. Throughout each side's presentations of evidence, the opposing attorney may object, on specified

legal grounds, to certain questions asked of witnesses or to certain evidence that has been offered for admission. The trial judge utilizes the legal rules of evidence to determine whether to sustain the objection (meaning that the objected-to question cannot be answered by the witness or that the offered evidence will be disallowed) or, instead, overrule it (meaning that the question may be answered or that the offered evidence will be allowed).

After all of the evidence has been presented by the parties, each party's attorney makes a closing argument summarizing his or her client's position. In bench trials, the judge then usually takes the case under advisement rather than issuing a decision immediately. The judge later makes findings of fact and reaches conclusions of law, renders judgment, and, if the plaintiff is the winning party, states the relief to which the plaintiff is entitled.

Jury Trials At the close of a jury trial, the judge ordinarily submits the case to the jury after issuing **instructions** that set forth the legal rules applicable to the case. The jury then deliberates, makes the necessary determinations of the facts, applies the applicable legal rules to the facts, and arrives at a **verdict** on which the court's judgment will be based.

The verdict form used the majority of the time is the *general verdict*, which requires only that the jury declare which party wins and, if the plaintiff wins, the money damages awarded. The jury neither states its findings of fact nor explains its application of the law to the facts. Although the nature of the general verdict may permit a jury, if it is so inclined, to render a decision that is based on bias, sympathy, or some basis other than the probable facts and the law, one's belief regarding the extent to which juries engage in so-called "jury nullification" of the facts and law is likely to be heavily influenced by one's attitude toward the jury system. Most proponents of the jury system may be inclined to believe that "renegade" juries, though regrettable, are an aberration, and that the vast majority of juries make a good-faith effort to decide cases on the basis of the facts and controlling legal principles. Some jury system proponents, however, take a different view, asserting that juries *should* engage in jury nullification when they believe it is necessary to accomplish "rough justice." Those who take a dim view of the jury system perceive it as fundamentally flawed and as offering juries too much opportunity to make decisions that stray from a reasonable view of the evidence and the law. Critics of the jury system have little hope of abolishing it, however. Doing so

would require amendments to the U.S. Constitution and many state constitutions, as well as the repeal of numerous federal and state statutes.

Another verdict form known as the *special verdict* may serve to minimize concerns that some observers have about jury decisions. When a special verdict is employed, the jury makes specific, written findings of fact in response to questions posed by the trial judge. The judge then applies the law to those findings. Whether a special verdict is utilized is a matter largely within the discretion of the trial judge. The special verdict is not as frequently employed, however, as the general verdict.

Directed Verdict Although the general verdict gives the jury considerable power, the American legal system also has devices for limiting that power. One device, the **directed verdict**, takes the case away from the jury and provides a judgment to one party before the jury gets a chance to decide the case. The motion for a directed verdict may be made by either party; it usually occurs after the other (nonmoving) party has presented her evidence. The moving party asserts that the evidence, even when viewed favorably to the other party, leads to only one result and need not be considered by the jury. Courts differ on the test governing a motion for a directed verdict. Some deny the motion if there is *any* evidence favoring the nonmoving party, whereas others deny the motion only if there is *substantial* evidence favoring the nonmoving party. More often than not, trial judges deny motions for a directed verdict.

Judgment Notwithstanding the Verdict On occasion, one party wins a judgment even after the jury has reached a verdict against that party. The device for doing so is the **judgment notwithstanding the verdict** (also known as the judgment *non obstante veredicto* or judgment n.o.v.). Some jurisdictions provide that a motion for judgment n.o.v. cannot be made unless the moving party previously moved for a directed verdict. In any event, the standard used to decide the motion for judgment n.o.v. usually is the same standard used to decide the motion for a directed verdict.

Motion for a New Trial In a wide range of situations that vary among jurisdictions, the losing party can successfully move for a new trial. Acceptable reasons for granting a new trial include legal errors by the judge during the trial, jury or attorney misconduct, the discovery of new evidence, or an award of excessive damages to the plaintiff. Most motions for a new trial are unsuccessful, however.

Appeal A final judgment generally prevents the parties from relitigating the same claim. One or more parties still may appeal the trial court's decision, however. Normally, appellate courts consider only alleged errors of law made by the trial court. The matters ordinarily considered "legal" and thus appealable include the trial judge's decisions on motions to dismiss, for summary judgment, for directed verdict or judgment notwithstanding the verdict, and for a new trial. Other matters typically considered appealable include trial court rulings on service of process and admission of evidence at trial, as well as the court's legal conclusions in a nonjury trial, instructions to the jury in a jury case, and decision regarding damages or other relief. Appellate courts may *affirm* the trial court's decision, *reverse* it, or affirm parts of the decision and reverse other parts. One of three things ordinarily results from an appellate court's disposition of an appeal: (1) the plaintiff wins the case; (2) the defendant wins the case; or (3) the case is *remanded* (returned) to the trial court for further proceedings if the trial court's decision is reversed in whole or in part. For example, if the plaintiff appeals a trial court decision granting the defendant's motion to dismiss and the appellate courts affirm that decision, the plaintiff loses. On the other hand, if an appellate court reverses a trial court judgment in the plaintiff's favor, the defendant could win outright, or the case might be returned to the trial court for further proceedings consistent with the appellate decision.

Enforcing a Judgment In this text, you may occasionally see cases in which someone was not sued even though he probably would have been liable to the plaintiff, who sued another party instead. One explanation is that the first party was "judgment-proof"—so lacking in assets as to make a civil lawsuit for damages a waste of time and money. The defendant's financial condition also affects a winning plaintiff's ability to collect whatever damages she has been awarded.

When the defendant fails to pay as required after losing a civil case, the winning plaintiff must enforce the judgment. Ordinarily, the plaintiff will obtain a *writ of execution* enabling the sheriff to seize designated property of the defendant and sell it at a judicial sale to help satisfy the judgment. A judgment winner may also use a procedure known as *garnishment* to seize property, money, and wages that belong to the defendant but are in the hands of a third party such as a bank or employer. Legal limits exist, however, concerning the portion of wages that may be garnished. If the property needed to

satisfy the judgment is located in another state, the plaintiff must use that state's execution or garnishment procedures. Under the U.S. Constitution, the second state must give "full faith and credit" to the judgment of the state in which the plaintiff originally sued. Finally, when the court has awarded an equitable remedy such as an injunction, the defendant may be found in contempt of court and subjected to a fine or a jail term if he fails to obey the court's order.

Class Actions So far, our civil procedure discussion has proceeded as if the plaintiff and the defendant were single parties. Various plaintiffs and defendants, however, may be parties to one lawsuit. In addition, each jurisdiction has procedural rules stating when other parties can be *joined* to a suit that begins without them.

One special type of multiparty case, the **class action**, allows one or more persons to sue on behalf of themselves and all others who have suffered similar harm from substantially the same wrong. Class action suits by consumers, environmentalists, and other groups now are reasonably common events. The usual justifications for the class action are that (1) it allows legal wrongs causing losses to a large number of widely dispersed parties to be fully compensated, and (2) it promotes economy of judicial effort by combining many similar claims into one suit.

The requirements for a class action vary among jurisdictions. The issues addressed by state and federal class action rules include the following: whether there are questions of law and fact common to all members of the alleged class; whether the class is small enough to allow all of its members to join the case as parties rather than use a class action; and whether the plaintiff(s) and their attorney(s) can adequately represent the class without conflicts of interest or other forms of unfairness. To protect the individual class members' right to be heard, some jurisdictions have required that unnamed or absent class members be given notice of the case if this is reasonably possible. The damages awarded in a successful class action usually are apportioned among the entire class. Establishing the total recovery and distributing it to the class, however, pose problems when the class is large, the class members' injuries are indefinite, or some members cannot be identified.

In 2005, Congress moved to restrict the filing of class actions in state courts by enacting a statute giving the federal district courts original jurisdiction over class actions in which the amount in controversy exceeds \$5 million and any member of the plaintiff class resides in a state different from the state of any defendant.

Proponents of the measure describe it as being designed to curtail “forum shopping” by multistate plaintiffs for “friendly” state courts that might be especially likely to favor the claims of the plaintiffs. Critics assert that the 2005 enactment is too protective of corporate defendants and likely to curtail the bringing of legitimate civil rights, consumer-protection, and environmental-harm claims. As this book went to press, it remained too early to sort out the full effects of the 2005 class action legislation.

Alternative Dispute Resolution

Lawsuits are not the only devices for resolving civil disputes. Nor are they always the best means of doing so. Settling private disputes through the courts can be a cumbersome, lengthy, and expensive process for litigants. With the advent of a litigious society and the increasing caseloads it has produced, handling disputes in this fashion also imposes ever-greater social costs. For these reasons and others, various forms of **alternative dispute resolution (ADR)** have assumed increasing importance in recent years. Proponents of ADR cite many considerations in its favor. These include ADR’s (1) quicker resolution of disputes; (2) lower costs in time, money, and aggravation for the parties; (3) lessening of the strain on an overloaded court system; (4) use of decision makers with specialized expertise; and (5) potential for compromise decisions that promote and reflect consensus between the parties. Those who are skeptical of ADR worry about its potential for sloppy or biased decisions. They also worry that it may sometimes mean second-class justice for ordinary people who deal with powerful economic interests. Sometimes, for example, agreements to submit disputes to alternative dispute resolution are buried in complex standard-form contracts drafted by a party with superior size, knowledge, and business sophistication and are unknowingly agreed to by less knowledgeable parties. Such clauses, critics charge, may compel ADR proceedings before decision makers who are biased in favor of the stronger party.

Common Forms of ADR

Settlement The settlement of a civil lawsuit is not everyone’s idea of an alternative dispute resolution mechanism. It is an important means, however, of avoiding protracted litigation—one that often is a sensible compromise for the parties. Most cases settle at some stage in the proceedings described previously. The usual settlement agreement is a contract whereby the defendant

agrees to pay the plaintiff a sum of money, in exchange for the plaintiff’s promise to release the defendant from liability for the plaintiff’s claims. Such agreements must satisfy the requirements of contract law discussed later in this text. In some cases, moreover, the court must approve the settlement in order for it to be enforceable. Examples include class actions and litigation involving minors.

Arbitration Arbitration is the submission of a dispute to a neutral, nonjudicial third party (the *arbitrator*) who issues a binding decision resolving the dispute. Arbitration usually results from the parties’ agreement. That agreement normally is made before the dispute arises (most often through an *arbitration clause* in a contract). As noted in the *Preston* case, which follows shortly, the Federal Arbitration Act requires judicial enforcement of a wide range of agreements to arbitrate claims. This means that if a contract contains a clause requiring arbitration of certain claims but one of the parties attempts to litigate such a claim in court, the court is very likely to dismiss the case and compel arbitration of the dispute.

Arbitration may also be compelled by other statutes. One example is the *compulsory arbitration* many states require as part of the collective bargaining process for certain public employees. Finally, parties who have not agreed in advance to submit future disputes to arbitration may agree upon arbitration after the dispute arises.

Arbitration usually is less formal than regular court proceedings. The arbitrator may or may not be an attorney. Often, she is a professional with expertise in the subject matter of the dispute. Although arbitration hearings often resemble civil trials, the applicable procedures, the rules for admission of evidence, and the record-keeping requirements typically are not as rigorous as those governing courts. Arbitrators sometimes have freedom to ignore rules of substantive law that would bind a court.

The arbitrator’s decision, called an *award*, is filed with a court, which will enforce it if necessary. The losing party may object to the arbitrator’s award, but judicial review of arbitration proceedings is limited. According to the Federal Arbitration Act (FAA), grounds for overturning an arbitration award include (1) a party’s use of fraud, (2) the arbitrator’s partiality or corruption, and (3) other misconduct by the arbitrator.

In *Hall Street Associates v. Mattel, Inc.*, 128 S. Ct. 1396 (2008), the U.S. Supreme Court noted that the exclusive grounds for having an arbitration award vacated are the ones listed in the FAA. The Court then held that parties to an arbitration agreement cannot add to the statutory

list of grounds for overturning an arbitration award by contractually calling for judicial review that would allow an arbitration award to be vacated because of ordinary legal errors on the part of the arbitrator. Thus, even if a party believes that the arbitrator's decision resulted from an erroneous application of the law, the arbitration award will stand.

Preston v. Ferrer, which follows, discusses the purposes of the FAA. The Supreme Court goes on to hold that when parties have agreed to arbitrate disputes, the FAA controls and the dispute must therefore be submitted to arbitration even if otherwise applicable state law appears to give initial decision-making authority to a court or an administrative agency.

Preston v. Ferrer

128 S. Ct. 978 (U.S. Sup. Ct. 2008)

Alex Ferrer, a former judge who appears as "Judge Alex" on a Fox television network program, entered into a contract with Arnold Preston, a California attorney who renders services to persons in the entertainment industry. Seeking fees allegedly due under the contract, Preston invoked the clause setting forth the parties' agreement to arbitrate "any dispute . . . relating to the terms of [the contract] or the breach, validity, or legality thereof . . . in accordance with the rules [of the American Arbitration Association]." Preston's demand for arbitration was countered shortly thereafter by Ferrer's petition to the California Labor Commissioner. In that petition, Ferrer contended that the contract was unenforceable under the California Talent Agencies Act (CTAA). Ferrer asserted that Preston acted as a talent agent without the license required by the CTAA, and that Preston's unlicensed status rendered the entire contract void.

The Labor Commissioner's hearing officer determined that Ferrer had stated a plausible basis for invoking the Labor Commissioner's authority. The hearing officer denied Ferrer's motion to stay the arbitration, however, on the ground that the Labor Commissioner lacked the specific power to order such relief. Ferrer then filed suit in a California Superior Court, seeking a declaration that the controversy between the parties "arising from the [c]ontract, including in particular the issue of the validity of the [c]ontract, is not subject to arbitration." Ferrer sought an injunction restraining Preston from proceeding before the arbitrator. Preston responded by moving to compel arbitration. The Superior Court denied Preston's motion to compel arbitration and enjoined Preston from proceeding before the arbitrator "unless and until the Labor Commissioner determines that . . . she is without jurisdiction over the disputes between Preston and Ferrer."

Preston appealed to the California Court of Appeal, which affirmed the lower court's decision. The California Supreme Court denied Preston's petition for review. The U.S. Supreme Court, however, granted Preston's petition for a writ of certiorari and thereby agreed to decide the issue presented by Preston's appeal: whether the Federal Arbitration Act overrides a state law vesting initial adjudicatory authority in an administrative agency.

Ginsburg, Justice

As this Court recognized in *Southland Corp. v. Keating*, 465 U.S. 1 (1984), the Federal Arbitration Act (FAA) establishes a national policy favoring arbitration when the parties contract for that mode of dispute resolution. The FAA . . . supplies not simply a procedural framework applicable in federal courts; it also calls for the application, in state as well as federal courts, of federal substantive law regarding arbitration. More recently, in *Buckeye Check Cashing, Inc. v. Cardegna*, 546 U.S. 440 (2006), the Court clarified that when parties agree to arbitrate all disputes arising under their contract, questions concerning the validity of the entire contract are to be resolved by the arbitrator in the first instance, not by a federal or state court.

The instant petition presents the following question: Does the FAA override not only state statutes that refer certain state-law controversies initially to a judicial forum, but also state

statutes that refer certain disputes initially to an administrative agency? We hold today that when parties agree to arbitrate all questions arising under a contract, state laws lodging primary jurisdiction in another forum, whether judicial or administrative, are superseded by the FAA.

An easily stated question underlies this controversy. Ferrer claims that Preston was a talent agent who operated without a license in violation of the CTAA. Accordingly, he urges, the contract between the parties . . . is void and Preston is entitled to no compensation for any services he rendered. Preston, on the other hand, maintains that he acted as a personal manager, not as a talent agent, hence his contract with Ferrer is not governed by the CTAA and is both lawful and fully binding on the parties.

Because the contract between Ferrer and Preston provides that "any dispute . . . relating to the . . . validity, or legality"

of the agreement “shall be submitted to arbitration,” Preston urges that Ferrer must litigate his CTAA defense in the arbitral forum. Ferrer insists, however, that the “personal manager” or “talent agent” inquiry falls, under California law, within the exclusive original jurisdiction of the Labor Commissioner, and that the FAA does not displace the Commissioner’s primary jurisdiction. The dispositive issue, then, contrary to Ferrer’s suggestion, is not whether the FAA preempts the CTAA wholesale. The FAA plainly has no such destructive aim or effect. Instead, the question is simply who decides whether Preston acted as personal manager or as talent agent.

Section 2 of the FAA states: “A written provision in any . . . contract evidencing a transaction involving commerce to settle by arbitration a controversy thereafter arising out of such contract or transaction . . . shall be valid, irrevocable, and enforceable, save upon such grounds as exist at law or in equity for the revocation of any contract.” Section 2 “declare[s] a national policy favoring arbitration” of claims that parties contract to settle in that manner. *Southland Corp.*, 465 U.S. at 10. That national policy, we held in *Southland*, “appli[es] in state as well as federal courts” and “foreclose[s] state legislative attempts to undercut the enforceability of arbitration agreements.” *Id.* at 16. The FAA’s displacement of conflicting state law is now well-established and has been repeatedly reaffirmed. [Case citations omitted.]

A recurring question under § 2 is who should decide whether “grounds . . . exist at law or in equity” to invalidate an arbitration agreement. In *Prima Paint Corp. v. Flood & Conklin Mfg. Co.*, 388 U.S. 395 (1967), we held that attacks on the validity of an entire contract, as distinct from attacks aimed at the arbitration clause, are within the arbitrator’s ken. The litigation in *Prima Paint* originated in federal court, but the same rule, we held in *Buckeye*, applies in state court. The plaintiffs in *Buckeye* alleged that the contracts they signed, which contained arbitration clauses, were illegal under state law and void *ab initio*. Relying on *Southland*, we held that the plaintiffs’ challenge was within the province of the arbitrator to decide.

Buckeye largely, if not entirely, resolves the dispute before us. The contract between Preston and Ferrer clearly “evidenc[ed] a transaction involving commerce” [quoting FAA § 2], and Ferrer has never disputed that the written arbitration provision in the contract falls within the purview of § 2. Moreover, Ferrer sought invalidation of the contract as a whole. In the proceedings below, he made no discrete challenge to the validity of the arbitration clause. Ferrer thus urged the Labor Commissioner and California courts to override the contract’s arbitration clause on a ground that *Buckeye* requires the arbitrator to decide in the first instance.

Ferrer attempts to distinguish *Buckeye* by arguing that the CTAA merely requires exhaustion of administrative remedies before the parties proceed to arbitration. We reject that argument.

The CTAA regulates talent agents and talent agency agreements. “Talent agency” is defined, with exceptions not relevant here, as “a person or corporation who engages in the occupation of procuring, offering, promising, or attempting to procure employment or engagements for an artist or artists.” The definition “does not cover other services for which artists often contract, such as personal and career management (i.e., advice, direction, coordination, and oversight with respect to an artist’s career or personal or financial affairs).” [Case citation omitted.] The CTAA requires talent agents to procure a license from the Labor Commissioner. “In furtherance of the [CTAA’s] protective aims, an unlicensed person’s contract with an artist to provide the services of a talent agency is illegal and void.” [Case citation omitted.]

The CTAA states [that] “[i]n cases of controversy arising under this chapter, the parties involved shall refer the matters in dispute to the Labor Commissioner, who shall hear and determine the same, subject to an appeal within 10 days after determination, to the superior court where the same shall be heard *de novo*.” . . . Procedural prescriptions of the CTAA thus conflict with the FAA’s dispute resolution regime [by granting] the Labor Commissioner exclusive jurisdiction to decide an issue that the parties agreed to arbitrate. . . . Ferrer contends that the CTAA is nevertheless compatible with the FAA because [the CTAA] merely postpones arbitration until after the Labor Commissioner has exercised her primary jurisdiction. The party that loses before the Labor Commissioner may file for *de novo* review in [a California Superior Court]. At that point, Ferrer asserts, either party could move to compel arbitration under [California law] and thereby obtain an arbitrator’s determination prior to judicial review.

Ferrer’s . . . argument—that [the CTAA] merely postpones arbitration—[does not] withstand examination. [The CTAA] provides for *de novo* review in [California] Superior Court, not elsewhere. From Superior Court an appeal lies in the Court of Appeal. Thereafter, the losing party may seek review in the California Supreme Court. Arbitration, if it ever occurred following the Labor Commissioner’s decision, would likely be long delayed, in contravention of Congress’ intent “to move the parties to an arbitrable dispute out of court and into arbitration as quickly and easily as possible.” [Case citation omitted.] If Ferrer prevailed in the California courts, moreover, he would no doubt argue that judicial findings of fact and conclusions of law, made after a full and fair *de novo* hearing in court, are binding on the parties and preclude the arbitrator from making any contrary rulings.

A prime objective of an agreement to arbitrate is to achieve “streamlined proceedings and expeditious results.” [Case citation omitted.] That objective would be frustrated even if Preston could compel arbitration in lieu of *de novo* Superior Court review. Requiring initial reference of the parties’ dispute to the Labor Commissioner would, at the least, hinder speedy resolution of the controversy.

Ferrer asks us to overlook the apparent conflict between the arbitration clause and [the CTAA] because proceedings before the Labor Commissioner are administrative rather than judicial. Allowing parties to proceed directly to arbitration, Ferrer contends, would undermine the Labor Commissioner’s ability to stay informed of potentially illegal activity, and would deprive artists protected by the TAA of the Labor Commissioner’s expertise. In *Gilmer v. Interstate/Johnson Lane Corp.*, 500 U.S. 20 (1991), we considered and rejected a similar argument, namely, that arbitration of age discrimination claims would undermine the role of the Equal Employment Opportunity Commission (EEOC) in enforcing federal law. The “mere involvement of an administrative agency in the enforcement of a statute,” we held, does not limit private parties’ obligation to comply with their arbitration agreements.

Ferrer points to our holding in *EEOC v. Waffle House, Inc.*, 534 U.S. 279 (2002), that an arbitration agreement signed by an employee who becomes a discrimination complainant does not bar the EEOC from filing an enforcement suit in its own name. He further emphasizes our observation in *Gilmer* that individuals who agreed to arbitrate their discrimination claims would “still be free to file a charge with the EEOC.” Consistent with these decisions, Ferrer argues, the arbitration clause in his contract with Preston leaves undisturbed the Labor Commissioner’s independent authority to enforce the CTAA. And so it

may. Enforcement of the parties’ arbitration agreement in this case does not displace any independent authority the Labor Commissioner may have to investigate and rectify violations of the CTAA. But in [the CTAA] proceedings [Ferrer desires], the Labor Commissioner [would] function[] not as an advocate advancing a cause before a tribunal authorized to find the facts and apply the law; instead, the Commissioner [would] serve[] as impartial arbiter. That role is just what the FAA-governed agreement between Ferrer and Preston reserves for the arbitrator. In contrast, in *Waffle House* and in the *Gilmer* aside [that] Ferrer quotes, the Court addressed the role of an agency, not as adjudicator but as prosecutor, pursuing an enforcement action in its own name or reviewing a discrimination charge to determine whether to initiate judicial proceedings.

Finally, it bears repeating that Preston’s petition presents precisely and only a question concerning the forum in which the parties’ dispute will be heard. “By agreeing to arbitrate a statutory claim, a party does not forgo the substantive rights afforded by the statute; it only submits to their resolution in an arbitral . . . forum.” [Case citation omitted.] So here, Ferrer relinquishes no substantive rights the CTAA or other California law may accord him. But under the contract he signed, he cannot escape resolution of those rights in an arbitral forum.

In sum, we disapprove the distinction between judicial and administrative proceedings drawn by Ferrer and adopted by the [California Court of Appeal in ruling in favor of Ferrer]. When parties agree to arbitrate all questions arising under a contract, the FAA supersedes state laws lodging primary jurisdiction in another forum, whether judicial or administrative.

Decision of California Court of Appeal reversed, and case remanded for further proceedings.

Court-Annexed Arbitration In this form of ADR, certain civil lawsuits are diverted into arbitration. One example might be cases in which less than a specified dollar amount is at issue. Most often, court-annexed arbitration is mandatory and is ordered by the judge, but some jurisdictions merely offer litigants the option of arbitration. The losing party in a court-annexed arbitration still has the right to a regular trial.

Mediation In mediation, a neutral third party called a *mediator* helps the parties reach a cooperative resolution of their dispute by facilitating communication between them, clarifying their areas of agreement and disagreement, helping them to see each other’s viewpoints, and suggesting settlement options. Mediators, unlike arbitrators,

cannot make decisions that bind the parties. Instead, a successful mediation process results in a *mediation agreement*. Such agreements normally are enforced under regular contract law principles.

Mediation is used in a wide range of situations, including labor, commercial, family, and environmental disputes. It may occur by agreement of the parties after a dispute has arisen. It also may result from a previous contractual agreement by the parties. Increasingly, court-annexed mediation is either compelled or made available by courts in certain cases.

Summary Jury Trial Sometimes settlement of civil litigation is impeded because the litigants have vastly different perceptions about the merits of their cases. In such cases,

the summary jury trial may give the parties a needed dose of reality. The summary jury trial is an abbreviated, non-public mock jury trial that does not bind the parties. If the parties do not settle after completion of the summary jury trial, they still are entitled to a regular court trial. There is some disagreement over whether courts can compel the parties to take part in a summary jury trial.

Minitrial A minitrial is an informal, abbreviated private “trial” whose aim is to promote settlement of disputes. Normally, it arises out of a private agreement that also describes the procedures to be followed. In the typical minitrial, counsel for the parties present their cases to a panel composed of senior management from each side. Sometimes a neutral advisor such as an attorney or a retired judge presides. This advisor may also offer an opinion about the case’s likely outcome in court. After the presentations, the managers attempt to negotiate a settlement.

Other ADR Devices Other ADR devices include (1) *med/arb* (a hybrid of mediation and arbitration in which a third party first acts as a mediator, and then as an arbitrator); (2) the use of *magistrates* and *special masters* to perform various tasks during complex litigation in the federal courts; (3) *early neutral evaluation (ENE)* (a court-annexed procedure involving early, objective evaluation of the case by a neutral private attorney with experience in its subject matter); (4) *private judging* (in which litigants hire a private referee to issue a decision that may be binding but that usually does not preclude recourse to the courts); and (5) *private panels* instituted by an industry or an organization to handle claims of certain kinds (e.g., the Better Business Bureau). In addition, some formal legal processes are sometimes called ADR devices. Examples include small claims courts and the administrative procedures used to handle claims for veterans’ benefits or Social Security benefits.

Problems and Problem Cases

1. Peters sues Davis. At trial, Peters’s lawyer attempts to introduce certain evidence to help make his case. Davis’s attorney objects, and the trial judge refuses to allow the evidence. Peters eventually loses the case at the trial court level. On appeal, his attorney argues that the trial judge’s decision not to admit the evidence was erroneous. Davis’s attorney argues that the appellate court cannot consider this question, because appellate courts review only errors of *law* (not fact) at the trial court level. Is Davis’s attorney correct? Why or why not?
2. Eric Baker, who had agreed in his employment application to resolve any employment-related dispute through arbitration, was fired after suffering a seizure on the job. Baker did not initiate arbitration proceedings. Instead, he filed a charge of discrimination with the Equal Employment Opportunity Commission (EEOC). Alleging that Baker’s employer violated the Americans with Disabilities Act (ADA), the EEOC filed an enforcement action against the employer in federal court. The EEOC sought an injunction and punitive damages against the employer, and backpay, reinstatement, and compensatory damages for Baker. The Federal Arbitration Act (FAA) does not allow Baker to step outside the bounds of his agreement by bringing a judicial action against Waffle House. Does it prohibit the EEOC from bringing such an action, demanding victim-specific relief for Baker?
3. Alabama resident Lynda Butler sued Beer Across America, an Illinois firm, for having sold her minor son 12 bottles of beer. The son ordered the beer from the defendant’s Web site while his parents were on vacation. Butler based her lawsuit on an Alabama statute and filed it in an Alabama state court. Exercising an option described in Chapter 2, the defendant removed the case to a federal court, the U.S. District Court for the Northern District of Alabama. Alabama’s long-arm statute, rather than being restricted to certain listed behaviors on the part of nonresident defendants, contained an authorization for courts in the state and federal district of Alabama to exert in personam jurisdiction over nonresident defendants in any case in which the exertion of such jurisdiction would be consistent with the U.S. Constitution’s due process guarantee. Beer Across America filed a motion asking the federal court to dismiss the case for lack of in personam jurisdiction. The facts showed that Beer Across America owned no property in Alabama, had no offices or sales personnel located there, and did not advertise there. Beer Across America’s \$24.95 sale to Butler’s son was the only sale made by the firm to him, and the firm had not directly solicited him as a customer. Sales to Alabama residents represented a very small percentage of Beer Across America’s

revenue. Beer Across America's Web site allowed the ordering of products but was not highly interactive in nature. In view of the facts and the relevant legal principles, how did the court rule on Beer Across America's motion to dismiss?

4. Sandra Wheeler and Darrin Green were involved in litigation in which Wheeler was not represented by an attorney. Green's attorney served 64 requests for admission on Wheeler. For the most part, the requests for admission set forth substantive legal allegations that Green needed to prove in order to win the case, as opposed to being requests that sought admissions regarding purely factual matters. Wheeler provided responses to the requests but did so two days after the responses were due under applicable law of the state of Texas. Because the responses he received from Wheeler were not timely and because he took the position that the requests for admission were to be deemed admitted, Green's attorney filed a motion for summary judgment against Wheeler. The trial court granted summary judgment in favor of Green. Wheeler retained an attorney and appealed to the intermediate court of appeals, which affirmed the trial court's decision. Wheeler then appealed to the Supreme Court of Texas, arguing that even though her responses to the requests for admission were submitted after the due date, the requests should not have been deemed admitted, and the lower courts should not have granted summary judgment in favor of Green. Was Wheeler correct?
5. Adams, a worker at a Circuit City retail electronics store in California, signed an employment application that included an agreement to resolve all future employment disputes exclusively by binding arbitration. Later, Adams filed a state-law-based employment discrimination suit against Circuit City in a California state court. Circuit City then filed suit in a federal district court, asking the court to enjoin the state court action and compel arbitration under the Federal Arbitration Act (FAA). The coverage provision of the FAA states that "[a] written provision in . . . a contract evidencing a transaction involving commerce to settle by arbitration a controversy thereafter arising out of such contract . . . shall be valid, irrevocable, and enforceable. . . ." However, another section of the FAA excludes from the FAA's coverage "contracts of employment of seamen, railroad employees, or any other class or workers engaged in foreign or interstate commerce." Concluding that the FAA applied

to the Adams–Circuit City contract, the federal district court issued an order compelling arbitration of the dispute. Adams appealed, and the U.S. Court of Appeals for the Ninth Circuit reversed. The Ninth Circuit reasoned that in view of the above-quoted exclusion, the FAA does not apply to contracts of employment. Circuit City appealed to the U.S. Supreme Court, which agreed to decide the case. Was the Ninth Circuit correct? Are all contracts of employment excluded from the FAA's coverage?

6. Jerrie Gray worked at a Tyson Foods plant where she was exposed to comments, gestures, and physical contact that, she alleged, constituted sexual harassment. Tyson disputed the allegation, arguing that the behavior was not unwelcome, that the complained-about conduct was not based on sex, that the conduct did not affect a term, condition, or privilege of employment, and that proper remedial action was taken in response to any complaint by Gray of sexual harassment. During the trial in federal court, a witness for Gray repeatedly volunteered inadmissible testimony that the judge had to tell the jury to disregard. At one point, upon an objection from the defendant's counsel, the witness asked, "May I say something here?" The judge told her she could not. Finally, after the jury left the courtroom, the witness had an angry outburst that continued into the hallway, in view of some of the jurors.

The jury awarded Gray \$185,000 in compensatory and \$800,000 in punitive damages. Tyson believed that it should not have been liable, that the awards of damages were excessive and unsupported by evidence, and that the inadmissible evidence and improper conduct had tainted the proceedings. What courses of action may Tyson pursue?
7. Preston is the plaintiff in a civil lawsuit against Dalton. During the discovery phase of the case, Dalton's attorney took Preston's deposition. The trial of the case is in process. Dalton's attorney has offered Preston's deposition as evidence. Preston's attorney has objected, arguing that Preston is neither dead nor unavailable to testify in person, and that the deposition therefore should not be allowed admitted into evidence. Is Preston's attorney correct?
8. Abbott Laboratories manufactured and sold the Life Care PCA, a pump that delivers medication into a person intravenously at specific time intervals. Beverly Lewis sued Abbott in a Mississippi state court, alleging that a defective Life Care PCA had

injured her by delivering an excessive quantity of morphine. Abbott served Lewis with a request for admission calling for her to admit that her damages did not exceed \$75,000. Lewis did not answer the request for admission. Abbott removed the case to the U.S. District Court for the Southern District of Mississippi, predicating the court's subject-matter jurisdiction on diversity of citizenship and an amount in controversy exceeding \$75,000. Contending that her silence had amounted to an admission that her damages were less than \$75,000, Lewis filed a motion asking that the federal court remand the case to the state court. Did the federal court have subject-matter jurisdiction? How did the federal court rule on Lewis's motion to send the case back to the state court?

9. The state of New Jersey says it is sovereign over certain landfilled portions of Ellis Island. The state of New York disagrees, asserting that it is sovereign over the whole of the island. New Jersey brings an action in the U.S. District Court for the Southern District of New York. Should the court hear the case?
10. New Jersey residents Richard Goldhaber and his daughter, Danna, joined an Internet newsgroup that provided information about cruises and cruise ships.

California resident Charles Kohlenberg was a member of the same group. According to the Goldhabers, Kohlenberg began posting on this newsgroup certain messages that alleged the Goldhabers had engaged in unlawful and immoral acts. These allegations were false, the Goldhabers maintained. They filed a defamation lawsuit against Kohlenberg in a New Jersey court. Kohlenberg sought to have the case dismissed, contending that the court lacked in personam jurisdiction over him. Did the New Jersey court have in personam jurisdiction over Kohlenberg?

chapter 3

BUSINESS AND THE CONSTITUTION

A federal statute and related regulations prohibited producers of beer from listing, on a product label, the alcohol content of the beer in the container on which the label appeared. The regulation existed because the U.S. government believed that if alcohol content could be disclosed on labels, certain producers of beer might begin marketing their brand as having a higher alcohol content than competing beers. The government was concerned that “strength wars” among producers could then develop, that consumers would seek out beers with higher alcohol content, and that adverse public health consequences would follow. Because it wished to include alcohol content information on container labels for its beers, Coors Brewing Co. filed suit against the United States government and asked the court to rule that the statute and regulations violated Coors’s constitutional right to freedom of speech.

Consider the following questions as you read Chapter 3:

- On which provision in the U.S. Constitution was Coors relying in its challenge of the statute and regulations?
- Does a corporation such as Coors possess the same constitutional right to freedom of speech possessed by an individual human being, or does the government have greater latitude to restrict the content of a corporation’s speech?
- The alcohol content disclosures that Coors wished to make with regard to its product would be classified as *commercial speech*. Does commercial speech receive the same degree of constitutional protection that political or other noncommercial speech receives?
- Which party—Coors or the federal government—won the case, and why?
- Do producers and other sellers of alcoholic beverages have, in connection with the sale of their products, special ethical obligations that sellers of other products might not have? If so, what are those obligations and why do they exist?

CONSTITUTIONS SERVE TWO general functions. First, they set up the structure of government, allocating power among its various branches and subdivisions. Second, they prevent government from taking certain actions—especially actions that restrict individual or, as suggested by the Coors scenario with which this chapter opened, corporate rights. This chapter examines the U.S. Constitution’s performance of these functions and considers how that performance affects government regulation of business.

An Overview of the U.S. Constitution

The U.S. Constitution exhibits the principle of **separation of powers** by giving distinct powers to Congress, the president, and the federal courts. Article I of the Constitution establishes a Congress composed of a Senate and a House of Representatives, gives it sole power to legislate at the federal level, and sets out rules for the

enactment of legislation. Article I, section 8 also defines when Congress can make law by stating its *legislative powers*. Three of those powers—the commerce, tax, and spending powers—are discussed later in the chapter.

Article II gives the president the *executive power*—the power to execute or enforce the laws passed by Congress. Section 2 of that article lists other presidential powers, including the powers to command the nation’s armed forces and to make treaties. Article III gives the *judicial power* of the United States to the Supreme Court and the other federal courts later established by Congress. Article III also determines the types of cases the federal courts may decide.

Besides creating a separation of powers, Articles I, II, and III set up a system of **checks and balances** among Congress, the president, and the courts. For example, Article I gives the president the power to veto legislation passed by Congress, but allows Congress to override such a veto by a two-thirds vote of each House. Article I and Article II provide that the president, the vice president, and other federal officials may be impeached and removed from office by a two-thirds vote of the Senate. Article II states that treaties made by the president must be approved by a two-thirds vote of the Senate. Article III gives Congress some control over the Supreme Court’s appellate jurisdiction.

The Constitution recognizes the principle of **federalism** in the way it structures power relations between the federal government and the states. After Article I lists the powers Congress holds, a later section in Article I lists certain powers that Congress cannot exercise. The Tenth Amendment provides that those powers the Constitution neither gives to the federal government nor denies to the states are reserved to the states or the people.

Article VI, however, makes the Constitution, laws, and treaties of the United States supreme over state law. As will be seen, this principle of **federal supremacy** may cause federal statutes to *preempt* inconsistent state laws. The Constitution also puts limits on the states’ law-making powers. One example is Article I’s command that states shall not pass laws impairing the obligation of contracts.

Article V sets forth the procedures for amending the Constitution. The Constitution has been amended 27 times. The first 10 of these amendments comprise the Bill of Rights. Although the rights guaranteed in the first 10 amendments once restricted only federal government action, most of them now limit state government action as well. As you will learn, this results from their *incorporation* within the Due Process Clause of the Fourteenth Amendment.

The Evolution of the Constitution and the Role of the Supreme Court

According to the legal realists discussed in Chapter 1, written “book law” is less important than what public decision makers *actually do*. Using this approach, we discover a Constitution that differs from the written Constitution just described. The actual powers of today’s presidency, for instance, exceed anything one would expect from reading Article II. As you will see, moreover, some constitutional provisions have acquired a meaning different from their meaning when first enacted. American constitutional law is much more evolving than static.

Many of these changes result from the way one public decision maker—the nine-member U.S. Supreme Court—has interpreted the Constitution over time. Formal constitutional change can be accomplished only through the amendment process. Because this process is difficult to employ, however, amendments to the Constitution have been relatively infrequent. As a practical matter, the Supreme Court has become the Constitution’s main “amender” through its many interpretations of constitutional provisions. Various factors help explain the Supreme Court’s ability and willingness to play this role. Because of their vagueness, some key constitutional provisions invite diverse interpretations; “due process of law” and “equal protection of the laws” are examples. In addition, the history surrounding the enactment of constitutional provisions sometimes is sketchy, confused, or contradictory. Probably more important, however, is the perceived need to adapt the Constitution to changing social conditions. As the old saying goes, Supreme Court decisions tend to “follow the election returns.” (Regardless of where one finds himself or herself on the political spectrum, the old saying has taken on a new twist after *Bush v. Gore*, the historic 2000 decision referred to later in this chapter.)

Under the power of **judicial review**, courts can declare the actions of other government bodies unconstitutional. How courts exercise this power depends on how they choose to read the Constitution. This means that courts—especially the Supreme Court—have political power. Indeed, the Supreme Court’s justices are, to a considerable extent, public policy makers. Their beliefs are important in the determination of how America is governed. This is why the justices’ nomination and confirmation often involve so much political controversy.

Yet even though the Constitution frequently is what the courts say it is, judicial power to shape the Constitution

has limits. Certain limits spring from the Constitution's language, which sometimes is quite clear. Others result from the judges' adherence to the *stare decisis* doctrine discussed in Chapter 1. Perhaps the most significant limits on judges' power, however, stem from the tension between modern judicial review and democracy. Legislators are chosen by the people, whereas judges—especially appellate level judges—often are appointed, not elected. Today, judges exercise political power by declaring the actions of legislatures unconstitutional under standards largely of the judiciary's own devising. This sometimes leads to charges that courts are undemocratic, elitist institutions. Such charges put political constraints on judges because courts depend on the other branches of government—and ultimately on public belief in judges' fidelity to the rule of law—to make their decisions effective. Judges, therefore, may be reluctant to declare statutes unconstitutional because they are wary of power struggles with a more representative body such as Congress.

The Coverage and Structure of This Chapter

This chapter examines certain constitutional provisions that are important to business; it does not discuss constitutional law in its entirety. These provisions help define federal and state power to regulate the economy. The U.S. Constitution limits government regulatory power in two general ways. First, it restricts *federal* legislative authority by listing the powers Congress can exercise. These are known as the **enumerated powers**. Federal legislation cannot be constitutional if it is not based on a power specifically stated in the Constitution. Second, the U.S. Constitution limits both *state and federal* power by placing certain **independent checks** in the path of each. In effect, the independent checks establish that even if Congress has an enumerated power to legislate on a particular matter or a state constitution authorizes a state to take certain actions, there still are certain protected spheres into which neither the federal government nor the state government may reach.

Accordingly, a federal law must meet two general tests in order to be constitutional: (1) it must be based on an enumerated power of Congress, and (2) it must not collide with any of the independent checks. For example, Congress has the power to regulate commerce among the states. This power might seem to allow Congress to pass legislation forbidding women from crossing state lines to buy or sell goods. Yet such a law, though arguably based on an enumerated power, surely would be unconstitutional because it conflicts with an independent check—the equal protection guarantee discussed later in the chapter. Today, the independent checks are the main limitations on congressional power. The most important reason for the decline of the enumerated powers limitation is the perceived need for active federal regulation of economic and social life. Recently, however, the enumerated powers limitation has begun to assume somewhat more importance, as will be seen.

After discussion of the most important state and federal powers to regulate economic matters, the chapter explores certain independent checks that apply to the federal government and the states. The chapter then examines some independent checks that affect the states alone. It concludes by discussing a provision—the Takings Clause of the Fifth Amendment—that both recognizes a governmental power and limits its exercise.

State and Federal Power to Regulate

State Regulatory Power Although state constitutions may do so, the U.S. Constitution does not list the powers state legislatures can exercise. The U.S. Constitution does place certain independent checks in the path of state lawmaking, however. It also declares that certain powers (e.g., creating currency and taxing imports) can be exercised only by Congress. In many other areas, though, Congress and the state legislatures have *concurrent powers*. Both can make law within those areas unless Congress preempts state regulation under the supremacy clause. A very important state legislative power that operates concurrently with many congressional powers is the **police power**, a broad state power to regulate for the public health, safety, morals, and welfare.

Federal Regulatory Power Article I, section 8 of the U.S. Constitution specifies a number of ways in which Congress may legislate concerning business and commercial matters. For example, it empowers Congress to coin and borrow money, regulate commerce

with foreign nations, establish uniform laws regarding bankruptcies, create post offices, and enact copyright and patent laws. The most important congressional powers contained in Article I, section 8, however, are the powers to regulate commerce among the states, to lay and collect taxes, and to spend for the general welfare. Because they now are read so broadly, these three powers are the main constitutional bases for the extensive federal social and economic regulation that exists today.

The Commerce Power Article I, section 8 states that “The Congress shall have Power . . . To regulate Commerce . . . among the several States.” The original reason for giving Congress this power to regulate *interstate commerce* was to nationalize economic matters by blocking the protectionist state restrictions on interstate trade that were common after the Revolution. As discussed later in the chapter, the Commerce Clause serves as an independent check on state regulation that unduly restricts interstate commerce. Our present concern, however, is the Commerce Clause’s role as a source of congressional regulatory power.

The literal language of the Commerce Clause simply gives Congress power to regulate commerce that occurs among the states. Today, however, the clause is regarded as an all-purpose federal police power enabling Congress to regulate many activities within a state’s borders (*intra-state matters*). How has this transformation occurred?

The most important step in the transformation was the Supreme Court’s conclusion that the power to regulate *interstate* commerce includes the power to regulate *intra-state* activities that affect interstate commerce. For example, in a 1914 decision, the Supreme Court upheld the Interstate Commerce Commission’s regulation of railroad rates within Texas (an intrastate matter outside the language of the Commerce Clause) because those rates affected rail traffic between Texas and Louisiana (an interstate matter within the clause’s language). This “affecting commerce” doctrine eventually was used to justify federal police power measures with significant intrastate reach. For instance, the Supreme Court upheld the application of the 1964 Civil Rights Act’s “public accommodations” section to a family-owned restaurant in Birmingham, Alabama. It did so because the restaurant’s racial discrimination affected interstate commerce by reducing the restaurant’s business and limiting its purchases of out-of-state meat, and by restricting the ability of blacks to travel among the states.

As the above example suggests, Congress may Constitutionally regulate many predominantly intrastate activities. Yet two Supreme Court decisions during roughly the past 15 years offered indications that the commerce power is not as broad as many had come to believe. Harmonizing those two decisions with the earlier “affecting commerce” decisions was the Court’s task in a 2005 case, *Gonzales v. Raich*, which follows.

Gonzales v. Raich

545 U.S. 1 (U.S. Sup. Ct. 2005)

Although marijuana possession and sale are outlawed by state and federal statutes, a 1996 California law, the Compassionate Use Act, made California the first of approximately 10 states to authorize limited use of the drug for medicinal purposes. The Compassionate Use Act created an exemption from criminal prosecution for patients and primary caregivers who possess or cultivate marijuana for medicinal purposes with a physician’s approval.

California residents Angel Raich and Diane Monson suffered from a variety of serious medical conditions. After prescribing numerous conventional medicines, physicians had concluded that marijuana was the only effective treatment for Raich and Monson. Both women had been using marijuana as a medication pursuant to their doctors’ recommendations, and both relied heavily on marijuana so that they could function on a daily basis without extreme pain. Monson cultivated her own marijuana. Two caregivers provided Raich with locally grown marijuana at no charge.

In 2002, county deputy sheriffs and agents from the federal Drug Enforcement Administration (DEA) came to Monson’s home. Although the deputies concluded that Monson’s use of marijuana was lawful under California law, the federal agents seized and destroyed all six of her cannabis plants. Raich and Monson thereafter initiated legal action against the Attorney General of the United States and the head of the DEA in an effort to obtain an injunction barring the enforcement of the federal Controlled Substances Act (CSA), to the extent that it prevented them from possessing, obtaining, or manufacturing cannabis for their personal medical use in accordance with California law. The CSA classifies marijuana as a controlled substance and criminalizes its possession and sale. In their complaint, Raich and Monson claimed that enforcing the CSA against them would violate the U.S. Constitution’s Commerce Clause and the Due Process Clause of the Fifth Amendment. The

federal district court denied the request for a preliminary injunction. The U.S. Court of Appeals for the Ninth Circuit, however, agreed with the Commerce Clause argument made by Raich and Monson. The Court of Appeals therefore directed the lower court to issue a preliminary injunction prohibiting enforcement of the CSA against Raich and Monson (often referred to below as “respondents”). The U.S. Supreme Court granted the federal government’s petition for a writ of certiorari.

Stevens, Justice

Article I, section 8 of the Constitution [empowers Congress] “to make all Laws which shall be necessary and proper for carrying into Execution” [the federal] authority to “regulate Commerce with foreign Nations, and among the several States.” The question presented in this case is whether the power vested in Congress by [the Commerce Clause] includes the power to prohibit the local cultivation and use of marijuana in compliance with California law. [This] case is made difficult by respondents’ strong arguments that they will suffer irreparable harm because, despite a congressional finding to the contrary, marijuana does have valid therapeutic purposes. The [issue] before us, however, is not whether it is wise to enforce the statute in these circumstances; rather, it is whether Congress’ power to regulate interstate markets for medicinal substances encompasses the portions of those markets that are supplied with drugs produced and consumed locally.

[Enacted in 1970 as part of a broader legislative package known as the Comprehensive Drug Abuse Prevention and Control Act], the CSA repealed most of the earlier [federal] drug laws in favor of a comprehensive regime to combat the international and interstate traffic in illicit drugs. The main objectives of the CSA [center around monitoring] legitimate and illegitimate traffic in controlled substances. Congress devised a closed regulatory system making it unlawful to manufacture, distribute, dispense, or possess any controlled substance except in a manner authorized by the CSA, [which] categorizes all controlled substances into five schedules. The drugs are grouped together based on their accepted medical uses, the potential for abuse, and their psychological and physical effects on the body. Each schedule is associated with a distinct set of controls regarding the manufacture, distribution, and use of the substances listed therein.

Congress classified marijuana [in] Schedule I [of the CSA]. Schedule I drugs are categorized as such because of their high potential for abuse, lack of any accepted medical use, and absence of any accepted safety for use in medically supervised treatment. These three factors, in varying gradations, are also used to categorize drugs in the other four schedules. [As Congress acknowledged in the CSA, many drugs listed on the other schedules do have accepted medical uses.] By classifying marijuana as a Schedule I drug, [Congress made] the manufacture, distribution, or possession of marijuana . . . a criminal offense.

Respondents . . . do not dispute that passage of the CSA, as part of the Comprehensive Drug Abuse Prevention and Control Act, was well within Congress’ commerce power. Rather,

respondents’ challenge is actually quite limited; they argue that the CSA’s categorical prohibition of the manufacture and possession of marijuana as applied to the intrastate manufacture and possession of marijuana for medical purposes pursuant to California law exceeds Congress’ authority under the Commerce Clause.

[This Court’s Commerce Clause cases] have identified three general categories of regulation in which Congress is authorized to engage under its commerce power. First, Congress can regulate the channels of interstate commerce. Second, Congress has authority to regulate and protect the instrumentalities of interstate commerce, and persons or things in interstate commerce. Third, Congress has the power to regulate activities that substantially affect interstate commerce. Only the third category is implicated in the case at hand.

Our case law firmly establishes Congress’ power to regulate purely local activities that are part of an economic “class of activities” [having] a substantial effect on interstate commerce. See, e.g., *Wickard v. Filburn*, 317 U.S. 111 (1942). As we stated in *Wickard*, “even if appellee’s activity be local and though it may not be regarded as commerce, it may still, whatever its nature, be reached by Congress if it exerts a substantial economic effect on interstate commerce.” In *Wickard*, we upheld the application of regulations promulgated under the Agricultural Adjustment Act of 1938, which were designed to control the volume of wheat moving in interstate and foreign commerce in order to avoid surpluses and consequent abnormally low prices. The regulations established an allotment of 11.1 acres for Filburn’s 1941 wheat crop, but he sowed 23 acres, intending to use the excess by consuming it on his own farm. Filburn argued that even though Congress [had the] power to regulate the production of goods for commerce, that power did not authorize “federal regulation [of] production not intended in any part for commerce but wholly for consumption on the farm.” Justice Jackson’s opinion for a unanimous Court rejected this submission. He wrote:

The effect of the statute before us is to restrict the amount which may be produced for market and the extent as well to which one may forestall resort to the market by producing to meet his own needs. That appellee’s own contribution to the demand for wheat may be trivial by itself is not enough to remove him from the scope of federal regulation where, as here, his contribution, taken together with that of many others similarly situated, is far from trivial.

Wickard thus establishes that Congress can regulate purely intrastate activity that is not itself “commercial,” in that it is not

produced for sale, if it concludes that failure to regulate that class of activity would undercut the regulation of the interstate market in that commodity.

The similarities between this case and *Wickard* are striking. Like the farmer in *Wickard*, respondents are cultivating, for home consumption, a fungible commodity for which there is an established, albeit illegal, interstate market. Just as the Agricultural Adjustment Act was designed “to control the volume [of wheat] moving in interstate and foreign commerce in order to avoid surpluses” and consequently control the market price, a primary purpose of the CSA is to control the supply and demand of controlled substances in both lawful and unlawful drug markets. In *Wickard*, we had no difficulty concluding that Congress had a rational basis for believing that . . . leaving home-consumed wheat outside the regulatory scheme would have a substantial influence on price and market conditions. Here too, Congress had a rational basis for concluding that leaving home-consumed marijuana outside federal control would similarly affect price and market conditions.

More concretely, one concern prompting inclusion of wheat grown for home consumption in the 1938 Act was that rising market prices could draw such wheat into the interstate market, resulting in lower market prices. The parallel concern making it appropriate to include marijuana grown for home consumption in the CSA is the likelihood that the high demand in the interstate market will draw such marijuana into that market. While the diversion of homegrown wheat tended to frustrate the federal interest in stabilizing prices by regulating the volume of commercial transactions in the interstate market, the diversion of homegrown marijuana tends to frustrate the federal interest in eliminating commercial transactions in the interstate market in their entirety. In both cases, the regulation is squarely within Congress’ commerce power because production of the commodity meant for home consumption, be it wheat or marijuana, has a substantial effect on supply and demand in the national market for that commodity.

To support their [argument that applying the CSA to them would violate the Commerce Clause], respondents rely heavily on two of our more recent Commerce Clause cases, *United States v. Lopez*, 514 U.S. 549 (1995), and *United States v. Morrison*, 529 U.S. 598 (2000). [However, respondents] overlook the larger context of modern-era Commerce Clause jurisprudence preserved by those cases. [T]he statutory challenges in *Lopez* and *Morrison* were markedly different from the [statutory] challenge in the case at hand. Here, respondents ask us to excise individual applications of a concededly valid statutory scheme. In contrast, in both *Lopez* and *Morrison*, the parties asserted that a particular statute or provision fell outside Congress’ commerce power in its entirety. This distinction is pivotal, for we have often reiterated that “where the class of activities is

regulated and that class is within the reach of federal power, the courts have no power ‘to excise, as trivial, individual instances’ of the class.” [Citations of authority omitted.]

At issue in *Lopez* was the validity of the Gun-Free School Zones Act of 1990, which was a brief, single-subject statute making it a [federal] crime for an individual to possess a gun in a school zone. The Act did not regulate any economic activity and did not contain any requirement that the possession of a gun have any connection to past interstate activity or a predictable impact on future commercial activity. Distinguishing our earlier cases holding that comprehensive regulatory statutes may be validly applied to local conduct that does not, when viewed in isolation, have a significant impact on interstate commerce, we held the statute invalid. We explained:

[The Gun-Free School Zones Act] is a criminal statute that by its terms has nothing to do with ‘commerce’ or any sort of economic enterprise, however broadly one might define those terms. [The statute] is not an essential part of a larger regulation of economic activity, in which the regulatory scheme could be undercut unless the intrastate activity were regulated. It cannot, therefore, be sustained under our cases upholding regulations of activities that arise out of or are connected with a commercial transaction, which viewed in the aggregate, substantially affects interstate commerce.

The statutory scheme that the government is defending in this litigation is at the opposite end of the regulatory spectrum. [The CSA is] a lengthy and detailed statute creating a comprehensive framework for regulating the production, distribution, and possession of five classes of controlled substances. [The CSA’s classification of marijuana], unlike the discrete prohibition established by the Gun-Free School Zones Act of 1990, was merely one of many “essential parts of a larger regulation of economic activity, in which the regulatory scheme could be undercut unless the intrastate activity were regulated.” [Citation omitted.] Our opinion in *Lopez* casts no doubt on the validity of such a program.

Nor does this Court’s holding in *Morrison*. The Violence Against Women Act of 1994 created a federal civil remedy for the victims of gender-motivated crimes of violence. The remedy . . . generally depended on proof of the violation of a state law. Despite congressional findings that such crimes had an adverse impact on interstate commerce, we held the statute unconstitutional because, like the statute in *Lopez*, it did not regulate economic activity.

Unlike those at issue in *Lopez* and *Morrison*, the activities regulated by the CSA are quintessentially economic. The CSA is a statute that regulates the production, distribution, and consumption of commodities for which there is an established, and lucrative, interstate market. Prohibiting the intrastate possession

or manufacture of an article of commerce is a rational (and commonly utilized) means of regulating commerce in that product. Because the CSA is a statute that directly regulates economic, commercial activity, our opinion in *Morrison* casts no doubt on its constitutionality.

The Court of Appeals was able to conclude otherwise only by isolating a “separate and distinct” class of activities that it held to be beyond the reach of federal power, defined as “the intrastate, noncommercial cultivation, possession and use of marijuana for personal medical purposes on the advice of a physician and in accordance with state law.” The court characterized this class as “different in kind from drug trafficking.” The differences between the members of a class so defined and the principal traffickers in Schedule I substances might be sufficient to justify a policy decision exempting the narrower class from the coverage of the CSA. The question, however, is whether Congress’ contrary policy judgment, i.e., its decision to include this narrower “class of activities” within the larger regulatory scheme, was constitutionally deficient. We have no difficulty concluding that Congress acted rationally in determining that none of the characteristics making up the purported class . . . compelled an exemption from the CSA.

We acknowledge that evidence proffered by respondents in this case regarding the effective medical uses for marijuana, if found credible after trial, would cast serious doubt on the accuracy of the [congressional] findings that require marijuana to be listed in Schedule I. But the possibility that the drug may be reclassified in the future has no relevance to the question whether Congress now has the power to regulate its production and distribution. One need not have a degree in economics to understand why a nationwide exemption for the vast quantity of marijuana . . . locally cultivated for personal use (which presumably would include use by friends, neighbors, and family members) may have a substantial impact on the interstate market for this extraordinarily popular substance. The congressional judgment that an exemption for such a significant segment of the total market would undermine the orderly enforcement of the entire regulatory scheme is entitled to a strong presumption of validity.

[T]hat the California exemptions will have a significant impact on both the supply and demand sides of the market for marijuana is . . . readily apparent. [Although] most prescriptions for legal drugs . . . limit the dosage and duration of the usage,

under California law the doctor’s permission to recommend marijuana use is open-ended. The [Compassionate Use Act’s authorization for the doctor] to grant permission whenever the doctor determines that a patient is afflicted with “any other illness for which marijuana provides relief” is broad enough to allow even the most scrupulous doctor to conclude that some recreational uses would be therapeutic. And our cases have taught us that there are some unscrupulous physicians who overprescribe when it is sufficiently profitable to do so.

The exemption for cultivation by patients and caregivers can only increase the supply of marijuana in the California market. The likelihood that all such production will promptly terminate when patients recover or will precisely match the patients’ medical needs during their convalescence seems remote, whereas the danger that excesses will satisfy some of the admittedly enormous demand for recreational use seems obvious. Moreover, that the national and international narcotics trade has thrived in the face of vigorous criminal enforcement efforts suggests that no small number of unscrupulous people will make use of the California exemptions to serve their commercial ends whenever it is feasible to do so.

[T]he case for the exemption comes down to the claim that a locally cultivated product that is used domestically rather than sold on the open market is not subject to federal regulation. Given the findings in the CSA and the undisputed magnitude of the commercial market for marijuana, our decisions in *Wickard v. Filburn* and the later [cases] endorsing its reasoning foreclose that claim.

Respondents also raise a substantive due process claim and seek to avail themselves of [a] medical necessity defense. These theories of relief were set forth in their complaint but were not reached by the Court of Appeals. We therefore do not address the question whether judicial relief is available to respondents on these alternative bases. We do note, however, the presence of another avenue of relief: [the CSA-authorized procedures that can lead to] reclassification of Schedule I drugs. But perhaps even more important than these legal avenues is the democratic process, in which the voices of voters allied with these respondents may one day be heard in the halls of Congress. Under the present state of the law, however, the judgment of the Court of Appeals [cannot stand].

Court of Appeals decision vacated; case remanded for further proceedings.

The Taxing Power Article I, section 8 of the Constitution states that “The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises.” The main purpose of this *taxing power* is to provide a means

of raising revenue for the federal government. The taxing power, however, may also serve as a regulatory device. Because the power to tax is the power to destroy, Congress may choose, for instance, to regulate a disfavored

activity by imposing a heavy tax on it. Although some past regulatory taxes were struck down, today the reach of the taxing power is seen as very broad. Sometimes it is said that a regulatory tax is constitutional if its purpose could be furthered by another power belonging to Congress. The broad scope of the commerce power may therefore mean that the taxing power has few limits.

The Spending Power If taxing power regulation uses a federal club, congressional *spending power* regulation employs a federal carrot. Article I, section 8 also gives Congress a broad ability to spend for the general welfare. By basing the receipt of federal money on the performance of certain conditions, Congress can use the spending power to advance specific regulatory ends. Conditional federal grants to the states, for instance, are common today.

Over the past several decades, congressional spending power regulation routinely has been upheld. There are limits, however, on its use. First, an exercise of the spending power must serve *general* public purposes rather than particular interests. Second, when Congress conditions the receipt of federal money on certain conditions, it must do so clearly. Third, the condition must be reasonably related to the purpose underlying the federal expenditure. This means, for instance, that Congress probably could not condition a state's receipt of federal highway money on the state's adoption of a one-house legislature.

Independent Checks on the Federal Government and the States

Even if a regulation is within Congress's enumerated powers or a state's police power, it still is unconstitutional if it collides with one of the Constitution's *independent checks*. This section discusses three checks that limit both federal and state regulation of the economy: freedom of speech; due process; and equal protection. Before discussing these guarantees, however, we must consider three foundational matters.

Incorporation The Fifth Amendment prevents the federal government from depriving "any person of life, liberty, or property, without due process of law." The Fourteenth Amendment creates the same prohibition with regard to the states. The literal language of the First Amendment, however, restricts only federal government action. Moreover, the Fourteenth Amendment says that no *state* shall "deny to any person . . . the equal protection of the laws."

Thus, although the due process guarantees clearly apply to both the federal government and the states, the First Amendment seems to apply only to the federal government and the Equal Protection Clause only to the states. The First Amendment's free speech guarantee, however, has been included within the "liberty" protected by Fourteenth Amendment due process as a result of Supreme Court decisions. The free speech guarantee, therefore, restricts state governments as well as the federal government. This is an example of the process of *incorporation*, by which almost all Bill of Rights provisions now apply to the states. The Fourteenth Amendment's equal protection guarantee, on the other hand, has been made applicable to federal government action through incorporation of it within the Fifth Amendment's Due Process Clause.

Government Action People often talk as if the Constitution protects them against anyone who might threaten their rights. However, most of the Constitution's individual rights provisions block only the actions of *government* bodies, federal, state, and local.¹ Private behavior that denies individual rights, while perhaps forbidden by statute, is very seldom a constitutional matter. This **government action** or **state action** requirement forces courts to distinguish between governmental behavior and private behavior. Judicial approaches to this problem have varied over time.

Before World War II, only formal arms of government such as legislatures, administrative agencies, municipalities, courts, prosecutors, and state universities were deemed state actors. After the war, however, the scope of government action increased considerably, with various sorts of traditionally private behavior being subjected to individual rights limitations. The Supreme Court, in *Marsh v. Alabama* (1946), treated a privately owned company town's restriction of free expression as government action under the *public function* theory because the town was nearly identical to a regular municipality in most respects. In *Shelley v. Kraemer* (1948), the Court held that when state courts enforced certain white homeowners' private agreements not to sell their homes to blacks, there was state action that violated the Equal Protection Clause. Later, in *Burton v. Wilmington Parking Authority* (1961), the Court concluded that racial discrimination by a privately owned restaurant located in a state-owned and state-operated parking garage was unconstitutional state

¹However, the Thirteenth Amendment, which bans slavery and involuntary servitude throughout the United States, does not have a state action requirement. Some state constitutions, moreover, have individual rights provisions that lack a state action requirement.

action, in part because the garage and the restaurant were intertwined in a mutually beneficial “symbiotic” relationship. Among the other factors leading courts to find state action during the 1960s and 1970s were extensive government regulation of private activity and government financial aid to a private actor.

The Court, however, severely restricted the reach of state action during the 1970s and 1980s. Since then, private behavior generally has not been held to constitute state action unless a regular unit of government is directly *responsible* for the challenged private behavior because it has coerced or encouraged such behavior. The public function doctrine, moreover, has been limited to situations in which a private entity exercises powers that have *traditionally* been *exclusively* reserved to the state; private police protection is a possible example. In addition, government regulation and government funding have become somewhat less important factors in state action determinations. Despite all these changes, however, state action doctrine has not returned to its narrow pre-World War II definition. Some uncertainty remains in this area, as brief discussion of two cases will demonstrate.

Consider, first, the Supreme Court’s decision in *Rendell-Baker v. Cohn* (1982). There, the Court rejected various constitutional challenges to the firing of teachers and counselors at a private school for maladjusted high school students because no state action was present. Although the school was extensively regulated by the state, that did not matter because no state regulation compelled or even influenced the challenged firings. The school depended heavily on state funding, but that fact was not sufficient for state action either. The Court found the public function doctrine inapplicable because the education of maladjusted high school students, though public in nature, is not *exclusively* a state function.

In a 2001 decision, however, a six-justice majority of the Supreme Court concluded that the Tennessee Secondary School Athletic Association (TSSAA) was a state actor for purposes of the Constitution’s Fourteenth Amendment when it enforced an association rule against a member school. The TSSAA, a privately organized, not-for-profit entity, regulated interscholastic sports competition among public and private high schools in Tennessee. Although no school was required to join the TSSAA, nearly all public schools and many private schools had done so. All members of the association’s governing bodies were school officials, most of whom were from public schools. Public school systems provided considerable financial support for the TSSAA, which worked closely with the state board of education, a governmental body. For many years, the TSSAA was designated in a state

board of education rule as the regulator of athletics in the state’s public schools. Stressing the “pervasive entwinement of public institutions and public officials in [the TSSAA’s] composition and workings” and the lack of any “substantial reason to claim unfairness in applying constitutional standards to it,” the Supreme Court held in *Brentwood Academy v. Tennessee Secondary School Athletic Association* that the TSSAA was a government actor. *Brentwood Academy’s* “entwinement” rationale appears to provide an additional way in which state action can be found, though the Court emphasized that each decision on the state action issue is highly fact-specific.

Means-Ends Tests Throughout this chapter, you will see tests of constitutionality that may seem strange at first glance. One example is the test for determining whether laws that discriminate on the basis of sex violate equal protection. This test says that to be constitutional, such laws must be substantially related to the achievement of an important government purpose. The Equal Protection Clause does not contain such language. It simply says that “No State shall . . . deny to any person . . . the equal protection of the laws.” What is going on here?

The sex discrimination test just stated is a **means-ends test** developed by the Supreme Court. Such tests are judicially created because no constitutional right is absolute, and because judges therefore must weigh individual rights against the social purposes served by laws that restrict those rights. In other words, means-ends tests determine how courts strike the balance between individual rights and the social needs that may justify their suppression. The “ends” component of a means-ends test specifies how *significant* a social purpose must be in order to justify the restriction of a right. The “means” component states how *effectively* the challenged law must promote that purpose in order to be constitutional. In the sex discrimination test, for example, the challenged law must serve an “important” government purpose (the significance of the end) and must be “substantially” related to the achievement of that purpose (the effectiveness of the means).

Some constitutional rights are deemed more important than others. Accordingly, courts use tougher tests of constitutionality in certain cases and more lenient tests in other situations. Sometimes these tests are lengthy and complicated. Throughout the chapter, therefore, we will simplify by referring to three general kinds of means-ends tests:

1. *The rational basis test.* This is a very relaxed test of constitutionality that challenged laws usually pass with ease. A typical formulation of the rational basis

test might say that government action need only have a *reasonable* relation to the achievement of a *legitimate* government purpose to be constitutional.

2. *Intermediate scrutiny.* This comes in many forms; the sex discrimination test discussed above is an example.
3. *Full strict scrutiny.* Here, the court might say that the challenged law must be *necessary* to the fulfillment of a *compelling* government purpose. Government action that is subjected to this rigorous test of constitutionality is usually struck down.

Business and the First Amendment

The First Amendment provides that “Congress shall make no law . . . abridging the freedom of speech.” Despite its absolute language (“no law”), the First Amendment does not prohibit every law that restricts speech. As Justice Oliver Wendell Holmes famously remarked, the First Amendment does not protect someone who falsely shouts “Fire!” in a crowded theater. Although the First Amendment’s free speech guarantee is not absolute, government action restricting the content of speech usually receives very strict judicial scrutiny. One justification for this high level of protection is the “marketplace” rationale, under which the free competition of ideas is seen as the surest means of attaining truth. The marketplace of ideas operates most effectively, according to this rationale, when restrictions on speech are kept to a minimum and all viewpoints can be considered.

During recent decades, the First Amendment has been applied to a wide variety of government restrictions on the expression of individuals and organizations, including corporations. This chapter does not attempt a comprehensive discussion of the many applications of the freedom of speech guarantee. Instead, it explores basic First Amendment concepts before turning to an examination of the free speech rights of corporations.

Political and Other Noncommercial Speech Political speech—expression that deals in some fashion with government, government issues or policies, public officials, or political candidates—is often described as being at the “core” of the First Amendment. Various Supreme Court decisions have held, however, that the freedom of speech guarantee applies not only to political speech but also to noncommercial expression that does not have a political content or flavor. According to these decisions, the First Amendment protects speech of a literary or artistic nature, speech dealing with scientific, economic, educational, and ethical issues, and expression on many other matters of public interest or concern. Government attempts to

restrict the content of political or other noncommercial speech normally receive full strict scrutiny when challenged in court. Unless the government is able to meet the exceedingly difficult burden of proving that the speech restriction is *necessary* to the fulfillment of a *compelling government purpose*, a First Amendment violation will be found. Because government restrictions on political or other noncommercial speech trigger the full strict scrutiny test, such speech is referred to as carrying “full” First Amendment protection.

Do *corporations*, however, have the same First Amendment rights that individual human beings possess? The Supreme Court has consistently provided a “yes” answer to this question. Therefore, if a corporation engages in political or other noncommercial expression, it is entitled to full First Amendment protection, just as an individual would be if he or she engaged in such speech. This does not mean, however, that all speech of a corporation is fully protected. Some corporate speech is classified as **commercial speech**, a category of expression to be examined shortly. As will be seen, commercial speech receives First Amendment protection but not the full variety extended to political or noncommercial speech. The mere fact, however, that a profit motive underlies speech does not make the speech commercial in nature. Books, movies, television programs, musical works, works of visual art, and newspaper, magazine, and journal articles are normally classified as noncommercial speech—and are thus fully protected—despite the typical existence of an underlying profit motive. Their informational, educational, artistic, or entertainment components are thought to outweigh, for First Amendment purposes, the profit motive.

Commercial Speech The exact boundaries of the commercial speech category are not certain, though the Supreme Court has usually defined commercial speech as speech that proposes a commercial transaction. As a result, most cases on the subject involve advertisements for the sale of products or services or for the promotion of a business. In 1942, the Supreme Court held that commercial speech fell outside the First Amendment’s protective umbrella. The Court reversed its position, however, during the 1970s. It reasoned that informed consumer choice would be furthered by the removal of barriers to the flow of commercial information in which consumers would find an interest. Since the mid-1970s, commercial speech has received an intermediate level of First Amendment protection if it deals with a lawful activity and is nonmisleading. Commercial speech receives no protection, however, if it misleads or seeks to promote

CYBERLAW IN ACTION

When Congress enacts a statute designed to combat the problem of child pornography, is there a danger that the statute will sweep too far into the realm of expression protected by the First Amendment? In two cases in recent years, the Supreme Court has struggled with this question.

Child pornography—sexually explicit visual depictions of actual minors—has long been held to fall outside the First Amendment’s protective umbrella. Therefore, the Supreme Court has held that criminal prosecutions for purveying or possessing child pornography do not violate the First Amendment. In *Ashcroft v. Free Speech Coalition*, 535 U.S. 234 (2002), the Court was faced with determining the constitutionality of a statute in which Congress banned the possession and distribution of material meant to create the impression of minors engaging in sexually explicit conduct even if the persons actually depicted were adults. The Court struck down this statute because it would reach beyond actual child pornography and would ban expression protected by the First Amendment—in particular, nonobscene depictions of nudity or sexual content involving adults. (Although obscene expression receives no First Amendment protection, most descriptions or depictions of nudity or other sexual content involving adults are seen as having literary, artistic, political, or scientific value and thus are not obscene under the controlling test established by the Supreme Court.)

After the *Free Speech Coalition* decision, Congress again tackled the child pornography problem in a 2003 statute, the Protect Act (Prosecutorial Remedies and Other Tools to End the Exploitation of Children Act). The Protect Act made it a crime to knowingly promote, distribute, or solicit, by means of a computer or by any other means, “material or purported material in a manner that reflects the belief, or that is intended to cause another to believe, that the material or purported material is or contains . . . a visual depiction of an actual minor engaging in sexually explicit conduct.” Rejecting the argument that this statute was effectively the same as the one struck down in *Free Speech Coalition*, the Supreme Court held in *United States v. Williams*, 2008 U.S. LEXIS 4314 (2008), that the

Protect Act did not violate the First Amendment. In his opinion for a seven-justice majority, Justice Scalia noted that the Protect Act’s focus on pandering or soliciting distinguished it from the earlier statute. He also observed that “[t]he emergence of new technology and the repeated retransmission of picture files over the Internet could make it nearly impossible to prove that a particular image was produced using real children” even though evidence seemed to indicate that child pornography-type images being circulated over the Internet generally did involve actual children. Thus, the Court saw the Protect Act as a reasonable response to the child pornography problem.

In upholding the Protect Act, the Court sustained the defendant’s conviction of pandering in violation of the statute. The defendant had represented in an Internet chat room to an undercover federal agent that he could provide certain pictures amounting to child pornography, when in reality he did not have the particular pictures he purported to have. When the government obtained a warrant to search the defendant’s computer, however, federal agents found other images of actual child pornography—images whose possession by the defendant caused him to be convicted of a separate charge of possession of child pornography. Therefore, the defendant was convicted of the possession charge concerning the images he actually had on his computer in addition to being convicted of pandering—in violation of the Protect Act—regarding the images he purported to have but did not actually have.

Addressing the concern that the Protect Act might ensnare the grandparent who offers to provide a “cute” picture of her grandchild in the bathtub or the advertiser of R-rated movies that contain scenes suggesting sexual activity, the *Williams* majority opinion stressed the need to read the Protect Act narrowly. Justice Scalia reasoned that a strict reading of the statute and its “knowingly” requirement—coupled with the likely good faith of mainstream movie makers and the public’s expectation that movies containing sex scenes are not usually made with minor actors—should not leave the grandparent or the movie advertiser at any serious risk of a Protect Act conviction.

an illegal activity. As a result, there is no First Amendment obstacle to federal or state regulation of deceptive commercial advertising. (Political or other noncommercial speech, on the other hand, generally receives—with very few exceptions—full First Amendment protection even if it misleads or deals with unlawful matters.)

Because nonmisleading commercial speech about a lawful activity receives intermediate protection, the government has greater ability to regulate such speech without

violating the First Amendment than when the government seeks to regulate fully protected political or other noncommercial speech. Nearly three decades ago, the Supreme Court developed a still-controlling test that amounts to intermediate scrutiny. Under this test, a government restriction on protected commercial speech does not violate the First Amendment if the government proves each of these elements: that a *substantial government interest* underlies the restriction; that the restriction

CONCEPT REVIEW

The First Amendment

| Type of Speech | Level of First Amendment Protection | Consequences When Government Regulates Content of Speech |
|--|-------------------------------------|--|
| Noncommercial | Full | Government action is constitutional only if action is necessary to fulfillment of compelling government purpose. Otherwise, government action violates First Amendment. |
| Commercial (<i>nonmisleading and about lawful activity</i>) | Intermediate | Government action is constitutional if government has substantial underlying interest, action directly advances that interest, and action is no more extensive than necessary to fulfillment of that interest (i.e., action is narrowly tailored). |
| Commercial (<i>misleading or about unlawful activity</i>) | None | Government action is constitutional. |

directly advances the underlying interest; and that the restriction is *no more extensive than necessary* to further the interest (i.e., that the restriction is narrowly tailored). It usually is not difficult for the government to prove that a substantial interest supports the commercial speech restriction. Almost any asserted interest connected with the promotion of public health, safety, or welfare will suffice. The government is likely to encounter more difficulty, however, in proving that the restriction at issue directly advances the underlying interest without being more extensive than necessary—the elements that address the “fit” between the restriction and the underlying interest. If the government fails to prove any element of the test, the restriction violates the First Amendment.

Although the same test has been used in evaluating commercial speech restrictions for nearly three decades, the Supreme Court has varied the intensity with which it has applied the test. From the mid-1980s until 1995, the Court sometimes applied the test loosely and in a manner favorable to the government. The Court has applied the test—especially the “fit” elements—more strictly since 1995, however. For instance, in *Coors v. Rubin* (1995), the Court struck down federal restrictions that kept beer producers from listing the alcohol content of their beer on product labels. (The *Coors* case was the subject of the introductory problem with which this chapter began.) In *44 Liquormart v. Rhode Island* (1996), the Court held that Rhode Island’s prohibition on price disclosures in alcoholic beverage advertisements violated the First Amendment. A 1999 decision, *Greater New Orleans Broadcasting Association v. United States*, established

that a federal law barring broadcast advertisements for a variety of gambling activities could not constitutionally be applied to radio and television stations located in the same state as the gambling casino whose lawful activities were being advertised. In each of the cases just noted, the Court emphasized that the government’s restrictions on commercial speech suffered from “fit” problems—usually because the restrictions prohibited more speech than would have been necessary if the government had adopted available alternative measures that would have furthered the underlying public health, safety, or welfare interest just as well, if not better.

Two key conclusions may be drawn from the Court’s recent commercial speech decisions: (1) the government has found it more difficult to justify restrictions on commercial speech; and (2) the gap between the intermediate protection for commercial speech and the full protection for political and other noncommercial speech has effectively become smaller than it was approximately 20 years ago. Although the Court has hinted in recent cases that it might consider formal changes in commercial speech doctrine (so as to enhance First Amendment protection for commercial speech), it had not made formal doctrinal changes as of the time this book went to press in 2008.

In the following case, *Kasky v. Nike, Inc.*, the Supreme Court of California addresses a classification question: whether Nike engaged in fully protected noncommercial speech or, instead, commercial speech, when it made allegedly misleading statements in the course of a public relations campaign designed to refute claims about its overseas labor practices.

Kasky v. Nike, Inc.

45 P.3d 243 (Cal. Sup. Ct. 2002)

Nike, Inc. mounted a public relations campaign in order to refute news media allegations that its labor practices overseas were unfair and unlawful. This campaign involved the use of press releases, letters to newspapers, a letter to university presidents and athletic directors, and full-page advertisements in leading newspapers. Relying on California statutes designed to curb false and misleading advertising and other forms of unfair competition, California resident Mark Kasky filed suit in a California court on behalf of the general public of the state. Kasky contended that Nike had made false statements in its campaign and that the court should therefore grant the legal relief contemplated by the California statutes. Nike demurred on the ground, among others, that the First Amendment barred Kasky's action. The court, holding Nike's campaign to be fully protected under the First Amendment as noncommercial speech, sustained Nike's demurrer and dismissed Kasky's complaint. Kasky appealed, and the California Court of Appeal affirmed. The Supreme Court of California granted Kasky's petition for review.

Kennard, Justice

The U.S. Supreme Court has not adopted an all-purpose test to distinguish commercial from noncommercial speech under the First Amendment, nor do we propose to do so here. A close reading of the high court's commercial speech decisions suggests, however, that it is possible to formulate a limited-purpose test. We conclude, therefore, that *when a court must decide whether particular speech may be subjected to laws aimed at preventing false advertising or other forms of commercial deception*, categorizing a particular statement as commercial or noncommercial speech requires consideration of three elements: the speaker, the intended audience, and the content of the message.

In typical commercial speech cases, the *speaker* is likely to be someone engaged in commerce—that is, generally, the production, distribution, or sale of goods or services—or someone acting on behalf of a person so engaged. [T]he *intended audience* is likely to be actual or potential buyers or customers of the speaker's goods or services, or persons acting for actual or potential buyers or customers, or persons (such as reporters or reviewers) likely to repeat the message to or otherwise influence actual or potential buyers or customers. Considering the identity of both the speaker and the target audience is consistent with, and implicit in, the U.S. Supreme Court's commercial speech decisions. The Court has frequently spoken of commercial speech as speech proposing a commercial transaction, thus implying that commercial speech typically is communication between persons who engage in such transactions.

In addition, the factual content of the message should be commercial in character. In the context of regulation of false or misleading advertising, this typically means that the speech consists of representations of fact about the business operations, products, or services of the speaker (or the individual or company that the speaker represents), made for the purpose of promoting sales of, or other commercial transactions in, the speaker's products or services. This is consistent with . . . the Supreme Court's commercial speech decisions[, including *Bolger v. Youngs Drug Products Corp.*, 463 U.S. 60 (1983), in

which the Court identified “product references” as a usual characteristic of commercial speech]. By “product references,” we do not understand the Court to mean only statements about the price, qualities, or availability of individual items offered for sale. Rather, we understand “product references” to include also, for example, statements about the manner in which the products are manufactured, distributed, or sold, about repair or warranty services that the seller provides to purchasers of the product, or about the identity or qualifications of persons who manufacture, distribute, sell, service, or endorse the product. Similarly, references to services would include not only statements about the price, availability, and quality of the services themselves, but also, for example, statements about the education, experience, and qualifications of the persons providing or endorsing the services. This broad definition of “product references” is necessary, we think, to adequately categorize statements made in the context of a modern, sophisticated public relations campaign intended to increase sales and profits by enhancing the image of a product or of its manufacturer or seller.

Our understanding of the content element of commercial speech is also consistent with the reasons that the Court has given for denying First Amendment protection to false or misleading commercial speech. The Court stated[, in *Virginia State Board of Pharmacy v. Virginia Citizens Consumer Council, Inc.*, 425 U.S. 748 (1976),] that false or misleading commercial speech may be prohibited because the truth of commercial speech is “more easily verifiable by its disseminator” and because commercial speech, being motivated by the desire for economic profit, is less likely than noncommercial speech to be chilled by proper regulation.

Apart from this consideration of the identities of the speaker and the audience, and the contents of the speech, we find nothing in the U. S. Supreme Court's commercial speech decisions that is essential to a determination that particular speech is commercial in character. Although in *Bolger* the Court noted that the [commercial] speech at issue there was in a traditional advertising format, the court cautioned that it was

not holding that this factor would always be necessary to the characterization of speech as commercial. Advertising format is by no means essential to characterization as commercial speech.

Here, the first element—a commercial speaker—is satisfied because the speakers—Nike and its officers and directors—are engaged in commerce. The second element—an intended commercial audience—is also satisfied. Nike’s letters to university presidents and directors of athletic departments were addressed directly to actual and potential purchasers of Nike’s products, because college and university athletic departments are major purchasers of athletic shoes and apparel. [Kasky] has alleged that Nike’s press releases and letters to newspaper editors, although addressed to the public generally, were also intended to reach and influence actual and potential purchasers of Nike’s products. Specifically, plaintiff has alleged that Nike made these statements about its labor policies and practices “to maintain and/or increase its sales and profits.” To support this allegation, [he] has included as an exhibit a letter to a newspaper editor, written by Nike’s director of communications, referring to Nike’s labor policies practices and stating that “consumers are savvy and want to know they support companies with good products and practices” and that “during the shopping season, we encourage shoppers to remember that Nike is the industry’s leader in improving factory conditions.”

The third element—representations of fact of a commercial nature—is also present. In describing its own labor policies, and the practices and working conditions in factories where its products are made, Nike was making factual representations about its own business operations. In speaking to consumers about working conditions and labor practices in the factories where its products are made, Nike addressed matters within its own knowledge. The wages paid to the factories’ employees, the hours they work, the way they are treated, and whether the environmental conditions under which they work violate local health and safety laws, are all matters likely to be within the personal knowledge of Nike executives, employees, or subcontractors. Thus, Nike was in a position to readily verify the truth of any factual assertions it made on these topics.

In speaking to consumers about working conditions in the factories where its products are made, Nike engaged in speech that is particularly hardy or durable. Because Nike’s purpose in making these statements, at least as alleged in [Kasky’s] complaint, was to maintain its sales and profits, regulation aimed at preventing false and actually or inherently misleading speech is unlikely to deter Nike from speaking truthfully or at all about the conditions in its factories. To the extent that application of these laws may make Nike more cautious, and cause it to make greater efforts to verify the truth of its statements, these laws will serve the purpose of commercial speech protection by[, as

noted in *Virginia Board of Pharmacy*,] “insuring that the stream of commercial information flows cleanly as well as freely.”

Because Nike was acting as a commercial speaker, because its intended audience was primarily the buyers of its products, and because the statements consisted of factual representations about its own business operations, we conclude that the statements were commercial speech for purposes of applying state laws designed to prevent false advertising and other forms of commercial deception. Nike argues[, however,] that its allegedly false and misleading statements were not commercial speech because they were part of “an international media debate on issues of intense public interest.” This argument falsely assumes that speech cannot properly be categorized as commercial speech if it relates to a matter of significant public interest or controversy. As the U.S. Supreme Court has [made clear], commercial speech commonly concerns matters of intense public and private interest. The individual consumer’s interest in the price, availability, and characteristics of products and services “may be as keen, if not keener by far, than his interest in the day’s most urgent political debate” (quoting *Virginia Board of Pharmacy*).

Nike’s speech is not removed from the category of commercial speech because it is intermingled with noncommercial speech. To the extent Nike’s press releases and letters discuss policy questions such as the degree to which domestic companies should be responsible for working conditions in factories located in other countries, or what standards domestic companies ought to observe in such factories, or the merits and effects of economic “globalization” generally, Nike’s statements are noncommercial speech. Any content-based regulation of these noncommercial messages would be subject to the strict scrutiny test for fully protected speech. But Nike may not “immunize false or misleading product information from government regulation simply by including references to public issues” (quoting *Bolger*). Here, the alleged false and misleading statements all relate to the commercial portions of the speech in question—the description of actual conditions and practices in factories that produce Nike’s products—and thus the proposed regulations reach only that commercial portion.

We also reject Nike’s argument that regulating its speech to suppress false and misleading statements is impermissible because it would restrict or disfavor expression of one point of view (Nike’s) and not the other point of view (that of the critics of Nike’s labor practices). The argument is misdirected because the regulations in question do not suppress points of view but instead suppress false and misleading statements of fact. Moreover, differential treatment of speech about products and services based on the identity of the speaker is inherent in the commercial speech doctrine as articulated by the U.S. Supreme Court. A noncommercial speaker’s statements criticizing a product are

generally noncommercial speech, for which damages may be awarded only upon proof of both falsehood and actual malice. A commercial speaker's statements in praise or support of the same product, by comparison, are commercial speech that may be prohibited entirely to the extent the statements are either false or actually or inherently misleading.

We conclude, accordingly, that the trial court and the Court of Appeal erred in characterizing as noncommercial speech

Nike's allegedly false and misleading statements about labor practices and working conditions in factories where Nike products are made. In concluding . . . that Nike's speech at issue here is commercial speech, we do not decide whether that speech was, as plaintiff has alleged, false or misleading. [That issue, as well as others, should be addressed on remand.]

Court of Appeal decision reversed and case remanded.

Figure 1 A Note on Government Speech

"Beef. It's What's for Dinner." This familiar tagline has been featured in numerous television commercials during recent years. Given the pro-beef messages being communicated, one might logically assume that a private association of beef marketers chose to pay for these commercials and selected the particular content included in them. Such an assumption would be inaccurate, however, because the beef advertisements referred to here were government-initiated and government-approved. The U.S. government has implemented various industry-specific regulatory regimes that require advertisements for a particular type of product—for example, beef, mushrooms, cotton, potatoes, watermelons, blueberries, pork, and eggs—and levy monetary assessments on producers or marketers of such products as a means of paying for the advertisements.

If producers or marketers of the regulated products disagree with the advertisements' content but are still compelled by federal law to help pay for the advertisements, are those parties' First Amendment rights violated? That was the issue presented in *Johanns v. Livestock Marketing Association*, 544 U.S. 550 (2005), in which the U.S. Supreme Court considered numerous livestock marketers' First Amendment challenge to the government's beef advertising program. The familiar "Beef. It's What's for Dinner" commercials were part of that program. In the Beef Promotion and Research Act of 1985 (Beef Act), Congress established a federal policy of promoting the marketing and consumption of beef. The Beef Act called for the Secretary of Agriculture (Secretary) to issue an order setting up an advisory board and operating committee charged with, among other things, designing a beef advertising program that would be subject to the Secretary's approval. To fund the advertisements, the Beef Act directed the Secretary to impose a \$1-per-head assessment on all sales or importations of cattle and a similar assessment on imported beef products. Although the members of the advisory board and operating committee were private parties rather than government officials, the Secretary possessed and exercised final approval rights over the content of the advertisements.

The beef marketers who challenged the advertising program objected to its generic pro-beef message, which they saw as impeding their individual efforts to advertise their particular beef (e.g., grain-fed, certified Angus, or Hereford) as superior to other beef. They based their challenge on two lines of cases: the *compelled speech* decisions, which found First Amendment problems with governmental attempts to require persons to communicate messages with which they disagreed; and the *compelled subsidy* decisions, which established that the First Amendment is implicated when the government requires one party to subsidize (in a financial sense) the speech of another party even though the subsidizing party disagrees with the speech. A federal district court and court of appeals both ruled in favor of the beef marketers, holding largely on the basis of the compelled subsidy line of cases that the beef advertising program violated the First Amendment.

In *Johanns v. Livestock Marketing Association*, however, the Supreme Court reversed the lower courts' decisions. The Supreme Court stressed that the compelled speech and compelled subsidy cases apply only when the mandated message, or the speech being subsidized, is private in nature, as opposed to that of the government. The Court held that when *government speech* is involved, there is no First Amendment barrier to the government's requirement that individuals or corporations contribute financially—whether through general tax revenues or targeted assessments—to the communication of that speech. According to the Court, the advertising program at issue in *Livestock Marketing* was government speech because Congress set up the legal parameters of the beef promotions initiative, required the Secretary to take certain actions to launch and maintain it, and gave the Secretary final authority to approve the content of the advertisements. Despite the presence of private parties on the advisory board and the operating committee, the legal structure just noted made the message of the beef advertisements "from beginning to end the message established by the federal government."

The Court further noted that the pervasive nature of the statutory and administrative regime made the beef advertisements' government speech even though the advertisements' reference to sponsorship by "America's Beef Producers" did not send a clear government speech signal to readers and viewers. The Court conceded that the beef promotions program upheld in *Livestock Marketing* was exceedingly similar to the federal government's mushroom promotions program, which the Court had struck down as a violation of the First Amendment only four years earlier. In that earlier case, however, the government speech issue had not been before the Court. Because the government speech issue was properly presented in *Livestock Marketing*, the

Court reasoned that it was not bound by the earlier decision and was free to sustain the beef promotions program on the government speech ground.

Although the specifics of each regulatory initiative requiring subsidization of advertisements for a type of product must be examined in order to make a clear determination of whether the advertising at issue is government speech, the analysis in *Livestock Marketing* appears to give the government considerable latitude to implement such programs without violating the First Amendment rights of product producers and marketers who are unhappy with the advertising they must subsidize.

Due Process The Fifth and Fourteenth Amendments require that the federal government and the states observe **due process** when they deprive a person of life, liberty, or property. Due process has both *procedural* and *substantive* meanings.

Procedural Due Process The traditional conception of due process, called **procedural due process**, establishes the *procedures* that government must follow when it takes life, liberty, or property. Although the requirements of procedural due process vary from situation to situation, their core idea is that one is entitled to adequate *notice* of the government action to be taken against him and to some sort of *fair trial or hearing* before that action can occur.

For purposes of procedural due process claims, *liberty* includes a very broad and poorly defined range of freedoms. It even includes certain interests in personal reputation. For example, the firing of a government employee may require some kind of due process hearing if it is publicized, the fired employee's reputation is sufficiently damaged, and her future employment opportunities are restricted. The Supreme Court has said that procedural due process *property* is not created by the Constitution but by existing rules and understandings that stem from an independent source such as state law. These rules and understandings must give a person a *legitimate claim of entitlement* to a benefit, not merely some need, desire, or expectation for it. This definition includes almost all of the usual forms of property, as well as utility service, disability benefits, welfare benefits, and a driver's license. It also includes the job rights of tenured public employees who can be discharged only for cause, but not the rights of untenured or probationary employees.

Substantive Due Process Procedural due process does not challenge rules of *substantive law*—the rules that set standards of behavior for organized social life. For example, imagine that State X makes adultery a crime and allows people to be convicted of adultery without a trial. Arguments that adultery should not be a crime go to the substance of the statute, whereas objections to the lack of a trial are procedural in nature.

Sometimes, the due process clauses have been used to attack the substance of government action. For our purposes, the most important example of this **substantive due process** occurred early in the 20th century, when courts struck down various kinds of social legislation as denying due process. They did so mainly by reading freedom of contract and other economic rights into the liberty and property protected by the Fifth and Fourteenth Amendments, and then interpreting "due process of law" to require that laws denying such rights be subjected to means-ends scrutiny. The best-known example is the Supreme Court's 1905 decision in *Lochner v. New York*, which struck down a state law setting maximum hours of work for bakery employees because the statute limited freedom of contract and did not directly advance the legitimate state goal of promoting worker health.

Since 1937, however, this "economic" form of substantive due process has been largely abandoned by the Supreme Court and has not amounted to a significant check on government regulation of economic matters. Substantive due process attacks on such regulations now trigger only a lenient type of rational basis review and thus have had little chance of success. During the 1970s and 1980s, however, substantive due process became increasingly important as a device for protecting *non-economic* rights. The most important example is the constitutional right of privacy, which consists of several

rights that the Supreme Court regards as fundamental and as entitled to significant constitutional protection. The Court has declared that these include the rights to marry, have children and direct their education and upbringing, enjoy marital privacy, use contraception, and elect to have an abortion. Laws restricting these rights must be narrowly tailored to meet a compelling government purpose in order to avoid being declared unconstitutional.

Equal Protection The Fourteenth Amendment's Equal Protection Clause says that "[n]o State shall . . . deny to any person . . . the equal protection of the laws." Because the equal protection guarantee has been incorporated within Fifth Amendment due process, it also

restricts the federal government. As currently interpreted, the equal protection guarantee potentially applies to all situations in which government *classifies* or *distinguishes* people. The law inevitably makes distinctions among people, benefiting or burdening some groups but not others. Equal protection doctrine, as developed by the Supreme Court, sets the standards such distinctions must meet in order to be constitutional.

The Basic Test The basic equal protection standard is the *rational basis* test described earlier. This is the standard usually applied to social and economic regulations that are challenged as denying equal protection. As the following case illustrates, this lenient test usually does not impede state and federal regulation of social and economic matters.

Fitzgerald v. Racing Association of Central Iowa 539 U.S. 103 (U.S. Sup. Ct. 2003)

Before 1989, Iowa permitted only one form of gambling: parimutuel betting at racetracks. A 1989 Iowa statute authorized other forms of gambling, including slot machines on riverboats. The 1989 law established that adjusted revenues from riverboat slot machine gambling would be taxed at graduated rates, with a top rate of 20 percent. In 1994, Iowa enacted a law that authorized racetracks to operate slot machines. That law also imposed a graduated tax upon racetrack slot machine adjusted revenues, with a top rate that started at 20 percent and would automatically rise over time to 36 percent. The 1994 enactment left in place the 20 percent tax rate on riverboat slot machine adjusted revenues.

Contending that the 1994 legislation's 20 percent versus 36 percent tax rate difference violated the federal Constitution's Equal Protection Clause, a group of racetracks and an association of dog owners brought suit against the State of Iowa (through its state treasurer, Michael Fitzgerald). A state district court upheld the statute, but the Iowa Supreme Court reversed. The U.S. Supreme Court granted Iowa's petition for a writ of certiorari.

Breyer, Justice

We here consider whether a difference in state tax rates violates the Fourteenth Amendment's mandate that "no State shall . . . deny to any person . . . the equal protection of the laws." The law in question does not distinguish on the basis of, for example, race or gender. It does not distinguish between in-state and out-of-state businesses. Neither does it favor a State's long-time residents at the expense of residents who have more recently arrived from other States. Rather, the law distinguishes for tax purposes among revenues obtained within the State of Iowa by two enterprises, each of which does business in the State. Where that is so, the law is subject to rational-basis review:

The Equal Protection Clause is satisfied so long as there is a plausible policy reason for the classification, the legislative facts on which the classification is apparently based rationally may have been considered to be true by the governmental decisionmaker, and the relationship of the classification to its goal is not so attenuated as to render the distinction arbitrary or irrational.

[Case citation omitted.] [We have also held that] rational-basis review "is especially deferential in the context of classifications made by complex tax laws." [Case citation omitted.]

The Iowa Supreme Court found that the 20 percent/36 percent tax rate differential failed to meet this standard because, in its view, that difference frustrated what it saw as the law's basic objective, namely, rescuing the racetracks from economic distress. And no rational person, it believed, could claim the contrary. The Iowa Supreme Court could not deny, however, that the Iowa law, like most laws, might predominately serve one general objective, say, helping the racetracks, while containing subsidiary provisions that seek to achieve other desirable (perhaps even contrary) ends as well, thereby producing a law that balances objectives but still serves the general objective when seen as a whole. After all, if *every* subsidiary provision in a law designed to help racetracks had to help those racetracks and nothing more, then (since any tax rate hurts the racetracks when compared with a lower rate) there could be no taxation of the racetracks at all.

Neither could the Iowa Supreme Court deny that the 1994 legislation, *seen as a whole*, can rationally be understood to do what that court says it seeks to do, namely, advance the racetracks' economic interests. Its grant to the racetracks of authority to operate slot machines should help the racetracks economically to some degree—even if its simultaneous imposition of a tax on slot machine adjusted revenue means that the law provides less help than respondents might like. At least a rational legislator might so believe. And the Constitution grants legislators, not courts, broad authority (within the bounds of rationality) to decide whom they wish to help with their tax laws and how much help those laws ought to provide. “The ‘task of classifying persons for . . . benefits . . . inevitably requires that some persons who have an almost equally strong claim to favored treatment be placed on different sides of the line,’ and the fact the line might have been drawn differently at some points is a matter for legislative, rather than judicial, consideration.” [Case citation omitted.]

Once one realizes that not every provision in a law must share a single objective, one has no difficulty finding the necessary rational support for the 20 percent/36 percent differential here at issue. That difference, harmful to the racetracks, is helpful to the riverboats, which, as [those challenging the 1994 statute]

concede, were also facing financial peril. These two characterizations are but opposite sides of the same coin. Each reflects a rational way for a legislator to view the matter. And aside from simply aiding the financial position of the riverboats, the legislators may have wanted to encourage the economic development of river communities or to promote riverboat history, say, by providing incentives for riverboats to remain in the State, rather than relocate to other States. Alternatively, they may have wanted to protect the reliance interests of riverboat operators, whose adjusted slot machine revenue had previously been taxed at the 20 percent rate. All these objectives are rational ones, which lower riverboat tax rates could further and which suffice to uphold the different tax rates.

We conclude that there is “a plausible policy reason for the classification,” that the legislature “rationally may have . . . considered . . . true” the related justifying “legislative facts,” and that the “relationship of the classification to its goal is not so attenuated as to render the distinction arbitrary or irrational.” [Case citation omitted.] Consequently the State’s differential tax rate does not violate the Federal Equal Protection Clause.

Iowa Supreme Court decision reversed, and case remanded for further proceedings.

Stricter Scrutiny The rational basis test is the basic equal protection standard. Some classifications, however, receive tougher means-ends scrutiny. According to Supreme Court precedent, laws that discriminate regarding **fundamental rights** or **suspect classes** must undergo more rigorous review.

Although the list of rights regarded as “fundamental” for equal protection purposes is not completely clear, it includes certain criminal procedure protections as well as the rights to vote and engage in interstate travel. Laws creating unequal enjoyment of these rights receive full strict scrutiny. In 1969, for instance, the Supreme Court struck down the District of Columbia’s one-year residency requirement for receiving welfare benefits because that requirement unequally and impermissibly restricted the right of interstate travel.

An equal protection claim involving the fundamental right to vote was addressed in high-profile fashion by the Supreme Court in *Bush v. Gore*, 531 U.S. 98 (2000). A five-justice majority in the historic and controversial decision terminated an ongoing vote recount in Florida because, in the majority’s view, Florida law’s “intent of the voter” test was not a sufficiently clear standard for determining whether a ballot not counted in the initial machine count should be counted as valid during the

manual recount. The majority was concerned that in the absence of a more specific standard, vote counters taking part in the recount might apply inconsistent standards in determining what the voter supposedly intended, and might thereby value some votes over others. The termination of the Florida recount meant that then-Governor Bush won the state of Florida, giving him enough Electoral College votes to win the presidency despite the fact that candidate Gore tallied more popular votes nationally. The four dissenters in *Bush v. Gore* faulted the majority for focusing on the supposed equal protection violation it identified, when, in the dissenters’ view, the Court ignored a potentially bigger equal protection problem created by termination of the recount: the prospect that large numbers of ballots not counted during the machine count would never be counted, even though they may have been valid votes under Florida’s “intent of the voter” test.

In *Crawford v. Marion County Election Board*, 128 S. Ct. 1610 (2008), the Supreme Court again addressed the fundamental right to vote. This time, the Court was faced with determining whether an Indiana law violated the Equal Protection Clause by requiring that voters produce a government-issued photo ID as a precondition to being allowed to vote. Those who raised the equal

protection challenge to the requirement asserted that its burdens would fall disproportionately on low-income and elderly voters, who would be less likely than other persons to have a driver's license or other photo ID and would not be able to exercise the right to vote if they lacked the necessary photo ID. The Court upheld the Indiana law, ruling that it did not violate the Equal Protection Clause. The six justices in the majority split into two three-justice camps on the details of the appropriate supporting reasoning. They agreed, however, that even though voter fraud at the polls had not been a demonstrated problem in Indiana, the photo ID requirement was a generally applicable and not excessively burdensome way of furthering the state's purposes of preventing voter fraud and preserving voter confidence in the integrity of elections.

Certain “suspect” bases of classification also trigger more rigorous equal protection review. As of 2008, the **suspect classes** and the level of scrutiny they attract are as follows:

1. Race and national origin. Classifications disadvantaging racial or national minorities receive the most rigorous kind of strict scrutiny and are almost never constitutional. Still, the Supreme Court has sometimes upheld government-required affirmative action plans and what critics have called reverse racial discrimination—government action that benefits racial minorities and allegedly disadvantages whites. In 1989, however, a majority of the Court concluded that state action of this kind should receive the same full strict scrutiny as discrimination *against* racial or national minorities. Reversing a 1990 ruling, a 1995 Supreme Court decision held that this is true of federal government action as well as state action. These developments have curtailed certain government-created affirmative action programs but have not eliminated them.

In the companion cases of *Gratz v. Bollinger*, 539 U.S. 244 (2003), and *Grutter v. Bollinger*, 539 U.S. 306 (2003), the Supreme Court considered whether the University of Michigan violated the Equal Protection Clause by taking minority students' race into account in its undergraduate and law school admissions policies. The Court recognized in the two cases that seeking student diversity in a higher education context is a compelling government interest. However, in *Gratz*, a five-justice majority of the Court held that the university's undergraduate admissions policy violated the Equal Protection Clause because the policy's consideration of minority applicants' race became effectively the automatic determining factor in admission decisions regarding minority applicants. In *Grutter*, on the other hand, a different five-justice majority held that the university's law school admissions policy did not violate the Equal Protection Clause. The *Grutter* majority reasoned that the law school's policy, in considering minority applicants' race, did so as part of individualized consideration of applicants and of various types of diversity, not simply race. Thus, the law school's policy did not make race *the* determining factor in the impermissible way that the undergraduate policy did.

After the decisions in *Gratz* and *Grutter*, two new justices—Chief Justice Roberts and Justice Alito—joined the Court as replacements for Chief Justice Rehnquist (who died) and Justice O'Connor (who retired). In a much-anticipated decision, *Parents Involved in Community Schools v. Seattle School District No. 1*, 127 S. Ct. 2738 (2007), the Court held that public school districts in Washington and Kentucky violated the Equal Protection Clause in the ways that they considered race when assigning students to schools. There was a five-justice majority for this holding, but Justice Kennedy's crucial fifth vote came in a concurring

Ethics in Action

As discussion in this chapter reveals, Supreme Court precedent establishes that when government action discriminates on the basis of race or sex, the action will receive heightened scrutiny from the Court in an equal protection case. Sexual orientation, however, has not been treated by the Supreme Court as a classification basis that justifies heightened scrutiny. This means that the lenient rational basis review will be employed by a court deciding an equal protection case in which the government is alleged to have discriminated on the basis of sexual orientation. In a

legal sense, then, the government has more latitude to regulate in ways that draw lines on the basis of persons' sexual preference than in ways that classify on the basis of persons' race or gender. Now view this set of issues from an *ethical* perspective. Should the government be any more free to take actions that discriminate against homosexuals—or, for that matter, against heterosexuals—than it is to take actions that discriminate on the basis of race or sex? As you consider this question, you may wish to examine Chapter 4's discussion of ethical theories and ethical decision making.

opinion that rejected much of the reasoning in the plurality opinion authored by Chief Justice Roberts (and joined by Justices Scalia, Thomas, and Alito). Justice Breyer authored a lengthy dissent in which he spoke for himself and Justices Stevens, Souter, and Ginsburg. In order to provide a sense of the Court's divisions on the questions before it, the edited version of *Parents Involved in Community Schools* (which follows shortly), includes portions of the Chief Justice's plurality opinion, the Kennedy concurrence in the judgment, and the Breyer dissent. (Students may want to look back at Chapter 1's discussion of legal reasoning before reading the case.)

2. Alienage. Classifications based on one's status as an alien also receive strict scrutiny of some kind, but this standard almost certainly is not as tough as the full strict scrutiny normally used in race discrimination cases. Under the "political function" exception, moreover, laws restricting aliens from employment in positions that are intimately related to democratic self-government only receive *rational basis* review. This exception has been read broadly to allow the upholding of laws that exclude aliens from being state troopers, public school teachers, and probation officers.

3. Sex. Although the Supreme Court has been hesitant to make a formal declaration that sex is a suspect class, for well more than 30 years laws discriminating on the basis of gender have been subjected to a fairly rigorous form of *intermediate scrutiny*. As the Court said in 1996, such laws require an "exceedingly persuasive" justification. The usual test is that government action discriminating on the basis of sex must be *substantially* related to the furtherance of an *important* government purpose. Under this test, measures discriminating against women have almost always been struck down. The Supreme Court has said that laws disadvantaging men receive the same scrutiny as those disadvantaging women, but this has not prevented the Court from upholding men-only draft registration and a law making statutory rape a crime for men alone.

4. Illegitimacy. Classifications based on one's illegitimate birth receive a form of *intermediate scrutiny* that probably is less strict than the scrutiny given gender-based classifications. Under this vague standard, the Court has struck down state laws discriminating against illegitimates in areas such as recovery for wrongful death, workers' compensation benefits, Social Security payments, inheritance, and child support.

Parents Involved in Community Schools v. Seattle School District No. 1 127 S. Ct. 2738 (U.S. Sup. Ct. 2007)

School districts in Seattle, Washington, and Jefferson County, Kentucky, voluntarily adopted student assignment plans that relied on race to determine which schools certain children may attend. The Seattle district, which had neither created segregated schools nor been subject to court-ordered desegregation, generally allowed students to choose what high school they wished to attend. However, the district classified students as white or nonwhite and used the racial classifications as a "tiebreaker" to allocate available slots in particular high schools and thereby seek to achieve racially diverse schools despite the existence of housing patterns that would have produced little racial diversity at schools in certain areas of the city. The Jefferson County district was subject to a federal court's desegregation decree from 1975 until 2000, when the court dissolved the decree after finding that the district had eliminated the vestiges of prior segregation to the greatest extent feasible. In 2001, the district adopted a plan that classified students as black or "other" in order to make certain elementary school assignments and to rule on transfer requests. By doing so, the district sought to achieve racial diversity in schools that otherwise would have reflected less racial diversity in light of traditional housing patterns.

An organization of Seattle parents and the mother of a Jefferson County student, whose children were or could be assigned under the plans described above, filed separate suits contending that allocating children to different public schools based solely on their race violated the Fourteenth Amendment's Equal Protection Clause. In the Seattle case, the district court granted the school district summary judgment, finding that its plan survived strict scrutiny because it was narrowly tailored to serve a compelling government interest in achieving a racially diverse educational environment. The U. S. Court of Appeals for the Ninth Circuit affirmed. In the Jefferson County case, the district court found that the school district had asserted a compelling interest in maintaining racially diverse schools, and that its plan was narrowly tailored to serve that interest. The U.S. Court of Appeals for the Sixth Circuit affirmed. The U.S. Supreme Court consolidated the cases for decision and granted the respective school districts' petitions for a writ of certiorari.

Roberts, Chief Justice

Both cases present the same underlying legal question—whether a public school that had not operated legally segregated schools or has been found to be unitary may choose to classify students by race and rely upon that classification in making school assignments.

It is well-established that when the government distributes burdens or benefits on the basis of individual racial classifications, that action is reviewed under strict scrutiny. [*E.g.*,] *Grutter v. Bollinger*, 539 U.S. 306 (2003). As the Court recently reaffirmed, “racial classifications are simply too pernicious to permit any but the most exact connection between justification and classification.” *Gratz v. Bollinger*, 539 U.S. 244, 270 (2003). In order to satisfy this searching standard of review, the school districts must demonstrate that the use of individual racial classifications in the assignment plans here under review is narrowly tailored to achieve a compelling government interest.

Without attempting to set forth all the interests a school district might assert, it suffices to note that our prior cases, in evaluating the use of racial classifications in the school context, have recognized two interests that qualify as compelling. The first is the compelling interest of remedying the effects of past intentional discrimination. Yet the Seattle public schools have not shown that they were ever segregated by law, and were not subject to court-ordered desegregation decrees. The Jefferson County public schools were previously segregated by law and were subject to a desegregation decree entered in 1975. In 2000, the District Court that entered that decree dissolved it, finding that Jefferson County had eliminated the vestiges associated with the former policy of segregation and its pernicious effects, and thus had achieved unitary status. Jefferson County accordingly does not rely upon an interest in remedying the effects of past intentional discrimination in defending its present use of race in assigning students.

The second government interest we have recognized as compelling for purposes of strict scrutiny is the interest in diversity in higher education upheld in *Grutter*. The specific interest found compelling in *Grutter* was student body diversity “in the context of higher education.” The diversity interest was not focused on race alone but encompassed “all factors that may contribute to student body diversity.” We described the various types of diversity that the law school sought[, noting that the law school’s policy] “makes clear there are many possible bases for diversity admissions, and provides examples of admittees who have lived or traveled widely abroad, are fluent in several languages, have overcome personal adversity and family hardship, have exceptional records of extensive community service, and have had successful careers in other fields.”

The entire gist of the analysis in *Grutter* was that the admissions program at issue there focused on each applicant as an individual, and not simply as a member of a particular racial group. The classification of applicants by race upheld in *Grutter* was only as part of a “highly individualized, holistic review.” The point of the narrow tailoring analysis in which the *Grutter* Court engaged was to ensure that the use of racial classifications was indeed part of a broader assessment of diversity, and not simply an effort to achieve racial balance, which the Court explained would be “patently unconstitutional.”

In the present cases, by contrast, race is not considered as part of a broader effort to achieve “exposure to widely diverse people, cultures, ideas, and viewpoints.” Race, for some students, is determinative standing alone. The districts argue that other factors, such as student preferences, affect assignment decisions under their plans, but under each plan when race comes into play, it is decisive by itself. It is not simply one factor weighed with others in reaching a decision, as in *Grutter*; it is the factor. Like the University of Michigan undergraduate plan struck down in *Gratz*, the plans here do not provide for a meaningful individualized review of applicants but instead rely on racial classifications in a nonindividualized, mechanical way.

In upholding the admissions plan in *Grutter*, . . . this Court relied upon considerations unique to institutions of higher education, noting that in light of “the expansive freedoms of speech and thought associated with the university environment, universities occupy a special niche in our constitutional tradition.” The Court in *Grutter* expressly articulated key limitations on its holding—defining a specific type of broad-based diversity and noting the unique context of higher education—but these limitations were largely disregarded by the lower courts in extending *Grutter* to uphold race-based assignments in elementary and secondary schools. The present cases are not governed by *Grutter*.

Perhaps recognizing that reliance on *Grutter* cannot sustain their plans, both school districts assert additional interests, distinct from the interest upheld in *Grutter*, to justify their race-based assignments. Seattle contends that its use of race helps to reduce racial concentration in schools and to ensure that racially concentrated housing patterns do not prevent nonwhite students from having access to the most desirable schools. Jefferson County has articulated a similar goal, phrasing its interest in terms of educating its students in a racially integrated environment. Each school district argues that educational and broader socialization benefits flow from a racially diverse learning environment, and each contends that because the diversity they seek is racial diversity—not the broader diversity at issue in *Grutter*—it makes sense to promote that interest directly by relying on race alone.

The parties dispute whether racial diversity in schools in fact has a marked impact on test scores and other objective yardsticks or achieves intangible socialization benefits. The debate is not one we need to resolve, however, because it is clear that the racial classifications employed by the districts are not narrowly tailored to the goal of achieving the educational and social benefits asserted to flow from racial diversity. In design and operation, the plans are directed only to racial balance, pure and simple, an objective this Court has repeatedly condemned as illegitimate.

The plans are tied to each district's specific racial demographics, rather than to any pedagogic concept of the level of diversity needed to obtain the asserted educational benefits. In Seattle, the district seeks white enrollment of between 31 and 51 percent (within 10 percent of the district white average of 41 percent), and nonwhite enrollment of between 49 and 69 percent (within 10 percent of the district minority average of 59 percent). In Jefferson County, by contrast, the district seeks black enrollment of no less than 15 or more than 50 percent, a range designed to be equally above and below black student enrollment systemwide. In Seattle, then, the benefits of racial diversity require enrollment of at least 31 percent white students; in Jefferson County, at least 50 percent. There must be at least 15 percent nonwhite students under Jefferson County's plan; in Seattle, more than three times that figure. This comparison makes clear that the racial demographics in each district—whatever they happen to be—drive the required “diversity” numbers. The plans here are not tailored to achieving a degree of diversity necessary to realize the asserted educational benefits; instead the plans are tailored [to a goal of attaining a level of diversity within the schools that approximates the district's overall demographics]. The districts offer no evidence that the level of racial diversity necessary to achieve the asserted educational benefits happens to coincide with the racial demographics of the respective school districts.

In *Grutter*, the number of minority students the school sought to admit was an undefined “meaningful number” necessary to achieve a genuinely diverse student body. Although the matter was the subject of disagreement on the Court, the majority concluded that the law school did not count back from its applicant pool to arrive at the “meaningful number” it regarded as necessary to diversify its student body. Here the racial balance the districts seek is a defined range set solely by reference to the demographics of the respective school districts.

This working backward to achieve a particular type of racial balance, rather than working forward from some demonstration of the level of diversity that provides the purported benefits, is a fatal flaw under our existing precedent. We have many times

over reaffirmed that “racial balance is not to be achieved for its own sake.” [Case citation omitted.] *Grutter* itself reiterated that “outright racial balancing” is “patently unconstitutional.”

Accepting racial balancing as a compelling state interest would justify the imposition of racial proportionality throughout American society, contrary to our repeated recognition that “at the heart of the Constitution's guarantee of equal protection lies the simple command that the Government must treat citizens as individuals, not as simply components of a racial, religious, sexual or national class.” [Case citation omitted.] Racial balancing is not transformed from “patently unconstitutional” to a compelling state interest simply by relabeling it “racial diversity.” While the school districts use various verbal formulations to describe the interest they seek to promote—racial diversity, avoidance of racial isolation, racial integration—they offer no definition of the interest that suggests it differs from racial balance.

The districts have also failed to show that they considered methods other than explicit racial classifications to achieve their stated goals. Narrow tailoring requires “serious, good faith consideration of workable race-neutral alternatives,” [case citation omitted,] and yet in Seattle several alternative assignment plans—many of which would not have used express racial classifications—were rejected with little or no consideration. Jefferson County has failed to present any evidence that it considered alternatives.

In *Brown v. Board of Education*, 347 U.S. 483 (1954), we held that segregation deprived black children of equal educational opportunities regardless of whether school facilities and other tangible factors were equal, because government classification and separation on grounds of race themselves denoted inferiority. It was not the inequality of the facilities but the fact of legally separating children on the basis of race on which the Court relied to find a constitutional violation in 1954. The parties . . . debate which side is more faithful to the heritage of *Brown*, but the position of the plaintiffs in *Brown* was spelled out in their brief and could not have been clearer: “The Fourteenth Amendment prevents states from according differential treatment to American children on the basis of their color or race.” What do the racial classifications at issue here do, if not accord differential treatment on the basis of race? As counsel who appeared before this Court for the plaintiffs in *Brown* put it: “We have one fundamental contention which we will seek to develop in the course of this argument, and that contention is that no State has any authority under the equal-protection clause of the Fourteenth Amendment to use race as a factor in affording educational opportunities among its citizens.” There is no ambiguity in that statement. And it was that position that prevailed in this Court. What do the racial classifications do in

these cases, if not determine admission to a public school on a racial basis?

Before *Brown*, schoolchildren were told where they could and could not go to school based on the color of their skin. The school districts in these cases have not carried the heavy burden of demonstrating that we should allow this once again—even for very different reasons. For schools that never segregated on the basis of race, such as Seattle, or that have removed the vestiges of past segregation, such as Jefferson County, the way “to achieve a system of determining admission to the public schools on a nonracial basis” [quoting *Brown*] is to stop assigning students on a racial basis. The way to stop discrimination on the basis of race is to stop discriminating on the basis of race.

Decisions of Sixth and Ninth Circuit Courts of Appeal reversed, and cases remanded for further proceedings.

Kennedy, Justice, concurring in part and concurring in the judgment

In my view the state-mandated racial classifications at issue . . . are unconstitutional as the cases now come to us. I agree with The Chief Justice that [the Seattle and Jefferson County plans violate the Equal Protection Clause]. My views[, however,] do not allow me to join the balance of the [plurality] opinion by The Chief Justice. The plurality [opinion] does not acknowledge that the school districts have identified a compelling interest here. For this reason, among others, I [join only portions of the plurality opinion]. Diversity, depending on its meaning and definition, is a compelling educational goal a school district may pursue.

[P]arts of the opinion by The Chief Justice imply an all-too-unyielding insistence that race cannot be a factor in instances when, in my view, it may be taken into account. The plurality opinion is too dismissive of the legitimate interest government has in ensuring all people have equal opportunity regardless of their race. The plurality’s postulate that “the way to stop discrimination on the basis of race is to stop discriminating on the basis of race” is not sufficient to decide these cases. Fifty years of experience since *Brown v. Board of Education* should teach us that the problem before us defies so easy a solution. School districts can seek to reach *Brown*’s objective of equal educational opportunity. The plurality opinion is at least open to the interpretation that the Constitution requires school districts to ignore the problem of de facto resegregation in schooling. I cannot endorse that conclusion. To the extent the plurality opinion suggests the Constitution mandates that state and local school authorities must accept the status quo of racial isolation in schools, it is, in my view, profoundly mistaken.

In the administration of public schools by the state and local authorities it is permissible to consider the racial makeup of schools and to adopt general policies to encourage a diverse student body, one aspect of which is its racial composition. If school authorities are concerned that the student-body compositions of certain schools interfere with the objective of offering an equal educational opportunity to all of their students, they are free to devise race-conscious measures to address the problem in a general way and without treating each student in different fashion solely on the basis of a systematic, individual typing by race. School boards may pursue the goal of bringing together students of diverse backgrounds and races through other means, including strategic site selection of new schools; drawing attendance zones with general recognition of the demographics of neighborhoods; allocating resources for special programs; recruiting students and faculty in a targeted fashion; and tracking enrollments, performance, and other statistics by race. These mechanisms are race-conscious but do not lead to different treatment based on a classification that tells each student he or she is to be defined by race, so [none of them should be found unconstitutional].

This Nation has a moral and ethical obligation to fulfill its historic commitment to creating an integrated society that ensures equal opportunity for all of its children. A compelling interest exists in avoiding racial isolation, an interest that a school district, in its discretion and expertise, may choose to pursue. Likewise, a district may consider it a compelling interest to achieve a diverse student population. Race may be one component of that diversity, but other demographic factors, plus special talents and needs, should also be considered. What the government is not permitted to do, absent a showing of necessity not made here, is to classify every student [solely] on the basis of race and to assign each of them to schools based on that classification.

The decision today should not prevent school districts from continuing the important work of bringing together students of different racial, ethnic, and economic backgrounds. Due to a variety of factors—some influenced by government, some not—neighborhoods in our communities do not reflect the diversity of our Nation as a whole. Those entrusted with directing our public schools can bring to bear the creativity of experts, parents, administrators, and other concerned citizens to find a way to achieve the compelling interests they face without resorting to widespread governmental allocation of benefits and burdens on the basis of racial classifications.

Breyer, Justice, dissenting

The school board plans before us resemble many others adopted in the last 50 years by primary and secondary schools

throughout the Nation. All of those plans represent local efforts to bring about the kind of racially integrated education that *Brown v. Board of Education* long ago promised—efforts that this Court has repeatedly required, permitted, and encouraged local authorities to undertake. This Court has recognized that the public interests at stake in such cases are “compelling.” We have approved of “narrowly tailored” plans that are no less race-conscious than the plans before us. And we have understood that the Constitution permits local communities to adopt desegregation plans even where it does not require them to do so.

The plurality pays inadequate attention to this law, to past opinions’ rationales, their language, and the contexts in which they arise. As a result, it reverses course and reaches the wrong conclusion. In doing so, it distorts precedent, it misapplies the relevant constitutional principles, it announces legal rules that will obstruct efforts by state and local governments to deal effectively with the growing resegregation of public schools, it threatens to substitute for present calm a disruptive round of race-related litigation, and it undermines *Brown’s* promise of integrated primary and secondary education that local communities have sought to make a reality. This cannot be justified in the name of the Equal Protection Clause.

There is reason to believe that those who drafted [the Equal Protection Clause] would have understood the legal and practical difference between the use of race-conscious criteria . . . to keep the races apart, and the use of race-conscious criteria . . . to bring the races together. Although the Constitution almost always forbids the former, it is significantly more lenient in respect to the latter. Until today, this Court understood the Constitution as affording the people, acting through their elected representatives, freedom to select the use of “race-conscious” criteria from among their available options [in an effort to promote integration]. Yesterday, the citizens of this Nation could look for guidance to this Court’s unanimous pronouncements concerning desegregation. Today, they cannot. Yesterday, school boards had available to them a full range of means to combat segregated schools. Today, they do not.

The Court’s decision undermines other basic institutional principles as well. What has happened to *stare decisis*? The history of the plans before us, their educational importance, their highly limited use of race—all these and more—make clear that the compelling interest here is stronger than in *Grutter*. The plans here are more narrowly tailored than the law school admissions program there at issue. Hence, applying *Grutter’s* strict test, their lawfulness follows *a fortiori*.

And what of the long history and moral vision that the Fourteenth Amendment itself embodies? The plurality cites in support those who argued in *Brown* against segregation. But

segregation policies did not simply tell schoolchildren “where they could and could not go to school based on the color of their skin” [quoting the plurality opinion]; they perpetuated a caste system rooted in the institutions of slavery and 80 years of legalized subordination. The lesson of history is not that efforts to continue racial segregation are constitutionally indistinguishable from efforts to achieve racial integration. Indeed, it is a cruel distortion of history to compare Topeka, Kansas, in the 1950s [the setting in *Brown*] to Louisville and Seattle in the modern day—to equate the plight of Linda Brown (who was ordered to attend a Jim Crow school [in 1950s Topeka]) to the circumstances of Joshua McDonald (whose request to transfer to a [Jefferson County] school closer to home was initially declined).

Finally, what of the hope and promise of *Brown*? It was not long ago that people of different races drank from separate fountains, rode on separate buses, and studied in separate schools. In this Court’s finest hour, *Brown v. Board of Education* challenged this history and helped to change it. For *Brown* held out a promise . . . of true racial equality—not as a matter of fine words on paper, but as a matter of everyday life in the Nation’s cities and schools. [*Brown’s* promise] was about the nature of a democracy that must work for all Americans. It sought one law, one Nation, one people, not simply as a matter of legal principle but in terms of how we actually live.

Not everyone welcomed this Court’s decision in *Brown*. Three years after that decision was handed down, the Governor of Arkansas ordered state militia to block the doors of a white schoolhouse so that black children could not enter. The President of the United States dispatched the 101st Airborne Division to Little Rock, Arkansas, and federal troops were needed to enforce a desegregation decree. Today, 50 years later, attitudes toward race in this Nation have changed dramatically. Many parents, white and black alike, want their children to attend schools with children of different races. Indeed, the very school districts that once spurned integration now strive for it. The long history of their efforts reveals the complexities and difficulties they have faced. And in light of those challenges, they have asked us not to take from their hands the instruments they have used to rid their schools of racial segregation, instruments that they believe are needed to overcome the problems of cities divided by race and poverty. The plurality would decline their modest request.

The plurality is wrong to do so. The last half-century has witnessed great strides toward racial equality, but we have not yet realized the promise of *Brown*. To invalidate the plans under review is to threaten the promise of *Brown*. The plurality’s position, I fear, would break that promise. This is a decision that the Court and the Nation will come to regret.

CONCEPT REVIEW

Equal Protection and Levels of Scrutiny

| Type of Government Action | Controlling Test | Operation and Effect of Test |
|--|---|---|
| Government action that discriminates but neither affects exercise of fundamental right nor discriminates against suspect class (e.g., most social and economic regulation) | Rational basis | Lenient test—government action is constitutional if rationally related to legitimate government purpose. |
| Government action that discriminates concerning ability to exercise fundamental right | Full strict scrutiny | Very rigorous test—government action is unconstitutional unless necessary to fulfillment of compelling government purpose. |
| Government action that discriminates on basis of race or national origin | Full strict scrutiny | Very rigorous test—government action is unconstitutional unless necessary to fulfillment of compelling government purpose. |
| Government action that discriminates on basis of alienage | Less than full strict scrutiny as general rule; rational basis when public function exception applies | Rigorous test—though softer application of full strict scrutiny requirements. When public function exception applies, test is lenient. |
| Government action that discriminates on basis of sex (gender) | Intermediate scrutiny | Moderately rigorous test—government action is unconstitutional unless substantially related to fulfillment of important government purpose. |
| Government action that discriminates on basis of illegitimacy | Intermediate scrutiny, but to lesser degree than in gender discrimination cases | Moderately rigorous test—though softer application of intermediate scrutiny requirements. |

Independent Checks Applying Only to the States

The Contract Clause Article I, section 10 of the Constitution states: “No State shall . . . pass any . . . Law impairing the Obligation of Contracts.” Known as the *Contract Clause*, this provision deals with state laws that change the parties’ performance obligations under an *existing* contract *after* that contract has been made.² The original purpose of the Contract Clause was to strike down the many debtor relief statutes passed by the states after the Revolution. These statutes impaired the obligations of existing private contracts by relieving debtors of

what they owed to creditors. In two early 19th-century cases, however, the Contract Clause also was held to protect the obligations of *governmental* contracts, charters, and grants.

The Contract Clause probably was the most important constitutional check on state regulation of the economy for much of the 19th century. Beginning in the latter part of that century, the clause gradually became subordinate to legislation based on the states’ police powers. By the mid-20th century, most observers treated the clause as being of historical interest only. In 1977, however, the Supreme Court gave the Contract Clause new life by announcing a fairly strict constitutional test governing situations in which a state impairs *its own* contracts, charters, and grants. Such impairments, the Court said, must be “reasonable and necessary to serve an important public purpose.”

²Under the Fifth Amendment’s Due Process Clause, standards similar to those described in this section apply to the federal government.

During recent decades, the Court has continued its deference toward state regulations that impair the obligations of *private* contracts. Consider, for instance, *Exxon Corp. v. Eagerton* (1983). For years, Exxon had paid a severance tax under Alabama law on oil and gas it drilled within the state. As the tax increased, appropriate provisions in Exxon's contracts with the purchasers of its oil and gas allowed Exxon to pass on the amounts of the increases to the purchasers. Alabama, however, enacted a law that not only increased the severance tax but also forbade producers of oil and gas from passing on the increase to purchasers. Exxon filed suit, seeking a declaration that the law's pass-on prohibition was unconstitutional under the Contract Clause. Affirming Alabama's highest court, the U.S. Supreme Court observed that the Contract Clause allows the states to adopt broad regulatory measures without having to be concerned that private contracts will be affected. The pass-on prohibition was designed to advance a broad public interest in protecting consumers against excessive prices and was applicable to all oil and gas producers regardless of whether they were then parties to contracts containing pass-on provisions. Therefore, the Court reasoned, the Alabama statute did not violate the Contract Clause.

Burden on, or Discrimination against, Interstate Commerce

In addition to empowering Congress to regulate interstate commerce, the Commerce Clause limits the states' ability to *burden* or discriminate against such commerce. This limitation is not expressly stated in the Constitution. Instead, it arises by implication from the Commerce Clause and reflects that clause's original purpose of blocking state protectionism and ensuring free interstate trade. (Because this limitation arises by implication, it is often referred to as the "dormant" Commerce Clause—a term used by the Supreme Court in the *Davis* case, which follows shortly.) The burden-on-commerce limitation and the nondiscrimination principle operate independently of congressional legislation under the commerce power or other federal powers. If appropriate federal regulation is present, the preemption questions discussed in the next section may also arise.

Many different state laws can raise burden-on-commerce problems. For example, state regulation of transportation (e.g., limits on train or truck lengths) has been a prolific source of litigation. The same is true of state restrictions on the importation of goods or resources, such as laws forbidding the sale of out-of-state food products unless they meet certain standards. Such restric-

tions sometimes benefit local economic interests and reflect their political influence. Burden-on-commerce issues also arise if states try to aid their own residents by blocking the export of scarce or valuable products, thus denying out-of-state buyers access to those products.

In part because of the variety of state regulations it has had to consider, the Supreme Court has not adhered to one consistent test for determining when such regulations impermissibly burden interstate commerce. In a 1994 case, the Court said that if a state law *discriminates* against interstate commerce, the strictest scrutiny will be applied in the determination of the law's constitutionality. Discrimination is *express* when state laws treat local and interstate commerce unequally on their face.

State laws might also discriminate even though on their face, they seem neutral regarding interstate commerce. This occurs when their *effect* is to burden or hinder such commerce. In one case, for example, the Supreme Court considered a North Carolina statute that required all closed containers of apples sold within the state to bear only the applicable U.S. grade or standard. The State of Washington, the nation's largest apple producer, had its own inspection and grading system for Washington apples. This system generally was regarded as superior to the federal system. The Court struck down the North Carolina statute because it benefited local apple producers by forcing Washington sellers to regrade apples sold in North Carolina (thus raising their costs of doing business) and by undermining the competitive advantage provided by Washington's superior grading system.

On the other hand, state laws that regulate evenhandedly and have only incidental effects on interstate commerce are constitutional if they serve legitimate state interests and their local benefits exceed the burden they place on interstate commerce. There is no sharp line between such regulations and those that are almost always unconstitutional under the tests discussed above. In a 1981 Supreme Court case, a state truck-length limitation that differed from the limitations imposed by neighboring states failed to satisfy the tests for constitutionality. The Court concluded that the measure did not further the state's legitimate interest in highway safety because the trucks banned by the state generally were as safe as those it allowed. In addition, whatever marginal safety advantage the law provided was outweighed by the numerous problems it posed for interstate trucking companies.

Laws may also unconstitutionally burden interstate commerce when they *directly regulate* that commerce. This can occur, for example, when state price regulations require firms to post the prices at which they will sell within the state and to promise that they will not sell

below those prices in other states. Because they affect prices in other states, such regulations directly regulate interstate commerce and usually are unconstitutional.

Department of Revenue of Kentucky v. Davis, which follows, addresses a number of the principles discussed

in the foregoing section. The Supreme Court goes on in *Davis* to explain an important analytical wrinkle: the greater latitude given, in dormant Commerce Clause cases, to states that have acted as market *participants* rather than merely as market *regulators*.

Department of Revenue of Kentucky v. Davis 2008 U.S. LEXIS 4312 (U.S. Sup. Ct. 2008)

As most other states do, the Commonwealth of Kentucky taxes its residents' income. Kentucky law establishes that income subject to taxation includes "interest income derived from obligations of sister states and political subdivisions thereof," but not interest income from obligations of Kentucky. Interest on bonds issued by Kentucky and its political subdivisions is thus exempt from Kentucky income tax, whereas interest on municipal bonds of other states and their subdivisions is taxable. The tax exemption for Kentucky bonds helps make those bonds attractive to in-state purchasers even if they carry somewhat lower rates of interest than other states' bonds or those issued by private companies. Most other states have differential tax schemes that resemble Kentucky's.

George and Catherine Davis are Kentucky residents who paid state income tax on interest from out-of-state municipal bonds, and then sued the Department of Revenue of Kentucky (hereinafter, Kentucky) in state court in an effort to obtain a refund. The Davises claimed that Kentucky's differential taxation of municipal bond interest impermissibly discriminates against interstate commerce in violation of the U.S. Constitution's Commerce Clause. The trial court ruled in favor of Kentucky, but the Court of Appeals of Kentucky reversed. In doing so, the appellate court rejected the reasoning of an Ohio decision upholding a similar tax scheme that had been challenged under the Commerce Clause. The Supreme Court of Kentucky denied review. However, the U.S. Supreme Court granted Kentucky's petition for a writ of certiorari because of the conflict between the Kentucky and Ohio courts on an important question of constitutional law, and because the result reached by the Kentucky court cast constitutional doubt on a tax regime adopted by a majority of the states.

Souter, Justice

For the better part of two centuries States and their political subdivisions have issued bonds for public purposes, and for nearly half that time some States have exempted interest on their own bonds from their state income taxes, which are imposed on bond interest from other States. The question here is whether Kentucky's version of this differential tax scheme offends the Commerce Clause.

The significance of the scheme is immense. Between 1996 and 2002, Kentucky and its subdivisions issued \$7.7 billion in long-term bonds to pay for spending on transportation, public safety, education, utilities, and environmental protection, among other things. Across the Nation during the same period, States issued over \$750 billion in long-term bonds, with nearly a third of the money going to education, followed by transportation (13%) and utilities (11%). Municipal bonds currently finance roughly two-thirds of capital expenditures by state and local governments.

Funding the work of government this way follows a tradition going back as far as the 17th century. Municipal bonds first appeared in the United States in the early 19th century. The municipal bond market had swelled by the mid-1840s.

Bonds funded some of the great public works of the day, including New York City's first water system. At the turn of the 20th century, the total state and municipal debt was closing in on \$2 billion, and by the turn of the millennium, over \$1.5 trillion in municipal bonds were outstanding.

Differential tax schemes [such as] Kentucky's have a long pedigree, too. State income taxation became widespread in the early 20th century, and along with the new tax regimes came exemptions and deductions to induce all sorts of economic behavior. Today, 41 States have [differential tax laws similar to] the one before us.

The Commerce Clause empowers Congress "[t]o regulate Commerce . . . among the several States," and although its terms do not expressly restrain "the several States" in any way, we have sensed a negative implication in the provision since the early days. The modern law of what has come to be called the dormant Commerce Clause is driven by concern about "economic protectionism—that is, regulatory measures designed to benefit in-state economic interests by burdening out-of-state competitors." [Case citation omitted.] The point is to "effectuat[e] the Framers' purpose to prevent a State from retreating into [the] economic isolation" [case citation omitted] "that had

plagued relations among the Colonies and later among the States under the Articles of Confederation.” [Case citation omitted.] The law has had to respect a cross purpose as well, for the Framers’ distrust of economic Balkanization was limited by their federalism favoring a degree of local autonomy.

Under the resulting protocol for dormant Commerce Clause analysis, we ask whether a challenged law discriminates against interstate commerce. See *Oregon Waste Systems, Inc. v. Department of Environmental Quality of Ore.*, 511 U.S. 93, 99, 114 S. Ct. 1345, 128 L. Ed. 2d 13 (1994). [We noted in *Oregon Waste Systems* that] a discriminatory law is “virtually *per se* invalid,” and will survive only if it “advances a legitimate local purpose that cannot be adequately served by reasonable nondiscriminatory alternatives.” Absent discrimination for the forbidden purpose, however, the law “will be upheld unless the burden imposed on [interstate] commerce is clearly excessive in relation to the putative local benefits.” [Case citation omitted.]

Some cases run a different course, however, and an exception covers States that go beyond regulation and themselves “participat[e] in the market” so as to “exercis[e] the right to favor [their] own citizens over others.” *Hughes v. Alexandria Scrap Corp.*, 426 U.S. 794 (1976). This “market-participant” exception reflects a “basic distinction . . . between States as market participants and States as market regulators,” [t]here [being] no indication of a constitutional plan to limit the ability of the States themselves to operate freely in the free market.” [Case citation omitted.] Thus, in *Alexandria Scrap*, we found that a state law authorizing state payments to processors of automobile hulks validly burdened out-of-state processors with more onerous documentation requirements than their in-state counterparts. Likewise, [later decisions] accepted South Dakota’s policy of giving in-state customers first dibs on cement produced by a state-owned plant, and [upheld] a Boston executive order requiring half the workers on city-financed construction projects to be city residents.

Our most recent look at the reach of the dormant Commerce Clause came just last Term, in a case decided independently of the market participation precedents. *United Haulers*, [cited earlier,] upheld a “flow control” ordinance requiring trash haulers to deliver solid waste to a processing plant owned and operated by a public authority in New York State. We found “[c]ompelling reasons” for “treating [the ordinance] differently from laws favoring particular private businesses over their competitors.” [As noted in *United Haulers*,] state and local governments that provide public goods and services on their own, unlike private businesses, are “vested with the responsibility of protecting the health, safety, and welfare of [their] citizens,” and laws favoring such States and their subdivisions may “be directed toward any number of legitimate goals unrelated to protectionism.” That was true in *United Haulers*, where the ordinance

addressed waste disposal, “both typically and traditionally a local government function.” And if more had been needed to show that New York’s object was consequently different from forbidden protectionism, we pointed out that “the most palpable harm imposed by the ordinances—more expensive trash removal—[was] likely to fall upon the very people who voted for the laws,” rather than out-of-state interests. Being concerned that a “contrary approach . . . would lead to unprecedented and unbounded interference by the courts with state and local government,” we held that the ordinance did “not discriminate against interstate commerce for purposes of the dormant Commerce Clause.”

It follows *a fortiori* from *United Haulers* that Kentucky must prevail. In *United Haulers*, we explained that a government function is not susceptible to standard dormant Commerce Clause scrutiny owing to its likely motivation by legitimate objectives distinct from the simple economic protectionism the Clause abhors. This logic applies with even greater force to laws favoring a State’s municipal bonds, given that the issuance of debt securities to pay for public projects is a quintessentially public function, with the venerable history we have already sketched. By issuing bonds, state and local governments spread the costs of public projects over time, much as one might buy a house with a loan subject to monthly payments. Bonds place the cost of a project on the citizens who benefit from it over the years, and they allow for public work beyond what current revenues could support. Bond proceeds are thus the way to shoulder the cardinal civic responsibilities listed in *United Haulers*: protecting the health, safety, and welfare of citizens. It should go without saying that the apprehension in *United Haulers* about “unprecedented . . . interference” with a traditional government function is just as warranted here, where the Davises would have us invalidate a century-old taxing practice presently employed by 41 States and affirmatively supported by all of them [in an *amicus curiae* (“friend of the court”) brief submitted to the Court].

Thus, *United Haulers* provides a firm basis for reversal. Just like the ordinances upheld there, Kentucky’s tax exemption . . . does “not ‘discriminate against interstate commerce’ for purposes of the dormant Commerce Clause.”

[Our dissenting colleagues] rightly praise the virtues of the free market, and [warn] that our decision to uphold Kentucky’s tax scheme will result in untoward consequences for that market. But the warning is alarmism; going back to 1919 the state regimes of differential bond taxation have been elements of the national commerce without wilting the Commerce Clause. The threat would come, instead, from the dissent[ers’] approach, which to a certainty would upset the market in bonds and the settled expectations of their issuers based on the experience of nearly a century.

We have been here before. Our predecessors on this Court responded to an earlier invitation to the adventurism of overturning a traditional local taxing practice. Justice Holmes answered that “the mode of taxation is of long standing, and upon questions of constitutional law the long settled habits of the community play a part. . . . [T]he fact that the system has been in force for a very long time is of itself a strong reason . . . for

leaving any improvement that may be desired to the legislature.” *Paddell v. City of New York*, 211 U.S. 446, 448, 29 S. Ct. 139, 53 L. Ed. 275 (1908).

Decision of Court of Appeals of Kentucky reversed, and case remanded for further proceedings.

Federal Preemption The constitutional principle of **federal supremacy** dictates that when state law conflicts with valid federal law, the federal law is supreme. In such a situation, the state law is said to be *preempted* by the federal regulation. The central question in most federal preemption cases is the intent of Congress. Thus, such cases often present complex questions of statutory interpretation.

Federal preemption of state law generally occurs for one or more of four reasons:

1. *There is a literal conflict between the state and federal measures, so that it is impossible to follow both simultaneously.*
2. *The federal law specifically states that it will preempt state regulation in certain areas.* Similar statements may also appear in the federal statute’s legislative history. Courts sometimes find such statements persuasive even when they appear only in the legislative history and not in the statute itself.
3. *The federal regulation is pervasive.* If Congress has “occupied the field” by regulating a subject in great breadth and/or in considerable detail, such action by Congress may suggest an intent to displace state regulation of the subject. This may be especially likely where Congress has given an administrative agency broad regulatory power in a particular area.
4. *The state regulation is an obstacle to fulfilling the purposes of the federal law.* Here, the party challenging the state law’s constitutionality typically claims that the state law interferes with the purposes she attributes to the federal measure (purposes usually found in its legislative history).

The Takings Clause

The Fifth Amendment states that “private property [shall not] be taken for public use, without just compensation.” Because this **Takings Clause** has been incorporated within Fourteenth Amendment due process, it applies to

the states. Traditionally, it has come into play when the government formally condemns land through its power of **eminent domain**,³ but it has many other applications as well.

The Takings Clause both recognizes government’s power to take private property and limits the exercise of that power. It does so by requiring that when *property* is subjected to a governmental *taking*, the taking must be for a *public use* and the property owner must receive *just compensation*. We now consider these four aspects of the Takings Clause in turn.

1. *Property.* The Takings Clause protects other property interests besides land and interests in land. Although its full scope is unclear, the clause has been held to cover takings of personal property, liens, trade secrets, and contract rights.
2. *Taking.* Because of the range of property interests it may cover, the Takings Clause potentially has a broad scope. Another reason for the clause’s wide possible application is the range of government activities that may be considered takings. Of course, the government’s use of formal condemnation procedures to acquire private property is a taking. There also may be a taking when the government physically invades private property or allows someone else to do so.

It has long been recognized, moreover, that overly extensive land use regulation may so diminish the value of property or the owner’s enjoyment of it as to constitute a taking. Among the factors courts consider in such “regulatory taking” cases are the degree to which government deprives the owner of free possession, use, and disposition of his property; the overall economic impact of the regulation on the owner; and how much the regulation interferes with the owner’s reasonable investment-backed expectations regarding the future use of the property. In *Lucas v. South*

³Eminent domain and the Takings Clause’s application to land use problems are discussed in Chapter 24.

Carolina Coastal Council (1992), the Supreme Court held that there is an automatic taking when the government denies the owner *all* economically beneficial uses of the land. When this is not the case, courts tend to apply some form of means-ends scrutiny in determining whether land use regulation has gone too far and thus amounts to a regulatory taking.

3. *Public use*. Once a taking of property has occurred, it is unconstitutional unless it is for a public use. The public use element took center stage in a widely

publicized 2005 Supreme Court decision, *Kelo v. City of New London*. For discussion of *Kelo*, see Figure 2.

4. *Just compensation*. Even if a taking of property is for a public use, it still is unconstitutional if the property owner does not receive just compensation. Although the standards for determining just compensation vary with the circumstances, the basic test is the fair market value of the property (or of the lost property right) at the time of the taking.

Figure 2 Economic Development as Public Use?

Does the government's taking of private property for the purpose of economic development satisfy the *public use* requirement set forth in the Fifth Amendment's Takings Clause? In *Kelo v. City of New London*, 545 U.S. 469 (2005), the U.S. Supreme Court answered "yes."

New London, Connecticut, experienced economic decline for a considerable number of years. The city therefore made economic revitalization efforts, which included a plan to acquire 115 parcels of real estate in a 90-acre area and create, in collaboration with private developers, a multifaceted zone that would combine commercial, residential, and recreational elements. The planned development was designed to increase tax revenue, create jobs, and otherwise capitalize on the economic opportunities that city officials expected would flow from a major pharmaceutical company's already-announced plan to construct a large facility near the area the city wished to develop.

The city was able to negotiate the purchase of most parcels of property in the 90-acre area, but some property owners refused to sell. The latter group included homeowners Susette Kelo and Wilhelmina Dery. Kelo had lived in her home for several years, had made substantial improvements to it, and especially enjoyed the water view it afforded. Dery, who was born in 1918, had lived her entire life in the home the city sought to acquire. Both homes were well maintained. After the city decided to use its eminent domain power to acquire the properties of those owners who refused to sell, Kelo, Dery, and the other nonselling owners filed suit in state court. They contended that the city's plan to take their property for the purpose of economic development did not involve a public use and thus would violate the Fifth Amendment's Takings Clause. The dispute made its way through the Connecticut courts and then to the U.S. Supreme Court, where a five-justice majority ruled in favor of the city.

Writing for the majority in *Kelo v. City of New London*, Justice Stevens noted that earlier decisions had identified three types of eminent domain settings in which the government's acquisition of private property satisfied the constitutional

public use element: first, when the government planned to develop a government-owned facility (e.g., a military base); second, when the government planned to construct, or allow others to construct, improvements to which the public would have broad access (e.g., highways or railroads); and third, when the government sought to further some meaningful public purpose. Justice Stevens observed that precedents had recognized the *public purpose* type of public use even if the government would not ultimately retain legal title to the acquired property (unlike the military base example) and the acquired property would not be fully opened up for public access (unlike the highway and railroad examples). The Court acknowledged that the public use requirement clearly would not be satisfied if the government took private party A's property simply to give it to private party B. However, the Court stressed, the prospect that private parties might ultimately own or control property the government had acquired through eminent domain would not make the taking unconstitutional if an overriding public purpose prompted the government's use of eminent domain. Similarly, even if certain private parties (e.g., the pharmaceutical company and private developers in the *Kelo* facts) would stand to benefit from the government's exercise of eminent domain, such a fact would not make the taking unconstitutional if a public purpose supported the taking.

The *Kelo* majority stressed the particular relevance of two earlier Supreme Court decisions, *Berman v. Parker*, 348 U.S. 26 (1954), and *Hawaii Housing Authority v. Midkiff*, 467 U.S. 299 (1984). In *Berman*, the Court sustained Washington, D.C.'s use of eminent domain to take property that included businesses and "blighted" dwellings in order to construct a low-income housing project and new streets, schools, and public facilities. In *Midkiff*, the Court upheld Hawaii's use of eminent domain to effectuate a legislative determination that Hawaii's long-standing land oligopoly, under which property ownership was highly concentrated among a small number of property owners, had to be broken up for social and economic reasons. The *Kelo* majority concluded that significant public purposes were present in both *Berman* and *Midkiff* and that those decisions led logically to the

conclusion that economic development was a public purpose weighty enough to constitute public use for purposes of the Takings Clause. Therefore, the Court upheld the city's exercise of eminent domain in *Kelo*.

In his majority opinion, Justice Stevens was careful to point out that because the constitutional question was whether a public use existed, it was not the Court's job to determine the wisdom of the government's attempt to exercise eminent domain. Neither should the Court allow its decision to be guided by the undoubted hardship that eminent domain places on unwilling property owners who must yield their homes to the state (albeit in return for "just compensation"). Justice Stevens emphasized that if state legislatures believed an economic development purpose such as the one the City of New London had in mind should not be used to support an exercise of eminent domain, the legislatures were free to specify, in their state statutes, that eminent domain could not be employed for an economic development purpose. The Court's determination of what is a public use for purposes of the Takings Clause sets a protective floor for

property owners, with states being free to give greater protection against takings by the government.

The four dissenting justices in *Kelo* issued sharply worded opinions expressing their disagreement with the majority's characterization of *Berman* and *Midkiff* as having led logically to the conclusion that economic development was a public use. In emotional terms, the dissenters accused the majority of having effectively erased the public use requirement from the Takings Clause. The *Kelo* decision drew considerable media attention, perhaps more because of what appeared to be considerable hardship to property owners such as *Kelo* and *Dery* than because of new legal ground—if any—broken in the decision. For many observers, the case's compelling facts led to a perception that the city had engaged in overreaching. The Court's decision in *Kelo* meant that in a legal sense, there was no overreaching on the part of the city. Was there, however, overreaching in an *ethical* sense? How would *utilitarians* answer that question? What about *rights theorists*? (As you consider the questions, you may wish to consult Chapter 4.)

Problems and Problem Cases

1. In 1967, Gary Jones purchased a house on North Bryan Street in Little Rock, Arkansas. He and his wife lived in the house until they separated in 1993. Jones then moved into an apartment in Little Rock, and his wife continued to live in the house. Jones paid his mortgage each month for 30 years. The mortgage company paid the property taxes on the house. After Jones paid off his mortgage in 1997, the property taxes went unpaid. In April 2000, the Arkansas Commissioner of State Lands (Commissioner) attempted to notify Jones of his tax delinquency and his right to redeem the property by paying the past-due taxes. The Commissioner sought to provide this notice by mailing a certified letter to Jones at the North Bryan Street address. Arkansas law approved the use of such a method of providing notice. The packet of information sent by the Commissioner stated that unless Jones redeemed the property, it would be subject to public sale two years later. No one was at home to sign for the letter. No one appeared at the post office to retrieve the letter within the next 15 days. The post office then returned the unopened packet to the Commissioner with an "unclaimed" designation on it. In the spring of 2002, a few weeks before the public sale scheduled for

Jones's house, the Commissioner published a notice of public sale in a local newspaper. No bids were submitted, meaning that under Arkansas law, the state could negotiate a private sale of the property.

Several months later, Linda Flowers submitted a purchase offer. The Commissioner then mailed another certified letter to Jones at the North Bryan Street address, attempting to notify him that his house would be sold to Flowers if he did not pay his delinquent taxes. As with the first letter, the second letter was returned to the Commissioner with an "unclaimed" designation. Flowers purchased the house. Immediately after the expiration of the 30-day period in which Arkansas law would have allowed Jones to make a post-sale redemption of the property by paying the past-due taxes, Flowers had an eviction notice delivered to the North Bryan Street property. The notice was served on Jones's daughter, who contacted Jones and notified him of the tax sale. Jones then filed a lawsuit in Arkansas state court against the Commissioner and Flowers. In his lawsuit, Jones contended that the Commissioner's failure to provide notice of the tax sale and of Jones's right to redeem resulted in the taking of his property without due process. The trial court ruled in favor of the Commissioner and Flowers, and the Arkansas Supreme Court

affirmed. The U.S. Supreme Court agreed to decide the case and its central question of whether Jones was afforded due process. How did the U.S. Supreme Court rule?

2. The Food and Drug Administration Modernization Act of 1997 (FDAMA) exempted “compounded drugs” from the rigorous Food and Drug Administration approval process that new drugs must ordinarily undergo. Compounded drugs are “cocktails” whose ingredients are combined, mixed, or altered by pharmacists or doctors to accommodate patients with individualized needs. Congress exempted compounded drugs from the usual drug approval process because the high costs of going through the process would likely make compounded drug production financially unfeasible for many pharmacists, given the special-order nature of such medications. Providers of compounded drugs, however, were exempted from the approval process only if they adhered to certain conditions set by the FDAMA. These conditions required, among other things, that the providers not advertise or promote the compounding of any particular drug, class of drug, or type of drug. Congress adopted the advertising restriction because it believed that the inability to advertise the compounding of drugs would keep the amounts of compounded drugs produced from becoming large enough to compromise the integrity of the approval process that new drugs generally must complete. A group of pharmacies specializing in compounded drugs filed suit against the U.S. Secretary of Health and Human Services and the commissioner of the FDA, alleging that the FDAMA’s advertising restrictions violated First Amendment free speech rights. What type of speech did the FDAMA restrict, and what level of First Amendment protection attaches to such speech? Were the pharmacists entitled to win their case?
3. A federal statute, 8 U.S.C. § 1409, sets requirements for acquisition of U.S. citizenship by a child born outside the United States to unwed parents, only one of whom is a U.S. citizen. If the mother is the U.S. citizen, the child acquires citizenship at birth. Section 1409(a) states that when the father is the citizen parent, the child acquires citizenship only if, before the child reaches the age of 18, the child is legitimized under the law of the child’s residence or domicile, the father acknowledges paternity in writing under oath, or paternity is established by a competent court. Tuan Anh Nguyen was born in Vietnam to a

Vietnamese mother and a U.S. citizen father, Joseph Boulais. At six years of age, Nguyen came to the United States, where he became a lawful permanent resident and was raised by his father. When Nguyen was 22, he pleaded guilty in a Texas court to two counts of sexual assault. The U.S. Immigration and Naturalization Service initiated deportation proceedings against Nguyen, and an immigration judge found him deportable. While Nguyen’s appeal to the U.S. Board of Immigration Appeals was pending, Boulais obtained from a state court an order of parentage that was based on DNA testing. The board dismissed Nguyen’s appeal, denying his citizenship claim on the ground that he had not established compliance with § 1409(a). Nguyen and Boulais appealed to the U.S. Court of Appeals for the Fifth Circuit, which rejected their contention that § 1409 discriminated on the basis of gender and thus violated the Constitution’s equal protection guarantee. Was the Fifth Circuit’s decision correct?

4. A Dallas, Texas, city ordinance restricted admission to so-called “Class E” dance halls to persons between the ages of 14 and 18. The ordinance did not impose similar age limitations on most other establishments where teenagers might congregate—for example, skating rinks. Charles Stanglin, who in one building operated both a Class E dance hall and a roller-skating rink, filed suit in a Texas trial court in an effort to obtain an injunction against enforcement of the ordinance. He argued that the ordinance violated the U.S. Constitution’s Equal Protection Clause. The trial court rejected Stanglin’s argument, but a Texas appellate court struck down the age restriction. The U.S. Supreme Court agreed to decide the case. Did the age restriction in the Dallas ordinance violate the Equal Protection Clause?
5. A Stratton, Ohio, ordinance prohibited “canvassers” from “going in and upon” private residential property to promote a “cause” without first obtaining a permit from the office of the mayor. The ordinance sought to prevent fraud and crime and to protect residents’ privacy. Permits were free of charge, and were routinely issued after an applicant had filled out a “Solicitor’s Registration Form.” After receiving a permit, a solicitor was authorized to go upon the premises she had listed on the registration form. At a resident’s or a policeman’s request, the solicitor was required to display the permit. If a resident had filled out a “No Solicitation Registration Form” from the mayor’s office and posted a “no solicitation” sign on

his property, not even solicitors with permits were allowed to enter the premises unless the resident had listed them as exceptions on the “No Solicitation Registration Form.”

The Watchtower Bible and Tract Society of New York, a society and congregation of Jehovah’s Witnesses that distributed and published religious materials, did not apply for a permit. Watchtower claimed that God orders Jehovah’s Witnesses to preach the gospel, and that applying for a permit would insult God by subordinating the scripture to local code. Watchtower therefore brought an action in federal court seeking to have the village of Stratton enjoined from enforcing the solicitation ordinance. Watchtower contended that the ordinance violated First Amendment rights to free speech, free press, and the free exercise of religion. Was Watchtower’s allegation correct?

6. On August 26, while employed as a policeman at a state university, Richard Homar was arrested by the state police and charged with a drug felony. University officials then suspended Homar without pay. Although the criminal charges were dismissed on September 1, Homar’s suspension remained in effect. On September 18, he finally was provided the opportunity to tell his side of the story to university officials. Subsequently, he was demoted to groundskeeper. He then filed suit under a federal civil rights statute, claiming that university officials’ failure to provide him with notice and a hearing before suspension without pay had violated due process. Was Homar correct?
7. In the Violence Against Women Act, Congress provided a federal civil remedy for victims of gender-motivated violence. A female student who had attended a Virginia university brought a claim under the Violence Against Women Act against two male students who allegedly had sexually assaulted her and caused her to experience severe emotional distress. The defendants challenged the Violence Against Women Act on constitutional grounds, arguing that the statute did not fall within the power granted to Congress by the U.S. Constitution’s Commerce Clause. Were the defendants correct in this argument?
8. The Minnesota legislature passed a statute banning the sale of milk in plastic nonrefillable, nonreusable containers. However, it allowed sales of milk in other nonrefillable, nonreusable containers such as paperboard cartons. One of the justifications for this ban on plastic jugs was that it would ease the state’s solid waste disposal problems because plastic jugs occupy more space in landfills than other nonreturnable milk

containers. A group of dairy businesses challenged the statute, arguing that its distinction between plastic containers and other containers was unconstitutional under the Equal Protection Clause. What means-ends test or level of scrutiny applies in this case? Under that test, is easing the state’s solid waste disposal problems a sufficiently important *end*? Under that test, is there a sufficiently close “fit” between the classification and that end to make the statutory *means* constitutional? In answering the last question, assume for the sake of argument that there were better ways of alleviating the solid waste disposal problem than banning plastic jugs while allowing paperboard cartons.

9. Oklahoma statutes set the age for drinking 3.2 beer at 21 for men and 18 for women. The asserted purpose behind the statutes (and the sex-based classification that they established) was traffic safety. The statutes were challenged as a denial of equal protection by male residents of Oklahoma. What level of scrutiny would this measure receive if *women* had been denied the right to drink 3.2 beer until they were 21 but men had been allowed to consume it at age 18? Should this standard change because the measure discriminates against *men*? Is the male challenge to the statute likely to be successful?
10. While it was preparing a comprehensive land use plan in the area, the Tahoe Regional Planning Agency (TRPA) imposed two moratoria on development of property in the Lake Tahoe Basin. The moratoria together lasted 32 months. A group of property developers affected by the moratoria filed suit in federal court alleging that the moratoria constituted an unconstitutional taking without just compensation. Were the developers correct?
11. During the 14 years it was in effect until its repeal in 1933, the 18th Amendment to the U.S. Constitution called for Prohibition, a nationwide outlawing of alcoholic beverage production and distribution. The repeal of Prohibition was accomplished by § 1 of the 21st Amendment. In its § 2, however, the 21st Amendment preserved an ability on the part of the individual states to regulate alcohol distribution by providing that “[t]he transportation or importation into any State, Territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.” As did the laws of many states, Michigan law on alcoholic beverage distribution set up a three-tiered system under which, as a general rule, alcoholic

beverage producers could sell only to licensed in-state wholesalers. Wholesalers were allowed to sell only to licensed in-state retailers, which then could sell to consumers. Michigan law, however, included an exception to the three-tier system for the approximately 40 wineries located in that state. The in-state wineries were eligible for licenses that allowed direct shipment to in-state consumers. Out-of-state wineries could apply for an “outside seller of wine” license, but such a license allowed those wineries to sell only to in-state wholesalers and not directly to consumers. New York law channeled alcohol sales through a similar three-tiered system, subject to exceptions for in-state wineries. These exceptions allowed in-state wineries to make direct sales to New York consumers on terms not available to out-of-state wineries. Out-of-state wineries were allowed to ship directly to New York consumers only if they became licensed New York wineries—a process that required the establishment of a branch factory, office, or storeroom within New York.

In separate cases filed in federal district courts in Michigan and New York, residents of Michigan and New York who wished to receive direct shipments of wine from out-of-state wineries sued appropriate state officials. The plaintiffs in each case contended that the direct-shipment laws of the relevant state (Michigan or New York) discriminated against interstate commerce in violation of the U.S. Constitution’s Commerce Clause. In each case, the defendants argued that the ban on direct shipment from out-of-state wineries was a valid exercise of the relevant state’s power under § 2 of the 21st Amendment. Because the cases led to inconsistent decisions of federal courts of appeal on the questions presented, the U.S. Supreme Court granted certiorari in both cases and consolidated them for decision. Did the Michigan and New York direct-shipment laws violate the Commerce Clause? Were the states’ bans on direct shipment from out-of-state wineries valid exercises of the states’ power under § 2 of the 21st Amendment?

12. In the Motor Carrier Act of 1980, Congress deregulated trucking by eliminating federal regulations that had previously applied to the trucking industry. Fourteen years later, Congress sought to preempt trucking regulation at the state level by enacting a law providing that “a State . . . may not enact or enforce a law . . . related to a price, route, or service of any motor carrier . . . with respect to the transportation of property.” After the enactment of the

1994 federal statute just quoted, the State of Maine enacted a statute titled “An Act To Regulate the Delivery and Sales of Tobacco Products and To Prevent the Sale of Tobacco Products to Minors.” One section of the Maine statute forbade anyone other than a Maine-licensed tobacco retailer to accept an order for delivery of tobacco. The statute went on to state that when a licensed retailer accepted an order and shipped tobacco, the retailer had to “utilize a delivery service” that provided a special kind of recipient-verification service. The statute required the delivery service to make certain that (1) the person who bought the tobacco was the person to whom the package was addressed; (2) the person to whom the package was addressed was of legal age to purchase tobacco; (3) the person to whom the package was addressed had himself or herself signed for the package; and (4) the person to whom the package was addressed, if under the age of 27, had produced a valid government-issued photo identification with proof of age. Violations of the statute were punishable by civil penalties of a monetary nature. Another section of the Maine statute forbade any person “knowingly” to “transport” a “tobacco product” to “a person” in Maine unless either the sender or the receiver had a Maine license. It further stated that a “person is deemed to know that a package contains a tobacco product” (1) if the package was marked as containing tobacco and displayed the name and license number of a Maine-licensed tobacco retailer, or (2) if the person received the package from someone whose name appears on a list of unlicensed tobacco retailers that Maine’s Attorney General made available to various package-delivery companies. Violations again were made punishable by civil penalties of a monetary nature. Various trucking associations sued in federal court, claiming that the 1994 federal statute quoted earlier preempted the Maine statute. Were the trucking associations correct in this claim?

Online Research

The First Amendment

Using an online legal research tool, locate the U.S. Supreme Court’s 2006 decision in *Garcetti v. Ceballos*. Read the opinion of Justice Kennedy, who wrote for a five-justice majority. Then prepare a one-page summary of why the majority rejected the First Amendment claim made by Ceballos.

chapter 4

BUSINESS ETHICS, CORPORATE SOCIAL RESPONSIBILITY, CORPORATE GOVERNANCE, AND CRITICAL THINKING

You are a senior associate consultant at Accent Pointe Consulting LLP, a consulting firm. The engagement partner has asked you to prepare an engagement plan and budget, which you dutifully complete on time. This is the first time you have prepared an engagement plan and budget. You make sure that your plan and budget are in line with your knowledge of what can and must be done to meet the client's needs. The proposed fee is \$100,000. When you present the budget to the engagement partner, she goes ballistic. "What's this \$100,000? This is Accent Pointe Consulting. This is the big time. What kind of consultant are you?"

"A good one," you reply. "I've created a reasonable plan, and for what we are doing for the client, that is a high-end fee."

The partner, however, does not buy your arguments. "You make this contract \$200,000," she orders you, "and find a way in your engagement plan to back up that price."

- What action will you take?
- What process and guidelines will you use to determine what is the right thing to do in this context?
- If you decide that \$100,000 is the correct contract price, how do you resist the partner's request to make you bill the client for \$200,000?
- Will you take a different action if you know that a year from now the firm's partners will vote on whether you should be made a partner, and you believe the engagement partner's recommendation will be critical to your becoming a partner?
- Will you take a different action if you are the engagement partner and have been ordered to bill the client \$200,000 by a managing partner? Note that as a partner, your share of firm profits is determined by the number of "units" you have, which is largely a function of the amount the firm bills clients for whom you are the engagement partner.
- What action will you take if you discover that the managing partner's request to bill more is a relatively isolated incident in a firm that generally bills clients accurately? You don't know the managing partner's motivation for asking you to overbill the client.
- What action will you take if you discover that the firm has a culture that encourages overbilling clients? The overbilling culture evolved within the last decade from a desire of managing partners to enjoy a financial status more nearly equal to the corporate executives of their clients, many of whom receive annual compensation in the millions of dollars.

Why Study Business Ethics?

Enron. WorldCom. Tyco. Adelphia. Global Crossing. ImClone. These business names from the front pages of the last decade conjure images of unethical and socially irresponsible behavior by business executives. The United States Congress, employees, investors, and other critics of the power held and abused by some corporations and their management have demanded that corporate wrongdoers be punished and that future wrongdoers be deterred. Consequently shareholders, creditors, and state and federal attorneys general have brought several civil and criminal actions against wrongdoing corporations and their executives. Congress has also got in on the action, passing the Sarbanes–Oxley Act, which increased penalties for corporate wrongdoers and established rules designed to deter and prevent future wrongdoing. The purpose of the statute is to encourage and enable corporate executives to be ethical and socially responsible.

But statutes and civil and criminal actions can go only so far in directing business managers down an ethical path. And while avoiding liability by complying with the law is one reason to be ethical and socially responsible, there are noble and economic reasons that encourage current and future business executives to study business ethics.

Although it is tempting to paint all businesses and all managers with the same brush that colors unethical and irresponsible corporations and executives, in reality corporate executives are little different from you, your friends, and your acquaintances. All of us from time to time fail to do the right thing, and we know that people have varying levels of commitment to acting ethically. The difference between most of us and corporate executives is that they are in positions of power that allow them to do greater damage to others when they act unethically or socially irresponsibly. They also act under the microscope of public scrutiny.

It is also tempting to say that current business managers are less ethical than managers historically. But as former Federal Reserve Chairman Alan Greenspan said, “It is not that humans have become any more greedy than in generations past. It is that the avenues to express greed have grown enormously.”

This brings us to the first and most important reason why we need to study business ethics: to make better decisions for ourselves, the businesses we work for, and the society we live in. As you read this chapter, you will study not only the different theories that attempt to define ethical conduct, but more importantly you will learn to use a framework or strategy for making decisions. This

framework will increase the likelihood you have considered all the facts affecting your decision. By learning a methodology for ethical decision making and studying common thinking errors, you will improve your ability to make ethical decisions.

Another reason we study ethics is to understand ourselves and others better. While studying the various ethical theories, you will see concepts that reflect your own thinking and the thinking of others. This chapter, by exploring ethical theories systematically and pointing out the strengths and weaknesses of each ethical theory, should help you understand better why you think the way you do and why others think the way they do. By studying ethical theories, learning a process for ethical decision making, and understanding common reasoning fallacies, you should also be better able to decide how you should think and whether you should be persuaded by the arguments of others. Along the way, by better understanding where others are coming from and avoiding fallacious reasoning, you should become a more persuasive speaker and writer.

There are also cynical reasons for executives to study business ethics. By learning how to act ethically and in fact doing so, businesses forestall public criticism, reduce lawsuits against them, prevent Congress from passing onerous legislation, and make higher profits. For many corporate actors, however, these are not reasons to act ethically, but instead the natural consequences of so acting.

While we are studying business ethics, we will also examine the role of the law in defining ethical conduct. Some argue that it is sufficient for corporations and executives to comply with the requirements of the law; commonly, critics of the corporation point out that since laws cannot and do not encompass all expressions of ethical behavior, compliance with the law is necessary but not sufficient to ensure ethical conduct. This introduces us to one of the major issues in the corporate social responsibility debate.

The Corporate Social Responsibility Debate

Although interest in business ethics education has increased greatly in the last few decades, that interest is only the latest stage in a long struggle to control corporate misbehavior. Ever since large corporations emerged in the late 19th century, such firms have been heroes to some and villains to others. Large corporations perform essential national and global economic functions, including raw material extraction, energy production, transportation,

and communication, as well as providing consumer goods and entertainment to millions of people.

Critics, however, claim that corporations in their pursuit of profits ruin the environment, mistreat employees, sell shoddy and dangerous products, produce immoral television shows and motion pictures, and corrupt the political process. Critics claim that even when corporations provide vital and important services, business is not nearly as accountable to the public as are organs of government. For example, the public has little to say about the election of corporate directors or the appointment of corporate officers. This lack of accountability is aggravated by the large amount of power that big corporations wield in America and much of the rest of the world.

These criticisms and perceptions have led to calls for changes in how corporations and their executives make decisions. The main device for checking corporate misdeeds has been the law. The perceived need to check abuses of business power was a force behind the New Deal laws of the 1930s and extensive federal regulations enacted in the 1960s and 1970s. Some critics, however, believe that legal regulation, while an important element of any corporate control scheme, is insufficient by itself. They argue that businesses should adhere to a standard

of ethical or socially responsible behavior that is higher than the law.

One such standard is the stakeholder theory of corporate social responsibility. It holds that rather than merely striving to maximize profits for its shareholders, a corporation should balance the interests of shareholders against the interests of other corporate stakeholders, such as employees, suppliers, customers, and the community. To promote such behavior, some corporate critics have proposed changes that increase the influence of the various stakeholders in the internal governance of a corporation. We will study many of these proposals later in the chapter in the subsection on profit maximization. You will also learn later that an ethical decision-making process requires a business executive to anticipate the effects of a corporate decision on the various corporate stakeholders.

Despite concerns about abuses of power, big business has contributed greatly to the unprecedented abundance in America and elsewhere. Partly for this reason and partly because many businesses attempt to be ethical actors, critics have not totally dominated the debate about control of the modern corporation. Defenders of businesses argue that in a society founded on capitalism, profit maximization should be the main goal of businesses: the only ethical norms firms must follow are those embodied

Ethics in Action

American physicist, mathematician, and futurist Freeman Dyson gave insight into why we humans may have difficulty determining which ethical viewpoint to embrace. His insights also help explain why different people have different ethical leanings.

The destiny of our species is shaped by the imperatives of survival on six distinct time scales. To survive means to compete successfully on all six time scales. But the unit of survival is different for each of the six time scales. On a time scale of years, the unit is the individual. On a time scale of decades, the unit is the family. On a time scale of centuries, the unit is the tribe or nation. On a time scale of millennia, the unit is the culture. On a time scale of tens of millennia, the unit is the species. On a time scale of eons, the unit is the whole web of life on our planet. That is why conflicting loyalties are deep in our nature. In order to survive, we need to be loyal to ourselves, to our families, to our tribes, to our culture, to our species, to our planet. If our psychological impulses are complicated, it is because they were shaped by complicated and conflicting demands.¹

Dyson goes on to write, “Nature gave us greed, a robust desire to maximize our personal winnings. Without greed we would not have survived at the individual level.” Yet he points out that Nature also gave us the connections and tools to survive at the family level (Dyson calls this tool love of family), the tribal level (love of friends), the cultural level (love of conversation), the species level (love of people in general), and the planetary level (love of nature).

If Dyson is correct, why are humans sometimes vastly different from each other in some of their ethical values? Why do some of us argue, for example, that universal health care is a right for each citizen, while others believe health care coverage should be an individual decision? The answer lies in the degree to which each of us embraces, innately or rationally, Dyson’s six units of survival and the extent to which each of us possesses the connections and tools to survive on each of those levels.

¹Freeman Dyson, *From Eros to Gaia*, (London: Penguin Books, 1993), pp. 341–42.

in the law or those impacting profits. In short, they argue that businesses that maximize profits within the limits of the law are acting ethically. Otherwise, the marketplace would discipline them for acting unethically by reducing their profits.

Former Fed Chairman Alan Greenspan wrote in 1963 that moral values are the power behind capitalism. He wrote, “Capitalism is based on self-interest and self-esteem; it holds integrity and trustworthiness as cardinal virtues and makes them pay off in the marketplace, thus demanding that men survive by means of virtue, not of vices.” Note that companies that are successful decade after decade, like Procter & Gamble and Johnson & Johnson, adhere to society’s core values.

We will cover other arguments supporting and criticizing profit maximization later in the chapter, where we will consider fully proposals to improve corporate governance and accountability. For now, however, having set the stage for the debate about business ethics and corporate social responsibility, we want to study the definitions of ethical behavior.

Ethical Theories

For centuries, religious and secular scholars have explored the meaning of human existence and attempted to define a “good life.” In this section, we will define and examine some of the most important theories of ethical conduct.

As we cover these theories, much of what you read will be familiar to you. The names may be new, but almost certainly you have previously heard speeches and read writings of politicians, religious leaders, and commentators that incorporate the values in these theories. You will discover that your own thinking is consistent with one or more of the theories. You can also recognize the thinking of friends and antagonists in these theories.

None of these theories is necessarily invalid, and many people believe strongly in any one of them. Whether you believe your theory to be right and the others to be wrong, it is unlikely that others will accept what you see as the error of their ways and agree with all your values. Instead, it is important for you to recognize that people’s ethical values can be as diverse as human culture. Therefore, no amount of argumentation appealing to theories you accept is likely to influence someone who subscribes to a different ethical viewpoint.

This means that if you want to be understood by and to influence someone who has a different ethical underpinning than you do, you must first determine his ethical viewpoint and then speak in an ethical language that will be understood and accepted by him. Otherwise, you and

your opponent are like the talking heads on nighttime cable TV news shows, whose debates often are reduced to shouting matches void of any attempt to understand the other side.

LOG ON

Go to
www.iep.utm.edu

The Internet Encyclopedia of Philosophy gives you background on all the world’s great philosophers from Abelard to Zizek. You can also study the development of philosophy from ancient times to the present. Many of the world’s great philosophers addressed the question of ethical or moral conduct.

The four ethical theories we will study are rights theory, justice theory, utilitarianism, and profit maximization. Some of these theories focus on results of our decisions or actions: do our decisions or actions produce the right results? Theories that focus on the consequences of a decision are **teleological** ethical theories. For example, a teleological theory may justify a manufacturing company laying off 5,000 employees, because the effect is to keep the price of manufactured goods low and to increase profits for the company’s shareholders.

Other theories focus on the decision or action itself, irrespective of what results it produces. Theories that focus on decisions or actions alone are **deontological** ethical theories. For example, a deontological theory may find unacceptable that any competent employee loses his job, even if the layoff’s effect is to reduce prices to consumers and increase profits.

First, we will cover rights theory, which is a deontological theory. Next will be justice theory, which has concepts common to rights theory, but a focus primarily on outcomes. Our study of ethical theories will conclude with two additional teleological theories, utilitarianism and profit maximization.

Rights Theory Rights theory encompasses a variety of ethical philosophies holding that certain human rights are fundamental and must be respected by other humans. The focus is on each individual member of society and her rights. As an actor, each of us faces a moral compulsion not to harm the fundamental rights of others.

Kantianism Few rights theorists are strict deontologists, and one of the few is 18th-century philosopher Immanuel Kant. Kant viewed humans as moral actors that are free

to make choices. He believed humans are able to judge the morality of any action by applying his famous **categorical imperative**. One formulation of the categorical imperative is, “Act only on that maxim whereby at the same time you can will that it shall become a universal law.” This means that we judge an action by applying it universally.

Suppose you want to borrow money even though you know that you will never repay it. To justify this action using the categorical imperative, you state the following maxim or rule: “When I want money, I will borrow money and promise to repay it, even though I know I won’t repay.” According to Kant, you would not want this maxim to become a universal law, because no one would believe in promises to repay debts and you would not be able to borrow money when you want. Thus, your maxim or rule fails to satisfy the categorical imperative. You are compelled, therefore, not to promise falsely that you will repay a loan.

Kant had a second formulation of the categorical imperative: “Always act to treat humanity, whether in yourself or in others, as an end in itself, never merely as a means.” That is, we may not use or manipulate others to achieve our own happiness. In Kant’s eyes, if you

falsely promise a lender to repay a loan, you are using that person because she would not agree to the loan if she knew all the facts.

Modern Rights Theories Strict deontological ethical theories like Kant’s face an obvious problem: the duties are absolute. We can never lie and never kill, even though most of us find lying and killing acceptable in some contexts, such as in self-defense. Responding to these difficulties, some modern philosophers have proposed mixed deontological theories. There are many theories here, but one popular theory requires us to abide by a moral rule unless a more important rule conflicts with it. In other words, our moral compulsion is not to compromise a person’s right unless a greater right takes priority over it.

For example, members of society have the right not to be lied to. Therefore, in most contexts you are morally compelled not to tell a falsehood. That is an important right, because it is critical to a society that we be able to rely on someone’s word. If, however, you could save someone’s life by telling a falsehood, such as telling a lie to a criminal about where a witness who will testify against him can be found, you probably will be required to save that person’s life by lying about his whereabouts.

The Global Business Environment

The Golden Rule in the World’s Religions and Cultures

Immanuel Kant’s categorical imperative, which is one formulation of rights theory, has its foundations in the Golden Rule. Note that the Golden Rule exists in all cultures and in all countries of the world. Here is a sampling.

BUDDHISM: Hurt not others in ways that you would find hurtful.

CHRISTIANITY: Do to others as you would have others do to you.

CONFUCIANISM: Do not to others what you would not like yourself.

GRECIAN: Do not that to a neighbor which you shall take ill from him.

HINDUISM: This is the sum of duty: do nothing to others which if done to you would cause you pain.

HUMANISM: Individual and social problems can only be resolved by means of human reason, intelligent effort, and critical thinking joined with compassion and a spirit of empathy for all living beings.

ISLAM: No one of you is a believer until he desires for his brother that which he desires for himself.

JAINISM: In happiness and suffering, in joy and grief, we should regard all creatures as we regard our own self.

JUDAISM: Whatever is hateful to you, do not to another.

NATIVE AMERICAN SPIRITUALITY: Respect for all life is the foundation.

PERSIAN: Do as you would be done by.

ROMAN: Treat your inferiors as you would be treated by your superiors.

SHINTOISM: The heart of the person before you is a mirror. See there your own form.

SIKHISM: As you deem yourself, so deem others.

TAOISM: Regard your neighbor’s gain as your own gain, and your neighbor’s loss as your own loss.

YORUBAN: One going to take a pointed stick to pinch a baby bird should first try it on himself to feel how it hurts.

ZOROASTRIANISM: That nature alone is good which refrains from doing to another whatsoever is not good for itself.

In this context, the witness's right to live is a more important right than the criminal's right to hear the truth. In effect, one right "trumps" the other right.

What are these fundamental rights? How do we rank them in importance? Seventeenth-century philosopher John Locke argued for fundamental rights that we see embodied in the constitutions of modern democratic states: the protection of life, liberty, and property. Libertarians and others include the important rights of freedom of contract and freedom of expression. Modern liberals, like Bertolt Brecht, argued that all humans have basic rights to employment, food, housing, and education. Since the 1990s, the right to health care has become part of the liberal rights agenda.

Strengths of Rights Theory The major strength of rights theory is that it protects fundamental rights, unless some greater right takes precedence. This means that members of modern democratic societies have extensive liberties and rights that they need not fear will be taken away by their government or other members of society.

Criticisms of Rights Theory Most of the criticisms of rights theory deal with the near absolute yet relative value of the rights protected, making it difficult to articulate and administer a comprehensive rights theory. First, it is difficult to achieve agreement about which rights are protected. Rights fundamental to modern countries like the United States (such as many women's rights) are unknown or severely restricted in countries like Pakistan or Saudi Arabia. Even within one country, citizens disagree on the existence and ranking of rights. For example, some Americans argue that the right to health care is an important need that should be met by government or a person's employer. Other Americans believe funding universal health care would interfere with the libertarian right to limited government intervention in our lives.

In addition, rights theory does not concern itself with the costs or benefits of requiring respect for another's right. For example, rights theory probably justifies the protection of a neo-Nazi's right to spout hateful speech, even though the costs of such speech, including damage to relations between ethnic groups, may far outweigh any benefits the speaker, listeners, and society receives from the speech.

Moreover, rights theory promotes moral fanaticism and creates a sense of entitlement reducing innovation, entrepreneurship, and production. If, for example, I am entitled to a job, a place to live, food, and health care regardless of how hard I work, how motivated am I to work to earn those things?

Justice Theory In 1971, John Rawls published his book *A Theory of Justice*, the philosophical underpinning for the bureaucratic welfare state. Rawls reasoned that it was right for governments to redistribute wealth in order to help the poor and disadvantaged. He argued for a just distribution of society's resources by which a society's benefits and burdens are allocated fairly among its members.

Rawls expressed this philosophy in his **Greatest Equal Liberty Principle**: each person has an equal right to basic rights and liberties. He qualified or limited this principle with the **Difference Principle**: social inequalities are acceptable only if they cannot be eliminated without making the worst-off class even worse off. The basic structure is perfectly just, he wrote, when the prospects of the least fortunate are as great as they can be.

Rawls's justice theory has application in the business context. Justice theory requires decision makers to be guided by fairness and impartiality. It holds that businesses should focus on outcomes: are people getting what they deserve? It would mean, for example, that a business deciding in which of two communities to build a new manufacturing plant should consider which community has the greater need for economic development.

Chief among Rawls's critics was his Harvard colleague Robert Nozick. Nozick argued that the rights of the individual are primary and that nothing more was justified than a minimal government that protected against violence and theft and ensured the enforcement of contracts. Nozick espoused a libertarian view that unequal distribution of wealth is moral if there is equal opportunity. Applied to the business context, Nozick's formulation of justice would permit a business to choose between two manufacturing plant sites after giving each community the opportunity to make its best bid for the plant. Instead of picking the community most in need, the business may pick the one offering the best deal.

Strengths of Justice Theory The strength of Rawls's justice theory lies in its basic premise, the protection of those who are least advantaged in society. Its motives are consistent with the religious and secular philosophies that urge humans to help those in need. Many religions and cultures hold basic to their faith the assistance of those who are less fortunate.

Criticisms of Justice Theory Rawls's justice theory shares some of the criticisms of rights theory. It treats equality as an absolute, without examining the costs of producing equality, including reduced incentives for

innovation, entrepreneurship, and production. Moreover, any attempt to rearrange social benefits requires an accurate measurement of current wealth. For example, if a business is unable to measure accurately which employees are in greater need of benefits due to their wealth level, application of justice theory may make the business a Robin Hood in reverse: taking from the poor to give to the rich.

Utilitarianism Utilitarianism requires a decision maker to maximize utility for society as a whole. Maximizing utility means achieving the highest level of satisfactions over dissatisfactions. This means that a person must consider the benefits and costs of her actions to everyone in society.

A utilitarian will act only if the benefits of the action to society outweigh the societal costs of the action. Note that the focus is on society as a whole. This means a decision maker may be required to do something that harms her if society as a whole is benefited by her action.

A teleological theory, utilitarianism judges our actions as good or bad depending on their consequences. This is sometimes expressed as “the ends justify the means.”

Utilitarianism is most identified with 19th-century philosophers Jeremy Bentham and John Stuart Mill. Bentham argued that maximizing utility meant achieving the greatest overall balance of pleasure over pain. A critic of utilitarianism, Thomas Carlyle, called utilitarianism “pig philosophy,” because it appeared to base the goal of ethics on the swinish pleasures of the multitude.

Mill thought Bentham’s approach too narrow and broadened the definition of utility to include satisfactions such as health, knowledge, friendship, and aesthetic delights. Responding to Carlyle’s criticisms, Mill also wrote that some satisfactions count more than others. For example, the pleasure of seeing wild animals free in the world may be a greater satisfaction morally than shooting them and seeing them stuffed in one’s den.

How does utilitarianism work in practice? It requires that you consider not just the impact of decisions on yourself, your family, and your friends, but also the impact on everyone in society. Before deciding whether to ride a bicycle to school or work rather than to drive a car, a utilitarian would consider the wear and tear on her clothes, the time saved or lost by riding a bike, the displeasure of riding in bad weather, her improved physical condition, her feeling of satisfaction for not using fossil fuels, the cost of buying more food to fuel her body for the bike trips, the dangers of riding near automobile traffic, and a host of other factors that affect her satisfaction and dissatisfaction.

But her utilitarian analysis doesn’t stop there. She has to consider her decision’s effect on the rest of society. Will she interfere with automobile traffic flow and decrease the driving pleasure of automobile drivers? Will commuters be encouraged to ride as she does and benefit from doing so? Will her lower use of gasoline for her car reduce demand and consumption of fossil fuels, saving money for car drivers and reducing pollution? Will her and other bike riders’ increased food consumption drive up food prices and make it less affordable for poor families? This only scratches the surface of her utilitarian analysis.

The process we used above, so-called **act utilitarianism**, judges each act separately, assessing a single act’s benefits and costs to society’s members. Obviously, a person cannot make an act utilitarian analysis for every decision. It would take too much time.

Utilitarianism recognizes that human limitation. **Rule utilitarianism** judges actions by a rule that over the long run maximizes benefits over costs. For example, you may find that taking a shower every morning before school or work maximizes society’s satisfactions, as a rule. Most days, people around you will be benefited by not having to smell noisome odors, and your personal and professional prospects will improve by practicing good hygiene. Therefore, you are likely to be a rule utilitarian and shower each morning, even though some days you may not contact other people.

Many of the habits we have are the result of rule utilitarian analysis. Likewise, many business practices, such as a retailer’s regular starting and closing times, also are based in rule utilitarianism.

Strengths of Utilitarianism What are the strengths of utilitarianism as a guide for ethical conduct? It is easy to articulate the standard of conduct: you merely need to do what is best for society as a whole. It also coincides with values of most modern countries like the United States: it is capitalist in nature by focusing on total social satisfactions, benefits, welfare, and wealth, not on the allocations of pleasures and pains, satisfactions and dissatisfactions, and wealth.

Criticisms of Utilitarianism Those strengths also expose some of the criticisms of utilitarianism as an ethical construct. It is difficult to measure one’s own pleasures and pains and satisfactions and dissatisfactions, let alone those of all of society’s members. In addition, those benefits and costs almost certainly are unequally distributed across society’s members. It can foster a tyranny of the majority that may result in morally monstrous behavior,

such as a decision by a 100,000-person community to use a lake as a dump for human waste because only one person otherwise uses or draws drinking water from the lake.

That example exhibits how utilitarianism differs from rights theory. While rights theory may protect a person's right to clean drinking water regardless of its cost, utilitarianism considers the benefits and costs of that right as only one factor in the total mix of society's benefits and costs. In some cases, the cost of interfering with someone's right may outweigh the benefits to society, resulting in the same decision that rights theory produces. But where rights theory is essentially a one-factor analysis, utilitarianism requires a consideration of that factor and a host of others as well.

A final criticism of utilitarianism is that it is not constrained by law. Certainly, the law is a factor in utilitarian analysis. Utilitarian analysis must consider, for example, the dissatisfactions fostered by not complying with the law and by creating an environment of lawlessness in a society. Yet the law is only one factor in utilitarian analysis. The pains caused by violating the law may be offset by benefits the violation produces. Most people, however, are rule utilitarian when it comes to law, deciding that obeying the law in the long run maximizes social utility.

Profit Maximization Profit maximization as an ethical theory requires a decision maker to maximize a business's long-run profits within the limits of the law. It is based in the *laissez faire* theory of capitalism first expressed by Adam Smith in the 18th century and more recently promoted by economists such as Milton Friedman and Thomas Sowell. Laissez faire economists argue total social welfare is optimized if humans are permitted to work toward their own selfish goals. The role of governments and law is solely to ensure the workings of a free market by not interfering with economic liberty, eliminating collusion among competitors, and promoting accurate information in the marketplace.

By focusing on results—maximizing total social welfare—profit maximization is a teleological ethical theory. It is closely related to utilitarianism, but it differs fundamentally in how ethical decisions are made. While utilitarianism maximizes social utility by focusing the actor on everyone's satisfactions and dissatisfactions, profit maximization optimizes total social utility by narrowing the actor's focus, requiring the decision maker to make a decision that merely maximizes profits for himself or his organization.

Strengths of Profit Maximization How can we define ethical behavior as acting in one's selfish interest? As

you probably already learned in a microeconomics course, this apparent contradiction is explained by the consequences of all of us being profit maximizers. By working in our own interests, we compete for society's scarce resources (iron ore, labor, and land, to name a few), which are allocated to those people and businesses that can use them most productively. By allocating society's resources to their most efficient uses, as determined by a free market, we maximize total social utility or benefits. Society as a whole is bettered if all of us compete freely for its resources by trying to increase our personal or business profits. If we fail to maximize profits, some of society's resources will be allocated to less productive uses that reduce society's total welfare.

In addition, profit maximization results in ethical conduct because it requires society's members to act within the constraints of the law. A profit maximizer, therefore, acts ethically by complying with society's mores as expressed in its laws.

Moreover, each decision maker and business is disciplined by the marketplace. Consequently, profit maximization analysis probably requires a decision maker to consider the rights protected by rights theory and justice theory. Ignoring important rights of employees, customers, suppliers, communities, and other stakeholders may negatively impact a corporation's profits. A business that engages in behavior that is judged unethical by consumers and other members of society is subject to boycotts, adverse publicity, demands for more restrictive laws, and other reactions that damage its image, decrease its revenue, and increase its costs.

Consider for example, the reduced sales of Martha Stewart branded goods at Kmart after Ms. Stewart was accused of trading ImClone stock while possessing inside information. Consider also the fewer number of college graduates willing to work for Waste Management, Inc., in the wake of adverse publicity and indictments against its executives for misstating its financial results. Note also the higher cost of capital for firms like Dell as investors bid down the stock price of companies accused of accounting irregularities and other wrongdoing.

All these reactions to perceived unethical conduct impact the business's profitability in the short and long run, motivating that business to make decisions that comply with ethical views that transcend legal requirements.

Criticisms of Profit Maximization The strengths of profit maximization as a model for ethical behavior also suggest criticisms and weaknesses of the theory. Striking at the heart of the theory is the criticism that corporate managers are subject to human failings that make it

impossible for them to maximize corporate profits. The failure to discover and process all relevant information and varying levels of aversion to risk can result in one manager making a different decision than another manager. Group decision making in the business context introduces other dynamics that interfere with rational decision making. Social psychologists have found that groups often accept a higher level of risk than they would as individuals. There is also the tendency of a group to internalize the group's values and suppress critical thought.

Furthermore, even if profit maximization results in an efficient allocation of society's resources and maximization of total social welfare, it does not concern itself with how wealth is allocated within society. In America, more than 50 percent of all wealth is held by 10 percent of the population. To some people, that wealth disparity is unacceptable. To *laissez faire* economists, wealth disparity is a necessary component of a free market that rewards hard work, acquired skills, innovation, and risk taking. Yet critics of profit maximization respond that market imperfections and a person's position in life at birth interfere with his ability to compete.

Critics charge that the ability of laws and market forces to control corporate behavior is limited, because it requires lawmakers, consumers, employees, and other constituents to detect unethical corporate acts and take appropriate steps. Even if consumers notice irresponsible behavior and inform a corporation, a bureaucratic corporate structure may interfere with the information being received by the proper person inside the corporation. If instead consumers are silent and refuse to buy corporate products because of perceived unethical acts, corporate management may notice a decrease in sales, yet attribute it to something other than the corporation's unethical behavior.

Critics also argue that equating ethical behavior with legal compliance is a tautology in countries like the United States where businesses distort the lawmaking process by lobbying legislators and making political contributions. It cannot be ethical, they argue, for businesses to comply with laws reflecting the interests of businesses.

Profit maximization proponents respond that many laws restraining businesses are passed despite businesses lobbying against those laws. The Sarbanes-Oxley Act, which increases penalties for wrongdoing executives, requires CEOs to certify financial statements, and imposes internal governance rules on public companies, is such an example. So are laws restricting drug companies from selling a drug unless it is approved by the Food and Drug Administration and requiring environmental impact studies before a business may construct a new manufacturing

plant. Moreover, businesses are nothing other than a collection of individual stakeholders, which includes employees, shareholders, and their communities. When they lobby, they lobby in the best interests of all these stakeholders.

Critics respond that ethics transcends law, requiring in some situations that businesses adhere to a higher standard than required by law. We understand this in our personal lives. For example, despite the absence of law dictating for the most part how we treat friends, we know that ethical behavior requires us to be loyal to friends and to spend time with them when they need our help. In the business context, a firm may be permitted to release employees for nearly any reason, except the few legally banned bases of discrimination (such as race, age, and gender), yet some critics will argue businesses should not terminate an employee for other reasons currently not banned by most laws (such as sexual orientation or appearance). Moreover, these critics further argue that businesses—due to their influential role in a modern society—should be leaders in setting a standard for ethical conduct.

Profit maximizers respond that such an ethical standard is difficult to define and hampers efficient decision making. Moreover, they argue that experience shows the law has been a particularly relevant definition of ethical conduct. Consider that all the recent corporate scandals would have been prevented had the executives merely complied with the law. For example, Enron executives illegally kept some liabilities off the firm's financial statements. Tyco and Adelphia executives illegally looted corporate assets. Had these executives simply complied with the law and maximized their firms' long-run profits, none of the recent ethical debacles would have occurred.

Critics of profit maximization respond that the recent corporate crises at companies like Enron and WorldCom prove that flaws in corporate governance encourage executives to act unethically. These examples, critics say, show that many executives do not maximize profits for their firms. Instead, they maximize their own profits at the expense of the firm and its shareholders. They claim that stock options and other incentives intended to align the interests of executives with those of shareholders promote decisions that raise short-term profits to the long-run detriment of the firms. They point out that many CEOs and other top executives negotiate compensation plans that do not require them to stay with the firm long term and which allow them to benefit enormously from short-term profits. Executive greed, encouraged by these perverse executive compensation plans, also encourage CEOs and other executives to violate the law.

Defenders of business, profit maximization, and capitalist economics point out that it is nearly impossible to stop someone who is bent on fraud. A dishonest executive will lie to shareholders, creditors, board members, and the public and also treat the law as optional. Yet enlightened proponents of the modern corporation accept that there are problems with corporate management culture that require changes. They know that an unconstrained CEO, ethically uneducated executives, perverse compensation incentives, and inadequate supervision of executives by the firm's CEOs, board of directors, and shareholders present golden opportunities to the unscrupulous person and make unwitting accomplices of the ignorant and the powerless.

Improving Corporate Governance and Corporate Social Responsibility Even if we cannot stop all fraudulent executives, we can modify the corporate governance model to educate, motivate, and supervise executives and thereby improve corporate social responsibility. Corporate critics have proposed a wide variety of cures, all of which have been implemented to some degree and with varying degrees of success.

Ethics Codes Many large corporations and several industries have adopted codes of ethics or codes of conduct to guide executives and other employees. The Sarbanes–Oxley Act requires a public company to disclose whether it has adopted a code of ethics for senior financial officers, and to disclose any change in the code or waiver of the code's application.

There are two popular views of such codes. One sees the codes as genuine efforts to foster ethical behavior within a firm or an industry. The other view regards them as thinly disguised attempts to make the firm function better, to mislead the public into believing the firm behaves ethically, to prevent the passage of legislation that would impose stricter constraints on business, or to limit competition under the veil of ethical standards. Even where the first view is correct, ethical codes fail to address concretely all possible forms of corporate misbehavior. Instead, they often emphasize either the behavior required for the firm's effective internal function, such as not accepting gifts from customers, or the relations between competitors within a particular industry, such as prohibitions on some types of advertising.

Better corporate ethics codes make clear that the corporation expects employees not to violate the law in a mistaken belief that loyalty to the corporation or corporate profitability requires it. Such codes work best, however, when a corporation also gives its employees an outlet for dealing with a superior's request to do an unethical

act. That outlet may be the corporate legal department or corporate ethics office. One example is Google's Code of Ethics, which appears on the next page.

Ethical Instruction Some corporations require their employees to enroll in classes that teach ethical decision making. The idea is that a manager trained in ethical conduct will recognize unethical actions before they are taken and deter herself and the corporation from the unethical acts.

While promising in theory, in practice many managers are resistant to ethical training that requires them to examine their principles. They are reluctant to set aside a set of long-held principles with which they are comfortable. Therefore, there are some doubts whether managers are receptive to ethical instruction. Even if the training is accepted, will managers retain the ethical lessons of their training and use it, or will time and other job-related pressures force a manager to think only of completing the job at hand?

Moreover, what ethical values should be taught? Is it enough to teach only one, a few, or all the theories of ethical conduct? Corporations mostly support profit maximization, because it maximizes shareholder value. But should a corporation also teach rights theory and expect its employees to follow it? Or should rights theory be treated as only a component of profit maximization?

Most major corporations today express their dedication to ethical decision making by having an ethics officer who is not only responsible for ethical instruction, but also in charge of ethical supervision. The ethics officer may attempt to instill ethical decision making as a component of daily corporate life by sensitizing employees to the perils of ignoring ethical issues. The ethics officer may also be a mentor or sounding board for all employees who face ethical issues.

Whether an ethics officer is effective, however, is determined by the level of commitment top executives make to ethical behavior and the position and power granted to the ethics officer. For example, will top executives and the board of directors allow an ethics officer to nix an important deal on ethical grounds or will they replace the ethics officer with another executive whose ethical views permit the deal? Therefore, probably more important than an ethics officer is a CEO with the character to do the right thing.

Greater Shareholder Role in Corporations Since shareholders are the ultimate stakeholders in a corporation in a capitalist economy, some corporate critics argue that businesses should be more attuned to shareholders' ethical values and that shareholder control of the board of directors and executives should be increased. This

Ethics in Action

Google Code of Conduct

Internet giant Google Inc. is one of many international corporations to adopt an ethics code. Here are excerpts from Google's Code of Ethics for its employees and board of directors. For a look at Google's complete Code of Ethics, go to <http://investor.google.com/conduct.html>.

Preface “Don’t be evil.” Googlers generally apply those words to how we serve our users. But “Don’t be evil” is much more than that. Yes, it’s about providing our users unbiased access to information, focusing on their needs and giving them the best products and services that we can. But it’s also about doing the right thing more generally—following the law, acting honorably and treating each other with respect.

The Google Code of Conduct is one of the ways we put “Don’t be evil” into practice. It’s built around the recognition that everything we do in connection with our work at Google will be, and should be, measured against the highest possible standards of ethical business conduct. We hire great people who work hard to build great products, and it’s essential that we build an environment of trust—among ourselves and with our users. That trust and mutual respect underlie our success, and we need to earn it every day.

So, please do read the Code, and follow it, always bearing in mind that each of us has a personal responsibility to incorporate, and to encourage other Googlers to incorporate, the principles of the Code into our work.

I. Serve Our Users Our users value Google not only because we deliver great products and services, but [also] because we hold ourselves to a higher standard in how we treat users and operate more generally. Keeping the following principles in mind will help us to maintain that high standard:

a. Integrity

Our reputation as a company that our users can trust is our most valuable asset, and it is up to all of us to make sure that we continually earn that trust. All of our communications and other interactions with our users should increase their trust in us.

c. Privacy

As we develop great products that serve our users’ needs, always remember that we are asking users to trust us with their personal information. Preserving that trust requires that each of us respect and protect the privacy of that information. Our security procedures strictly limit access to and use of users’ personal information. Know your responsibilities under these procedures, and access data only as authorized by them, our Privacy Policy, and applicable local data protection laws.

II. Respect Each Other We are committed to a supportive work environment, where employees have the opportunity to reach their fullest potential. Each Googler is expected to do

his or her utmost to create a respectful workplace culture that is free of harassment, intimidation, bias and unlawful discrimination of any kind.

III. Avoid Conflicts of Interest In working at Google, we have an obligation to always do what’s best for the company and our users. When you are in a position to influence a decision or situation that may result in personal benefit for you or your friends or family at the expense of Google or our users, you may be subject to a conflict of interest. All of us should avoid circumstances that present even the appearance of such a conflict.

When faced with a potential conflict of interest, ask yourself:

- Would this relationship or situation embarrass me or Google if it showed up on the front page of a newspaper or the top of a blog?
- Am I reluctant to disclose the relationship or situation to my manager, Legal, or Ethics & Compliance?
- If I wanted to, could I exploit the potential relationship or situation in a way that benefited me, my friends or family or an associated business, at the expense of Google?

If the answer to any of these questions is “yes,” the relationship or situation is likely to create a conflict of interest, and you should avoid it.

VI. Ensure Financial Integrity and Responsibility Financial integrity and fiscal responsibility are core aspects of corporate professionalism. This is more than accurate reporting of our financials, though that’s certainly important. The money we spend on behalf of Google is not ours; it’s the company’s and, ultimately, our shareholders’. Each person at Google—not just those in Finance—has a role in making sure that money is appropriately spent, our financial records are complete and accurate and internal controls are honored.

VII. Obey the Law Google takes its responsibilities to comply with laws and regulations very seriously and each of us is expected to comply with applicable legal requirements and prohibitions. While it’s impossible for anyone to know all aspects of every applicable law, you should understand the major laws and regulations that apply to your work. Take advantage of Legal and Ethics & Compliance to assist you here.

VIII. Conclusion Google aspires to be a different kind of company. It’s impossible to spell out every possible ethical scenario we might face. Instead, we rely on one another’s good judgment to uphold a high standard of integrity for ourselves and our company. We expect all Googlers to be guided by both the letter and the spirit of this Code. Sometimes, identifying the right thing to do isn’t an easy call. If you aren’t sure, don’t be afraid to ask questions of your manager, Legal, or Ethics & Compliance.

And remember . . . don’t be evil, and if you see something that you think isn’t right—speak up!

decentralization of ethical decision making, the theory goes, should result in corporate decisions that better reflect shareholders' ethical values.

Yet this decentralization of power flies in the face of the rationale for the modern corporation, which in part is designed to centralize management in the board of directors and top officers and to free shareholders from the burden of managing their investments in the corporation. Significant efficiencies are lost if corporate executives are required to divine and apply shareholders' ethical values before making a decision.

In addition, divining the shareholders' ethical viewpoint may be difficult. While nearly all shareholders are mostly profit driven, a small minority of shareholders have other agendas, such as protecting the environment or workers' rights, regardless of the cost to the corporation. It is often not possible to please all shareholders.

Nonetheless, increasing shareholder democracy by enhancing the shareholders' role in the nomination and election of board members is essential to uniting the interests of shareholders and management. So is facilitating the ability of shareholders to bring proposals for ethical policy to a vote of shareholders. In the last several years, for public companies at least, the Securities and Exchange Commission has taken several steps to increase shareholder democracy. These steps, which are covered fully in Chapter 45, are having their intended effect. For example, shareholders of EMC Corporation approved a proposal recommending that the company's board comprise a majority of independent directors. Mentor Graphics Corporation shareholders voted in a resolution that any significant stock option plan be shareholder-approved. Moreover, the New York Stock Exchange and NASDAQ require companies listed on those exchanges to submit for shareholder approval certain actions, such as approval of stock option plans.

Consider All Stakeholders' Interests Utilitarianism analysis clearly requires an executive to consider a decision's impact on all stakeholders. How else can one determine all the benefits and costs of the decision? Likewise, modern rights theory also dictates considering all stakeholders' rights, including not compromising an important right unless trumped by another. Kant's categorical imperative also mandates a concern for others by requiring one to act as one would require others to act.

Critics of corporations and modern proponents of profit maximization argue that more responsible and ethical decisions are made when corporate managers consider the interests of all stakeholders, including not only shareholders, but also employees, customers, suppliers, the community, and others impacted by a decision. For profit

maximizers, the wisdom of considering all stakeholders is apparent, because ignoring the interests of any stakeholder may negatively affect profits. For example, a decision may impact a firm's ability to attract high quality employees, antagonize consumers, alienate suppliers, and motivate the public to lobby lawmakers to pass laws that increase a firm's cost of doing business. This wisdom is reflected in the Guidelines for Ethical Decision Making, which you will learn in the next section.

Nonetheless, there are challenges when a corporate manager considers the interests of all stakeholders. Beyond the enormity of identifying all stakeholders, stakeholders' interests may conflict, requiring a compromise that harms some stakeholders and benefits others. In addition, the impact on each stakeholder group may be difficult to assess accurately.

For example, if a manager is considering whether to terminate the 500 least productive employees during an economic downturn, the manager will note that shareholders will benefit from lower labor costs and consumers may find lower prices for goods, but the manager also knows that the terminated employees, their families, and their communities will likely suffer from the loss of income. Yet if the employees terminated are near retirement and have sizable retirement savings or if the termination motivates employees to return to college and seek better jobs, the impact on them, their families, and their communities may be minimal or even positive. On the other hand, if the manager makes the decision to retain the employees, shareholder wealth may decrease and economic inefficiency may result, which harms all society.

Independent Boards of Directors In some of the instances in which corporate executives have acted unethically and violated the law, the board of directors was little more than a rubber stamp or a sounding board for the CEO and other top executives. The CEO handpicked a board that largely allowed the CEO to run the corporation with little board supervision.

CEO domination of the board is a reality in most large corporations, because the market for CEO talent has skewed the system in favor of CEOs. Few CEOs are willing to accept positions in which the board exercises real control. Often, therefore, a CEO determines which board members serve on the independent board nominating committee and selects who is nominated by the committee. Owing their positions to the CEO and earning handsome fees sometimes exceeding \$100,000, many directors are indisposed to oppose the CEO's plans.

For more than three decades, corporate critics have demanded that corporate boards be made more nearly

independent of the CEO. The corporate ethical crisis of recent years has increased those calls for independence. The New York Stock Exchange and NASDAQ require companies with securities listed on the exchanges to have a majority of directors independent of the company and top management. Their rules also require independent management compensation, board nomination, and audit committees. The Sarbanes–Oxley Act requires public companies to have board audit committees comprising only independent directors.

One criticism of director independence rules is the belief that no director can remain independent after joining the board, because every director receives compensation from the corporation. There is a concern that an independent director, whose compensation is high, will side with management to ensure his continuing nomination, election, and receipt of high fees.

More extreme proposals of corporate critics include recommendations that all corporate stakeholders, such as labor, government, environmentalists, and communities, have representation on the board or that special directors or committees be given responsibility over special areas, such as consumer protection and workers' rights. Other critics argue for contested elections for each board vacancy. Few corporations have adopted these recommendations.

While honestly motivated, these laws and recommendations often fail to produce greater corporate social responsibility because they ignore the main reason for management's domination of the board: the limited time, information, and resources that directors have. One solution is to give outside directors a full-time staff with power to acquire information within the corporation. This solution, while providing a check on management, also may produce inefficiency by creating another layer of management in the firm.

In addition, some of the recommendations complicate management by making the board less cohesive. Conflicts between stakeholder representatives or between inside and outside directors may be difficult to resolve. For example, the board could be divided by disputes between shareholders who want more dividends, consumers who want lower prices, and employees who want higher wages.

Changing the Internal Management Structure Some corporate critics argue that the historic shift of corporate powers away from a public corporation's board and shareholders to its managers is irreversible. They recommend, therefore, that the best way to produce responsible corporate behavior is to change the corporation's management structure.

The main proponent of this view, Christopher Stone, recommended the creation of offices dedicated to areas such as environmental affairs and workers' rights, higher educational requirements for officers in positions like occupational safety, and procedures to ensure that important information inside and outside the corporation is directed to the proper person within the corporation. He also recommended that corporations study certain important issues and create reports of the study before making decisions.

These requirements aim to change the process by which corporations make decisions. The objective is to improve decision making by raising the competency of decision makers, increasing the amount of relevant information they hold, and enhancing the methodology by which decisions are made.

More information held by more competent managers using better tools should produce better decisions. Two of the later sections in this chapter in part reflect these recommendations. The Guidelines for Ethical Decision Making require a decision maker to study a decision carefully before making a decision. This includes acquiring all relevant facts, assessing a decision's impact on each stakeholder, and considering the ethics of one's decision from each ethical perspective. In addition, the Critical Thinking section below will help you understand when fallacious thinking interferes with a manager's ability to make good decisions.

Eliminating Perverse Incentives and Supervising Management Even if a corporation modifies its internal management structure by improving the decision-making process, there are no guarantees more responsible decisions will result. To the extent unethical corporate behavior results from faulty perception and inadequate facts, a better decision-making process helps. But if a decision maker is motivated solely to increase short-term profits, irresponsible decisions may follow. When one examines closely recent corporate debacles three things are clear: the corporate wrongdoers acted in their selfish interests; the corporate reward system encouraged them to act selfishly, illegally, and unethically; the wrongdoers acted without effective supervision. These facts suggest other changes that should be made in the internal management structure.

During the high flying stock market of the 1990s, stock options were the compensation package preferred by high level corporate executives. Shareholders and boards of directors were more than willing to accommodate them. On one level, stock options seem to align the interests of executives with those of the corporation and its shareholders. Issued at an exercise price usually far

below the current market price of the stock, stock options have no value until the corporation's stock price exceeds the exercise price of the stock options. Thus, executives are motivated to increase the corporation's profits, which should result in an increase in the stock's market price. In the 1990s stock market, in which some stock prices were doubling yearly, the exercise price of executives' stock options was quickly dwarfed by the market price. Executives exercised the stock options, buying and then selling stock, and in the process generating profits for a single executive in the tens and hundreds of millions of dollars. Shareholders also benefited from the dramatic increase in the value of their stock.

So what is the problem with stock options? As executives accepted more of their compensation in the form of stock options and became addicted to the lifestyle financed by them, some executives felt pressure to keep profits soaring to ever higher levels. In companies like Enron and WorldCom, which had flawed business models and suspect accounting practices, some executives were encouraged to create business deals that had little if any economic justification and could be accounted for in ways that kept profits growing. In what were essentially pyramid schemes, once the faulty economics of the deals were understood by prospective partners, no new deals were possible and the schemes crashed like houses of cards. But until the schemes were discovered, many executives, including some who were part of the fraudulent schemes, pocketed tens and hundreds of millions of dollars in stock option profits.

The Sarbanes–Oxley Act attempts to recover fraudulently obtained stock option profits by requiring the CEO and CFO to reimburse the company when the corporation is required to restate its financial statements filed with the SEC. The CEO and CFO must disgorge any bonus or stock compensation that was received within 12 months after a false financial report was filed with the SEC.

It is easy to see how fraudulent actions subvert the objective of stock options to motivate executives to act in the best interests of shareholders. Adolph Berle, however, has argued for more than 40 years that stock options are flawed compensation devices that allow executives to profit when stock market prices rise in general, even when executives have no positive effect on profitability. He proposed that the best way to compensate executives is to allow them to trade on inside information they possess about a corporation's prospects, information they possess because they helped produce those prospects. His proposal, however, is not likely ever to be legal compensation because insider trading creates the appearance that the securities markets are rigged.

Even with incentives in place to encourage executives to inflate profits artificially, it is unlikely that the recent fraudulent schemes at Enron, WorldCom, and other companies would have occurred had there been better scrutiny of upper management and its actions by the CEO and the board of directors. At Enron, executives were given great freedom to create partnerships that allowed Enron to keep liabilities off the balance sheet yet generate income that arguably could be recognized in the current period. It is not surprising that this freedom from scrutiny when combined with financial incentives to create the partnerships resulted in executives creating partnerships that had little economic value to Enron.

Better supervision of management is mostly the responsibility of the CEO, but the board of directors bears this duty also. We addressed earlier proposals to create boards of directors that are more nearly independent of the CEO and, therefore, better able to supervise the CEO and other top managers. Primarily, however, better supervision is a matter of attitude, or a willingness to devote time and effort to discover the actions of those under your charge and to challenge them to justify their actions. It is not unlike the responsibility a parent owes to a teenage child to scrutinize her actions and her friends to make sure that she is acting consistent with the values of the family. So too, boards must make the effort to scrutinize their CEOs and hire CEOs who are able and willing to scrutinize the work of the managers below them.

Yet directors must also be educated and experienced. Poor supervision of management has also been shown to be partly due to some directors' ignorance of business disciplines like finance and accounting. Unless board members are able to understand accounting numbers and other information that suggests management wrongdoing, board scrutiny of management is a process with no substance.

The Law The law has been a main means of controlling corporate misdeeds. Lawmakers usually assume that corporations and executives are rational actors that can be deterred from unethical and socially irresponsible behavior by the threats law presents. Those threats are fines and civil damages, such as those imposed and increased by the Sarbanes–Oxley Act. For deterrence to work, however, corporate decision makers must know when the law's penalties will be imposed, fear those penalties, and act rationally to avoid them.

To some extent, the law's ability to control executive misbehavior is limited. As we discussed earlier in this chapter, corporate lobbying may result in laws reflecting the views of corporations, not society as a whole. Some

The Global Business Environment

Foreign Businesses Face Tougher Laws in U.S. than at Home

Although American executives accused of defrauding shareholders are prosecuted or hauled before congressional hearings, wrongdoing managers in the rest of the world often escape the grasp of their countries' regulators. In most of Asia, Europe, and Latin America, regulations and enforcement are weak. Some legal systems are poorly equipped to handle executive misconduct. The Japanese Securities and Exchange Surveillance Commission brought only 108 enforcement actions in 2007 compared to 655 brought by the United States Securities and Exchange Commission.

Taiwan's Securities and Futures Commission has no power to conduct its own investigations, and local prosecutors who do have that power have little expertise in market and accounting fraud. Germany has been labeled the Wild West, with numerous scandals in newly public companies, yet few actions against the perpetrators. The German Association for Shareholder Protection, a shareholder rights group, regularly brings abuse allegations to state prosecutors, yet the cases are often too complicated for untrained prosecutors to handle. Fewer than 5 percent are investigated. In Italy, false

accounting was decriminalized in 2001, making it merely a misdemeanor.

Yet if those executives manage foreign businesses that register their securities on a stock exchange in the United States, such as the New York Stock Exchange, the Sarbanes–Oxley Act (SOX) requires them to comply with some of the Act's toughest provisions. More than 1,300 foreign corporations, such as Sony, Nokia, and Daimler, and their executives are affected by the Act's provisions that ban loans to officers, require independent audit committees, and impose personal liability on officers for errors in the corporate books. The additional paperwork caused Sony to delay an earnings release in 2007.

Foreign governments and businesses have lobbied to be granted exemptions from the Sarbanes–Oxley Act. The European Union wrote to U.S. legislators that the Act gives the SEC unjustified authority over foreign auditing firms that could chill trans-Atlantic trade. The president of the Japanese Institute of Certified Public Accountants argued that the Act places U.S. law above Japanese securities and CPA law, violates international treaties, and infringes Japanese sovereignty.

For a year or so, the European Union considered enacting a law similar to SOX. That threat, however, appears to have passed.

corporate executives may not know the law exists. Others may view the penalties merely as a cost of doing business. Some may think the risk of detection is so low that the corporation can avoid detection. Other executives believe they are above the law, that it does not apply to them out of arrogance or a belief that they know better than lawmakers. Some rationalize their violation of the law on the grounds that “everybody does it.”

Nonetheless, for all its flaws, the law is an important means by which society controls business misconduct. Of all the devices for corporate control we have considered, only market forces and the law impose direct penalties for corporate misbehavior. Although legal rules have no special claim to moral correctness, at least they are knowable. Laws also are the result of an open political process in which competing arguments are made and evaluated. This cannot be said about the intuitions of a corporate ethics officer, edicts from public interest groups, or the theories of economists or philosophers, except to the extent they are reflected in law. Moreover, in mature political systems like the United States, respect for and adherence to law is a well-entrenched value.

Where markets fail to promote socially responsible conduct, the law can do the job. For example, the antitrust laws discussed in Chapter 49, while still controversial,

have eliminated the worst anticompetitive business practices. The federal securities laws examined in Chapters 45 and 46 arguably restored investor confidence in the securities markets after the stock market crash of 1929. Although environmentalists often demand more regulation, the environmental laws treated in Chapter 52 have improved the quality of water and reduced our exposure to toxic substances. Employment regulations discussed in Chapter 51—especially those banning employment discrimination—have forced significant changes in the American workplace. Thus, the law has an accomplished record as a corporate control device.

Indeed, sometimes the law does the job too well, often imposing a maze of regulations that deter socially valuable profit seeking without producing comparable benefits. Former Fed chairman Greenspan once wrote, “Government regulation is not an alternative means of protecting the consumer. It does not build quality into goods, or accuracy into information. Its sole ‘contribution’ is to substitute force and fear for incentive as the ‘protector’ of the consumer.”

The hope was that the Sarbanes–Oxley Act would restore investor confidence in audited financial statements and corporate governance. A 2007 survey by Financial Executives International found that 69 percent of financial

executives agreed that compliance with SOX section 404 resulted in more investor confidence in their companies' financial reports. Fifty percent agreed that financial reports were more accurate. Those results came despite the high cost of complying with the Act: an average of \$1.7 million for 168 companies with market capitalization above \$75 million. For larger companies, like General Electric, the cost is even higher. In each of 2004 and 2005, GE spent more than \$30 million to comply with section 404, which requires verification of adequate internal controls.

Guidelines for Ethical Decision Making

Now that you understand the basics of ethical theories and the issues in the corporate governance debate, how do you use this information to make decisions for your business that are ethical and socially responsible? That is, what process will ensure that you have considered all the ethical ramifications and arrived at a decision that is good for your business, good for your community, good for society as a whole, and good for you.

Figure 1 lists nine factors in the Guidelines for Ethical Decision Making. Let's consider each Guideline and explain how each helps you make better decisions.

What Facts Impact My Decision? This is such an obvious component of any good decision that it hardly seems necessary to mention. Yet it is common that people make only a feeble attempt to acquire *all* the facts necessary to a good decision.

Many people enter a decision-making process biased in favor of a particular option. As a result, they look only

for facts that support that option. You have seen this done many times by your friends and opponents, and since you are an honest person, you have seen yourself do this as well from time to time. In addition, demands on our time, fatigue, laziness, ignorance of where to look for facts, and aversion to inconvenience someone who has information contribute to a reluctance or inability to dig deep for relevant facts.

Since good decisions cannot be made in a partial vacuum of information, it is important to recognize when you need to acquire more facts. That is primarily the function of your other classes, which may teach you how to make stock market investment decisions, how to audit a company's financial records, and how to do marketing research.

For our purposes, let's consider this example. Suppose we work for a television manufacturing company that has a factory in Sacramento, California. Our company has placed you in charge of investigating the firm's decision whether to move the factory to Juarez, Mexico. What facts are needed to make this decision, and where do you find those facts?

Among the facts you need are: What are the firm's labor costs in Sacramento and what will those costs be in Juarez? How much will labor costs increase in subsequent years? What is the likelihood of good labor relations in each location? What is and will be the productivity level of employees in each city? What are and will be the transportation costs of moving the firm's inventory to market? What impact will the move have on employees, their families, the communities, the schools, and other stakeholders in each community? Will Sacramento employees find other jobs in Sacramento or elsewhere? How much will we have to pay in severance pay?

Figure 1 Guidelines for Ethical Decision Making

1. What **FACTS** impact my decision?

2. What are the **ALTERNATIVES**?

3. Who are the **STAKEHOLDERS**?

4. How do the alternatives impact **SOCIETY AS A WHOLE**?

5. How do the alternatives impact **MY BUSINESS FIRM**?

6. How do the alternatives impact **ME, THE DECISION MAKER**?

7. What are the **ETHICS** of each alternative?

8. What are the **PRACTICAL CONSTRAINTS** of each alternative?

9. What **COURSE OF ACTION** should be taken and how do we **IMPLEMENT** it?

How will our customers and suppliers be impacted by our decision? If we move to Juarez, will our customers boycott our products even if our televisions are better and cheaper than before? If we move, will our suppliers' costs increase or decrease? How will our profitability be affected? How will shareholders view the decision? Who are our shareholders? Do we have a lot of Mexican shareholders, or do Americans dominate our shareholder list? What tax concessions and other benefits will the City of Sacramento give our firm if we promise to stay in Sacramento? What will Ciudad Juarez and the government of Mexico give us if we move to Juarez? How will our decision impact U.S.–Mexican economic and political relations?

This looks like a lot of facts, but we have only scratched the surface. You can probably come up with another 100 facts that should be researched. To give you another example of how thorough managers must be to make prudent decisions, consider that the organizers for the 2000 Summer Olympics in Sydney, Australia, created 800 different terrorist scenarios before developing an antiterrorism plan.

You can see that to some extent we are discussing other factors in the Guidelines as we garner facts. The factors do overlap to some degree. Note also that some of the facts you want to find are not facts at all, but estimates, such as cost and sales projections. We'll discuss in the Eighth Guideline the practical problems with the facts we find.

What Are the Alternatives? A decision maker must be thorough in listing the alternative courses of actions. For many of us, the temptation is to conclude that there are only two options: to do something or not to do something. Let's take our decision whether to move our factory to Juarez, Mexico. You might think that the only choices are to stay in Sacramento or to move to Juarez. Yet there are several combinations that fall in between those extremes.

For example, we could consider maintaining the factory in Sacramento temporarily, opening a smaller factory in Juarez, and gradually moving production to Mexico as employees in Sacramento retire. Another alternative is to offer jobs in the Juarez factory to all Sacramento employees who want to move. If per-unit labor costs in Sacramento are our concern, we could ask employees in Sacramento to accept lower wages and fringe benefits or to increase their productivity.

There are many other alternatives that you can imagine. It is important to consider all reasonable alternatives. If you do not, you increase the risk that the best course of action was not chosen only because it was not considered.

Who Are the Stakeholders? In modern societies, where diversity is valued as an independent virtue, considering the impacts of your decision on the full range of society's stakeholders has taken on great significance in prudent and ethical decision making. While a public corporation with thousands of shareholders obviously owes a duty to its shareholders to maximize shareholder wealth, corporate managers must also consider the interests of other important stakeholders, including employees, suppliers, customers, and the communities in which they live. Stakeholders also include society as a whole, which can be defined as narrowly as your country or more expansively as an economic union of countries, such as the European Union of 27 countries, or even the world as a whole.

Not to be omitted from stakeholders is you, the decision maker who is also impacted by your decisions for your firm. The legitimacy of considering your own selfish interests will be considered fully in the Sixth Guideline.

Listing all the stakeholders is not a goal by itself, but helps the decision maker apply more completely other factors in the Ethical Guidelines. Knowing whom your decision affects will help you find the facts you need. It also helps you evaluate the alternatives using the next three Guidelines: how the alternatives we have proposed impact society as whole, your firm, and the decision maker.

How Do the Alternatives Impact Society as a Whole? We covered some aspects of this Guideline above when we made an effort to discover all the facts that impact our decision. We can do a better job discovering the facts if we try to determine how our decision impacts society as a whole.

For example, if the alternative we evaluate is keeping the factory in Sacramento after getting property tax and road building concessions from the City of Sacramento, how is society as a whole impacted? What effect will tax concessions have on the quality of Sacramento schools (most schools are funded with property taxes)? Will lower taxes cause the Sacramento infrastructure (roads and governmental services) to decline to the detriment of the ordinary citizen? Will the economic benefits to workers in Sacramento offset the harm to the economy and workers in Juarez?

Will our firm's receiving preferential concessions from the Sacramento government undermine the ordinary citizen's faith in our political and economic institutions? Will we contribute to the feelings of some citizens that government grants privileges only to the powerful? Will our staying in Sacramento foster further economic

growth in Sacramento? Will staying in Sacramento allow our suppliers to stay in business and continue to hire employees who will buy goods from groceries and malls in Sacramento?

What impact will our decision have on efforts to create a global economy in which labor and goods can freely travel between countries? Will our decision increase international tension between the United States and Mexico?

Note that the impact of our decision on society as a whole fits neatly with one of the ethical theories we discussed earlier: utilitarianism. Yet profit maximization, rights theory, and justice theory also require a consideration of societal impacts.

How Do the Alternatives Impact My Firm? The most obvious impact any alternative has on your firm is its effect on the firm's bottom line: what are the firm's profits. Yet that answer requires explaining, because what you really want to know is what smaller things leading to profitability are impacted by an alternative.

For example, if our decision is to keep the factory in Sacramento open temporarily and gradually move the plant to Juarez as retirements occur, what will happen to employee moral and productivity in Sacramento? Will our suppliers in Sacramento abandon us to serve more permanent clients instead? Will consumers in Sacramento and the rest of California boycott our televisions? Will they be able to convince other American laborers to boycott our TVs? Will a boycott generate adverse publicity and media coverage that will damage our brand name? Will investors view our firm as a riskier business, raising our cost of capital?

Again, you can see some redundancy here as we work through the guidelines, but that redundancy is all right, for it ensures that we are examining all factors important to our decision.

How Do the Alternatives Impact Me, the Decision Maker? At first look, considering how a decision you make for your firm impacts *you* hardly seems to be a component of ethical and responsible decision making. The term "selfish" probably comes to mind.

Many of the corporate ethical debacles of the last few years comprised unethical and imprudent decisions that probably were motivated by the decision makers' selfish interests. Mortgage brokers' desires to earn large fees encouraged them to falsify borrowers' financial status and to make imprudent loans to high-risk clients. Several of Enron's off-balance-sheet partnerships, while apparently

helping Enron's financial position, lined the pockets of conflicted Enron executives holding stock options and receiving management fees from the partnerships.

Despite these examples, merely because a decision benefits you, the decision maker, does not always mean it is imprudent or unethical. Even decisions by some Enron executives in the late 1990s, while motivated in part by the desire to increase the value of the executives' stock options, could have been prudent and ethical if the off-balance-sheet partnerships had real economic value to Enron (as they did when Enron first created off-balance-sheet partnerships in the 1980s) and accounting for them complied with the law.

At least two reasons explain why you can and should consider your own interest yet act ethically for your firm. First, as the decision maker, you are impacted by the decision. Whether deservedly or not, the decision maker is often credited or blamed for the success or failure of the course of action chosen. You may also be a stakeholder in other ways. For example, if you are an executive in the factory in Sacramento, you and your family may be required to move to Juarez (or El Paso, Texas, which borders Juarez) if the factory relocates. It is valid to consider a decision's impact on you and your family, although it should not be given undue weight.

A second, and more important, reason to consider your own interest is that your decision may be better for your firm and other stakeholders if you also consider your selfish interest. For example, suppose when you were charged to lead the inquiry into the firm's decision whether to move to Juarez, it was made clear that the CEO preferred to close the Sacramento factory and move operations to Juarez.

Suppose also that you would be required to move to Juarez. Your spouse has a well-paying job in Sacramento, and your teenage children are in a good school system and have very supportive friends. You have a strong relationship with your parents and siblings, who also live within 50 miles of your family in Sacramento. You believe that you and your family could find new friends and good schools in El Paso or Juarez, and the move would enhance your position in the firm and increase your chances of a promotion. Nonetheless, overall you and your spouse have determined that staying in the Sacramento area is best for your family. So you are considering quitting your job with the firm and finding another job in the Sacramento area rather than make an attempt to oppose the CEO's preference.

If you quit your job, even in protest, you will have no role in the decision and your resignation will likely have no impact on the firm's Sacramento–Juarez decision.

Had you stayed with the firm, you could have led a diligent inquiry into all the facts that may have concluded that the prudent and ethical decision for the firm was to stay in Sacramento. Without your input and guidance, the firm may make a less prudent and ethical decision.

You can think of other examples where acting selfishly also results in better decisions. Suppose a top-level accounting executive, to whom you are directly responsible, has violated accounting standards and the law by pressuring the firm's auditors to book as income in the current year a contract that will not be performed for two years. You could quit your job and blow the whistle, but you may be viewed as a disgruntled employee and your story given no credibility. You could confront the executive, but you may lose your job or at least jeopardize your chances for a promotion while tipping off the executive, who will cover her tracks. As an alternative, the more effective solution may be to consider how you can keep your job and prospects for promotion while achieving your objective to blow the whistle on the executive. One alternative may be to go through appropriate channels in the firm, such as discussing the matter with the firm's audit committee or legal counsel.

Finding a way to keep your job will allow you to make an ethical decision that benefits your firm, whereas your quitting may leave the decision to someone else who would not act as prudently. The bottom line is this: while sometimes ethical conduct requires acting unselfishly, in other contexts consideration of your self-interest is not only consistent with ethical conduct, but also necessary to produce a moral result.

What Are the Ethics of Each Alternative?

Because our goal is to make a decision that is not only prudent for the firm but also ethical, we must consider the ethics of each alternative, not from one but a variety of ethical viewpoints. Our stakeholders' values comprise many ethical theories; ignoring any one theory will likely cause an incomplete consideration of the issues and may result in unforeseen consequences.

What Would a Utilitarian Do? A utilitarian would choose the alternative that promises the highest net welfare to society as a whole. If we define our society as the United States, moving to Juarez may nonetheless produce the highest net benefit, because the benefits to American citizens from a lower cost of televisions and to American shareholders from higher profits may more than offset the harm to our employees and other citizens of Sacramento. Another benefit of the move may be the reduced cost of the American government dealing with illegal

immigration as Mexican workers decide to work at our plant in Juarez. Another cost may be the increased labor cost for a Texas business that would have hired Mexican workers had we not hired them.

If we define society as all countries in the North American Free Trade Agreement (NAFTA was signed by the United States, Mexico, and Canada), the benefit to workers in Juarez may completely offset the harm to workers in Sacramento. For example, the benefit to Juarez workers may be greater than the harm to Sacramento employees if many Juarez employees would otherwise be underemployed and Sacramento employees can find other work or are protected by a severance package or retirement plan.

As we discussed above in the discussion of ethical theories, finding and weighing all the benefits and costs of an alternative are difficult tasks. Even if we reject this theory as the final determinant, it is a good exercise for ensuring that we maximize the number of facts we consider when making a decision.

What Would a Profit Maximizer Do? A profit maximizer will choose the alternative that produces the most long-run profits for the company, within the limits of the law. This may mean, for example, that the firm should keep the factory in Sacramento if that will produce the most profits for the next 10 to 15 years.

This does not mean that the firm may ignore the impact of the decision on Juarez's community and workers. It may be that moving to Juarez will create a more affluent population in Juarez and consequently increase the firm's television sales in Juarez. But that impact is judged not by whether society as a whole is bettered (as with utilitarian analysis) or whether Juarez workers are more deserving of jobs (as with justice theory analysis), but is solely judged by how it impacts the firm's bottom line.

Nonetheless, profit maximization compels a decision maker to consider stakeholders other than the corporation and its shareholders. A decision to move to Juarez may mobilize American consumers to boycott our TVs, for example, or cause a public relations backlash if our Juarez employees receive wages far below our Sacramento workers. These and other impacts on corporate stakeholders may negatively impact the firm's profits.

Although projecting profits is not a precise science, tools you learned in finance classes should enhance your ability to select an alternative that maximizes your firm's profits within the limits of the law.

What Would a Rights Theorist Do? A follower of modern rights theory will determine whether anyone's rights are negatively affected by an alternative. If several

rights are affected, the rights theorist will determine which right is more important or trumps the other rights, and choose the alternative that respects the most important right.

For example, if the alternative is to move to Juarez, the Sacramento employees, among others, are negatively affected. Yet if we do not move, potential employees in Juarez are harmed. Are these equal rights, a mere wash, or is it more important to retain a job one already has than to be deprived of a job one has never had?

Are other rights at work here, and how are they ranked? Is it more important to maintain manufacturing production in the firm's home country for national security and trade balance reasons than to provide cheaper televisions for the firm's customers? Does the right of all citizens to live in a global economy that spreads wealth worldwide and promotes international harmony trump all other rights?

While apparently difficult to identify and rank valid rights, this theory has value even to a utilitarian and a profit maximizer. By examining rights that are espoused by various stakeholders, we are more likely to consider all the costs and benefits of our decision and know which rights can adversely affect the firm's profitability if we fail to take them into account.

What Would a Justice Theorist Do? A justice theorist would choose the alternative that allocates society's benefits and burden most fairly. This requires the decision maker to consider whether everyone is getting what he deserves. If we follow the preaching of John Rawls, the firm should move to Juarez if the workers there are less advantaged than those in Sacramento, who may be protected by savings, severance packages, and retirement plans.

If we follow Nozick's libertarian approach, it is sufficient that the firm gives Sacramento workers an opportunity to compete for the plant by matching the offer the firm has received from Juarez workers. Under this analysis, if Sacramento workers fail to match the Juarez workers' offer of lower wages, for example, it would be fair to move the factory to Juarez, even if Sacramento workers are denied their right to jobs.

Even if the firm has difficulty determining who most deserves jobs with our firm, justice theory, like rights theory, helps the firm identify constituents who suffer from our decision and who can create problems impacting the firm's profitability if the firm ignores their claims.

What Are the Practical Constraints of Each Alternative? As we evaluate alternatives, it is important to consider each alternative's practical

problems before we implement it. For example, is it feasible for us to implement an alternative? Do we have the necessary money, labor, and other resources?

Suppose one alternative is to maintain our manufacturing plant in Sacramento as we open a new plant in Juarez, gradually shutting down the Sacramento plant as employees retire and quit. That alternative sounds like an ethical way to protect the jobs of all existing and prospective employees, but what are the costs of having two plants? Will the expense make that alternative infeasible? Will the additional expense make it difficult for the firm to compete with other TV manufacturers? Is it practicable to have a plant in Sacramento operating with only five employees who are 40 years old and will not retire for 15 years?

It is also necessary to consider potential problems with the facts that have led us to each alternative. Did we find all the facts relevant to our decision? How certain are we of some facts? For example, are we confident about our projections of labor and transportation costs if we move to Juarez? Are we sure that sales of our products will drop insubstantially due to consumer boycotts?

What Course of Action Should Be Taken and How Do We Implement It?

Ultimately, we have to stop our analysis and make a decision by choosing one alternative. Yet even then our planning is not over.

We must determine how to put the alternative into action. How do we implement it? Who announces the decision? Who is told of the decision and when? Do some people, like our employee's labor union, receive advance notice of our plans and have an opportunity to negotiate a better deal for our Sacramento employees? When do we tell shareholders, government officials, lenders, suppliers, investments analysts, and the media and in what order? Do we antagonize a friend or an enemy and risk killing a deal if we inform someone too soon or too late?

Finally, we have to prepare for the worst-case scenario. What do we do if, despite careful investigation, analysis, and planning, our course of action fails? Do we have backup plans? Have we anticipated all the possible ways our plan may fail and readied responses to those failures?

In 1985, the Coca-Cola Company decided to change the flavor of Coke in response to Coke's shrinking share of the cola market. Despite careful market research, Coca-Cola failed to anticipate Coke drinkers' negative response to the new Coke formula and was caught without a response to the outcry. Within three months, Coca-Cola realized it had to revive the old Coke formula under

the brand name Coca-Cola Classic. In the meantime, Coke lost significant market share to rival Pepsi. Today, one would expect Coke executives introducing a reformulated drink to predict more consumers' reactions to the drink and to prepare a response to each reaction.

Knowing When to Use the Guidelines

You can probably see that following these factors will result in better decisions in a variety of contexts, including some that appear to have no ethical concerns. For example, in the next few years, most of you will consider what major course of study to select at college or what job to take with which firm in which industry. This framework can help you make a better analysis that should result in a better decision.

The Guidelines can be used also to decide mundane matters in your personal life, such as whether to eat a high-fat hamburger or a healthful salad for lunch, whether to spend the next hour exercising at the gym or visiting a friend in the hospital, and whether or not to brush your teeth every day after lunch. But for most of us, using the Guidelines every day for every decision would occupy so much of our time that little could be accomplished, what is sometimes called “paralysis by analysis.”

Practicality, therefore, requires us to use the Guidelines only for important decisions and those that create a potential for ethical problems. We can identify decisions requiring application of the Guidelines if we carefully reflect from time to time about what we have done and are doing. This requires us to examine our past, current, and future actions.

It may not surprise you how seldom people, including business executives, carefully preview and review their actions. The pressures and pace of daily living give us little time to examine our lives critically. Most people are reluctant to look at themselves in the mirror and ask themselves whether they are doing the right thing for themselves, their families, their businesses, and their communities. Few know or follow the words of Socrates, “The unexamined life is not worth living.”

Ask yourself whether you believe that mortgage brokers used anything like the Guidelines for Ethical Decision Making before signing low-income borrowers to loans exceeding \$500,000. Did executives at bankrupt energy trader Enron consider any ethical issues before creating off-balance-sheet partnerships with no economic value to Enron? Do you think the employees at accounting firm Arthur Andersen carefully examined their decision to accept Enron's accounting for off-balance-sheet partnerships?

Merely by examining our past and prospective actions, we can better know when to apply the Guidelines.

In the last section of this chapter, Resisting Requests to Act Unethically, you will learn additional tools to help you identify when to apply the Guidelines.

Thinking Critically

Part of ethical decision making is being able to think critically, that is, to evaluate arguments logically, honestly, and without bias in favor of your own arguments and against those of others.

Even if someone uses the Guidelines for Ethical Decision Making, there is a risk that they have been misapplied if a person makes errors of logic or uses fallacious arguments. In this section, we want to help you identify when your arguments and thinking may be flawed and how to correct them. Equally important, we want to help you identify flaws in others' thinking. The purpose is to help you think critically and not to accept at face value everything you read or hear and to be careful before you commit your arguments to paper or voice them.

This chapter's short coverage of critical thinking covers only a few of the errors of logic and argument that are covered in a college course or book devoted to the subject. Here are 15 common fallacies.

Non Sequiturs A *non sequitur* is a conclusion that does not follow from the facts or premises one sets out. The speaker is missing the point or coming to an irrelevant conclusion. For example, suppose a consumer uses a corporation's product and becomes ill. The consumer argues that because the corporation has lots of money, the corporation should pay for his medical expenses. Clearly, the consumer is missing the point. The issue is whether the corporation's product *caused* his injuries, not whether money should be transferred from a wealthy corporation to a poor consumer.

You see this also used when employees attempt to justify stealing pens, staplers, and paper from their employers. The typical *non sequitur* goes like this: “I don't get paid enough, so I'll take a few supplies. My employer won't even miss them.”

Business executives fall prey to this fallacy also. Our firm may consider which employees to let go during a downturn. Company policy may call for retaining the best employees in each department, yet instead we release those employees making the highest salary in each position in order to save more money. Our decision does not match the standards the company set for downsizing decisions and is a *non sequitur*, unless we admit that we have changed company policy.

Appeals to Pity A common fallacy seen in the American press is the appeal to pity or compassion. This argument generates support for a proposition by focusing on a victim's predicament. It usually is also a *non sequitur*. Examples are news stories about elderly, retired people who find it hard to afford expensive, life-prolonging drugs. None of these stories point out that many of these people squandered their incomes when working rather than saving for retirement.

Appeals to pity are effective because humans are compassionate. We have to be careful, however, not to be distracted from the real issues at hand. For example, in the trial against accused 9/11 co-conspirator Zacarias Moussaoui, federal prosecutors wanted to introduce testimony by the families of the victims. While what the families of 9/11 suffered is terrible, the victims' families hold no evidence of Moussaoui's role in 9/11. Instead, their testimonies are appeals to pity likely to distract the jury from its main task of determining whether Moussaoui was a part of the 9/11 conspiracy.

You see many appeals to pity used against corporations. Here is a typical argument: a corporation has a chemical plant near a neighborhood; children are getting sick and dying in the neighborhood; someone should pay for this suffering; the corporation should pay. You can also see that this reasoning is a *non sequitur*. Better reasoning requires one to determine not whether two events are coincidental or correlated, but whether one (the chemical plant) caused the other (the children's illnesses).

False Analogies An analogy essentially argues that since something is like something else in one or more ways, it is also like it in another respect. Arguers often use analogies to make a point vividly, and therefore analogies have strong appeal. Nonetheless, while some analogies are apt, we should make sure that the two situations are sufficiently similar to make the analogy valid.

Suppose an executive argues that our bank should not make loans to lower-income borrowers because the bank will suffer huge losses like Countrywide Financial. This analogy may be invalid because we may do a better job

verifying a borrower's income and ability to repay a loan than did Countrywide.

Analogies can also be used to generate support for a proposal, such as arguing that since Six Sigma worked for General Electric, it will work for our firm also. It is probable that factors other than Six Sigma contributed to GE's success during the Jack Welch era, factors our firm may or may not share with GE.

Nonetheless, analogies can identify potential opportunities, which we should evaluate prudently to determine whether the analogy is valid. Analogies can also suggest potential problems that require us to examine a decision more carefully before committing to it.

Begging the Question An arguer begs the question when she takes for granted or assumes the thing that she is setting out to prove. For example, you might say that we should tell the truth because lying is wrong. That is **circular reasoning** and makes no sense, because telling the truth and not lying are the same things. Another example is arguing that democracy is the best form of government because the majority is always right.

Examples of begging the question are difficult to identify sometimes because they are hidden in the language of the speaker. It is best identified by looking for arguments that merely restate what the speaker or questioner has already stated, but in different words. For an example in the business context, consider this interchange between you and someone working under you.

You: Can I trust these numbers you gave to me?

Co-worker: Yes, you can trust them.

You: Why can I trust them?

Co-worker: Because I'm an honest person.

The co-worker used circular reasoning, since whether the numbers can be trusted is determined by whether he is honest, yet he provided no proof of his honesty or trustworthiness.

Argumentum ad Populum *Argumentum ad populum* means argument to the people. It is an emotional appeal to popular beliefs, values, or wants. The fallacy is that merely because many or all people believe something does not mean it is true. It is common for newspapers to poll its readers about current issues, such as support for a presidential decision. For example, a newspaper poll may show that 60 percent of Americans support the president. The people may be right, but it is also possible that the president's supporters are wrong: they may be uninformed or base their support of the president on invalid reasoning.

Arguments to the people are commonly used by corporations in advertisements, such as beer company ads showing friends having a good time while drinking beer. The point of such ads is that if you want to have a good time with friends, you should drink beer. While some beer drinkers do have fun with friends, you probably can also point to other people who drink beer alone.

Bandwagon Fallacy The bandwagon fallacy is similar to *argumentum ad populum*. A bandwagon argument states that we should or should not do something merely because one or more other people or firms do or do not do it. *Sports Illustrated* quoted baseball player Ken Caminiti's justification for using steroids: "At first I felt like a cheater. But I looked around, and everyone was doing it." Some people justify cheating on their taxes for the same reason.

This reasoning can be fallacious because probably not everyone is doing it, and even if many or all people do something, it is not necessarily right. For example, while some baseball players do use steroids, there are serious negative side effects including impotency and acute psychosis, which make its use risky. Cheating on taxes may be common, but it is still illegal and can result in the cheater's imprisonment.

Bandwagon thinking played a large part in the credit crunch of 2008, as many loan buyers like Bear Stearns bought high-risk loans only because their competitors were buying the loans, thereby encouraging lenders to continue to make high-risk loans.

Argumentum ad Baculum *Argumentum ad baculum* means argument to club. The arguer uses threats or fear to bolster his position. This is a common argument in business and family settings. For example, when a parent asks a child to take out the garbage, the child may ask, "Why?" Some parents respond, "Because if you don't, you'll spend the rest of the afternoon in your room." Such an argument is a *non sequitur* as well.

In the business context, bosses explicitly and implicitly use the club, often generating support for their ideas from subordinates who fear they will not be promoted unless they support the boss's plans. An executive who values input from subordinates will ensure that they do not perceive that the executive is wielding a club over them.

Enron's CFO Andrew Fastow used this argument against investment firm Goldman Sachs when it balked at lending money to Enron. He told Goldman that he would not do anything with a presentation Goldman had prepared unless it made the loan.

By threatening to boycott a company's products, consumers and other interest groups use this argument against corporations perceived to act unethically. It is one reason that profit maximization requires decision makers to consider a decision's impact on all stakeholders.

Argumentum ad Hominem *Argumentum ad hominem* means "argument against the man." This tactic attacks the speaker, not his reasoning. For example, a Republican senator criticizes a Democratic senator who supports the withdrawal of American troops from a war zone by saying, "You can't trust him. He never served in the armed forces." Such an argument attacks the Democratic senator's character, not the validity of his reasons for withdrawing troops.

When a CEO proposes a new compensation plan for corporate executives, an opponent may argue, "Of course he wants the new plan. He'll make a lot of money from it." Again, this argument doesn't address whether the plan is a good one or not; it only attacks the CEO's motives. While the obvious conflict of interest the CEO has may cause us to doubt the sincerity of the reasons he presents for the plan (such as to attract and retain better management talent), merely pointing out this conflict does not rebut his reasons.

One form of *ad hominem* argument is attacking a speaker's consistency, such as, "Last year you argued for something different." Another common form is appealing to personal circumstances. One woman may say to another, "As a woman, how can you be against corporate policies that set aside executive positions for women?" By personalizing the argument, the speaker is trying to distract the listener from the real issue. A proper response to the personal attack may be, "As a woman and a human, I believe in equal opportunity for all people. I see no need for any woman or myself to have special privileges to compete with men. I can compete on my own. By having quotas, the corporation cheapens my accomplishments by suggesting that I need the quota. Why do you, as a woman, think you need a quota?"

Guilt by association is the last *ad hominem* argument we will consider. This argument attacks the speaker by linking her to someone unpopular. For example, if you make the libertarian argument that government should not restrict or tax the consumption of marijuana, someone may attack you by saying, "Mass murderer Charles Manson also believed that." Your attacker suggests that by believing as you do, you are as evil as Charles Manson. Some corporate critics use guilt by association to paint all executives as unethical people motivated to cheat their corporations. For example, if a CEO asks for stock

options as part of her compensation package, someone may say, “Enron’s executives wanted stock options also.” The implication is that the CEO should not be trusted because some Enron executives who were corrupt also wanted stock options.

No *ad hominem* argument is necessarily fallacious, because a person’s character, motives, consistency, personal characteristics, and associations may suggest further scrutiny of a speaker’s arguments is necessary. However, merely attacking the speaker does not expose flaws in her arguments.

Argument from Authority Arguments from authority rely on the quality of an expert or person in a position of authority, not the quality of the expert’s or authority’s argument. For example, if someone says, “The president says we need to stop drug trafficking in the United States, and that is good enough for me,” he has argued from authority. He and the president may have good reasons to stop drug trafficking, but we cannot know that from his statement.

Another example is “Studies show that humans need to drink 10 glasses of water a day.” What studies? What were their methodologies? Did the sample sizes permit valid conclusions? A form of argument to authority is **argument to reverence or respect**, such as “Who are you to disagree with the CEO’s decision to terminate 5,000 employees?” The arguer is trying to get you to abandon your arguments, not because they are invalid, but because they conflict with the views of an authority. Your response to this question should not attack the CEO (to call the CEO an idiot would be *ad hominem* and also damage your prospects in the firm), but state the reasons you believe the company would be better off not terminating 5,000 employees.

It is natural to rely on authorities who have expertise in the area on which they speak. But should we give credibility to authorities speaking on matters outside the scope of their competency? For example, does the fact that Julia Roberts is an Academy Award–winning actress have any relevance when she is testifying before Congress about Rett Syndrome, a neurological disorder that leaves infants unable to communicate and control body functions? Is she any more credible as a Rett Syndrome authority because she narrated a film on the Discovery Health Channel about children afflicted with the disease?

This chapter includes several examples of arguments from authority when we cite Kant, Bentham, and others who have formulated ethical theories. What makes their theories valid, however, is not whether they are recognized as experts, but whether their reasoning is sound.

False Cause This fallacy results from observing two events and concluding that there is a causal link between them when there is no such link. Often we commit this fallacy because we do not attempt to find all the evidence proving or disproving the causal connection. For example, if as a store manager you change the opening hour for your store to 6 AM from 8 AM, records for the first month of operation under the new hours may show an increase in revenue. While you may be tempted to infer that the revenue increase is due to the earlier opening hour, you should not make that conclusion until at the very least you examine store receipts showing the amount of revenue generated between 6 AM and 8 AM. The increase in revenue could have resulted from improved general economic conditions unconnected to the new hours: people just had more money to spend.

The fallacy of false cause is important to businesses, which need to make valid connections between events in order to judge the effectiveness of decisions. Whether, for example, new products and an improved customer relations program increases revenues and profits should be subjected to rigorous testing, not some superficial causal analysis. Measurement tools you learn in other business classes help you eliminate false causes.

The Gambler’s Fallacy This fallacy results from the mistaken belief that independent prior outcomes affect future outcomes. Consider this example. Suppose you flip a coin five times and each time it comes up heads. What is the probability that the next coin flip will be heads? If you did not answer 50 percent, you committed the gambler’s fallacy. Each coin flip is an independent event, so no number of consecutive flips producing heads will reduce the likelihood that the next flip will also be heads. That individual probability is true even though the probability of flipping six consecutive heads is 0.5 to the sixth power, or only 1.5625 percent.

What is the relevance of the gambler’s fallacy to business? We believe and are taught that business managers and professionals with higher skills and better decision-making methods are more likely to be successful than those with lesser skills and worse methods. Yet we have not discussed the importance of luck or circumstance to success. When a corporation has five years of profits rising by 30 percent, is it due to good management or because of expanding consumer demand or any number of other reasons? If a mutual fund has seven years of annual returns of at least 15 percent, is the fund’s manager an investment genius or is she lucky? If it is just luck, one should not expect the luck to continue. The point is that you should not be seduced by a firm’s, manager’s, or

even your own string of successes and immediately jump to the conclusion that the successes were the result of managerial excellence. Instead, you should use measurement tools taught in your finance, marketing, and other courses to determine the real reasons for success.

Reductio ad Absurdum *Reductio ad absurdum* carries an argument to its logical end, without considering whether it is an inevitable or probable result. This is often called the **slippery slope fallacy**.

For example, if I want to convince someone not to eat fast food, I might argue, “Eating fast food will cause you to put on weight. Putting on weight will make you overweight. Soon you will weigh 400 pounds and die of heart disease. Therefore, eating fast food leads to death. Don’t eat fast food.” In other words, if you started eating fast food, you are on a slippery slope and will not be able to stop until you die. Although you can see that this argument makes some sense, it is absurd for most people who eat fast food.

Scientist Carl Sagan noted that the slippery slope argument is used by both sides of the abortion debate. One side says, “If we allow abortion in the first weeks of pregnancy, it will be impossible to prevent the killing of a full-term infant.” The other replies, “If the state prohibits abortion even in the ninth month, it will soon be telling us what to do with our bodies around the time of conception.”

Business executives face this argument frequently. Human resource managers use it to justify not making exceptions to rules, such as saying, “If we allow you time off to go to your aunt’s funeral, we have to let anyone off anytime they want.” Well, no, that was not what you were asking for. Executives who reason this way often are looking for administratively simple rules that do not require them to make distinctions. That is, they do not want to think hard or critically.

Pushing an argument to its limits is a useful exercise in critical thinking, often helping us to discover whether a claim has validity. The fallacy is carrying the argument to its extreme without recognizing and admitting that there are many steps along the way that are more likely consequences.

Appeals to Tradition Appeals to tradition infer that because something has been done a certain way in the past, it should be done the same way in the future. You probably have heard people say, “I don’t know why we do it, but we’ve always done it that way, and it’s always worked, so we’ll continue to do it that way.” Although there is some validity to continuing to do what has stood

the test of time, the reasons a business strategy has succeeded in the past may be independent of the strategy itself. The gambler’s fallacy would suggest that perhaps we have just been lucky in the past. Also, changed circumstances may justify departing from previous ways of doing business.

The Lure of the New The opposite of appeals to tradition is the lure of the new, the idea that we should do or buy something merely because it is “just released” or “improved.” You see this common theme in advertising that promotes “new and improved” Tide or Windows 2009. Experience tells us that sometimes new products are better. But we can also recount examples of new car models with defects and new software with bugs that were fixed in a later version.

The lure of the new is also a common theme in management theories, as some managers have raced to embrace one new craze after another, depending on which is the hottest fad, be it Strategic Planning, Total Quality Management, Reengineering the Corporation, or Customer Relationship Management. The point here is the same. Avoid being dazzled by claims of newness. Evaluations of ideas should be based on substance.

Sunk Cost Fallacy The sunk cost fallacy is an attempt to recover invested time, money, and other resources, by spending still more time, money, or other resources. It is sometimes expressed as “throwing good money after bad.” Stock market investors do this often. They invest \$30,000 in the latest tech stock. When the investment declines to \$2,000, rather than evaluate whether it is better to withdraw that \$2,000 and invest it elsewhere, an investor who falls for the sunk cost fallacy might say, “I can’t stop investing now, otherwise what I’ve invested so far will be lost.” While the latter part of the statement is true, the fallacy is in the first part. Of the money already invested, \$28,000 is lost whether or not the investor continues to invest. If the tech stock is not a good investment *at this time*, the rational decision is to withdraw the remaining \$2,000 and not invest more money.

There are other statements that indicate business executives may fall victim to the sunk cost fallacy: “It’s too late for us to change plans now.” Or “If we could go back to square one, then we could make a different decision.” The best way to spend the firm’s remaining labor and money may be to continue a project. But that decision should be unaffected by a consideration of the labor and money already expended. The proper question is this: What project will give the firm the best return on its

investment of money and other resources *from this point forward*. To continue to invest in a hopeless project is irrational, and may be a pathetic attempt to delay having to face the consequences of a poor decision.

A decision maker acts irrationally when he attempts to save face by throwing good money after bad. If you want a real-world example of ego falling prey to the sunk cost fallacy, consider that President Lyndon Johnson committed American soldiers to the Vietnam Conflict after he had determined that America and South Vietnam could never defeat the Viet Cong. By falling for the sunk cost fallacy, the United States lost billions of dollars and tens of thousands of soldiers in the pursuit of a hopeless cause.

www.austhink.org/critical

Tim van Gelder's *Critical Thinking on the Web* lists some of the best Web sites with information about reasoning and critical thinking.

Common Characteristics of Poor Decision Making

Most business managers during the course of their formal education in school or informal education on the job have learned most of the techniques we have discussed in this chapter for making ethical and well-reasoned decisions. Yet business managers continue to make unethical and poor decisions, most often in disregard of the very principles that they otherwise view as essential to good decision making. Each of us can also point to examples when we have failed to analyze a situation properly before making a decision, even though at the time we possessed the ability to make better decisions.

Why do we and other well-intentioned people make bad decisions? What is it that interferes with our ability to use all the decision-making tools at our disposal, resulting sometimes in unethical and even catastrophic decisions? What causes a basically honest accountant to agree to cook the books for his corporation? What causes a drug company to continue to market a drug when internal tests and user experience show a high incidence of harmful side effects? What causes a corporation to continue to

operate a chemical plant when its safety systems have been shut down? While business scholars and other writers have suggested several attributes that commonly interfere with good decision making, we believe they can be distilled into three essential traits that are useful to you, a decision maker who has already learned the Guidelines for Ethical Decision Making and the most common critical thinking errors.

Failing to Remember Goals Friedrich Nietzsche wrote, “Man’s most enduring stupidity is forgetting what he is trying to do.” If, for example, our company’s goal as a retailer is to garner a 30 percent market share in the retail market in five years, you may think that would translate into being dominant in each segment of our business, from housewares to video games. But should our retailer strive to dominate a market segment that is declining, such as portable cassette players, when the consumer market has clearly moved to iPods and other similar digital recorders? If we focus on the wrong goal—dominating the cassette player market, which may not exist in five years—we have failed to remember our goal of acquiring a 30 percent overall market share.

In another example, suppose we are a luxury home-builder with two goals that go hand-in-hand: producing high quality housing and maintaining an annual 15 percent return on equity. The first goal supports the second goal: by having a reputation for producing high quality housing, we can charge more for our houses. Suppose, however, one of our project managers is under pressure to bring her development in line with cost projections. She decides, therefore, to use lower quality, lower cost materials. The consequence is we meet our profit target in the short run, but in the long run when the shoddy materials are detected and our reputation is sullied, both of our goals of building high quality housing and achieving a 15 percent return on equity will be compromised. Again, we have failed to remember the most important goal, maintaining high quality, which allowed us to achieve our ROE goal.

Overconfidence While confidence is a personal trait essential to success, overconfidence or overoptimism is one of the most common reasons for bad decisions. We all have heard ourselves and others say, “Don’t worry. Everything will work out OK.” That statement is likely a consequence of overconfidence, not careful analysis that is necessary to make sure everything will work out as we hope.

There are several corollaries or other ways to express this overoptimism. Sometimes businesses executives will

do something that they know to be wrong with the belief that it is only a small or temporary wrong that will be fixed next year. They may rationalize that no one will notice the wrongdoing and that only big companies and big executives get caught, not small companies and little managers like them.

Many of the accounting scandals of the last ten years started small, rationalized as temporary attempts to cook the books that would be corrected in the following years when business turned around. As we now know, finance managers and accountants who thought things would turn around were being overconfident about the economy and their companies.

Another aspect of overconfidence is confirmation bias; that is, we must be doing things the right way because all has gone well in the past. Or at least we have not been caught doing something wrong in the past, so we will not be caught in the future. In part this reveals a thinking error we have studied, appeal to tradition. In the home-builder example above, the project manager's cutting quality in years past may not have been detected by homeowners who knew nothing about construction quality. And none of the project manager's workers may have told top management about the project manager's actions. That past, however, does not guarantee the future. New homeowners may be more knowledgeable, and future workers may inform management of the project manager's quality-cutting actions.

Another consequence of overoptimism is believing that complex problems have simple solutions. That leads to the next common trait of bad decision making.

Complexity of the Issues Closely aligned to and aggravated by overconfidence is the failure of decision makers to understand the complexity of an issue. A manager may perceive that the facts are simpler than reality and, therefore, not see that there is little margin for error. Consequently, the executive has not considered the full range of possible solutions and has failed to find the one solution that best matches the facts.

Restated, the decision maker has not done all the investigation and thinking required by the Guidelines for Ethical Decision Making and, therefore, has not discovered all the facts and considered all the reasonable courses of action necessary to making a prudent decision.

The impediments to knowing all the facts, understanding the complexity of a problem, and doing the hard work to create and evaluate all possible solutions to a problem are known to all of us. Fatigue, laziness, overconfidence, and forgetting goals play roles in promoting ignorance of critical facts. We may also want to be team

players, by following the lead of a colleague or the order of a boss. These human tendencies deter us from making the effort to find the facts and to consider all options.

Resisting Requests to Act Unethically

Even if we follow the Guidelines for Ethical Decision Making and avoid the pitfalls of fallacious reasoning, not everyone is a CEO or his own boss and able to make decisions that everyone else follows. Sure, if you control a firm, you will do the right thing. But the reality is that for most people in the business world, other people make many decisions that you are asked to carry out. What do you do when asked to do something unethical? How can you resist a boss's request to act unethically? What could employees at WorldCom have done when its CFO instructed them to falsify the firm's books, or mortgage brokers when their bosses asked them to falsify borrowers' incomes?

Recognizing Unethical Requests and Bosses A person must recognize whether he has been asked to do something unethical. While this sounds simple considering we have spent most of this chapter helping you make just that kind of decision, there are structural problems that interfere with your ability to perform an ethical analysis when a boss or colleague asks you to do something. Many of us are inclined to be team players and "do as we are told" by a superior. Therefore, it is important to recognize any tendency to accept appeals to authority and to resist the temptation to follow orders blindly. We do not want to be like the Enron accounting employee who returned to his alma mater and was asked by a student, "What do you do at Enron?" When considering that question, a question he never posed to himself, he realized that his only job was to remove liabilities from Enron's balance sheet.

For most bosses' orders, such an analysis will be unnecessary. Most of the time, a boss is herself ethical and will not ask us to do something wrong. But there are exceptions that require us to be on the lookout. Moreover, some bosses have questionable integrity, and they are more likely to give us unethical orders. Therefore, it will be helpful if we can identify bosses who have shaky ethics, for whom we should put up our ethical antennae when they come to us with a task.

Business ethicists have attempted to identify executives with questionable integrity by their actions. Ethical bosses have the ability to "tell it like it is" while those

with less integrity say one thing and do another. Ethical bosses have the ability to acknowledge that they have failed, whereas those with low integrity often insist on being right all the time. Ethical bosses try to build a consensus before making an important decision; unethical bosses may generate support for their decisions with intimidation through anger and threats. Ethical bosses can think about the needs of others beside themselves. Bosses with low integrity who misuse their workers by asking them to act unethically often mistreat other people also, like secretaries and waiters.

If we pay attention to these details, we will be better able to consider the “source” when we are asked to do something by a boss and, therefore, more sensitive to the need to scrutinize the ethics of a boss’s request.

Buying Time If we think a requested action is or might be unethical, what is done next? How can we refuse to do something a boss has ordered us to do? One key is to buy some time before you have to execute the boss’s order. Buying time allows you to find more facts, to understand an act’s impact on the firm’s stakeholders, and to evaluate the ethics of the action. It also lets you find other alternatives that achieve the boss’s objectives without compromising your values. Delay also gives you time to speak with the firm’s ethics officer and other confidants.

How do you buy time? If the request is in an e-mail, you might delay responding to it. Or you could answer that you have received the e-mail and will give your attention to it when you finish with the task you are working on. Similar tactics can be used with phone calls and other direct orders. Even a few hours can help your decision. Depending on the order and your ability to stack delay on top of delay, you may be able to give yourself days or weeks to find a solution to your dilemma.

The most important reason for buying time is it allows you to seek advice and assistance from other people, especially those in the firm. That brings us to the next tactic for dealing with unethical requests.

Find a Mentor and a Peer Support Group Having a support system is one of the most important keys to survival in any organization, and it is best to put a system in place when you start working at the firm. Your support system can improve and help defend your decisions. It can also give you access to executives who hold the power to overrule your boss. Your support system should include a mentor and a network of other employees with circumstances similar to your own.

A mentor who is well established, well respected, and highly placed in the firm will help you negotiate the

pitfalls that destroy employees who are ignorant of a firm’s culture. A mentor can be a sounding board for your decisions; he can provide information on those who can be expected to help you and those who could hurt you; he can advise you of the procedures you should follow to avoid antagonizing potential allies. A mentor can also defend you and provide protection when you oppose a boss’s decision. Many firms have a mentorship program, but if not or if your assigned mentor is deficient, you should find an appropriate mentor soon after you join the firm. Be sure to keep him updated regularly on what you are doing. By letting a mentor know that you care to keep him informed, he becomes invested in you and your career.

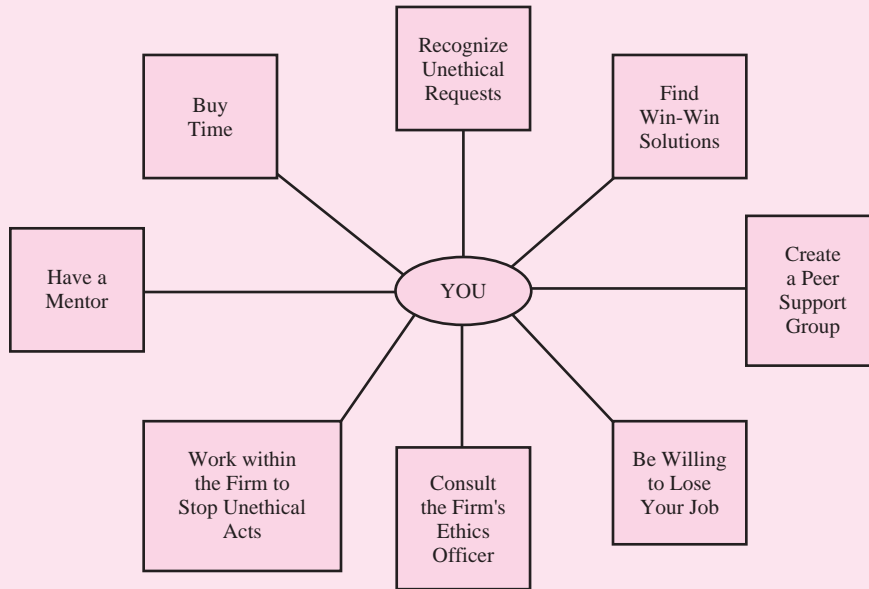

You should also build a community of your peers by creating a network of other workers who share your values and interests. You may want to find others who joined the firm at about the same time you did, who are about the same age, who share your passion for the firm’s products and services, and who have strong ethical values. To cement the relationship, your peer support group should meet regularly, such as twice a week at work during 15-minute coffee breaks. This group can give you advice, help with difficult decisions, and unite to back up your ethical decisions.

Find Win-Win Solutions As we learned from the Guidelines for Ethical Decision Making, many times there are more than the two options of doing and not doing something. There are a number of choices in between those extremes, and the best solution may be one unconnected to them. For example, suppose your boss has ordered you to fire someone who works under you. The worker’s productivity may be lagging, and perhaps he has made a few costly mistakes. Yet you think it would be wrong to fire the worker at this time. What do you do?

Find a win-win solution, that is, a compromise that works for you and your boss. First, discover your boss’s wants. Probably you will find that your boss wants an employee who makes no or few mistakes and has a certain level of productivity. Next determine what is needed for the affected employee to reach that level. If you find the employee is having emotional problems that interfere with his work, are they temporary or can we help him handle them? Can we make him more productive by giving him more training? Is the employee unmotivated or is he unaware that he lags behind other workers? Should we give him a warning and place him on probationary status for a month, releasing him if there is no satisfactory improvement? These alternatives may address your boss’s concerns about the employee without compromising your ethical values.

CONCEPT REVIEW

Resisting Requests to Do Unethical Acts

In other contexts, you may need to approach your boss directly and show that her order is not right for the firm. Using the Guidelines for Ethical Decision Making and valid arguments, you may be able to persuade your boss to accept your perspective and avoid an otherwise unethical decision. Finding a win-win solution is possible only when there is room for compromise. The Ethical Guidelines and logical arguments are effective when your boss respects reason and wants to act ethically. However, when you face an intractable executive demanding you do something illegal, a different response is needed.

Work within the Firm to Stop the Unethical Act Suppose you receive an order from an executive you know or suspect to be corrupt. For example, a CFO is motivated to increase the price of the firm's stock in order to make her stock options more valuable. She orders you to book in the current year revenue that in fact will not be received for at least two years, if ever. Booking that revenue would be fraudulent, unethical, and illegal. You are convinced the CFO knows of the illegality and will find someone else to book the

revenue if you refuse. You probably will lose your job if you do not cooperate. What do you do?

This is when your mentor, peer support group, and corporate ethics officer can help you. Your mentor may have access to the CEO or audit committee, who if honest, should back you and fire the CFO. Your peer support group might have similar access. The corporate ethics officer, especially if she is a lawyer in the firm's legal department, can also provide her backing and that of the legal department.

There is one large caveat, however. While the situation just described should and probably will result in your support system rallying to your support, in other situations that are ethically ambiguous, you, your mentor, and your support group may find that fighting a battle against a top corporate executive ineffectively expends your and your colleagues' political capital. In other words, you need to pick your battles carefully lest you and your colleagues at the firm be labeled whiners and troublemakers who unnecessarily seek intervention from higher level corporate executives. This is why we have listed this alternative near the end of our discussion. In most situations, it is better to rely on your colleagues as

advisors and to execute win-win solutions in cooperation with your boss.

But if neither compromise nor other intrafirm tactics protect you from unethical requests, you are left with a final tactic.

Prepare to Lose Your Job This is the last tactic, because by quitting or losing your job you are deprived of your ability to help the firm make ethical decisions. Only as an employee can you craft win-win solutions or work within the firm to do the right thing.

But if a firm's executives and its internal governance are so corrupted that neither compromise nor reason can steer the firm away from an unethical and illegal course, you must be willing to walk away from your job or be fired for standing up for your values. Do not want your job and the status it brings so much that you are willing to compromise more important values. It is tough losing a job when one has obligations to family, banks, and other creditors as well as aspirations for a better life. But if you prepare yourself financially from day one, putting away money for an ethical rainy day, you will protect more important values.

Leading Ethically

Some day, perhaps today, you will be in charge of other people in your business organization. You may be managing a four-person team, you may be a vice president of marketing in charge of a department, or you may eventually be a CEO directing an entire company. You give the people under your charge tasks to complete, supervise their work, help them complete the tasks, and provide motivation and feedback to ensure that the current job will be done well and that future work will be done better. So how do you also ensure that all those people under your charge act ethically? This is the daily challenge of ethical business leaders, who must not only act ethically themselves, but also promote ethical behavior of their workers.

Be Ethical No one can lead ethically who does not attempt and mostly succeed in behaving ethically in her business and personal life. Few underlings respect an unethical leader, and many will be tempted to rationalize their own unethical conduct when they see their leaders acting unethically. They fall prey to the bandwagon fallacy, arguing for example that since the CFO is doing something wrong, so may they. For the same reason, ethical behavior by good managers encourages ethical behavior by underlings, who often view their bosses as role

models and guides for advancing in the corporation. If they see an ethical boss moving up in the business, they will believe that the system is fair and that they, too, by acting ethically, can advance at the firm.

Communicate the Firm's Core Ethical Values For CEOs, creating, communicating, and emphasizing the firm's core values are essential to creating an ethical environment that rubs off on all employees. For other managers, recommunicating and reemphasizing the firm's value are also important.

All public companies today have ethics codes, as do many smaller companies. Yet the CEO who leads ethically must continually emphasize in written messages and speeches the importance and necessity that everyone comply with the code. Other top level managers, such as the vice president of finance, should ensure that their staffs understand the ethics code's application to their corporate tasks and make ethical reviews part of the staffs' annual evaluations. A lower level manager who supervises a small staff for a single project should also do her part to encourage compliance with the ethics code by pointing out how the code relates to the project assignment and including ethics in the project team's progress reports.

Connect Ethical Behavior with the Firm's and Workers' Best Interests

It is one thing to educate your staff about ethical behavior and another to obtain compliance. One good way to increase compliance with the firm's core ethical values is to convince the staff that their best interests—and the firm's—are met by acting ethically. Management should help employees understand that the firm's profitability and the employee's advancement in the firm are optimized by each employee taking responsibility for acting ethically. Staff must understand that adverse publicity caused by unethical conduct harms a firm's ability to promote itself and its products and services. The ethical manager also clearly establishes ethical behavior as a prerequisite for salary increases and promotions, or at least that unethical behavior is a disqualifier.

Reinforce Ethical Behavior When a manager knows a staff member has acted ethically in a situation in which employees in less ethical firms would be tempted to act unethically, the manager should congratulate and find other ways to reinforce the staff member's behavior. For example, if a staff member reports that a supplier has attempted to bribe him in order to do business with the firm, the ethical manager will praise the staff member and may include a letter commending him in his employment file.

In addition, management should set up a mechanism for its employees to report instances of unethical behavior by the staff. While some employees will view whistle blowing as an act of disloyalty, management should recharacterize whistle blowing as necessary to the protection of the firm's decision-making processes and reputation. Undetected ethical decisions often lead to poor decisions and harm corporate profits. While management does not want witch hunts, good managers must garner evidence of alleged unethical behavior so they may investigate and stop conduct that is harmful to the firm.

A necessary corollary is not reinforcing unethical behavior, including behavior that may lead to an unethical act or foster an environment that appears tolerant of ethical missteps. As with childrearing, and so too with manag-

ing a staff, it is usually not acceptable to ignore bad behavior. The ethical leader must reprimand staff for unethical actions and must not tolerate statements that suggest the firm should engage in unethical conduct. For example, if during discussions about how to increase revenue for a product line, one staff member suggests obtaining competitors' agreements to fix prices, a manager running the meeting should make clear that the firm will not engage in that or any other conduct that is illegal. To let the price-fixing comment pass without comment may send the message that the manager and the firm condone illegal or unethical acts.

Collectively, these reinforcing mechanisms should create a culture in which ethical practices define the firm and its employees rather than being imposed on them.

Problems and Problem Cases

1. You are a middle manager with responsibility over a staff of 16 workers. One of your workers is six months pregnant. Over the last month, she has missed work an average of two days a week and seems to be frequently distracted at work. You are concerned about her welfare and about her work performance, but are unsure what to do. What do the Guidelines for Ethical Decision Making suggest you do first?
2. You are an outside director of Hook, Inc., a manufacturer of surgical instruments. Hook has 19,000 employees worldwide, including 6,000 mostly manufacturing workers in China, 5,000 mostly manufacturing workers in Mexico, and 3,500 manufacturing and 1,500 executive employees in Springfield, Illinois, where it maintains its corporate headquarters. The CEO has proposed to Hook's board of directors that Hook close its manufacturing facility in Springfield and replace it with a larger facility in Honduras. Using the Guidelines for Ethical Decision Making, what do you want to know before you decide whether you will support the decision of the CEO?
3. You are a director of SeaGold Canning Company. SeaGold's business is canning tuna and salmon for sale to consumers. Its annual revenue is \$575,000,000, 75 percent from tuna sales. SeaGold buys tuna from independent fishermen whose fishing methods do not always permit them to determine whether they are catching tuna or dolphins. The result is that many

dolphins are killed. The Society to Protect All Sea Mammals (SPASM) has discovered that fishermen selling to SeaGold have been killing dolphins and has asked SeaGold to demand that the fishermen not kill dolphins and to refuse to buy tuna from fishermen who kill dolphins. If SeaGold does not comply with SPASM's request, SPASM will call a press conference to urge consumers to stop buying SeaGold tuna and salmon.

For fishermen to change their fishing methods would result in SeaGold paying an additional \$20,000,000 each year for tuna. If SeaGold passes the cost on to consumers, the price of tuna will increase to \$2.05 per can from the present \$1.95 per can. Since SeaGold tuna now sells for the same price as other tuna brands, SeaGold expects its sales to fall by 10 percent if it increases the price of its tuna. What would a rights theorist do? What would you do as a SeaGold director?

4. You own a consulting firm with 32 employees and annual billings of \$29,000,000. One of your clients, whom you bill an average of \$1,200,000 annually, has asked you to hire her grandson. You know that the grandson has been recently graduated from a top-20 business school. He is 31 years old, has a solid academic record, and possesses the personal and professional skills to be successful as a consultant. You also know, however, that he is a recovering cocaine addict, having struggled with the addiction for five years prior to his attending business school.

Your firm has a strict no-drugs policy, which you usually interpret to exclude those who previously abused drugs. Using justice theory, justify a decision to exempt the grandson from your firm's no-drugs policy. Could you make the same decision as a profit maximizer?

5. Marigold Dairy Corporation sells milk products, including powdered milk formula for infants. Marigold hopes to increase sales of its powdered milk formula in Liberia and other African nations where mothers are often malnourished due to drought and civil war. Marigold's marketing department has created a marketing plan to convince mothers and expectant mothers not to breastfeed their babies and instead to use Marigold formula. Doctors generally favor breastfeeding as beneficial to mothers (it helps the uterus return to normal size), to babies (it is nutritious and strengthens the bonds between the infant and the mother), and to families (it is inexpensive). Marigold's marketing plan stresses the good nutrition of its formula and the convenience to parents of using it, including not having to breastfeed.

You are the Senior Vice President of Marketing for Marigold. Do you approve this marketing plan? What would a rights theorist do? What would a utilitarian do? What would a profit maximizer do?

6. During World War II, the insecticide DDT was used successfully to halt a typhus epidemic spread by lice and to control mosquitoes and flies. After World War II, it was used extensively to control agricultural and household pests. Today, DDT may not be used legally in the United States and most other countries. Although DDT has a rather low immediate toxicity to humans and other vertebrates, it becomes concentrated in fatty tissues of the body. In addition, it degrades slowly, remaining toxic in the soil for years after its application. But there has never been any credible evidence that this residue has caused any harm. Even so, DDT has been blamed for the near extinction of bald eagles, whose population has increased greatly since DDT was banned, although evidence tends to point to oil, lead, mercury, stress from noise, and other factors as the likely causes.

In 2007, over 3,600 people in the United States were infected by and 124 people killed after contracting West Nile virus, which is carried to humans by mosquitoes. CDC director Julie Gerberding called West Nile virus an "emerging, infectious disease epidemic" that could be spread all the way to

the Pacific Coast by birds and mosquitoes. Pesticides such as malathion, resmethrin, and sumithrin can be effective in killing mosquitoes but are significantly limited because they do not stay in the environment after spraying. In Mozambique, indoor spraying of DDT has caused malaria rates to drop 88 percent among children.

As an executive for Eartho Chemical Company, you have been asked by Eartho's CEO to study whether Eartho should resume the manufacture of DDT. What would a utilitarian decide? What would a profit maximizer do?

7. You are assigned by your employer, Jay-Mart Corporation, an international discount retailer, to supervise the construction of ten new retail superstores in Shanghai, China. All construction is being done by a Chinese-owned contractor in compliance with Jay-Mart's construction standards. After an earthquake in China kills over 70,000 people, China's legislature passes a statute requiring new buildings to have a greater ability to withstand a large earthquake. The Chinese contractor has approached you and suggested that the new Chinese construction standards are unnecessarily high, that Jay-Mart's construction standards are sufficient to protect against any earthquake likely to occur, and that the cost of complying with the new Chinese construction standards will increase construction costs 20 percent.

What do you do if you believe that ethical behavior requires you to maximize Jay-Mart's profits?

8. You are the CFO of Ridgeway Bank, which makes loans to consumers and businesses totaling \$870 million annually. Ridgeway Bank receives promissory notes from its borrowers, which notes the bank typically sells in bulk to investment banks, hedge funds, and other institutional investors within days after making the loans to its borrowers. By doing so, Ridgeway Bank is able to turn over its assets many times and optimize its profits. Finding buyers for the notes, however, can be challenging and depends in large part on the quality of the promissory notes, especially the collateral backing the notes and the borrowers' abilities to pay the notes. You are considering expanding Ridgeway's loan business by making loans to riskier borrowers. Before doing so, you want commitments from institutional investors that they will be willing to buy the risky notes. Because other banks made a large number of bad loans in 2005 and 2006 on which borrowers defaulted, Ridgeway has

found it especially difficult to sell higher-risk notes, as institutional investors have greatly restricted their buying of risky notes. You know that if you can convince one institutional investor to purchase some of the risky notes, you can tell other institutional investors that they are missing an opportunity that one of their competitors is taking. Do you think it is ethical to use that tactic to convince institutional investors to buy the notes? What fallacy are you expecting the institutional investors to make when they agree to do what their competitors do?

9. In 2007, NFL Commissioner Roger Goodell determined that the New England Patriots and its head coach, Bill Belichick, had violated NFL rules by videotaping opposing teams' sideline signals during games. Goodell docked the Patriots a 2008 first-round draft pick, and he fined Belichick \$500,000 and the team \$250,000. In 2008, Goodell interviewed the Patriots' employee who had done the videotaping and concluded that the employee's information was consistent with the behavior for which the Patriots and Belichick had been disciplined in 2007. Therefore, Goodell termed the matter over and said it was not necessary to discipline further the Patriots or Belichick. Immediately thereafter, Arlen Specter, a U.S. senator from Pennsylvania, called the NFL investigation "neither objective nor adequate." Specter stated, "If the commissioner doesn't move for an independent investigation, . . . depending on the public reaction, I may ask the Senate Judiciary Committee to hold hearings on the NFL antitrust exemption." Specter further stated that Goodell has made "ridiculous" assertions that wouldn't fly "in kindergarten." The senator said Goodell was caught in an "apparent conflict of interest" because the NFL doesn't want the public to lose confidence in the league's integrity. Terming the videotaping of opposing teams' signals a form of cheating equivalent to steroid use, Specter called for an independent investigation similar to the 2007 Mitchell Report on performance enhancing drugs in baseball.

Can you identify the fallacies in Senator Specter's arguments?

10. For the last five years, you have been a corporate accountant for Farrless Company, a public company that has seen explosive growth through acquisitions of smaller competitors in its industry, retail pharmacy.

Farrless's CFO tells you that Farrless's per store revenue for the fiscal quarter, as yet not publicly disclosed, has dropped by 15 percent. As a result, Farrless has had insufficient cash flow to pay some suppliers, many of whom are refusing to ship additional inventory to Farrless until it pays its outstanding debt to them. The CFO tells you he believes that the revenue drop, while temporary, will continue for the rest of the fiscal year. Next year, he says, per store revenue will be 20 percent more than last year's historic high. Consequently, to avoid a temporary drop in the market price of Farrless's stock, which will reduce the value of the CFO's stock options and make it more expensive for Farrless to raise capital, the CFO wants you to create false accounting entries that will smooth Farrless's revenues.

Can you identify the common characteristics of poor decision making that the CFO is exhibiting? Draft a plan that will help you resist the CFO's request for you to make false accounting entries. What should you have done during the five years you have been working for Farrless to help you now resist the CFO's request?

11. You have been a marketing manager at Pramato-Glomer Company for 10 years. Last week, you were promoted to the position of Assistant Vice President of Marketing. Overseeing a staff of 50 marketing professionals, you report directly to the Executive Vice President of Marketing. Draft a plan that will help ensure that every member of your staff acts ethically in compliance with Pramato-Glover's code of ethics.

chapter 5

CRIMES

Nicolai Caymen worked as a desk clerk at a hotel in Ketchikan, Alaska. After a woman called a Ketchikan business supply store and complained that the store had charged her credit card for a laptop computer she did not purchase, the store discovered that Caymen had used a credit card in placing a telephone order for the laptop and that when he picked up the computer, the store clerk had not asked for identification. Store personnel then contacted the Ketchikan police department to report the incident and to pass along information, acquired from other stores, indicating that Caymen may have attempted similar credit card trickery elsewhere.

In order to look for the laptop and other evidence of credit card fraud, the police obtained a search warrant for the house where Caymen rented a room. Caymen, who was present while his room was searched, denied the allegation that he had used someone else's credit card to acquire the laptop. Instead, he stated that he had bought it with his own credit card. During the search, the police found the laptop and a tower computer. It was later determined that Caymen had rented the tower computer from a store but had never made any of the required payments. In Caymen's wallet, which the police examined in connection with the search of his room, the officers found receipts containing the names and credit card information of guests who had stayed at the hotel where Caymen was employed.

The police seized the laptop, took it to the police station, and contacted the store where Caymen had acquired it to ask whether officers could examine the laptop's hard drive before they returned the computer to the store. The store's owner consented to this request. In examining the laptop's hard drive for evidence of credit card fraud, the police found evidence indicating Caymen's probable commission of federal crimes unrelated to credit card fraud. The police then temporarily suspended their search of the hard drive and obtained another search warrant, because they had probable cause to believe that Caymen had committed federal offenses. Under that search warrant, officers checked the hard drives and storage media from the laptop and tower computers and found further evidence pertaining to the federal crimes.

Caymen was prosecuted in state court for credit card fraud and was indicted in federal court for the separate federal offenses. In the federal proceeding, he asked the court to suppress (i.e., rule inadmissible) the evidence obtained by the police in their examinations of the hard drives of the laptop and tower computers. Caymen based his suppression request on this multipart theory: that the police had no valid warrant for their initial look at the laptop's hard drive; that in the absence of a valid warrant, his consent (rather than the store owner's) was needed to justify a search of the laptop's hard drive; that the evidence obtained during the initial examination of the laptop's hard drive was the result of an unconstitutional search and was therefore inadmissible; and that the evidence obtained in the later examinations of the hard drives of the laptop and tower computers amounted to inadmissible "fruit of the poisonous tree."

As you read Chapter 5, consider these questions:

- On what constitutional provision was Caymen basing his challenge to the validity of the searches conducted by the police?
- Must law enforcement officers always have a warrant before they conduct a search, or are warrantless searches sometimes permissible? If warrantless searches are sometimes permissible, when?

- What is the usual remedy when law enforcement officers conduct an unconstitutional search?
- Did Caymen succeed with his challenge to the validity of the searches conducted by the police? Why or why not?
- What if a guilty person goes free as a result of a court's ruling that he was subjected to an unconstitutional search by law enforcement officers? From an ethical perspective, how would *utilitarians* view that outcome? What about *rights theorists*?

THE LIST FEATURES FAMILIAR corporate names: Enron, Arthur Andersen, WorldCom, Adelphia, ImClone, Global Crossing, and Tyco. Individuals such as Bernard Ebbers, John and Timothy Rigas, and Dennis Kozlowski also make the list. These names sometimes dominated the business headlines during recent years, but not for reasons any corporation or executive would find desirable. Instead, they acquired the notoriety associated with widely publicized financial scandals, related civil litigation, and criminal prosecutions that were actually pursued by the government, seriously contemplated by prosecutors, or argued for by the public and political figures of varying stripes.

For instance, former WorldCom CEO Ebbers was sentenced to 25 years in prison for his role in an \$11 billion accounting and securities fraud. The Rigases were sentenced to substantial prison terms because of their involvement in bank and securities fraud while serving as high level executives at Adelphia. Kozlowski, convicted of financial wrongdoing in connection with his former position as Tyco's CEO, also faced incarceration.

In an earlier edition of this text, the first paragraph of Chapter 5 noted the importance of studying criminal law as part of a business manager's education but conceded that "[w]hen one lists legal topics relevant to business, criminal law comes to mind less readily than contracts, torts, agency, corporations, and various other subjects dealt with in this text." That statement, of course, was written approximately 10 years ago. Given the media, public, and governmental attention devoted to recent corporate scandals, it might be argued that criminal law now comes to mind *more* readily than certain other subjects on the list of legal topics relevant to business. At the very least, recent events involving high-profile firms and executives have demonstrated that business managers create considerable risk for themselves and their firms if they ignore the criminal law or lack a working understanding of it.

Role of the Criminal Law

This century has witnessed society's increasing tendency to use the criminal law as a major device for controlling corporate behavior. Many regulatory statutes establish criminal and civil penalties for statutory violations. The criminal penalties often apply to individual employees as well as to their employers.

Advocates of using the criminal law in this way typically argue that doing so achieves a deterrence level superior to that produced by damage awards and other civil remedies. Corporations may be inclined to treat damage awards as simply a business cost and to violate regulatory provisions when doing so makes economic sense. Criminal prosecutions, however, threaten corporations with the reputation-harming effect of a criminal conviction. In some cases, the criminal law allows society to penalize employees who would not be directly affected by a civil judgment against their employer. Moreover, by alerting private parties to a violation that could also give rise to a civil lawsuit for damages, criminal prosecutions may increase the likelihood that a corporation will bear the full costs of its actions.

Our examination of the criminal law's role in today's business environment begins with consideration of the nature and essential components of the criminal law. The chapter then explores various problems encountered in applying the criminal law to the corporate setting.

Nature of Crimes Crimes are *public wrongs*—acts prohibited by the state or federal government. Criminal prosecutions are initiated by a prosecutor (an elected or appointed government employee) in the name of the state or the United States, whichever is appropriate. Persons convicted of crimes bear the stigma of a criminal conviction and face the punitive force of the criminal sanction.

Our legal system also contemplates noncriminal consequences for violations of legal duties. The next two chapters deal with *torts*, private wrongs for which the wrongdoer must pay money damages to compensate the harmed victim. In some tort cases, the court may also assess punitive damages in order to punish the wrongdoer. Only the criminal sanction, however, combines the threat to life or liberty with the stigma of conviction.

Crimes are typically classified as felonies or misdemeanors. A **felony** is a serious crime such as murder, sexual assault, arson, drug-dealing, or a theft or fraud offense of sufficient magnitude. Most felonies involve significant moral culpability on the offender's part. Felonies are punishable by lengthy confinement of the convicted offender to a penitentiary, as well as by a fine. A person convicted of a felony may experience other adverse consequences, such as disenfranchisement (loss of voting rights) and disqualification from the practice of certain professions (e.g., law or medicine). A **misdemeanor** is a lesser offense such as disorderly conduct or battery resulting in minor physical harm to the victim. Misdemeanor offenses usually involve less—sometimes much less—moral culpability than felony offenses. As such, misdemeanors are punishable by lesser fines and/or limited confinement in jail. Depending on their seriousness and potential for harm to the public, traffic violations are classified either as misdemeanors or as less serious **infractions**. Really only quasi-criminal, infractions usually are punishable by fines but not by confinement in jail.

Purpose of the Criminal Sanction Disagreements about when the criminal sanction should be employed sometimes stem from a dispute over its purpose. Persons accepting the *utilitarian* view believe that prevention of socially undesirable behavior is the only proper purpose of criminal penalties. This prevention goal includes three major components: deterrence, rehabilitation, and incapacitation.

Deterrence theorists maintain that the threat or imposition of punishment deters the commission of crimes in two ways. The first, *special deterrence*, occurs when punishment of an offender deters him from committing further crimes. The second, *general deterrence*, results when punishment of a wrongdoer deters other persons from committing similar offenses. Factors influencing the probable effectiveness of deterrence include the respective likelihoods that the crime will be detected, that detection will be followed by prosecution, and that prosecution will result in a conviction. The severity of the probable punishment also serves as a key factor.

A fundamental problem attending deterrence theories is that we cannot be certain whether deterrence works,

because we cannot determine reliably what the crime rate would be in the absence of punishment. Similarly, high levels of crime and recidivism (repeat offenses by previously punished offenders) may indicate only that sufficiently severe and certain criminal sanctions have not been employed, not that criminal sanctions in general cannot effectively deter. Deterrence theory's other major problem is its assumption that potential offenders are rational beings who consciously weigh the threat of punishment against the benefits derived from an offense. The threat of punishment, however, may not deter the commission of criminal offenses produced by irrational or unconscious drives.

Rehabilitation of convicted offenders—changing their attitudes or values so that they are not inclined to commit future offenses—serves as another way to prevent undesirable behavior. Critics of rehabilitation commonly point to high rates of recidivism as evidence of the general failure of rehabilitation efforts to date. Even if rehabilitation efforts fail, however, *incapacitation* of convicted offenders contributes to the goal of prevention. While incarcerated, offenders have much less ability to commit other crimes.

Prevention is not the only asserted goal of the criminal sanction. Some persons see *retribution*—the infliction of deserved suffering on violators of society's most fundamental rules—as the central focus of criminal punishment. Under this theory, punishment satisfies community and individual desires for revenge and reinforces important social values.

As a general rule, state laws on criminal punishments seek to further the deterrence, rehabilitation, and incapacitation purposes just discussed. State statutes usually set forth ranges of sentences (e.g., minimum and maximum amounts of fines and imprisonment) for each crime established by law. The court sets the convicted offender's sentence within the appropriate range unless the court places the defendant on probation.

Probation is effectively a conditional sentence that suspends the usual imprisonment and/or fine if the offender "toes the line" and meets other judicially imposed conditions for the period specified by the court. It is sometimes granted to first-time offenders and other convicted defendants deemed suitable candidates by the court. In deciding whether to order probation or an appropriate sentence within the statutory range, the court normally places considerable reliance on information contained in a presentence investigation conducted by the state probation office.

Figure 1 explains how federal law approaches the proper determination of a convicted offender's punishment.

Figure 1 The Federal Sentencing Guidelines and the Booker Decision

The federal approach to sentencing closely resembled the typical state approach discussed in the text until the Federal Sentencing Guidelines took effect in the mid-1980s. The significantly different sentencing model contemplated by the Sentencing Guidelines was largely upended, however, by the U.S. Supreme Court's decision in *United States v. Booker*, 543 U.S. 220 (2005), and decisions that followed it. To understand *Booker*, one must first know how the Sentencing Guidelines operated for the approximately 20 years preceding the Supreme Court's decision.

In the Sentencing Reform Act of 1984, Congress created the U.S. Sentencing Commission and authorized it to develop the Sentencing Guidelines. Congress took this action to reduce judicial discretion in sentencing and to minimize disparities among sentences imposed on defendants who committed the same offenses. Although pre-Sentencing Guidelines statutes setting forth sentencing ranges for particular crimes generally remained on the books, the Sentencing Guidelines developed by the Sentencing Commission assumed a legally controlling status under provisions of the Sentencing Reform Act. The Guidelines contain a table with more than 40 levels of seriousness of offense. Where an offender's crime and corresponding sentence range are listed on the table depends on the offender's prior criminal history and on various factors associated with the offense. The Sentencing Reform Act established that federal courts were bound by the table and usually were required to sentence convicted defendants in accordance with the range set in the table for the crime at issue. However, if the court found the existence of certain additional circumstances to be present (such as a leadership role in a crime committed by more than one person or similar facts seeming to enhance the defendant's level of culpability), the Guidelines required the court to sentence the defendant to a harsher penalty than would otherwise have been the maximum under the Guidelines.

Many federal judges voiced displeasure with the Guidelines because their mandatory nature deprived judges of the sentencing discretion they believed they needed in order to do justice in individual cases. In another key effect, the Guidelines led to the imposition of more severe sentences than had previously been imposed. Although the prospect of probation for certain offenses was not eliminated, the Guidelines led to an increased use of incarceration of individuals convicted of serious crimes. (A special subset of rules known as the Corporate Sentencing Guidelines, discussed later in the chapter, pertains to the sentencing of organizations convicted of federal crimes.)

In recent years, questions began to arise concerning the constitutionality of the Sentencing Guidelines. The

questions focused on the cases in which the Guidelines effectively required—if the requisite additional circumstances were present—a sentence going beyond what would otherwise have been the maximum called for by the Guidelines. These cases were troublesome because nearly always the additional circumstances triggering the enhanced sentence were identified by the trial judge on the basis of evidence submitted to him or her at a posttrial sentencing hearing. The jury, on the other hand, would have heard and seen only the evidence produced at the trial—evidence that went toward guilt and presumably the standard range of punishment, but not toward an enhanced punishment harsher than the usual maximum. All of this was problematic, critics contended, in view of criminal defendants' Sixth Amendment right to a jury trial.

United States v. Booker provided the Supreme Court an opportunity to address the concerns raised by critics of the Guidelines. A jury had convicted Booker of the offense of possessing, with intent to distribute, at least 50 grams of crack cocaine. The evidence the jury heard at trial was to the effect that Booker possessed approximately 90 grams of crack. The Sentencing Guidelines called for a sentence of 20 to 22 years in prison for possessing at least 50 grams. However, evidence presented to the judge at the posttrial sentencing hearing indicated that Booker possessed some 650 grams. Possession of a much larger amount of crack than the amount for which he was convicted was a special circumstance that, under the Guidelines, necessitated a harsher sentence. Upon finding by a preponderance of the evidence that Booker possessed 650 grams (rather than the smaller quantity about which the jury heard evidence), the judge was required by the Guidelines to sentence Booker to at least 30 years in prison—even though the evidence presented to the jury would have justified a lesser sentence of 20 to 22 years. The judge imposed a 30-year sentence on Booker, who contended on appeal that the enhanced sentence required by the Guidelines violated his Sixth Amendment jury trial right.

In the 2005 *Booker* decision, the Supreme Court held that in view of the Sixth Amendment, any facts calling for the imposition of a sentence harsher than the usual maximum must be facts found by a jury rather than merely a judge (unless a jury has been validly waived by the defendant). The Federal Sentencing Guidelines and the statute contemplating their creation were thus unconstitutional insofar as they mandated a sentence going beyond the usual maximum if a judge's factual findings supporting such a sentence were made on the basis of evidence that the jury had not heard and seen. To remedy the constitutional defect, the Court determined it was

necessary to excise certain Sentencing Reform Act sections that made the Sentencing Guidelines mandatory. The elimination of those statutory sections caused the Sentencing Guidelines to become *advisory* to judges as they make sentencing decisions. Judges must still consider what the Guidelines call for in regard to sentencing, but they are not required to impose the particular sentences specified in the Guidelines. The Court also stated in *Booker* that when a judge's sentencing decision is challenged on appeal, the governing standard will be one of reasonableness.

After *Booker*, lower courts were faced with determining what the “reasonableness” standard of review meant, as well as how far trial courts’ discretion regarding the Guidelines really extended. In *Rita v. United States*, 127 S. Ct. 2456 (2007), the Supreme Court held that it was permissible for courts of appeal to adopt and apply a presumption of reasonableness if the sentence imposed by the trial court fell within the range set by the Guidelines. *Gall v. United States*, 128 S. Ct. 586 (2007), made clear, however, that the converse was not true. The Court held there that courts of appeal cannot apply a presumption of unreasonableness to a sentence that departed from the range set by the Guidelines. Instead, according

to *Gall*, consideration of the Guidelines is only “the starting point and the initial benchmark” for the trial judge as he or she makes an “individualized assessment” based on the facts and circumstances. Appellate courts are to give “due deference” to the trial judge’s sentencing determinations, regardless of whether the sentence fell within or outside the Guidelines’ range. In *Kimbrough v. United States*, 128 S. Ct. 558 (2007), a companion case to *Gall*, the Court underscored this standard of review and expressed disapproval of appellate court micromanagement of trial judges’ sentencing decisions. The Court also suggested in *Kimbrough* that considerable deference to the trial judge’s sentencing determinations remains appropriate even if it appears that the sentence departed from the Guidelines because of the judge’s philosophical disagreement with the Guidelines.

Booker and its progeny—especially *Gall* and *Kimbrough*—have restored to trial judges most of the sentencing latitude they had prior to the Guidelines. This latitude is subject to two constraints: first, the sentence must be consistent with relevant *statutes* (as opposed to the now-advisory Guidelines); and second, the sentence must be based upon facts found by the jury (or by the judge, if a jury was waived).

Essentials of Crime To convict a defendant of a crime, the government ordinarily must (1) demonstrate that his alleged acts violated a criminal statute; (2) prove beyond a reasonable doubt that he committed those acts; and (3) prove that he had the capacity to form a criminal intent. Crimes are *statutory* offenses. A given behavior is not a crime unless Congress or a state legislature has

criminalized it.¹ As illustrated by the *Santos* case, which follows, courts normally interpret criminal statutes narrowly.

¹Infractions of a minor criminal or quasi-criminal nature (such as traffic offenses) are often established by city or county ordinances but will not be considered here. For discussion of ordinances as a type of law, see Chapter 1.

United States v. Santos

2008 U.S. LEXIS 4699 (U.S. Sup. Ct. 2008)

From the 1970s until 1994, Efrain Santos operated an illegal lottery in Indiana. He employed a number of helpers to run the lottery. At bars and restaurants, Santos’s runners gathered bets from gamblers, kept a portion of the bets as their commissions, and delivered the rest to Santos’s collectors. Collectors, one of whom was Benedicto Diaz, then delivered the money to Santos, who used some of it to pay the salaries of collectors (including Diaz) and to pay the lottery winners.

These payments to runners, collectors, and winners formed the basis of a 10-count indictment filed against Santos and Diaz in the United States District Court for the Northern District of Indiana. A jury found Santos guilty of one count of conspiracy to run an illegal gambling business, one count of running an illegal gambling business, one count of conspiracy to launder money, and two counts of money laundering. Diaz pleaded guilty to conspiracy to launder money. The relevant provision of the money-laundering statute, 18 U.S.C. § 1956(a)(1), reads as follows:

Whoever, knowing that the property involved in a financial transaction represents the proceeds of some form of unlawful activity, conducts or attempts to conduct such a financial transaction which in fact involves the proceeds of specified unlawful activity . . . with the intent to promote the carrying on of specified unlawful activity . . . shall be sentenced to a fine of not more than \$ 500,000 or twice the value of the property involved in the transaction, whichever is greater, or imprisonment for not more than twenty years, or both.

After the district court sentenced Santos and Diaz to prison, the U.S. Court of Appeals for the Seventh Circuit affirmed the convictions and sentences in a 2000 decision. Santos and Diaz later attacked the validity of the convictions and sentences by seeking a writ of habeas corpus. In the habeas corpus proceeding, the district court rejected all of their claims except for one, a challenge to their money-laundering convictions. The district court took note of a 2002 decision in which the Seventh Circuit held that the money-laundering statute's prohibition of transactions involving criminal "proceeds" applies only to transactions involving criminal profits, not criminal receipts. Applying that holding to the cases of Santos and Diaz, the district court found no evidence that the transactions on which the money-laundering convictions were based (Santos's payments to runners, winners, and collectors and Diaz's receipt of payment for his collection services) involved profits, as opposed to receipts, of the illegal lottery. Accordingly, the district court vacated the money-laundering convictions. The Seventh Circuit affirmed. The U.S. Supreme Court granted the government's petition for a writ of certiorari.

Scalia, Justice

We consider whether the term "proceeds" in the federal money-laundering statute means "receipts" or "profits."

The statute prohibits a number of activities involving criminal "proceeds." Most relevant to this case is 18 U.S.C. § 1956(a)(1), which criminalizes transactions to promote criminal activity. [The statute is quoted above.] This provision uses the term "proceeds" in describing two elements of the offense: the government must prove that a charged transaction "in fact involve[d] the proceeds of specified unlawful activity" (the proceeds element), and it also must prove that a defendant knew "that the property involved in" the charged transaction "represent[ed] the proceeds of some form of unlawful activity" (the knowledge element).

The money-laundering statute does not define "proceeds." When a term is undefined, we give it its ordinary meaning. "Proceeds" can mean either "receipts" or "profits." Both meanings . . . have long been accepted in ordinary usage[, as dictionaries indicate]. "Proceeds," moreover, has not acquired a common meaning in the provisions of the Federal Criminal Code. Most leave the term undefined. Recognizing the word's inherent ambiguity, Congress has defined "proceeds" in various criminal provisions, but sometimes has defined it to mean "receipts" and sometimes "profits."

Since context gives meaning, we cannot say the money-laundering statute is truly ambiguous until we consider "proceeds" not in isolation but as it is used in the money-laundering statute. The word appears repeatedly throughout the statute, but all of those appearances leave the ambiguity intact. Section 1956(a)(1) itself, for instance, makes sense under either [the "receipts" definition or the "profits" definition]. The same is true of all the other provisions of this legislation in which the term "proceeds" is used.

Under either of the word's ordinary definitions, all provisions of the federal money-laundering statute are coherent; no provisions are redundant; and the statute is not rendered utterly absurd. From the face of the statute, there is no more reason to think that "proceeds" means "receipts" than there is to think that "proceeds" means "profits." Under a long line of our

decisions, the tie must go to the defendant. The rule of lenity requires ambiguous criminal laws to be interpreted in favor of the defendants subjected to them. [Case citations omitted.] This venerable rule not only vindicates the fundamental principle that no citizen should be held accountable for a violation of a statute whose commands are uncertain, or subjected to punishment that is not clearly prescribed. It also places the weight of inertia upon the party that can best induce Congress to speak more clearly and keeps courts from making criminal law in Congress's stead. Because the "profits" definition of "proceeds" is always more defendant-friendly than the "receipts" definition, the rule of lenity dictates that it should be adopted.

[The government asserts that] if we do not read "proceeds" to mean "receipts," we will disserve the purpose of the federal money-laundering statute, which is, the government says, to penalize criminals who conceal or promote their illegal activities. [According to] the government's [brief,] "[t]he gross receipts of a crime accurately reflect the scale of the criminal activity, because the illegal activity generated all of the funds."

When interpreting a criminal statute, we do not play the part of a mind-reader. In our seminal rule-of-lenity decision, Chief Justice Marshall rejected the impulse to speculate regarding a dubious congressional intent. "[P]robability is not a guide which a court, in construing a penal statute, can safely take." [Case citation omitted.] And Justice Frankfurter, writing for the Court in another case, said the following: "When Congress leaves to the Judiciary the task of imputing to Congress an undeclared will, the ambiguity should be resolved in favor of lenity." [Case citation omitted.]

The statutory purpose advanced by the government to construe "proceeds" is a textbook example of begging the question. To be sure, if "proceeds" meant "receipts," one could say that the statute was aimed at the dangers of concealment and promotion. But whether "proceeds" means "receipts" is the very issue in the case. If "proceeds" means "profits," one could say that the statute is aimed at the distinctive danger that arises from leaving in criminal hands the yield of a crime. A rational Congress could surely have decided that the risk of leveraging

one criminal activity into the next poses a greater threat to society than the mere payment of crime-related expenses and justifies the money-laundering statute's harsh penalties.

If we accepted the government's invitation to speculate about congressional purpose, we would also have to confront and explain the strange consequence of the "receipts" interpretation, which [Santos and Diaz] have described [in their brief] as a "merger problem." If "proceeds" meant "receipts," nearly every violation of the illegal-lottery statute would also be a violation of the money-laundering statute, because paying a winning bettor is a transaction involving receipts that the defendant intends to promote the carrying on of the lottery. Since few lotteries, if any, will not pay their winners, the statute criminalizing illegal lotteries would "merge" with the money-laundering statute. Congress evidently decided that lottery operators ordinarily deserve up to five years of imprisonment, [as specified in the lottery statute], but as a result of merger they would face an additional 20 years [under the money-laundering statute]. Prosecutors, of course, would acquire the discretion to charge the lesser lottery offense, the greater money-laundering offense, or both—which would predictably be used to induce a plea bargain to the lesser charge.

The merger problem is not limited to lottery operators. For a host of predicate crimes, merger would depend on the manner and timing of payment for the expenses associated with the commission of the crime. Few crimes are entirely free of cost, and costs are not always paid in advance. Anyone who pays for the costs of a crime with its proceeds—for example, the felon who uses the stolen money to pay for the rented getaway car—would violate the money-laundering statute. And any wealth-acquiring crime with multiple participants would become money-laundering when the initial recipient of the wealth gives his confederates their shares.

The government suggests no explanation for why Congress would have wanted a transaction that is a normal part of a crime it had duly considered and appropriately punished elsewhere in the Criminal Code to radically increase the sentence for that crime. Interpreting "proceeds" to mean "profits" eliminates the merger problem. Transactions that normally occur during the course of running a lottery are not identifiable uses of profits and thus do not violate the money-laundering statute. More generally, a criminal who enters into a transaction paying the expenses of his illegal activity cannot possibly violate the money-laundering statute, because by definition profits consist of what remains after expenses are paid. Defraying an activity's costs with its receipts simply will not be covered.

The government also argues for the "receipts" interpretation because—quite frankly—it is easier to prosecute. Proving the proceeds and knowledge elements of the federal money-

laundering offense under the "profits" interpretation will unquestionably require proof that is more difficult to obtain. Essentially, the government asks us to resolve the statutory ambiguity in light of Congress's presumptive intent to facilitate money-laundering prosecutions. That position turns the rule of lenity upside-down. We interpret ambiguous criminal statutes in favor of defendants, not prosecutors.

The money-laundering charges brought against Santos were based on his payments to the lottery winners and his employees, and the money-laundering charge brought against Diaz was based on his receipt of payments as an employee. Neither type of transaction can fairly be characterized as involving the lottery's profits. We accordingly affirm the [lower court decisions to vacate the money-laundering convictions.]

Seventh Circuit Court of Appeals decision affirmed; money-laundering convictions vacated.

Stevens, Justice, concurring in the judgment

When Congress fails to define potentially ambiguous statutory terms, it effectively delegates to federal judges the task of filling gaps in a statute. Congress has included definitions of the term "proceeds" in some criminal statutes, but it has not done so in the money-laundering statute at issue in this case. That statute is somewhat unique because it applies to the proceeds of a varied and lengthy list of specified unlawful activities, [including, among others,] controlled substance violations, murder, bribery, smuggling, various forms of fraud, concealment of assets, various environmental offenses, and health care offenses).

Although it did not do so, it seems clear that Congress could have provided that the term "proceeds" shall have one meaning when referring to some specified unlawful activities and a different meaning when referring to others. We have previously recognized that the same word can have different meanings in the same statute. If Congress could have expressly defined the term "proceeds" differently when applied to different specified unlawful activities, it seems to me that judges filling the gap in a statute with such a variety of applications may also do so, as long as they are conscientiously endeavoring to carry out the intent of Congress.

The consequences of applying a "gross receipts" definition of "proceeds" to the gambling operation conducted by respondents are so perverse that I cannot believe they were contemplated by Congress. The revenue generated by a gambling business that is used to pay the essential expenses of operating that business is not "proceeds" within the meaning of the money-laundering statute. As the plurality notes, there is "no explanation for why Congress would have wanted a transaction that is a normal part of a crime it had duly considered and

appropriately punished elsewhere in the Criminal Code, to radically increase the sentence for that crime.” This conclusion dovetails with what common sense and the rule of lenity would require.

Faced with both a lack of legislative history speaking to the definition of “proceeds” when operating a gambling business

is the “specified unlawful activity” and my conviction that Congress could not have intended the perverse result that would obtain in this case under [the “gross receipts” interpretation], the rule of lenity may weigh in the determination. And in that respect the plurality’s opinion is surely persuasive. Accordingly, I concur in the judgment.

Constitutional Limitations on Power to Criminalize Behavior The U.S. Constitution prohibits *ex post facto* criminal laws. This means that a defendant’s act must have been prohibited by statute at the time she committed it and that the penalty imposed must be the one provided for at the time of her offense.

The Constitution places other limits on legislative power to criminalize behavior. If behavior is constitutionally protected, it cannot be deemed criminal. For example, the **right of privacy** held implicit in the Constitution caused the Supreme Court, in *Griswold v. Connecticut* (1965), to strike down state statutes that prohibited the use of contraceptive devices and the counseling or assisting of others in the use of such devices. This decision provided the constitutional basis for the Court’s historic *Roe v. Wade* (1973) decision, which limited the states’ power to criminalize abortions.

By prohibiting laws that unreasonably restrict **freedom of speech**, the First Amendment plays a major role in limiting governmental power to enact and enforce criminal laws. As explained in Chapter 3, the First Amendment protects a broad range of noncommercial speech, including expression of a political, literary, or artistic nature as well as speech that deals with economic, scientific, or ethical issues or with other matters of public interest or concern. The First Amendment protection for noncommercial speech is so substantial that it is called “full” protection.

Commercial speech, on the other hand, receives a less substantial First Amendment shield known as “intermediate” protection. Does a speaker or writer with a profit motive (e.g., the author who hopes to make money on her book) therefore receive only intermediate First Amendment protection? No, as a general rule, because the mere presence of a profit motive does not keep expression from being fully protected noncommercial speech. Moreover, the commercial speech designation is usually reserved for what the Supreme Court has termed “speech that does no more than propose a commercial transaction.” The best example of commercial speech is an advertisement for a product, service, or business.

Despite receiving less-than-full protection, commercial speech is far from a First Amendment outcast. Recent Supreme Court decisions, as noted in Chapter 3, have effectively raised commercial speech’s intermediate protection to a level near that of full protection. Therefore, regardless of whether it is full or intermediate in strength, the First Amendment protection extended to expression means that governmental attempts to hold persons criminally liable for the content of their written or spoken statements are often unconstitutional.

Some speech falls outside the First Amendment umbrella, however. In a long line of cases, the Supreme Court has established that *obscene* expression receives no First Amendment protection. Purveyors of obscene books, movies, and other similar works may therefore be criminally convicted of violating an obscenity statute even though it is the works’ content (i.e., the speech) that furnishes the basis for the conviction. Expression is obscene only if the government proves each element of the controlling obscenity test, which the Supreme Court established in *Miller v. California* (1973):

- (a) [That] the average person, applying contemporary community standards, would find that the work, taken as a whole, appeals to the prurient interest; (b) [that] the work depicts or describes, in a patently offensive way, [explicit] sexual conduct specifically defined by the applicable state law; and (c) [that] the work, taken as a whole, lacks serious literary, artistic, political, or scientific value.

If any of the three elements is not proven, the work is not obscene; instead, it is entitled to First Amendment protection.

The *Miller* test’s final element is the one most likely to derail the government’s obscenity case against a defendant. Books, movies, and other materials that contain explicit sexual content are not obscene if they have serious literary, artistic, political, or scientific value—and they generally do. In view of the *Miller* test’s final element, moreover, certain publications that might fairly be regarded as “pornographic” are likely to escape being classified as obscene.

Although nonobscene expression carries First Amendment protection, Supreme Court decisions have allowed the government limited latitude to regulate *indecent* speech in order to protect minors from being exposed to such material. Indecent expression contains considerable sexual content but stops short of being obscene, often because of the presence of serious literary, artistic, political, or scientific value (for adults, at least). Assume that a state statute requires magazines available for sale at a store to be located behind a store counter rather than on an unattended display rack, if the magazines feature nudity and sexual content and the store is open to minors. This statute primarily restricts indecent expression because most magazines contemplated by the law are unlikely to be obscene. If the statute is challenged on First Amendment grounds and the court concludes that it is narrowly tailored to further the protection-of-minors purpose, it will survive First Amendment scrutiny. A law that restricts too much expression suitable for adults, however, will violate the First Amendment even if the government's aim was to safeguard minors.

Recent years have witnessed decisions in which the Supreme Court determined the First Amendment fate of statutes designed to protect minors against online exposure to material that is indecent though not obscene. (If the material were obscene, there would be no First Amendment obstacle to banning such material and imposing criminal consequences on those involved in the distribution of it.) In *Reno v. American Civil Liberties Union*, 521 U.S. 844 (1997), the Court struck down most of the Communications Decency Act of 1996 (CDA), which sought to ban Internet distribution of indecent material in a manner that would make the material accessible by minors. The Court reasoned that notwithstanding the statute's protection-of-minors purpose, the sweeping nature of the ban on indecent material extended too far into the realm of expression that adults were entitled to receive. In *Ashcroft v. American Civil Liberties Union*, 542 U.S. 665 (2004), the Court considered the constitutionality of the Child Online Protection Act (COPA), the next congressional attempt to restrict minors' exposure to indecent material in online contexts. According to the Court, the same problem that plagued the CDA—restricting too much expression that adults were entitled to communicate and receive—doomed the COPA to a determination of unconstitutionality.

As noted above, much of the material often referred to as pornography would not be considered obscene under the *Miller* test and thus would normally carry First Amendment protection. Safeguarding-of-minors concerns have proven critical, however, to the very different legal treatment extended to child pornography—

sexually explicit visual depictions of actual minors (as opposed to similar depictions of adults). Because of the obvious dangers and harms that child pornography poses for minors, child pornography has long been held to fall outside the First Amendment's protective umbrella. Therefore, the Supreme Court has held that there is no First Amendment bar to criminal prosecutions for purveying or possessing child pornography. In *Ashcroft v. Free Speech Coalition*, 535 U.S. 234 (2002), the Court decided a constitutional challenge to a statute in which Congress attempted to expand the treatment of child pornography by banning the possession and distribution of material meant to create the impression of minors engaging in sexually explicit conduct, even if the persons actually depicted were adults. The Court struck down this statute because it would reach beyond actual child pornography and would ban expression protected by the First Amendment.

After *Free Speech Coalition* was decided, Congress again took on the child pornography problem in a 2003 enactment, the Protect Act (Prosecutorial Remedies and Other Tools to End the Exploitation of Children Act). This statute criminalized the knowing promotion, distribution, or solicitation, by means of a computer or by any other means, of "material or purported material in a manner that reflects the belief, or that is intended to cause another to believe, that the material or purported material is or contains . . . a visual depiction of an actual minor engaging in sexually explicit conduct." Turning aside the argument that the statute was effectively the same as the law struck down in *Free Speech Coalition*, the Supreme Court held in *United States v. Williams*, 2008 U.S. LEXIS 4314 (2008), that the Protect Act did not violate the First Amendment. Justice Scalia's opinion for a seven-justice majority stressed that the Protect Act's focus on pandering or soliciting distinguished it from the earlier statute. The majority opinion also included considerable interpretive language meant to narrow the application of the statute and minimize potential First Amendment concerns. For a more complete discussion of the Court's reasoning in *Williams*, see the Cyberlaw in Action box in Chapter 3.

In addition to limiting the sorts of behavior that may be made criminal, the Constitution limits the manner in which behavior may be criminalized. The **Due Process** Clauses of the Fifth and Fourteenth Amendments (discussed in Chapter 3) require that criminal statutes define the prohibited behavior precisely enough to enable law enforcement officers and ordinary members of the public to understand which behavior violates the law. Statutes that fail to provide such fair notice may be challenged as unconstitutionally vague. The Fourteenth Amendment's

Equal Protection Clause (also discussed in Chapter 3) prohibits criminal statutes that discriminatorily treat certain persons of the same class or arbitrarily discriminate among different classes of persons. Legislatures usually are extended considerable latitude in making statutory classifications if the classifications have a rational basis. “Suspect” classifications, such as those based on race, are subjected to much closer judicial scrutiny, however.

Finally, the Constitution limits the type of punishment imposed on convicted offenders. The Eighth Amendment

forbids **cruel and unusual punishments**. This prohibition furnishes, for example, the constitutional basis for judicial decisions establishing limits on imposition of the death penalty. Although various Supreme Court cases indicate that the Eighth Amendment may bar a sentence whose harshness is disproportionate to the seriousness of the defendant’s offense, the Court has signaled that any Eighth Amendment concerns along these lines are unlikely to be triggered unless the sentence–crime disproportionality is exceedingly gross.

CYBERLAW IN ACTION

As noted in the text, criminal statutes that do not provide reasonable notice of prohibited behavior may be struck down as unconstitutionally vague. *United States v. Twombly*, 475 F. Supp. 2d 1019 (S.D. Cal. 2007), involved an unsuccessful attempt by criminal defendants to win a void-for-vagueness challenge.

The statute at issue in *Twombly*, 18 U.S.C. § 1037, prohibits a variety of misleading electronic mail-related actions in commercial settings. These include instances in which a person who, with knowledge of doing so, “materially falsifies header information in multiple commercial electronic mail messages and intentionally initiates the transmission of such messages,” § 1037(a)(3), or “registers, using information that materially falsifies the identity of the actual registrant, for five or more electronic mail accounts or online user accounts or two or more domain names, and intentionally initiates the transmission of multiple commercial electronic mail messages from any combination of such accounts or domain names.” § 1037 (a)(4). Violators of these prohibitions may be punished by fines or imprisonment, or both.

In *Twombly*, a criminal indictment charged that Michael Twombly and Joshua Eveloff violated §§ 1037(a)(3) and (a)(4). The government claimed that Twombly leased dedicated servers using an alias, including one server from Biznesshosting, Inc., and that shortly after it provided logon credentials to Twombly, Biznesshosting began receiving complaints regarding spam electronic mail messages originating from its network. These spam messages allegedly numbered approximately 1 million, followed several days later by another 1.5 million. The spam messages contained computer software advertising and directed recipients to the Web site of a company with a Canadian address. The government maintained that this Web site was falsely registered under the name of a nonexistent business, and that the messages’ routing information and “From” lines had been falsified. As a result, the government contended, recipients, Internet service providers, and law enforcement agencies were prevented from identifying, locating, or responding to the senders. When Biznesshosting investigated the complaints, it traced the spam to the server

leased by Twombly. A search conducted by the FBI allegedly uncovered roughly 20 dedicated servers leased by Twombly using false credentials. According to the government, Twombly leased the servers for an unnamed person—later determined to be defendant Eveloff—and received payment from that person for each set of logon credentials provided. Under the government’s theory of the case, both Twombly and Eveloff caused the spam messages to be sent.

Twombly and Eveloff moved for dismissal of the indictment on the ground that §§ 1037(a)(3) and (a)(4) were unconstitutionally vague. Before examining the statutory language at issue, the court outlined basic principles governing void-for-vagueness challenges to criminal statutes. The court noted that in order to avoid being so vague as to violate the Constitution’s Due Process Clause, a criminal statute must give persons of ordinary intelligence fair warning of the conduct being criminalized. Quoting the U.S. Supreme Court’s decision in *Colten v. Kentucky*, 407 U.S. 104 (1972), the court emphasized that “[t]he root of the vagueness doctrine is a rough idea of fairness” and that “[i]t is not a principle designed to convert into a constitutional dilemma the practical difficulties in drawing criminal statutes both general enough to take into account a variety of human conduct and sufficiently specific to provide fair warning that certain kinds of conduct are prohibited.” In addition, the court observed that “the degree of vagueness that the Constitution tolerates depends in part on the nature of the enactment,” that “[e]conomic regulation of businesses is subject to less strict requirements,” and that a statute “threaten[ing] to inhibit the exercise of constitutionally protected rights may . . . require a stricter vagueness test.”

Turning to the statutory language under which the defendants had been charged, the *Twombly* court observed that the meaning of §§ 1037(a)(3) and (a)(4) could be discerned more clearly by reviewing a later subsection, § 1037(d)(2). In § 1037(d)(2), Congress stated that

[f]or purposes of [§§ 1037(a)(3) and (a)(4),] header information or registration information is materially falsified if it is altered or concealed in a manner that would impair the ability of a recipient

of the message, an Internet access service processing the message on behalf of a recipient, a person alleging a violation of this section, or a law enforcement agency to identify, locate, or respond to a person who initiated the electronic mail message or to investigate the alleged violation.

Twombly and Eveloff contended that the meanings of “impair” and “materially,” as explained in § 1037(d)(2), were no less vague than §§ 1037(a)(3) and (a)(4), the provisions § 1037(d)(2) purported to clarify. The defendants argued that a header does not necessarily identify the sender, and that a layperson has little or no ability to trace a sender’s location based on the address. The court acknowledged that e-mail addresses do not necessarily identify the sender by name, but countered by stressing that even if an e-mail address does not necessarily identify the sender, “it does tell a recipient where to send replies to the sender, much in the same way a return address on an envelope [operates].” Thus, the court concluded that “[a] material falsification of header or

registration information can violate [the statute] by hindering a recipient’s ability to respond to the sender of an e-mail,” as set forth in § 1037(d)(2).

Continuing its analysis, the court stated that even if identifying senders by header information may be difficult for many laypeople, the defendants erred in basing their argument “solely on the ability of an individual recipient to identify the sender of spam e-mails.” The court stressed that §§ 1037(a)(3) and (a)(4), as augmented by § 1037(d)(2), “are expressly also designed to protect the ability of internet access services and government agencies to investigate spam.” In “fail[ing] to show that falsified header or registration information would not impair the ability of either of these to investigate the source of spam or identify senders,” the defendants fell short in their challenge to the statute. With the relevant statutory sections having survived the defendants’ vagueness challenge, the court denied the defendants’ motion to dismiss the indictment.

Proof beyond a Reasonable Doubt The serious matters at stake in a criminal case—the life and liberty of the accused—justify our legal system’s placement of significant limits on the government’s power to convict a person of a crime. A fundamental safeguard is the *presumption of innocence*; defendants in criminal cases are presumed innocent until proven guilty. The Due Process Clauses require the government to overcome this presumption by proving beyond a reasonable doubt every element of the offense charged against the defendant.² Requiring the government to meet this stern burden of proof minimizes the risk of erroneous criminal convictions.

Defendant’s Criminal Intent and Capacity Most serious crimes require *mens rea*, or criminal intent, as an element. The level of fault required for a criminal violation depends on the wording of the relevant statute. Many criminal statutes require proof of intentional wrongdoing. Others impose liability for reckless conduct or, in rare instances, mere negligence. In the criminal context, recklessness generally means that the accused consciously disregarded a substantial risk that the harm prohibited by the statute would result from her actions. Negligence means that the accused failed to perceive a substantial risk of harm that a reasonable person would

have perceived. As a general rule, negligent behavior is left to the civil justice system rather than being criminalized. In the *Arthur Andersen* case, which follows shortly, the Supreme Court issues a reminder regarding the importance of the element of criminal intent.

Criminal intent may be inferred from an accused’s behavior, because a person is normally held to have intended the natural and probable consequences of her acts. The intent requirement furthers the criminal law’s general goal of punishing conscious wrongdoers. Accordingly, proof that the defendant had the capacity to form the required intent is a traditional prerequisite of criminal responsibility. The criminal law recognizes three general types of incapacity: *intoxication*, *infancy*, and *insanity*.

Although it is not a complete defense to criminal liability, voluntary intoxication may sometimes diminish the degree of a defendant’s responsibility. For example, many first-degree murder statutes require proof of *premeditation*, a conscious decision to kill. One who kills while highly intoxicated may be incapable of premeditation—meaning that he would not be guilty of first-degree murder. He may be convicted, however, of another homicide offense that does not require proof of premeditation.

The criminal law historically presumed that children younger than 14 years of age (“infants,” for legal purposes) could not form a criminal intent. Today, most states treat juvenile offenders below a certain statutory age—usually 16 or 17—differently from adult offenders, with special juvenile court systems and separate detention facilities. Current juvenile law emphasizes

²The beyond-a-reasonable-doubt standard required of the government in criminal cases contemplates a stronger and more convincing showing than that required of plaintiffs in civil cases. As explained in Chapter 2, plaintiffs in civil cases need only prove the elements of their claims by a preponderance of the evidence.

rehabilitation rather than capacity issues. Repeat offenders or offenders charged with very serious offenses, however, may sometimes be treated as adults.

An accused's insanity at the time the charged act was committed may constitute a complete defense. This possible effect of insanity has generated public dissatis-

faction. The controlling legal test for whether a defendant was insane varies among court systems. The details of the possible tests are beyond the scope of this text. Suffice it to say that as applied by courts, the tests make it a rare case in which the defendant succeeds with an insanity defense.

Arthur Andersen LLP v. United States

544 U.S. 696 (U.S. Sup. Ct. 2005)

In a 1990s move accompanied by aggressive accounting practices, Enron Corporation rapidly expanded beyond its original business of operating natural gas pipelines and became an energy conglomerate. The public accounting firm Arthur Andersen LLP (Andersen) audited Enron's publicly filed financial statements and provided internal audit and consulting services to the corporation. David Duncan headed Andersen's engagement team for Enron.

Enron's financial performance began to suffer in 2000 and worsened during 2001. On August 14, 2001, Enron CEO Jeffrey Skilling unexpectedly resigned. The corporation's former CEO, Kenneth Lay, then reassumed the CEO position. Within days after Skilling's resignation, Sherron Watkins, a senior accountant at Enron, warned Lay that Enron could "implode in a wave of accounting scandals." Watkins also mentioned the looming problems to Duncan and Michael Odom, an Andersen partner who had supervisory responsibility over Duncan. A key concern was Enron's use of "Raptors," which were special purpose entities engaging in "off-balance-sheet" activities. Andersen's engagement team had allowed Enron to "aggregate" the Raptors for accounting purposes so that they reflected a positive return. This was, in the words of an expert who testified in the case described below, a "black-and-white" violation of Generally Accepted Accounting Principles.

An August 28, 2001, Wall Street Journal article suggested improprieties at Enron. That same day, the Securities and Exchange Commission (SEC) opened an informal investigation. By early September, Andersen had formed an Enron "crisis-response" team, which included Nancy Temple, an in-house attorney for Andersen. On October 8, Andersen retained outside counsel to represent it in any litigation that might arise from the Enron matter. The next day, Temple discussed Enron with other in-house attorneys. Her notes from that meeting stated that "some SEC investigation" is "highly probable."

On October 10, Odom spoke at a meeting attended by 89 Andersen employees, including 10 from the Enron engagement team. Odom urged everyone to comply with Andersen's document retention policy. He added: "If [documents are] destroyed in the course of [the] normal policy and litigation is filed the next day, that's great. . . . We've followed our own policy, and whatever there was that might have been of interest to somebody is gone and irretrievable." Andersen's policy on documents called for a single central engagement file, which "should contain only that information which is relevant to supporting our work." The policy stated that "in cases of threatened litigation, . . . no related information will be destroyed." In addition, the policy provided that if Andersen was "advised of litigation or subpoenas regarding a particular engagement, the related information should not be destroyed. See Policy Statement No. 780—Notification of Litigation." Statement No. 780 set forth notification procedures for instances when "professional practice litigation against [Andersen] or any of its personnel has been commenced, has been threatened or is judged likely to occur, or when governmental or professional investigations that may involve [Andersen] or any of its personnel have been commenced or are judged likely."

On October 12, Temple entered the Enron matter into her computer, designating the "Type of Potential Claim" as "Professional Practice—Government/Regulatory Investigation." Temple also e-mailed Odom, suggesting that he "remind the engagement team" of the documents policy. In an October 16 announcement, Enron released its third quarter results and disclosed a \$1.01 billion charge to earnings. The following day, the SEC notified Enron by letter that it had opened an investigation in August. The letter also contained the SEC's request for certain information and documents. On October 19, Enron forwarded a copy of the letter to Andersen.

The Enron crisis-response team held an October 20 conference call, during which Temple instructed everyone to "make sure to follow the [documents] policy." On October 23, Enron CEO Lay declined to answer questions during a call with analysts because of "potential lawsuits, as well as the SEC inquiry." After the call, Duncan met with other Andersen partners on the Enron engagement team and told them that they should ensure team members were complying with the documents policy. During a later meeting for all team members, Duncan distributed the policy and told everyone to comply. These meetings, and other smaller ones, were followed by substantial destruction of paper and electronic documents.

On October 26, an Andersen senior partner circulated, by e-mail, a New York Times article discussing the SEC's response to Enron. His e-mail commented that "the problems are just beginning and we will be in the cross hairs. The marketplace is going to keep the pressure on this and is going to force the SEC to be tough." On October 30, the SEC opened a formal investigation and sent Enron a letter that requested accounting documents.

Throughout this time period, the document destruction continued, despite reservations on the part of some Andersen managers. For example, on October 26, an Andersen partner saw Duncan shredding documents and told him that "this wouldn't be the best time in the world for you guys to be shredding a bunch of stuff." On October 31, a forensics investigator for Andersen met with Duncan. During the meeting, Duncan picked up a document with the words "smoking gun" written on it and began to destroy it, adding that "we don't need this." The forensics investigator cautioned Duncan on the need to maintain documents and later informed Temple that Duncan needed advice regarding the documents policy.

On November 8, Enron announced that it would issue a comprehensive restatement of its earnings and assets. Also on November 8, the SEC served Enron and Andersen with subpoenas for records. The next day, Duncan's secretary sent an e-mail that stated: "Per Dave—No more shredding. . . . We have been officially served for our documents." Enron filed for bankruptcy less than a month later. Andersen fired Duncan, who later pleaded guilty to a criminal charge of witness tampering.

In March 2002, Andersen was indicted in federal court in Texas on one count of violating 18 U.S.C. §§ 1512(b)(2)(A) and (B), which, under the version then in effect, made it a crime if one "knowingly uses intimidation or physical force, threatens, or corruptly persuades another person . . . with intent to . . . cause" that person to "withhold" documents from, or "alter" documents for use in, an "official proceeding." The indictment alleged that, between October 10 and November 9, 2001, Andersen "did knowingly, intentionally and corruptly persuade" its employees to destroy documents so that the documents would not be available for use in "official proceedings, namely regulatory and criminal proceedings and investigations." A jury trial followed, with the jury returning a verdict of guilty. The U.S. Court of Appeals for the Fifth Circuit affirmed, holding that the trial judge's instructions to the jury on controlling principles of law properly conveyed the meaning of "corruptly persuades" for purposes of the relevant federal statute. The U.S. Supreme Court granted Andersen's petition for certiorari.

Rehnquist, Chief Justice

As Enron Corporation's financial difficulties became public in 2001, petitioner Andersen [directed] its employees to destroy documents pursuant to its document retention policy. A jury found that this action made petitioner guilty of violating 18 U.S.C. §§ 1512(b)(2)(A) and (B). The Court of Appeals for the Fifth Circuit affirmed. We hold[, however,] that the jury instructions [given by the trial judge] failed to convey properly the elements of a "corrupt persuasion" conviction under § 1512(b).

Title 18 of the United States Code provides criminal sanctions for those who obstruct justice. Sections 1512(b)(2)(A) and (B), part of the witness tampering provisions, provide in relevant part:

Whoever knowingly uses intimidation or physical force, threatens, or corruptly persuades another person, or attempts to do so, or engages in misleading conduct toward another person, with intent to . . . cause or induce any person to . . . withhold testimony, or withhold a record, document, or other object, from an official proceeding [or] alter, destroy, mutilate, or conceal an object with intent to impair the object's integrity or availability for use in an official proceeding . . . shall be fined under this title or imprisoned not more than ten years, or both.

In this case, our attention is focused on what it means to "knowingly . . . corruptly persuade" another person "with intent to . . . cause" that person to "withhold" documents from, or "alter" documents for use in, an "official proceeding."

"We have traditionally exercised restraint in assessing the reach of a federal criminal statute, both out of deference to the prerogatives of Congress and out of concern that 'a fair warning should be given to the world in language that the common world will understand, of what the law intends to do if a certain line is passed.'" [Citations of quoted cases omitted.] Such restraint is particularly appropriate here, where the act underlying the conviction—"persuasion"—is by itself innocuous. Indeed, "persuading" a person "with intent to . . . cause" that person to "withhold" testimony or documents from a government proceeding or government official is not inherently malign. Consider, for instance, a mother who suggests to her son that he invoke his [constitutional] right against compelled self-incrimination, or a wife who persuades her husband not to disclose marital confidences.

Nor is it necessarily corrupt for an attorney to "persuade" a client "with intent to . . . cause" that client to "withhold" documents from the government. In *Upjohn Co. v. United States*, 449 U.S. 383 (1981), for example, we held that Upjohn was justified in withholding documents that were covered by the

attorney-client privilege from the Internal Revenue Service (IRS). No one would suggest that an attorney who “persuaded” Upjohn to take that step acted wrongfully, even though he surely intended that his client keep those documents out of the IRS’ hands.

Document retention policies, which are created in part to keep certain information from getting into the hands of others, including the government, are common in business. It is, of course, not wrongful for a manager to instruct his employees to comply with a valid document retention policy under ordinary circumstances.

Acknowledging this point, the parties have largely focused their attention on the word “corruptly” as the key to what may or may not lawfully be done in the situation presented here. Section 1512(b) punishes not just “corruptly persuading” another, but “*knowingly* . . . corruptly persuading” another. (Emphasis added.) The government suggests that “knowingly” does not modify “corruptly persuades,” but that is not how the statute most naturally reads. It provides the *mens rea*—“knowingly”—and then a list of acts—“uses intimidation or physical force, threatens, or corruptly persuades.” [In earlier decisions, we] have recognized with regard to similar statutory language that the *mens rea* at least applies to the acts that immediately follow, if not to *other* elements down the statutory chain. The government suggests [in its brief] that it is “questionable whether Congress would employ such an inelegant formulation as ‘knowingly . . . corruptly persuades.’” Long experience has not taught us to share the government’s doubts on this score, and we must simply interpret the statute as written.

The parties have not pointed us to another interpretation of “knowingly . . . corruptly” to guide us here. In any event, the natural meaning of these terms provides a clear answer. “Knowledge” and “knowingly” are normally associated with awareness, understanding, or consciousness. See *Black’s Law Dictionary* 888 (8th ed. 2004) (hereinafter *Black’s*) [and other dictionaries]. “Corrupt” and “corruptly” are normally associated with wrongful, immoral, depraved, or evil. See *Black’s* 371 [and other dictionaries]. Joining these meanings together here makes sense both linguistically and in the statutory scheme. Only persons conscious of wrongdoing can be said to “knowingly . . . corruptly persuade.”

The outer limits of this element need not be explored here because the jury instructions at issue simply failed to convey the requisite consciousness of wrongdoing. Indeed, it is striking how little culpability the instructions required. For example, the jury was told [in the trial judge’s instructions] that “even if [petitioner] honestly and sincerely believed that its conduct was lawful, you may find [petitioner] guilty.” The instructions also diluted the meaning of “corruptly” so that it covered innocent conduct.

The parties vigorously disputed how the jury would be instructed on “corruptly.” The district court based its instruction on the definition of that term found in the Fifth Circuit Pattern Jury Instruction for [18 U.S.C.] § 1503. This pattern instruction defined “corruptly” as “knowingly and dishonestly, with the specific intent to subvert or undermine the integrity” of a proceeding. The government, however, insisted on excluding “dishonestly” and adding the term “impede” to the phrase “subvert or undermine.” The district court agreed over [Andersen’s] objections, and the jury was told to convict if it found petitioner intended to “subvert, undermine, or impede” governmental factfinding by suggesting to its employees that they enforce the document retention policy.

These changes were significant. No longer was any type of “dishonesty” necessary to a finding of guilt, and it was enough for [Andersen] to have simply “impeded” the government’s factfinding ability. As the government conceded at oral argument, “impede” has broader connotations than “subvert” or even “undermine,” and many of these connotations do not incorporate any “corruptness” at all. [A commonly used] dictionary defines “impede” as “to interfere with or get in the way of the progress of” or “hold up” or “detract from.” By definition, anyone who innocently persuades another to withhold information from the government “gets in the way of the progress of” the government. With regard to such innocent conduct, the “corruptly” instructions did no limiting work whatsoever.

[In view of the flawed jury instructions, Andersen’s conviction cannot stand.]

Court of Appeals decision upholding Andersen’s conviction reversed; case remanded for further proceedings.

Criminal Procedure

Criminal Prosecutions: An Overview

Persons arrested for allegedly committing a crime are taken to the police station and booked. *Booking* is an administrative procedure for recording the suspect’s arrest.

In some states, temporary release on bail may be available at this stage. After booking, the police file an arrest report with the prosecutor, who decides whether to charge the suspect with an offense. If she decides to prosecute, the prosecutor prepares a complaint identifying the accused and detailing the charges. Most states require that

arrested suspects be taken promptly before a magistrate or other judicial officer (such as a justice of the peace or judge whose court is of limited jurisdiction) for an *initial appearance*. During this appearance, the magistrate informs the accused of the charges and outlines the accused's constitutional rights. In misdemeanor cases in which the accused pleads guilty, the sentence may be (but need not be) imposed without a later hearing. If the accused pleads not guilty to a misdemeanor charge, the case is set for trial. In felony cases, as well as misdemeanor cases in which the accused pleads not guilty, the magistrate sets the amount of bail.

In many states, defendants in felony cases are protected against unjustified prosecutions by an additional procedural step, the *preliminary hearing*. The prosecutor must introduce enough evidence at this hearing to persuade a magistrate that there is *probable cause* to believe the accused committed a felony.³ If persuaded that probable cause exists, the magistrate binds over the defendant for trial in the appropriate court.

After a bindover, the formal charge against the defendant is filed with the trial court. The formal charge consists of either an *information* filed by the prosecutor or an *indictment* returned by a grand jury. Roughly half of the states require that a grand jury approve the decision to prosecute a person for a felony. Grand juries are bodies of citizens selected in the same manner as the members of a trial (petit) jury; often, they are chosen through random drawings from a list of registered voters. Indictment of an accused prior to a preliminary hearing normally eliminates the need for a preliminary hearing because the indictment serves essentially the same function as a magistrate's probable cause determination.

The remainder of the states allow felony defendants to be charged by either indictment or information, at the prosecutor's discretion. An *information* is a formal charge signed by the prosecutor outlining the facts supporting the charges against the defendant. In states allowing felony prosecution by information, prosecutors elect the information method in the vast majority of felony cases. Misdemeanor cases are prosecuted by information in nearly all states.⁴

³The state need not satisfy the beyond a reasonable doubt standard of proof at the preliminary hearing stage. The prosecutor sufficiently establishes probable cause by causing the magistrate to believe it is more likely than not that the defendant committed the felony alleged.

⁴For federal crimes, a prosecutor in the relevant U.S. Attorney's office files an information to institute the case if the offense involved carries a penalty of not more than one year of imprisonment. Federal prosecutions for more serious crimes with potentially more severe penalties are commenced by means of a grand jury indictment.

Once an information or indictment has been filed with a trial court, an *arraignment* occurs. The defendant is brought before the court, informed of the charges, and asked to enter a plea. The defendant may plead guilty, not guilty, or *nolo contendere*. Although technically not an admission of guilt, *nolo contendere* pleas indicate that the defendant does not contest the charges. This decision by the defendant will lead to a finding of guilt. Unlike evidence of a guilty plea, however, evidence of a defendant's *nolo* plea is inadmissible in later civil cases against that defendant based on the same conduct amounting to the criminal violation. Individuals and corporate defendants therefore may find *nolo* pleas attractive when their chances of mounting a successful defense to the criminal prosecution are poor and the prospect of later civil suits is likely.

At or shortly after the arraignment, the defendant who pleads not guilty chooses the type of trial that will take place. Persons accused of serious crimes for which incarceration for more than six months is possible have a constitutional right to be tried by a jury of their peers. The accused, however, may waive this right and opt for a bench trial (i.e., before a judge only).

Role of Constitutional Safeguards The preceding pages referred to various procedural devices designed to protect persons accused of crime. The Bill of Rights, the first 10 amendments to the U.S. Constitution, sets forth other rights of criminal defendants. These rights guard against unjustified or erroneous criminal convictions and serve as reminders of government's proper role in the administration of justice in a democratic society. Justice Oliver Wendell Holmes aptly addressed this latter point when he said, "I think it less evil that some criminals should escape than that the government should play an ignoble part."

Although the literal language of the Bill of Rights refers only to federal government actions, the U.S. Supreme Court has applied the most important Bill of Rights guarantees to state government actions by "selectively incorporating" those guarantees into the Fourteenth Amendment's due process protection. Once a particular safeguard has been found to be "implicit in the concept of ordered liberty" or "fundamental to the American scheme of justice," it has been applied equally in state and federal criminal trials. This has occurred with the constitutional protections examined earlier in this chapter as well as with the Fourth, Fifth, and Sixth Amendment guarantees discussed in the following pages.

The Fourth Amendment The Fourth Amendment protects persons against arbitrary and unreasonable governmental violations of their privacy rights. It states:

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

Reasonable Expectation of Privacy The Fourth Amendment's language and judicial interpretations of it reflect the difficulties inherent in balancing citizens' legitimate expectations of privacy and government's legitimate interest in securing evidence of wrongdoing. Citizens are not protected against all searches and

seizures—only against unreasonable ones. Because the Fourth Amendment safeguards reasonable privacy expectations, the Supreme Court has extended the amendment's protection to such places or items as private dwellings and immediately surrounding areas (often called the *curtilage*), telephone booths, sealed containers, and first-class mail. The Court has denied protection to places, items, or matters as to which it found no reasonable expectations of privacy, such as open fields, personal bank records, and voluntary conversations between criminal defendants and government informants. In *United States v. Hall*, which follows, the court considered whether a corporation and one of its executives possessed a reasonable expectation of privacy in the contents of garbage bags that had been placed in a dumpster on the corporation's property.

United States v. Hall

47 F.3d 1091 (11th Cir. 1995)

William T. Parks, a special agent of the U.S. Customs Service, was investigating allegations that Bet-Air, Inc. (a Miami-based seller of spare aviation parts and supplies) had supplied restricted military parts to Iran. Parks entered Bet-Air's property and removed, from a garbage dumpster, a bag of shredded documents. The dumpster was located near the Bet-Air offices in a parking area reserved for the firm's employees. To reach the dumpster, Parks had to travel 40 yards on a private paved road. No signs indicated that the road was private. In later judicial proceedings, Parks testified that at the time he traveled on the road, he did not know he was on Bet-Air's property.

When reconstructed, some of the previously shredded documents contained information seemingly relevant to the investigation. Parks used the shredded documents and the information they revealed as the basis for obtaining a warrant to search the Bet-Air premises. In executing the search warrant, Parks and other law enforcement officers seized numerous documents and Bet-Air records.

A federal grand jury later indicted Bet-Air's chairman, Terrence Hall, and other defendants on various counts related to the alleged supplying of restricted military parts to Iran. Contending that the Fourth Amendment had been violated, Hall filed a motion asking the court to suppress (i.e., exclude) all evidence derived from the warrantless search of the dumpster and all evidence seized during the search of the Bet-Air premises (the search pursuant to the warrant). The federal district court denied Hall's motion. Following a jury trial, Hall was convicted on all counts and sentenced to prison. Hall appealed to the 11th Circuit Court of Appeals.

Hatchett, Circuit Judge

In *California v. Greenwood* (1988), the Supreme Court held that a warrantless search and seizure of garbage left in a plastic bag on the curb in front of, but outside the curtilage of, a private house did not violate the Fourth Amendment. The Court held that such a search would only violate the Fourth Amendment if the persons discarding the garbage manifested a subjective expectation of privacy in their garbage that society accepts as objectively reasonable. The Court concluded that Greenwood had exposed his garbage to the public sufficiently to render his subjective expectation of privacy objectively unreasonable.

Hall points to the fact that Parks obtained documents that were shredded, then placed inside a green garbage bag, which was in turn placed inside a garbage dumpster. We believe that the manner in which Bet-Air disposed of its garbage serves only to demonstrate that Bet-Air manifested a subjective expectation of privacy in its discarded garbage. Whether Parks's actions were proscribed by the Fourth Amendment, however, turns on whether society is prepared to accept Bet-Air's subjective expectation of privacy as objectively reasonable.

It is well established that the Fourth Amendment protections apply [not only to residential property but also] to commercial premises. The Supreme Court's treatment of the

expectation of privacy that the owner of commercial property enjoys in such property has differed significantly from the protection accorded an individual's home, [however]. Such distinctions are inevitable given the fundamental difference in the nature and uses of a residence as opposed to commercial property. These distinctions are drawn into sharp focus when, as in this case, the government intrudes into the area immediately surrounding the structure. In order for persons to preserve Fourth Amendment protection in the area immediately surrounding the residence, they must not conduct an activity or leave an object in the plain view of those outside the area. The occupant of a commercial building, in contrast, must take the additional precaution of affirmatively barring the public from the area. The Supreme Court has consistently held that the government is required to obtain a search warrant only when it wishes to search those areas of commercial property from which the public has been excluded.

Relying on the fact that the dumpster was within the "commercial curtilage" of Bet-Air's property and that it could only be accessed by traveling 40 yards on a private road, Hall asserts that the company's subjective expectation of privacy was objectively reasonable. Hall's heavy emphasis on Parks's trespass onto Bet-Air's private property is misplaced. The law of trespass forbids intrusions onto land that the Fourth Amendment would not proscribe. We note that although the road leading to Bet-Air's dumpster was private, the magistrate judge found that no "objective signs of restricted access such as signs, barricades, and the like" were present. Moreover, the magistrate judge also found that at the time Parks traveled the road, he believed it was a public road. [Bet-Air's] failure to exclude the public takes on increased significance when the asserted

Even when plainly protected areas or items are involved, not every governmental action is deemed sufficiently intrusive to constitute a search or seizure for Fourth Amendment purposes. Thus, for example, the Supreme Court held, in *United States v. Place* (1983), that exposing an airline traveler's luggage to a narcotics detection dog in a public place was not a search, considering the minimally intrusive nature of the intrusion and the narrow scope of information it revealed. Relying on *Place*, the Supreme Court concluded in *Illinois v. Caballes* (2005) that no search occurred when law enforcement officers used a drug-sniffing dog on the exterior of a car whose driver had been stopped for speeding. If a law enforcement officer stops an automobile, examines its interior, and sorts through items located there, a search has occurred. Because the driver

expectation of privacy is in discarded garbage. A commercial proprietor incurs a diminished expectation of privacy when garbage is placed in a dumpster which is located in a parking lot that the business shares with other businesses, and no steps are taken to limit the public's access to the dumpster. It is common knowledge that commercial dumpsters have long been a source of fruitful exploration for scavengers.

The Supreme Court used the concept of curtilage in *Hester v. United States* (1924) to distinguish between the area outside a person's house which the Fourth Amendment protects, and the open fields, which are afforded no Fourth Amendment protection. The Supreme Court has not squarely addressed the applicability of the common law concept of curtilage to commercial property. Given the Court's view of the relationship between the Fourth Amendment and commercial premises, however, we have little doubt that were the Court to embrace the so-called "business curtilage" concept, it would, at a minimum, require that the commercial proprietor take affirmative steps to exclude the public. In light of Bet-Air's failure to exclude the public from the area immediately surrounding its offices, we refuse to apply the so-called "business curtilage" concept in this case.

[W]e do not believe that Parks infringed upon any societal values the Fourth Amendment protects when he searched Bet-Air's garbage. Bet-Air did not take sufficient steps to restrict the public's access to its discarded garbage; therefore, its subjective expectation of privacy is not one that society is prepared to accept as objectively reasonable.

District court's denial of Hall's suppression motion affirmed.

of the stopped car has been seized for Fourth Amendment purposes, she has legal standing to challenge the validity of the search. What about a passenger in the stopped vehicle? In *Brendlin v. California*, 127 S. Ct. 2400 (2007), the Supreme Court held that the passenger has also been seized for Fourth Amendment purposes and therefore has standing to challenge the search on Fourth Amendment grounds. As will be seen shortly, however, the search—whether challenged by the driver or by the passenger—may not violate the Fourth Amendment if the law enforcement officer had sufficient justification to stop the vehicle.

Did a search occur when law enforcement officers, operating from a public street, aimed a thermal imaging device at a private home? The Supreme Court addressed that question in the *Kyllo* case, which follows.

Kyllo v. United States

533 U.S. 27 (U.S. Sup Ct. 2001)

Suspicious that marijuana was being grown in Danny Lee Kyllo's home, federal agents used a thermal imaging device to scan his triplex to determine whether the amount of heat emanating from it was consistent with the amount emanated from high-intensity lamps typically used for indoor marijuana growth. The scan showed that Kyllo's roof and a side wall were relatively hot compared to the rest of his home and substantially warmer than the neighboring units. Based in part on the thermal imaging results, a federal magistrate judge issued a warrant to search Kyllo's home, where the agents found marijuana growing. After Kyllo was indicted on a federal drug charge, he unsuccessfully moved to suppress the evidence seized from his home and then entered a conditional guilty plea. The Ninth Circuit Court of Appeals ultimately affirmed, upholding the warrant and holding that the evidence was admissible. Kyllo appealed, and the U.S. Supreme Court granted certiorari.

Scalia, Justice

The Fourth Amendment provides that “the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated.” “At the very core” of the Fourth Amendment “stands the right of a man to retreat into his own home and there be free from unreasonable governmental intrusion.” *Silverman v. United States*, 507 U.S. 990 (1961). With few exceptions, the question whether a warrantless search of a home is reasonable and hence constitutional must be answered no.

On the other hand, the antecedent question of whether or not a Fourth Amendment “search” has occurred is not so simple under our precedent. The lawfulness of warrantless visual surveillance [has long been accepted]. As we observed in *California v. Ciraolo*, 476 U.S. 207, 213 (1986), “the Fourth Amendment protection of the home has never been extended to require law enforcement officers to shield their eyes when passing by a home on public thoroughfares.”

One might think that examining the portion of a house that is in plain public view [amounts to] a “search,” [though] not an “unreasonable” one under the Fourth Amendment. But in fact we have held that visual observation is no “search” at all—perhaps in order to preserve somewhat more intact our doctrine that warrantless searches are presumptively unconstitutional. In assessing when a search is not a search, we have applied somewhat in reverse the principle first enunciated in *Katz v. United States*, 389 U.S. 347 (1967). *Katz* involved eavesdropping by means of an electronic listening device placed on the outside of a telephone booth—a location not within the catalog (“persons, houses, papers, and effects”) that the Fourth Amendment protects against unreasonable searches. We held that the Fourth Amendment nonetheless protected *Katz* from the warrantless eavesdropping because he justifiably relied upon the privacy of the telephone booth. As Justice Harlan’s oft-quoted concurrence described it, a Fourth Amendment search occurs when the government violates a subjective expectation of privacy that society recognizes as reasonable. We have subsequently applied this principle to hold that a Fourth Amendment

search does *not* occur—even when the explicitly protected location of a *house* is concerned—unless “the individual manifested a subjective expectation of privacy in the object of the challenged search,” and “society [is] willing to recognize that expectation as reasonable.” *Ciraolo*, 476 U.S. at 211. We have applied this test in holding that it is not a search for the police to use a pen register at the phone company to determine what numbers were dialed in a private home, and we have applied the test on two different occasions in holding that aerial surveillance of private homes and surrounding areas does not constitute a search.

The present case involves officers on a public street engaged in more than naked-eye surveillance of a home. We have previously reserved judgment as to how much technological enhancement of ordinary perception from such a vantage point, if any, is too much. While we upheld enhanced aerial photography of an industrial complex in *Dow Chemical Co. v. United States*, 476 U.S. 227 (1986), we noted that we found it “important that this is *not* an area immediately adjacent to a private home, where privacy expectations are most heightened.” *Id.* at 237, n. 4. It would be foolish to contend that the degree of privacy secured to citizens by the Fourth Amendment has been entirely unaffected by the advance of technology. The question we confront today is what limits there are upon this power of technology to shrink the realm of guaranteed privacy.

The *Katz* test—whether the individual has an expectation of privacy that society is prepared to recognize as reasonable—has often been criticized as circular, and hence subjective and unpredictable. While it may be difficult to refine *Katz* when the search of areas such as telephone booths, automobiles, or even the curtilage and uncovered portions of residences are at issue, in the case of the search of the interior of homes—the prototypical and hence most commonly litigated area of protected privacy—there is a ready criterion, with roots deep in the common law, of the [minimum] expectation of privacy that *exists*, and that is acknowledged to be *reasonable*. To withdraw protection of this minimum expectation would

be to permit police technology to erode the privacy guaranteed by the Fourth Amendment. We think that obtaining by sense-enhancing technology any information regarding the interior of the home that could not otherwise have been obtained without physical “intrusion into a constitutionally protected area,” *Silverman*, 507 U.S. at 512, constitutes a search—at least where (as here) the technology in question is not in general public use. This assures preservation of that degree of privacy against government that existed when the Fourth Amendment was adopted. On the basis of this criterion, the information obtained by the thermal imager in this case was the product of a search.

The Government maintains, however, that the thermal imaging must be upheld because it detected “only heat radiating from the external surface of the house.” [However,] just as a thermal imager captures only heat emanating from a house, so also a powerful directional microphone picks up only sound emanating from a house and a satellite capable of scanning from many miles away would pick up only visible light emanating from a house. We rejected such a mechanical interpretation of the Fourth Amendment in *Katz*, where the eavesdropping device picked up only sound waves that reached the exterior of the phone booth. Reversing that approach would leave the homeowner at the mercy of advancing technology—including imaging technology that could discern all human activity in the home. While the technology used in the present case was relatively crude, the rule we adopt must take account of more sophisticated systems that are already in use or in development.

The Government also contends that the thermal imaging was constitutional because it did not “detect private activities occurring in private areas.” It points out that in *Dow Chemical* we observed that the enhanced aerial photography did not reveal any “intimate details.” *Dow Chemical*, however, involved enhanced aerial photography of an industrial complex, which does not share the Fourth Amendment sanctity of the home. The Fourth Amendment’s protection of the home has never been tied to measurement of the quality or quantity of information obtained. In *Silverman*, for example, we made clear that any physical invasion of the structure of the home, “by even a fraction of an inch,” was too much, and there is certainly no exception to the warrant requirement for the officer who barely cracks open the front door and sees nothing but the nonintimate rug on the vestibule floor. In the home, our cases show, *all* details are intimate details, because the entire area is held safe from prying government eyes.

Limiting the prohibition of thermal imaging to “intimate details” would not only be wrong in principle; it would be impractical in application, failing to provide “a workable

accommodation between the needs of law enforcement and the interests protected by the Fourth Amendment,” *Oliver v. United States*, 466 U.S. 170, 181 (1984). To begin with, there is no necessary connection between the sophistication of the surveillance equipment and the “intimacy” of the details that it observes—which means that one cannot say (and the police cannot be assured) that use of the relatively crude equipment at issue here will always be lawful. The Agema Thermovision 210 might disclose, for example, at what hour each night the lady of the house takes her daily sauna and bath—a detail that many would consider “intimate”; and a much more sophisticated system might detect nothing more intimate than the fact that someone left a closet light on. We could not, in other words, develop a rule approving only that through-the-wall surveillance which identifies objects no smaller than 36 by 36 inches, but would have to develop a jurisprudence specifying which home activities are “intimate” and which are not. And even when (if ever) that jurisprudence were fully developed, no police officer would be able to know *in advance* whether his through-the-wall surveillance picks up “intimate” details—and thus would be unable to know in advance whether it is constitutional.

We have said that the Fourth Amendment draws “a firm line at the entrance to the house.” *Payton v. New York*, 445 U.S. 573, 590 (1980). That line, we think, must be not only firm but also bright—which requires clear specification of those methods of surveillance that require a warrant. While it is certainly possible to conclude from the videotape of the thermal imaging that occurred in this case that no “significant” compromise of the homeowner’s privacy has occurred, we must take the long view, from the original meaning of the Fourth Amendment forward. “The Fourth Amendment is to be construed in the light of what was deemed an unreasonable search and seizure when it was adopted, and in a manner which will conserve public interests as well as the interests and rights of individual citizens.” *Carroll v. United States*, 267 U.S. 132, 149 (1925).

Where, as here, the Government uses a device that is not in general public use, to explore details of the home that would previously have been unknowable without physical intrusion, the surveillance is a “search” and is presumptively unreasonable without a warrant. Since we hold the Thermovision imaging to have been an unlawful search, it will remain for the District Court to determine whether, without the evidence it provided, the search warrant issued in this case was supported by probable cause.

Judgment of Ninth Circuit Court of Appeals reversed and case remanded for further proceedings.

Warrant Requirement and Exceptions In its treatment of the Fourth Amendment's warrant clause, the Supreme Court has engaged in similar balancing of individual and governmental interests. The warrant requirement further protects privacy interests by mandating that a judge or magistrate authorize and define the scope of intrusive governmental action. As a general rule, the Court has held that searches carried out without a proper warrant are unreasonable.

Nevertheless, the Court has devised a lengthy list of exceptions to this general rule. Warrantless searches of the arrestee himself, of items of property in his possession, and of the area within his immediate control have long been upheld, assuming the arrest was supported by probable cause. In *Virginia v. Moore*, 128 S. Ct. 1598 (2008), the Court reiterated this exception to the warrant requirement and held that the exception applies even when the arrest violates a procedure set by otherwise applicable state law, as long as there was probable cause for the arrest. The Court has also upheld warrantless searches of premises police enter in hot pursuit of an armed suspect, and of motor vehicles (and containers located therein) when the vehicle has been stopped by law enforcement officers for sufficient reason. The mobile nature of motor vehicles furnishes the justification for this exception to the warrant requirement. Warrantless seizures of contraband items in the plain view of officers acting lawfully have likewise been upheld. The same is true of customs searches, stop-and-frisk searches for weapons, and administrative inspections of closely regulated businesses, despite the absence of a warrant in each of these instances.

Finally, consensual searches without warrants do not violate the Fourth Amendment. For instance, if a homeowner consents to a search of her home, the search is considered to be reasonable. If there are co-occupants of a residence and any co-occupant gives law enforcement officers consent to search the property, the consent of that co-occupant will normally insulate the search against a Fourth Amendment challenge brought by a nonpresent and nonconsenting occupant. However, as the Supreme Court recognized in *Georgia v. Randolph*, 547 U.S. 103 (2006), the consent to search given by one co-occupant of a residence does not protect the search against a Fourth Amendment challenge by another

co-occupant who was present at the time of the search and objected to its occurrence.

Exclusionary Rule The exclusionary rule serves as the basic remedial device in cases of Fourth Amendment violations. Under this judicially crafted rule, evidence seized in illegal searches cannot be used in a subsequent trial against an accused whose constitutional rights were violated.⁵ In addition, if information obtained in an illegal search leads to the later discovery of further evidence, that further evidence is considered “fruit of the poisonous tree” and is therefore excluded from use at trial under the rule established in *Wong Sun v. United States* (1963). Because the exclusionary rule may result in suppression of convincing evidence of crime, it has generated controversy. The rule's supporters regard it as necessary to deter police from violating citizens' constitutional rights. The rule's opponents assert that it has no deterrent effect on police who believed they were acting lawfully. A loudly voiced complaint in some quarters has been that “because of a policeman's error, a criminal goes free.”

During roughly the past 25 years, the Court has responded to such criticism by rendering decisions that restrict the operation of the exclusionary rule. For example, the Court has held that illegally obtained evidence may be introduced at trial if the prosecution convinces the trial judge that the evidence would inevitably have been obtained anyway by lawful means. The Court has also created a “good faith” exception to the exclusionary rule. This exception allows the use of evidence seized by police officers who acted pursuant to a search warrant later held invalid if the officers reasonably believed that the warrant was valid. Although the Court has not extended the good faith exception to the warrantless search setting, it has expanded the exception's scope to include searches made in reliance on a statute that is later declared invalid.

Hudson v. Michigan, which follows, illustrates recent years' narrowing in the application of the exclusionary rule.

⁵The Supreme Court initially authorized application of the exclusionary rule in federal criminal cases only. In *Mapp v. Ohio* (1961), the Court made the exclusionary rule applicable to state criminal cases as well.

Hudson v. Michigan

547 U.S. 586 (U.S. Sup. Ct. 2006)

Police obtained a warrant authorizing a search for drugs and firearms at the home of Booker Hudson. When the officers arrived to execute the warrant, they announced their presence but waited only a short time—perhaps three to five seconds—before turning the knob of the unlocked front door and entering Hudson's home. Once inside the home, the officers

discovered large quantities of drugs. They also found a loaded gun lodged between the cushion and armrest of the chair in which Hudson was sitting. Hudson was charged under Michigan law with unlawful drug and firearm possession.

Arguing that the officers' premature entry into his home violated the "knock-and-announce" rule and therefore his Fourth Amendment rights, Hudson moved for suppression of the drugs and the gun. (In other words, Hudson's motion sought a court order that the drugs and the gun discovered by the officers not be allowed as evidence at trial.) The Michigan trial court granted his motion, but the Michigan Court of Appeals reversed the suppression order. After the Michigan Supreme Court denied leave to appeal, Hudson was convicted of drug possession. He renewed his Fourth Amendment claim on appeal, but the Court of Appeals rejected it and affirmed the conviction. After the Michigan Supreme Court again declined review, the U.S. Supreme Court granted Hudson's petition for a writ of certiorari.

Scalia, Justice

We [must] decide whether violation of the "knock-and-announce" rule requires the suppression of all evidence found in the search.

The common-law principle that law enforcement officers must announce their presence and provide residents an opportunity to open the door is an ancient one. See *Wilson v. Arkansas*, 514 U.S. 927 (1995). Since 1917, . . . this traditional protection has been part of federal statutory law. In *Wilson*, we were asked whether the rule was also a command of the Fourth Amendment. Tracing its origins in our English legal heritage, we concluded that it was.

When the knock-and-announce rule does apply, it is not easy to determine precisely what officers must do. How many seconds' wait are too few? Our "reasonable wait time" standard, see *United States v. Banks*, 540 U.S. 31 (2003), is necessarily vague. *Banks* (a drug case, like this one) held that the proper measure was not how long it would take the resident to reach the door, but how long it would take to dispose of the suspected drugs—but that such a time (15 to 20 seconds in that case) would necessarily be extended when, for instance, the suspected contraband was not easily concealed. If our *ex post* evaluation is subject to such calculations, it is unsurprising that, *ex ante*, police officers about to encounter someone who may try to harm them will be uncertain how long to wait.

Happily, these issues do not confront us here. From the trial level onward, Michigan has conceded that the entry was a knock-and-announce violation. The issue here is remedy. *Wilson* specifically declined to decide whether the exclusionary rule is appropriate for violation of the knock-and-announce requirement. That question is squarely before us now.

In *Weeks v. United States*, 232 U.S. 383 (1914), we adopted the federal exclusionary rule for evidence that was unlawfully seized from a home without a warrant in violation of the Fourth Amendment. We began applying the same rule to the States, through the Fourteenth Amendment, in *Mapp v. Ohio*, 367 U.S. 643 (1961).

Suppression of evidence, however, has always been our last resort, not our first impulse. The exclusionary rule generates "substantial social costs," which sometimes include setting the

guilty free and the dangerous at large. We have therefore been "cautio[us] against expanding" it. [Case citations omitted.] We have rejected indiscriminate application of the rule, and have held it to be applicable only "where its remedial objectives are thought most efficaciously served"—that is, "where its deterrence benefits outweigh its 'substantial social costs.'" [Case citations omitted.]

We did not always speak so guardedly. Expansive dicta in *Mapp*, for example, suggested wide scope for the exclusionary rule. ("[A]ll evidence obtained by searches and seizures in violation of the Constitution is, by that same authority, inadmissible in a state court.") But we have long since rejected that [sweeping] approach. [More recently, we have noted that] "whether the exclusionary sanction is appropriately imposed in a particular case, . . . is 'an issue separate from the question whether the Fourth Amendment rights of the party seeking to invoke the rule were violated by police conduct.'" [Case citations omitted.]

[C]ases excluding the fruits of unlawful warrantless searches say nothing about the appropriateness of exclusion to vindicate the interests protected by the knock-and-announce requirement. Until a valid warrant has issued, citizens are entitled to shield "their persons, houses, papers, and effects," U.S. Const., Amdt. 4, from the government's scrutiny. Exclusion of the evidence obtained by a warrantless search vindicates that entitlement. The interests protected by the knock-and-announce requirement are quite different—and do not include the shielding of potential evidence from the government's eyes.

One of those interests is the protection of human life and limb, because an unannounced entry may provoke violence in supposed self-defense by the surprised resident. Another interest is the protection of property. The knock-and-announce rule gives individuals "the opportunity to comply with the law and to avoid the destruction of property occasioned by a forcible entry." [Case citation omitted.] And thirdly, the knock-and-announce rule protects those elements of privacy and dignity that can be destroyed by a sudden entrance. [It] assures the opportunity to collect oneself before answering the door.

What the knock-and-announce rule has never protected, however, is one's interest in preventing the government from

seeing or taking evidence described in a warrant. Since the interests that were violated in this case have nothing to do with the seizure of the evidence, the exclusionary rule is inapplicable.

[T]he exclusionary rule has never been applied except “where its deterrence benefits outweigh its ‘substantial social costs.’” [Case citations omitted.] The costs here are considerable. In addition to the grave adverse consequence that exclusion of relevant incriminating evidence always entails (viz., the risk of releasing dangerous criminals into society), imposing that massive remedy for a knock-and-announce violation would generate a constant flood of alleged failures to observe the rule, and claims that any asserted justification for a no-knock entry had inadequate support. The cost of entering this lottery would be small, but the jackpot enormous: suppression of all evidence, amounting in many cases to a get-out-of-jail-free card. Courts would experience as never before the reality that “[t]he exclusionary rule frequently requires extensive litigation to determine whether particular evidence must be excluded.” [Case citation omitted.] Unlike the warrant or *Miranda* requirements, compliance with which is readily determined . . . , what constituted a reasonable wait time in a particular case [or whether there were suitable justifications for a failure to knock and announce], is difficult for the trial court to determine and even more difficult for an appellate court to review.

Next to these substantial social costs we must consider the deterrence benefits, existence of which is a necessary condition for exclusion. [T]he value of deterrence depends upon the strength of the incentive to commit the forbidden act. Viewed from this perspective, deterrence of knock-and-announce violations is not worth a lot. Violation of the warrant requirement sometimes produces incriminating evidence that could not otherwise be obtained. But ignoring knock-and-announce can realistically be expected to achieve absolutely nothing except the prevention of destruction of evidence and the avoidance of life-threatening resistance by occupants of the premises—dangers which, if there is even “reasonable suspicion” of their existence, suspend the knock-and-announce requirement anyway. Massive deterrence is hardly required.

It seems to us not even true, as Hudson contends, that without suppression there will be no deterrence of knock-and-announce violations at all. Assuming [for the sake of argument] that civil suit [against the police officers] is not an effective deterrent, one can think of many forms of police misconduct that are similarly “undeterred.” When, for example, a confessed suspect in the killing of a police officer, arrested (along with incriminating evidence) in a lawful warranted search, is subjected to physical abuse at the station house, would it seriously be suggested that the evidence must be excluded, since that is

the only “effective deterrent”? And what, other than civil suit, is the effective deterrent of police violation of an already-confessed suspect’s Sixth Amendment rights by denying him prompt access to counsel? Many would regard these violated rights as more significant than the right not to be intruded upon in one’s nightclothes—and yet nothing but “ineffective” civil suit is available as a deterrent.

We cannot assume that exclusion in this context is necessary deterrence simply because we found that it was necessary deterrence in different contexts and long ago. That would be forcing the public today to pay for the sins and inadequacies of a legal regime that existed almost half a century ago.

[Hudson’s attorney asserted at oral argument that] “it would be very hard to find a lawyer to take a [civil rights case against police officers who violated the knock-and-announce rule]” but 42 U.S.C. § 1988(b) answers this objection. Since some civil-rights violations would yield damages too small to justify the expense of litigation, Congress has authorized attorney’s fees for civil-rights plaintiffs. This remedy was unavailable in the heydays of our exclusionary-rule jurisprudence, because it is tied to the availability of a cause of action. For years after *Mapp*, “very few lawyers would even consider representation of persons who had civil rights claims against the police,” but now “much has changed. Citizens and lawyers are much more willing to seek relief in the courts for police misconduct.” [Citation of authority omitted.] The number of public-interest law firms and lawyers who specialize in civil-rights grievances has greatly expanded.

Hudson points out that few published decisions to date announce huge awards for knock-and-announce violations. [However, it] is clear, at least, that the lower courts are allowing colorable knock-and-announce suits [for damages and potentially large attorney’s fees] to go forward. As far as we know, civil liability is an effective deterrent here.

Another development over the past half-century that deters civil-rights violations is the increasing professionalism of police forces, including a new emphasis on internal police discipline. [W]e now have increasing evidence that police forces across the United States take the constitutional rights of citizens seriously. Numerous sources are now available to teach officers and their supervisors what is required of them under this Court’s cases, how to respect constitutional guarantees in various situations, and how to craft an effective regime for internal discipline. Failure to teach and enforce constitutional requirements exposes municipalities to financial liability. Moreover, modern police forces are staffed with professionals; it is not credible to assert that internal discipline, which can limit successful careers, will not have a deterrent effect. There is also evidence that the increasing use of various forms of citizen review can enhance police accountability.

In sum, the social costs of applying the exclusionary rule to knock-and-announce violations are considerable; the incentive to such violations is minimal to begin with, and the extant deterrents against them are substantial—incomparably greater than the factors deterring warrantless entries when *Mapp* was decided. Resort to the massive remedy of suppressing evidence of guilt is unjustified.

Judgment of Michigan Court of Appeals affirmed.

Kennedy, Justice, concurring in part and concurring in the judgment

Two points should be underscored with respect to today's decision. First, the knock-and-announce requirement protects rights and expectations linked to ancient principles in our constitutional order. The Court's decision should not be interpreted as suggesting that violations of the requirement are trivial or beyond the law's concern. Second, the continued operation of the exclusionary rule, as settled and defined by our precedents, is not in doubt. Today's decision determines only that in the specific context of the knock-and-announce requirement, a

violation is not sufficiently related to the later discovery of evidence to justify suppression.

Breyer, Justice, with whom Justices Stevens, Souter, and Ginsburg join, dissenting

In *Wilson v. Arkansas*, a unanimous Court held that the Fourth Amendment normally requires law enforcement officers to knock and announce their presence before entering a dwelling. Today's opinion holds that evidence seized from a home following a violation of this requirement need not be suppressed. As a result, the Court destroys the strongest legal incentive to comply with the Constitution's knock-and-announce requirement. And the Court does so without significant support in precedent. At least I can find no such support in the many Fourth Amendment cases the Court has decided in the near century since it first set forth the exclusionary principle.

Today's opinion is thus doubly troubling. It represents a significant departure from the Court's precedents. And it weakens, perhaps destroys, much of the practical value of the Constitution's knock-and-announce protection.

The Global Business Environment

If an arrestee who is a foreign national makes incriminating statements to law enforcement authorities without having been informed of his right under an international agreement to have his detention reported to his country's consulate, does the exclusionary rule apply? The U.S. Supreme Court confronted that question in *Sanchez-Llamas v. Oregon*, 548 U.S. 331 (2006).

The relevant international agreement in *Sanchez-Llamas* was the Vienna Convention on Consular Relations, which was drafted in 1963 with the purpose, as set forth in its preamble, of “contribut[ing] to the development of friendly relations among nations, irrespective of their differing constitutional and social systems.” Approximately 170 countries have subscribed to the Vienna Convention. The United States became a party to it in 1969. Article 36 of the Vienna Convention provides that “if he so requests, the competent authorities of the receiving State shall, without delay, inform the consular post of the sending State if, within its consular district, a national of that State is arrested or committed to prison or to custody pending trial or is detained in any other manner.” Thus, when a national of one country is detained by authorities in another, the authorities must notify the consular officers of the detainee's home country if the detainee so requests. Article 36 further provides that “[t]he said authorities shall inform the [detainee] without delay of his rights under this sub-paragraph.” The Convention also

states that the rights provided by Article 36 “shall be exercised in conformity with the laws and regulations of the receiving State, subject to the proviso, however, that the said laws and regulations must enable full effect to be given to the purposes for which the rights accorded under this Article are intended.”

Moises Sanchez-Llamas, a Mexican national, was arrested in Oregon in 1999 for alleged involvement in an exchange of gunfire in which a police officer was wounded. Following the arrest, police officers gave Sanchez-Llamas the *Miranda* warnings in both English and Spanish. However, the officers did not inform Sanchez-Llamas that he could ask to have the Mexican Consulate notified of his detention. Article 36 of the Vienna Convention was thus violated. During the interrogation that followed the issuance of the *Miranda* warnings, Sanchez-Llamas made incriminating statements that led to attempted murder charges, as well as various other charges, against him. After he made the incriminating statements and the formal charges were filed, Sanchez-Llamas learned of his Article 36 rights. He then moved for suppression of his incriminating statements (i.e., for an order that those statements be excluded from evidence at the trial) because of the Article 36 violation. The Oregon trial court denied the suppression motion. Sanchez-Llamas was convicted and sentenced to prison. After the appellate courts in Oregon affirmed, the U.S. Supreme Court agreed to decide the case.

Assuming that—but without deciding whether—individuals have a right to invoke Article 36 in a judicial proceeding (as opposed to nations enforcing the Convention through political or other appropriate channels), the Supreme Court held in *Sanchez-Llamas* that the exclusionary rule was not a proper remedy for an Article 36 violation. The Court noted that the Vienna Convention itself said nothing about the exclusionary rule as a remedy. Instead, through the statement that Article 36 rights are to be “exercised in conformity with the laws and regulations of the receiving State,” the Convention left the implementation of Article 36 to domestic law. The Court stated that it “would be startling” if the Convention were interpreted as requiring suppression of evidence as a remedy for an Article 36 violation, because “[t]he exclusionary rule as we know it is an entirely American legal creation.” The Court stressed that there was “no reason to suppose that Sanchez-Llamas would be afforded the relief he seeks here in any of the other 169 countries party to the Vienna Convention.” (Presumably, then, a U.S. national should not assume that the exclusionary rule will apply to his case if he is arrested in another Vienna Convention nation and makes incriminating statements to law enforcement officers without having been informed of his Article 36 rights.)

The Court emphasized that “[b]ecause the [exclusionary] rule’s social costs are considerable, suppression is warranted only where the rule’s “remedial objectives are thought most efficaciously served.” [Case citations omitted.] The Court emphasized that “[w]e have applied the exclusionary rule primarily to deter constitutional violations”—normally those involving unreasonable searches in violation of the Fourth

Amendment or incriminating statements of accused persons whose Fifth Amendment rights had been violated because their confessions were not voluntary or because they had not been given the *Miranda* warnings. No such problems attended the incriminating statements made by Sanchez-Llamas. From the Court’s perspective, “[t]he violation of the right to consular notification . . . is at best remotely connected to the gathering of evidence,” and “there is likely to be little connection between an Article 36 violation and evidence or statements obtained by police.” The Court reasoned that even if law enforcement officers fail to provide detained foreign nationals notice of their Article 36 rights, the same general interests served by Article 36 would be safeguarded by other protections available to persons in the situation in which Sanchez-Llamas found himself. The Court stressed that “[a] foreign national detained on suspicion of crime, like anyone else in our country, enjoys under our system the protections of the Due Process Clause[,] . . . is entitled to an attorney, and is protected against compelled self-incrimination.”

Finally, the Court stated that Vienna Convention rights could be vindicated in ways other than suppression of evidence. The Court observed that a defendant could make an Article 36 argument “as part of a broader challenge to the voluntariness of his statements to police,” and that if a defendant alludes to a supposed Article 36 violation at trial, “a court can make appropriate accommodations to ensure that the defendant secures, to the extent possible, the benefits of consular assistance.” Having concluded that the exclusionary rule was not an appropriate remedy for the Article 36 violation at issue, the Court upheld the conviction of Sanchez-Llamas.

The USA PATRIOT Act Approximately six weeks after the September 11, 2001, terrorist attacks on the United States, Congress enacted the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act. This statute, commonly known as the USA PATRIOT Act or as simply the Patriot Act, contains numerous and broad-ranging provisions designed to protect the public against international and domestic terrorism.

Included in the Patriot Act are measures allowing the federal government significantly expanded ability, in terrorism-related investigations, to conduct searches of property, monitor Internet activities, and track electronic communications. Most, though not all, actions of that nature require a warrant from a special court known as the Foreign Intelligence Surveillance Court. The statute contemplates, however, that such warrants may be issued upon less of a showing by the government than would ordinarily be required, and may be more sweeping than usual in terms of geographic application. Moreover,

warrants issued by the special court for the search of property can be of the so-called “sneak and peek” variety, under which the FBI need not produce the warrant for the property owner or possessor to see and need not notify an absent property owner or possessor that the search took place (unlike the rules typically applicable to execution of “regular” warrants).

The Patriot Act also calls for banks to report seemingly suspicious monetary deposits, as well as any deposits exceeding \$10,000, not only to the Treasury Department (as required by prior law) but also to the Central Intelligence Agency and other federal intelligence agencies. In addition, the statute enables federal law enforcement authorities to seek a Surveillance Court warrant for the obtaining of individuals’ credit, medical, and student records, regardless of state or federal privacy laws that would otherwise have applied.

Commentators critical of the Patriot Act have argued that despite the importance of safeguarding the public against acts of terrorism, the statute tips the balance too

heavily in favor of law enforcement. They have characterized the statute's definition of "domestic terrorism" as so broad that various suspected activities not normally regarded as terrorism (or as harboring or aiding terrorists) could be considered as such for purposes of the federal government's expanded investigatory tools. If that happens, the critics contend, Fourth Amendment and other constitutional rights may easily be subverted. Others with reservations about the statute maintain that its allowance of expanded monitoring of Internet activities and electronic communications and its provisions for retrieval of library records and other records normally protected by privacy laws could give the government ready access to communications and private information of many wholly innocent persons. Two federal district courts gave added voice to such concerns with 2007 decisions holding portions of the Patriot Act unconstitutional. As of the time this book went to press in 2008, appeals were pending in those cases.

In apparent recognition of the extraordinary action it was taking in a time of national crisis, Congress included provisions stating that unless renewed, portions of the statute would expire at the end of 2005. Congress also included provisions requiring the attorney general to report to Congress on the use of the enhanced investigatory powers. Congress later renewed the bulk of the Patriot Act—meaning that it will remain in force for the foreseeable future unless those who have raised civil liberties concerns about it can succeed in cutting back its scope and application.

The expanded investigatory tools provided by the Patriot Act have existed alongside those provided by an older statute, the Foreign Intelligence Surveillance Act (FISA), which was enacted long before the September 11, 2001, attacks and has been amended various times both before and since. Under FISA, monitoring of a suspected terrorist's electronic communications generally required that an individualized warrant be obtained from the previously mentioned Foreign Intelligence Surveillance Court (FISA Court), which operates in secret and whose decisions, unlike those of other courts, are not published. Applications for warrants from the FISA Court have historically been approved a very high percentage of the time.

In December 2005, it was revealed that the Bush Administration had implemented a program of monitoring telephone calls of suspected terrorists when one party to the conversation was located outside the United States. This monitoring had occurred without an attempt by the government to obtain warrants from the FISA Court. Critics of this action by the government complained that

it violated not only FISA but also the Fourth Amendment. The Bush Administration took the position, however, that the monitoring program was within the inherent powers of the executive branch. Disputes over the validity of the monitoring program led to discussions over possible amendments to strengthen or loosen FISA's requirements. These discussions resulted in a temporary amendment under which the FISA Court could issue blanket warrants for electronic monitoring of groups of terrorism suspects for set periods of time (as opposed to the previous sole option of individualized warrants). With such loosening of what it saw as FISA's constraints, the Bush Administration shut down its warrantless monitoring program and resumed going to the FISA Court for warrants. As this book went to press in 2008, Congress had just enacted a further amendment to FISA. This amendment expanded the government's ability to monitor the phone calls of suspected terrorists, established FISA's requirement of warrants from the FISA Court as the exclusive way of exercising this surveillance power, and provided immunity from legal liability for telephone companies that had assisted the Bush Administration in the phone call monitoring activities for which FISA Court warrants had not been obtained.

The Fifth Amendment The Fifth and Fourteenth Amendments' Due Process Clauses guarantee basic procedural and substantive fairness to criminal defendants. The Due Process Clauses are discussed earlier in this chapter and in Chapter 3.

Privilege against Self-Incrimination In another significant provision, the Fifth Amendment protects against *compelled testimonial self-incrimination* by establishing that "[n]o person . . . shall be compelled in any criminal case to be a witness against himself." This provision prevents the government from coercing a defendant into making incriminating statements and thereby assisting in his own prosecution.

In *Miranda v. Arizona* (1966), the Supreme Court established procedural requirements—the now-familiar *Miranda* warnings—to safeguard this Fifth Amendment right and other constitutional guarantees. The Court did so by requiring police to inform criminal suspects, before commencing custodial interrogation of them, that they have the right to remain silent, that any statements they make may be used as evidence against them, and that they have the right to the presence and assistance of a retained or court-appointed attorney (with court appointment occurring when suspects lack the financial ability to

retain counsel).⁶ Incriminating statements that an in-custody suspect makes without first having been given the *Miranda* warnings are inadmissible at trial. If the suspect invokes her right to silence, custodial interrogation must cease. If, on the other hand, the suspect knowingly and voluntarily waives her right to silence after having been given the *Miranda* warnings, her statements will be admissible.

The right to silence is limited, however, in various ways. For example, the traditional view that the Fifth Amendment applies only to *testimonial* admissions serves as the basis for allowing the police to compel an accused to furnish nontestimonial evidence such as fingerprints, samples of body fluids, and hair. Supreme Court decisions have recognized further limitations on the right to silence. For instance, the right has been held to include a corresponding implicit prohibition of prosecutorial comments at trial about the accused's failure to speak in his own defense. Although Supreme Court decisions still support this prohibition in general, the Court has sometimes allowed prosecutors to use the defendant's pretrial silence to impeach his trial testimony. For example, the Court has held that the Fifth Amendment is not violated by prosecutorial use of a defendant's silence (either prearrest or postarrest, but in advance of any *Miranda* warnings) to discredit his trial testimony that he killed the victim in self-defense.

⁶The portions of the *Miranda* warnings dealing with the right to an attorney further Sixth Amendment interests. The Sixth Amendment is discussed later in this chapter.

Further inclination to narrow *Miranda*'s applicability and effect has sometimes been displayed by the Supreme Court during roughly the past 30 years. In one case, for example, the Court upheld a suspect's waiver of his *Miranda* rights and approved the use of his confession at trial, despite the police's failure to notify the suspect that an attorney retained for him by a family member was seeking to contact him. Another decision established that an undercover police officer posing as a fellow inmate need not give a jailed suspect the *Miranda* warnings before asking questions that could lead to incriminating admissions.

Although the *Miranda* warnings have been a required feature of law enforcement practice since the Supreme Court handed down its landmark decision more than four decades ago, a surprising 1999 decision of the U.S. Court of Appeals for the Fourth Circuit labeled the *Miranda* warnings as merely judicially created rules of procedure that were neither grounded in, nor required by, the Constitution. The Fourth Circuit's holding that the *Miranda* warnings were not of constitutional dimension led it to conclude that the warnings' required status could be eliminated by appropriate legislation, and that Congress, in a largely ignored 1968 statute, indeed had legislatively overruled *Miranda*. In *Dickerson v. United States* (2000), however, the Supreme Court overturned the Fourth Circuit's decision and classified the *Miranda* warnings as a constitutional rule, which Congress could not legislatively overrule.

An interrogation tactic designed to subvert the purpose of the *Miranda* warnings drew the disapproval of the Supreme Court in *Missouri v. Seibert*, which follows.

Missouri v. Seibert

542 U.S. 600 (U.S. Sup. Ct. 2004)

Patrice Seibert's 12-year-old son, Jonathan, had cerebral palsy. When Jonathan died in his sleep, Seibert feared charges of neglect because there were bedsores on his body. In Seibert's presence, two of her teenage sons and two of their friends devised a plan to conceal the facts surrounding Jonathan's death by incinerating his body in the course of burning the family's mobile home. Under the plan, the fire would be set while Donald Rector, a mentally ill teenager who lived with the family, was asleep in the mobile home. The presence of Rector's body would negate any appearance that Jonathan had been unattended. Seibert's son Darian and a friend set the fire as planned, and Rector died.

Five days later, Rolla, Missouri, police officers awakened Seibert at 3 AM at a hospital where Darian was being treated for burns. An officer arrested Seibert but, in accordance with instructions from Officer Richard Hanrahan, refrained from giving Miranda warnings at the time of the arrest. After Seibert had been taken to the police station and left alone in an interview room for 15 to 20 minutes, Hanrahan questioned her without Miranda warnings for 30 to 40 minutes, squeezing her arm and repeating, "Donald was also to die in his sleep." When Seibert finally admitted she knew Donald was meant to die in the fire, she was given a 20-minute coffee and cigarette break. Hanrahan then turned on a tape recorder, gave Seibert the Miranda warnings, and obtained a signed waiver of rights from her. He resumed the questioning with "OK, [Pa]trice, we've been talking for a little while about what happened on Wednesday the twelfth, haven't we?" Hanrahan then confronted

Seibert with her prewarning statements about the plan to set the fire and the understanding that Donald Rector would be left sleeping in the mobile home. Specifically, Hanrahan referred to Seibert's prewarning statements by asking, in regard to Rector, "[D]idn't you tell me he was supposed to die in his sleep?" and "So he was supposed to die in his sleep?" Seibert answered "Yes" to the second of these postwarning questions.

After being charged with first-degree murder for her role in Rector's death, Seibert sought to have her prewarning and postwarning statements suppressed (i.e., excluded from evidence) as the remedy for what she alleged were Fifth Amendment, Fourteenth Amendment, and Miranda violations. At the hearing on Seibert's motion to suppress, Hanrahan testified that he made a "conscious decision" to withhold Miranda warnings and to resort to an interrogation technique he had been taught: question first, then give the warnings, and then repeat the question "until I get the answer that she's already provided once." Hanrahan acknowledged that Seibert's ultimate statement was "largely a repeat of information . . . obtained" prior to the giving of the Miranda warnings.

The trial court suppressed the prewarning statement but allowed, as evidence at Seibert's trial, the responses given after the Miranda recitation. After a jury convicted Seibert of second-degree murder, the Missouri Court of Appeals affirmed the conviction. However, the Supreme Court of Missouri reversed, holding that "the second statement, clearly the product of the invalid first statement, should have been suppressed." The U.S. Supreme Court granted the state of Missouri's petition for certiorari.

Souter, Justice

This case tests a police protocol for custodial interrogation that calls for giving no warnings of the rights to silence and counsel until interrogation has produced a confession. Although such a statement is generally inadmissible [i.e., cannot be used as evidence], since taken in violation of *Miranda v. Arizona*, 384 U.S. 436 (1966), the interrogating officer follows it with *Miranda* warnings and then leads the suspect to cover the same ground a second time. The question here is the admissibility of the repeated statement.

[Because the Fifth and Fourteenth Amendments to the Constitution afford defendants protection against compelled self-incrimination in federal and state criminal cases, a defendant's confession is not admissible evidence unless it was voluntarily given. Until the mid-1960s, courts determined whether a confession was voluntary by applying a totality-of-the-circumstances test that called for the court to examine all of the facts surrounding the interrogation and the confession in the particular case at issue.] In *Miranda*, we explained that the "voluntariness doctrine . . . encompasses all interrogation practices which are likely to exert such pressure upon an individual as to disable him from making a free and rational choice." We [also] appreciated the difficulty of judicial enquiry *post hoc* into the circumstances of a police interrogation. [In] *Dickerson v. United States*, 530 U.S. 428 (2000), [we noted *Miranda's* recognition] that "the coercion inherent in custodial interrogation blurs the line between voluntary and involuntary statements, and thus heightens the risk" that the privilege against self-incrimination will not be observed. Hence our concern that the traditional totality-of-the-circumstances test posed an "unacceptably great" risk that involuntary custodial confessions would escape detection.

Accordingly, to reduce the risk of a coerced confession and to implement the [constitutional privilege against] self-incrimination . . . , this Court in *Miranda* concluded that "the accused must be adequately and effectively apprised of his rights and the exercise of those rights must be fully honored." *Miranda* conditioned the admissibility at trial of any custodial confession on warning a suspect of his rights: failure to give the prescribed warnings and obtain a waiver of rights before custodial questioning generally requires exclusion of any statements obtained. Conversely, giving the warnings and getting a waiver has generally produced a virtual ticket of admissibility.

There are those, of course, who preferred the old way of doing things: giving no warnings and litigating the voluntariness of any statement in nearly every instance. In the aftermath of *Miranda*, Congress even passed a statute seeking to restore that old regime, although the [statute] lay dormant for years until finally invoked and challenged [on constitutional grounds]. [In] *Dickerson v. United States*[, we] reaffirmed *Miranda* and held that its constitutional character prevailed against the statute.

The technique of interrogating in successive unwarned and warned phases raises a new challenge to *Miranda*. Although we have no statistics on the frequency of this practice, it is not confined to Rolla, Missouri. An officer of that police department testified that the strategy of withholding *Miranda* warnings until after interrogating and drawing out a confession was promoted not only by his own department, but by a national police training organization and other departments in which he had worked. [T]he Police Law Institute, for example, instructs [in one of its manuals] that officers may "conduct a two-stage interrogation" [and that] "during the pre-*Miranda* interrogation, usually after arrestees have confessed, officers may then read the *Miranda* warnings and ask for a waiver. If the arrestees

waive their *Miranda* rights, officers will be able to repeat any *subsequent* incriminating statements later in court.” The upshot of all this advice is a question-first practice of some popularity, as one can see from the reported cases describing its use, sometimes in obedience to departmental policy. [Citations of representative cases omitted.]

When a confession so obtained is offered and challenged, attention must be paid to the conflicting objects of *Miranda* and question-first. *Miranda* addressed “interrogation practices . . . likely . . . to disable [an individual] from making a free and rational choice” about speaking, and held that a suspect must be “adequately and effectively” advised of the choice the Constitution guarantees. The object of question-first is to render *Miranda* warnings ineffective by waiting for a particularly opportune time to give them, after the suspect has already confessed.

[I]t would be absurd to think that mere recitation of the [*Miranda*] litany suffices to satisfy *Miranda* in every conceivable circumstance. The threshold issue when interrogators question first and warn later is . . . whether it would be reasonable to find that in these circumstances the warnings could function “effectively” as *Miranda* requires. Could the warnings effectively advise the suspect that he had a real choice about giving an admissible statement at that juncture? Could they reasonably convey that he could choose to stop talking even if he had talked earlier? For unless the warnings could place a suspect who has just been interrogated in a position to make such an informed choice, there is no practical justification for accepting the formal warnings as compliance with *Miranda*, or for treating the second stage of interrogation as distinct from the first, unwarned and inadmissible segment.

There is no doubt about the answer that proponents of question-first give to this question about the effectiveness of warnings given only after successful interrogation, and we think their answer is correct. By any objective measure, applied to circumstances exemplified here, it is likely that if the interrogators employ the technique of withholding warnings until after interrogation succeeds in eliciting a confession, the warnings will be ineffective in preparing the suspect for successive interrogation, close in time and similar in content. After all, the reason that question-first is catching on is as obvious as its manifest purpose, which is to get a confession the suspect would not make if he understood his rights at the outset; the sensible underlying assumption is that with one confession in hand before the warnings, the interrogator can count on getting its duplicate, with trifling additional trouble. Upon hearing warnings only in the aftermath of interrogation and just after making a confession, a suspect would hardly think he had a genuine right to remain silent, let alone persist in so believing once the police began to lead him over the same ground again.

Thus, when *Miranda* warnings are inserted in the midst of coordinated and continuing interrogation, they are likely to mislead and “depriv[e] a defendant of knowledge essential to his ability to understand the nature of his rights and the consequences of abandoning them.” [Citation omitted.] By the same token, it would ordinarily be unrealistic to treat two spates of integrated and proximately conducted questioning as independent interrogations subject to independent evaluation simply because *Miranda* warnings formally punctuate them in the middle.

Missouri argues that a confession repeated at the end of an interrogation sequence envisioned in a question-first strategy is admissible on the authority of *Oregon v. Elstad*, 470 U.S. 298 (1985), but the argument disfigures that case. In *Elstad*, the police went to the young suspect’s house to take him into custody on a charge of burglary. Before the arrest, one officer spoke with the suspect’s mother, while the other one joined the suspect in a “brief stop in the living room,” where the officer said he “felt” the young man was involved in a burglary. The suspect acknowledged he had been at the scene. This Court noted that the pause in the living room “was not to interrogate the suspect but to notify his mother of the reason for his arrest,” and described the incident as having “none of the earmarks of coercion.” The Court, indeed, took care to mention that the officer’s initial failure to warn was an “oversight” that “may have been the result of confusion as to whether the brief exchange qualified as ‘custodial interrogation’ or . . . may simply have reflected . . . reluctance to initiate an alarming police procedure before [an officer] had spoken with respondent’s mother.” At the outset of a later and systematic station house interrogation going well beyond the scope of the laconic prior admission, the suspect was given *Miranda* warnings and made a full confession.

In holding the second statement admissible and voluntary, *Elstad* rejected the “cat out of the bag” theory that any short, earlier admission, obtained in arguably innocent neglect of *Miranda*, determined the character of the later, warned confession. [O]n the facts of that case, the Court thought any causal connection between the first and second responses to the police was “speculative and attenuated.” Although the *Elstad* Court expressed no explicit conclusion about either officer’s state of mind, it is fair to read *Elstad* as treating the living room conversation as a good-faith *Miranda* mistake, not only open to correction by careful warnings before systematic questioning in that particular case, but posing no threat to warn-first practice generally.

The contrast between *Elstad* and this case reveals a series of relevant facts that bear on whether *Miranda* warnings delivered midstream could be effective enough to accomplish their object: the completeness and detail of the questions and answers

in the first round of interrogation, the overlapping content of the two statements, the timing and setting of the first and the second, the continuity of police personnel, and the degree to which the interrogator's questions treated the second round as continuous with the first. In *Elstad*, it was not unreasonable to see the occasion for questioning at the station house as presenting a markedly different experience from the short conversation at home; since a reasonable person in the suspect's shoes could have seen the station house questioning as a new and distinct experience, the *Miranda* warnings could have made sense as presenting a genuine choice whether to follow up on the earlier admission.

At the opposite extreme are the facts here, which by any objective measure reveal a police strategy adapted to undermine the *Miranda* warnings. (Because the intent of the officer will rarely be as candidly admitted as it was here . . . , [our] focus is on facts apart from intent that show the question-first tactic at work.) The unwarned interrogation was conducted in the station house, and the questioning was systematic, exhaustive, and managed with psychological skill. When the police were finished there was little, if anything, of incriminating potential left unsaid. The warned phase of questioning proceeded after a pause of only 15 to 20 minutes, in the same place as the unwarned segment. When the same officer who had conducted the first phase recited the *Miranda* warnings, he said nothing to counter the probable misimpression that the advice that anything Seibert said could be used against her also applied to the details of the inculpatory statement previously elicited. In particular, the police did not advise that her prior statement could not be used. The impression that the further questioning was a mere continuation of the earlier questions and responses was fostered by references back to the confession already given. It would have been reasonable to regard the two sessions as parts of a continuum, in which it would have been unnatural to refuse to repeat at the second stage what had been said before. These circumstances must be seen as challenging the

comprehensibility and efficacy of the *Miranda* warnings to the point that a reasonable person in the suspect's shoes would not have understood them to convey a message that she retained a choice about continuing to talk.

Strategists dedicated to draining the substance out of *Miranda* cannot accomplish by training instructions what *Dickerson* held Congress could not do by statute. Because the question-first tactic effectively threatens to thwart *Miranda*'s purpose of reducing the risk that a coerced confession would be admitted, and because the facts here do not reasonably support a conclusion that the warnings given could have served their purpose, Seibert's postwarning statements are inadmissible.

Supreme Court of Missouri's decision affirmed.

Note: The opinion of Justice Souter was a plurality opinion in regard to *reasoning* because Justice Souter spoke for four justices (himself and Justices Stevens, Ginsburg, and Breyer). In his concurrence in the judgment, Justice Kennedy provided a fifth vote—and hence a majority—on the case's *outcome*: that Seibert's post-*Miranda* warnings statement could not be used as evidence. Justice Kennedy condemned what he saw as a clear attempt to “circumvent” *Miranda*. He also expressed agreement with much of what the plurality opinion stated. Justice Kennedy did not join that opinion, however, because he would have adopted a different controlling test. Instead of the plurality's test of whether the midinterrogation giving of the *Miranda* warnings could reasonably be seen as effective to accomplish the purposes of those warnings, Justice Kennedy would have held that if law enforcement officers deliberately employed the two-step interrogation technique of the sort used in *Seibert*, the defendant's post-*Miranda* warnings statement would be inadmissible unless the interrogating officers implemented adequate “curative measures.” Justice Kennedy noted that such measures could include the use of a significant time delay or change in location between the prewarning and postwarning phases of the interrogation, or the making of a specific statement, along with the *Miranda* warnings, that the defendant's earlier (i.e., prewarning) statement probably could not be used against him.

Production of Records The preceding discussion of the privilege against self-incrimination applies to criminal defendants in general. The Fifth Amendment's scope, however, has long been of particular concern to businesspersons charged with crimes. Documentary evidence often is quite important to the government's case in white-collar crime prosecutions. To what extent does the Fifth Amendment protect business records? More than a century ago, the Supreme Court held, in *Boyd v. United States* (1886), that the Fifth Amendment protects individuals against compelled production of their private papers.

In more recent years, however, the Court has drastically limited the scope of the protection contemplated by *Boyd*. The Court has held various times that the private papers privilege is personal and thus cannot be asserted by a corporation, partnership, or other “collective entity.” Because such entities have no Fifth Amendment rights, the Court has held that when an organization's individual officer or agent has custody of organization records, the officer or agent cannot assert any personal privilege to prevent their disclosure. This rule holds even if the contents of the records incriminate her personally. Finally,

various decisions allow the government to require business proprietors to keep certain records relevant to transactions that are appropriate subjects for government regulation. These “required records” are not entitled to private papers protection. They may be subpoenaed and used against the record keeper in prosecutions for regulatory violations.

The Court’s business records decisions during the past three decades cast further doubt on the future of the private papers doctrine. Instead of focusing on whether subpoenaed records are private in nature, the Court now considers whether the *act of producing* the records would be sufficiently testimonial to trigger the privilege against self-incrimination. In *Fisher v. United States* (1976), the Court held that an individual subpoenaed to produce personal documents may assert his Fifth Amendment privilege only if the act of producing the documents would involve incriminating testimonial admissions. This is likely when the individual producing the records is in effect certifying the records’ authenticity or admitting the existence of records previously unknown to the government (demonstrating that he had access to the records and, therefore, possible knowledge of any incriminating contents).

In *United States v. Doe* (1984), the Court extended the act-of-production privilege to a sole proprietor whose proprietorship records were subpoenaed. The Court, however, held that normal business records were not themselves protected by the Fifth Amendment because they were voluntarily prepared and thus not the product of compulsion. In view of *Doe*’s emphasis on the testimonial and potentially incriminating nature of the act of producing business records, some observers thought that officers of collective entities under government investigation might be able to assert their personal privileges against self-incrimination as a way to avoid producing incriminating business records.

Braswell v. United States (1988) dashed such hopes, however, as the Court refused to extend its *Doe* holding to cover a corporation’s sole shareholder who acted in his capacity as custodian of corporate records. The Court held that Braswell (the sole shareholder), having chosen to operate his business under the corporate form, was bound by the rule that corporations and similar entities have no Fifth Amendment privilege. Because Braswell acted in a representative capacity in producing the requested records, the government could not make evidentiary use of his act of production. The government, however, was free to use the contents of the records against Braswell and the corporation.

Double Jeopardy Another important Fifth Amendment provision is the Double Jeopardy Clause. This provision protects defendants from multiple criminal prosecutions for the same offense. It prevents a second criminal prosecution for the same offense after the defendant has been acquitted or convicted of that offense. Moreover, it bars the imposition of multiple punishments for the same offense.

The Double Jeopardy Clause does not, however, preclude the possibility that a single criminal act may lead to more than one criminal prosecution. One criminal act may produce several statutory violations, all of which may give rise to prosecution. For example, a defendant who commits rape may also be prosecuted for battery, assault with a deadly weapon, and kidnapping if the facts of the case indicate that the relevant statutes were violated. In addition, the Supreme Court has long used a “same elements” test to determine what constitutes the same offense. This means that a single criminal act with multiple victims (e.g., a restaurant robbery in which several patrons are robbed) could result in several prosecutions because the identity of each victim would be an additional fact or element of proof in each case.

In addition, the Double Jeopardy Clause does not protect against multiple prosecutions by different sovereigns. A conviction or acquittal in a state prosecution does not prevent a subsequent federal prosecution for a federal offense arising out of the same event, or vice versa. Finally, the Double Jeopardy Clause does not bar a private plaintiff from pursuing a *civil* case (normally for one or more of the intentional torts discussed in Chapter 6) against a defendant who was criminally prosecuted by the government for the same alleged conduct. The headline-dominating criminal and civil cases against O. J. Simpson furnish perhaps the best-known example of this principle.

The Sixth Amendment The Sixth Amendment applies to criminal cases in various ways. It entitles criminal defendants to a speedy trial by an impartial jury and guarantees them the right to confront and cross-examine the witnesses against them. The Sixth Amendment also gives the accused in a criminal case the right “to have the assistance of counsel” in her defense. This provision has been interpreted to mean not only that the accused may employ her own attorney but also that an indigent criminal defendant is entitled to court-appointed counsel. Included in the previously discussed *Miranda* warnings is a requirement that the police inform the accused of his right to counsel before custodial interrogation begins. *Edwards v. Arizona* (1981) established

that once the accused has requested the assistance of counsel, he may not as a general rule be interrogated further until counsel is made available to him. The Supreme Court later held that the *Edwards* rule against further questioning is triggered only by an *unambiguous* request for counsel.⁷ In *McNeil v. Wisconsin* (1991), the Court provided further latitude for law enforcement officers by holding that if a defendant has made an in-court request for an attorney's assistance regarding a crime with which he has been formally charged, that request does not preclude police interrogation of him—in the absence of counsel—regarding another unrelated crime.

Finally, an accused is entitled to *effective* assistance of counsel. This means that the accused is entitled to representation at a point in the proceedings when an attorney may effectively assist him, and to reasonably competent representation by that attorney. Inadequate assistance of counsel is a proper basis for setting aside a conviction and ordering a new trial, but the standard applied to these cases makes ineffective assistance of counsel claims difficult ones for convicted defendants to invoke successfully.

White-Collar Crimes and the Dilemmas of Corporate Control

Introduction *White-collar crime* is the term used to describe a wide variety of nonviolent criminal offenses committed by businesspersons and business organizations. This term includes offenses committed by employees against their employers, as well as corporate officers' offenses that harm the corporation and its shareholders. It also includes criminal offenses committed by corporate employers and employees against society. Each year, corporate crime costs consumers billions of dollars. It takes various forms, from consumer fraud, securities fraud, mail or wire fraud, and tax evasion to price-fixing, environmental pollution, and other regulatory violations. Corporate crime presents our legal system with various problems that we have failed to resolve satisfactorily.

Corporations form the backbone of the most successful economic system in history. They dominate the international economic scene and provide us with substantial

benefits in the forms of efficiently produced goods and services. Yet these same corporations may pollute the environment, swindle their customers, mislead investors, produce dangerously defective products, and conspire with others to injure or destroy competition. How are we to achieve effective control over these large organizations so important to our existence? Increasingly, we have come to rely on the criminal law as a major corporate control instrument. The criminal law, however, was developed with individual wrongdoers in mind. Corporate crime is *organizational* in nature. Any given corporate action may be the product of the combined actions of many individuals acting within the corporate hierarchy. It may be that no individual had sufficient knowledge to possess the *mens rea* necessary for criminal responsibility under usual criminal law principles. Moreover, criminally penalizing corporations raises special problems in view of the obvious inability to apply standard sanctions such as imprisonment to legal entities.

Evolution of Corporate Criminal Liability The law initially rejected the notion that corporations could be criminally responsible for their employees' actions. Early corporations, small in size and number, had little impact on public life. Their small size made it relatively easy to pinpoint individual wrongdoers within the corporation.

As corporations grew in size and power, however, the social need to control their activities grew accordingly. Legislatures enacted statutes creating regulatory offenses that did not require proof of *mens rea*. By 1900, American courts had begun to impose criminal liability on corporations for general criminal offenses that required proof of *mens rea*. This expansion of corporate criminal liability involved imputing the criminal intent of employees to the corporation in a fashion similar to the imposition of tort liability on corporations under the *respondeat superior* doctrine.⁸

Corporations now may face criminal liability for almost any offense if the statute in question indicates a legislative intent to hold corporations responsible. This legislative intent requirement is sometimes problematic. Many state criminal statutes may contain language suggesting an intent to hold only humans liable. For example, manslaughter statutes often define the offense as "the killing of one human being by the act of another." When statutes are framed, however, in more

⁷In *Davis v. United States* (1994), the court concluded that "Maybe I should talk to a lawyer" was too ambiguous to trigger the *Edwards* rule.

⁸Chapter 36 discusses *respondeat superior* in detail.

Ethics in Action

The highly publicized financial scandals involving Enron, WorldCom, and other firms mentioned near the beginning of this chapter involved conduct that in some instances was alleged to be criminal. Regardless of whether criminal violations occurred, the alleged conduct was widely perceived to be questionable on ethical grounds and motivated by a desire for short-term gains notwithstanding the costs to others. Consider the broad-ranging and sometimes devastating effects of the perceived ethical lapses and the related legal proceedings (civil and/or criminal) faced by the firms and certain executives. These effects included:

- The crippling or near-crippling blow to the viability of the firms involved.
- The collapse in value of the firms' stock and the resulting loss to disillusioned and angry shareholders who felt they had been hoodwinked.
- The harm to the professional and personal reputations of the individuals involved in the business decisions that triggered legal scrutiny and raised serious ethical concerns.
- The job losses experienced by large numbers of employees who had nothing whatsoever to do with the questionable actions that effectively brought down the firm or made massive layoffs necessary.
- The effects on the families of those who lost their jobs.
- The lack of confidence on the part of would-be investors in the profit figures and projections put forth every day by corporations—including those that have done nothing irregular.
- The ripple effects of the above on the economy generally.

general terms—such as by referring to “persons”—courts are generally willing to apply them to corporate defendants.

Corporate Criminal Liability Today Under the modern rule, a corporation may be held liable for criminal offenses committed by employees who *acted within the scope of their employment and for the benefit of the corporation*. A major corporate criminal liability issue centers around the classes of corporate employees whose intent can be imputed to the corporation. Some commentators argue that a corporation should be criminally responsible only for offenses committed by high corporate officials or those linked to them by authorization or acquiescence. (Nearly all, if not all, courts impose criminal liability on a corporation under such circumstances.) This argument reflects fairness notions, for if any group of corporate employees can fairly be said to constitute a corporation's mind, that group is its top officers and directors.

The problem with imposing corporate liability only on the basis of top corporate officers' actions or knowledge is that such a policy often insulates the corporation from liability. Many corporate offenses may be directly traceable only to middle managers or more subordinate employees. It may be impossible to demonstrate that any higher level corporate official had sufficient knowledge to constitute *mens rea*. Recognizing this problem, the federal courts have adopted a general rule that a corporation may be criminally liable for the actions of any of its agents, regardless of whether any link between the

agents and higher level corporate officials can be demonstrated.

Problems with Punishing Corporations Despite the legal theories that justify corporate criminal liability, the punishment of corporations remains problematic. Does a criminal conviction stigmatize a corporation in the same way it stigmatizes an individual? Perhaps the only stigma resulting from a corporate criminal conviction is felt by the firm's employees, many of whom are entirely innocent of wrongdoing. Is it just to punish the innocent in an attempt to punish the guilty?

Consider, for instance, the effects that innocent employees of the Arthur Andersen firm experienced as a result of Andersen's obstruction of justice conviction in 2002. Although the conviction was overturned by the Supreme Court in 2005 because of faulty jury instructions (see the decision that appears earlier in the chapter), the Andersen firm had already been knocked out of existence. Many partners of the firm acquired positions elsewhere, but nonpartner employees of the firm no doubt experienced hardship despite having had nothing to do with any alleged wrongdoing. Concern about preservation of the firm and minimizing hardship for employees appeared to motivate another leading accounting firm, KPMG, to take the unusual step of acknowledging possibly criminal behavior before being formally charged in connection with certain questionable tax shelters designed by the firm. By acknowledging wrongdoing, it was thought, the firm might be able to head off criminal prosecution and remain viable as a firm.

What about the cash fine, the primary punishment imposed on convicted corporations? Most critics of corporate control strategies maintain that fines imposed on convicted firms tend to be too small to provide effective deterrence. These critics urge the use of fines keyed in some fashion to the corporate defendant's wealth. Larger fines may lead to undesirable results, however, if the corporate defendant ultimately passes along the fines to its customers (through higher prices), shareholders (through lower dividends or no dividends), or employees (through lower wages). Moreover, fines large enough to threaten corporate solvency may harm employees and those economically dependent on the corporation's financial well-being. Most of those persons, however, neither had the power to prevent the violation nor derived any benefit from it. Moreover, the managers responsible for a violation may avoid the imposition of direct burdens on them when the fine is assessed against the corporation.

Still other deficiencies make fines less-than-adequate corporate control devices. Fine strategies assume that all corporations are rationally acting profit-maximizers. Fines of sufficient size, it is argued, will erode the profit drive underlying most corporate violations. Numerous studies of actual corporate behavior, however, suggest that many corporations are neither profit-maximizers nor rational actors. Mature firms with well-established market shares may embrace goals other than profit maximization, such as technological prominence, increased market share, or higher employee salaries. In addition, the interests of managers who make corporate decisions and establish corporate policies may not coincide with the long-range economic interests of their corporate employers. The prospect that their employer could have to pay a substantial fine at some future point may not trouble top managers, who tend to have relatively short terms in office and are often compensated in part by large bonuses keyed to year-end profitability.

Individual Liability for Corporate Crime

Individuals who commit crimes while acting in corporate capacities have always been subjected to personal criminal liability. Most European nations reject corporate criminal liability and rely exclusively on individual criminal responsibility. In view of the problems associated with imposing criminal liability on corporations, individual liability may seem a more attractive control device. Besides being more consistent with traditional criminal law notions about the personal nature of guilt, individual liability may provide better deterrence than corporate liability if it enables society to use the criminal punishment threat against those who make

important corporate decisions. The prospect of personal liability may cause individuals to resist corporate pressures to violate the law. If guilty individuals are identified and punished, the criminal law's purposes may be achieved without harm to innocent employees, shareholders, and consumers.

Problems with Individual Liability Attractive as it may sound, individual liability also poses significant problems when applied to corporate acts. Identifying responsible individuals within the corporate hierarchy becomes difficult—and frequently impossible—if we follow traditional notions and require proof of criminal intent. Business decisions leading to corporate wrongs often result from the collective actions of numerous corporate employees, none of whom had complete knowledge or specific criminal intent. Other corporate crimes are structural in the sense that they result from internal bureaucratic failures rather than the conscious actions of any individual or group.

Proving culpability on the part of high level executives may be particularly difficult. Bad news sometimes does not reach them; other times, they consciously avoid knowledge that would lead to criminal responsibility. It therefore may be possible to demonstrate culpability only on the part of middle level managers. Juries may be unwilling to convict such individuals, however, if they seem to be scapegoats for their unindicted superiors.

The difficulties in imposing criminal penalties on individual employees have led to the creation of regulatory offenses that impose strict or vicarious liability on corporate officers. Strict liability offenses dispense with the requirement of proof of criminal intent but ordinarily require proof that the defendant committed some wrongful act. Vicarious liability offenses impose criminal liability on a defendant for the acts of third parties (normally, employees under the defendant's personal supervision), but may require proof of some form of *mens rea*, such as the defendant's negligent or reckless failure to supervise. Statutes often combine these two approaches by making corporate executives liable for the acts or omissions of corporate employees without requiring proof of criminal intent on the part of the employees. *United States v. Park*, discussed in Figure 2, is a famous example of such a prosecution.

Critics of strict liability offenses often argue that *mens rea* is a basic principle in our legal system and that it is unjust to stigmatize with a criminal conviction persons who are not morally culpable. In addition, critics doubt that strict liability statutes produce the deterrence sought by their proponents. Such statutes may reduce the

Figure 2 A Note on *United States v. Park*, 421 U.S. 658 (U.S. Sup. Ct. 1975)

Facts and Procedural History

John R. Park was CEO of Acme Markets, Inc., a national retail food chain with approximately 36,000 employees, 874 retail outlets, and 16 warehouses. Acme and Park were charged with five counts of violating the federal Food, Drug, and Cosmetic Act (the Act) by storing food shipped in interstate commerce in warehouses where it was exposed to rodent contamination. The violations were detected during Food and Drug Administration (FDA) inspections of Acme's Baltimore warehouse. Inspectors saw evidence of rodent infestation and unsanitary conditions, such as mouse droppings on the floor of the hanging meat room and alongside bales of lime Jell-O, and a hole chewed by a rodent in a bale of Jell-O. The FDA notified Park by letter of these findings.

Upon checking with Acme's vice president for legal affairs, Park learned that the Baltimore division vice president "was investigating the situation immediately and would be taking corrective action." An FDA inspection three months after the first one disclosed continued rodent contamination at the Baltimore warehouse despite improved sanitation there. The criminal charges were then filed against Acme and Park. Acme pleaded guilty; Park refused to do so. Park was convicted on each count, but the court of appeals overturned the conviction.

The Supreme Court's Decision

The Supreme Court, however, reversed. In sustaining Park's conviction, the Court noted that in view of the substantial public interest in purity of food, the Act did not require awareness of wrongdoing as an element of criminal conduct. This did not mean, however, that a person "remotely entangled in the proscribed shipment" was at risk of being criminally convicted. Instead, the defendant must be shown to have had "a responsible share" in the violation, such as by failing to exercise authority and supervisory responsibility. The Court emphasized that the Act imposes on supervisory personnel the "highest standard of foresight and vigilance." This includes a duty to seek out and remedy violations when they occur, and a duty to implement measures to prevent violations from occurring.

Although one who was "powerless" to prevent or correct the violation cannot be held criminally responsible under the Act, the Court emphasized that Park was hardly powerless. He had the authority and responsibility to prevent or correct the prohibited condition. The evidence showed that prior to the Baltimore warehouse inspections giving rise to the criminal charges, Park was advised by the FDA of unsanitary conditions in another Acme warehouse. According to the Court, Park thus acquired notice—prior to the time that the Baltimore warehouse violations were discovered—that he could not rely on his previously employed system of delegation to subordinates to prevent or correct unsanitary conditions at company warehouses. Despite evidence indicating Park's prior awareness of this system's deficiencies well before the Baltimore violations were discovered, Park had not instituted any new procedures designed to prevent violations of the Act. The Court therefore concluded that his conviction should stand.

moral impact of the criminal sanction if they apply it to relatively trivial offenses. Moreover, they may not result in enough convictions or sufficiently severe penalties to produce deterrence because juries and judges are unwilling to convict or punish defendants who may not be morally culpable. Although statutes creating strict liability offenses are generally held constitutional, they are disfavored by courts. Most courts require a clear indication of a legislative intent to dispense with the *mens rea* element.

Strict liability offenses are also criticized on the ground that even if responsible individuals within the corporation are convicted and punished appropriately, individual liability unaccompanied by corporate liability is unlikely to achieve effective corporate control. If immune from criminal liability, corporations could benefit financially from employees' violations of the law.

Individual liability, unlike a corporate fine, does not force a corporation to give up the profits flowing from a violation. Thus, the corporation would have no incentive to avoid future violations. Incarcerated offenders would merely be replaced by others who might eventually yield to the pressures that produced the violations in the first place. Corporate liability, however, may sometimes encourage corporate efforts to prevent future violations. When an offense has occurred but no identifiable individual is sufficiently culpable to justify an individual prosecution of him or her, corporate liability is uniquely appropriate.

New Directions The preceding discussion suggests that future efforts at corporate control are likely to include both corporate and individual criminal liability. It also suggests, however, that new approaches are

Ethics in Action

Enron employee Sherron Watkins received considerable praise from the public, governmental officials, and media commentators when she went public in 2002 with her concerns about certain accounting and other business practices of her employer. These alleged practices caused Enron and high level executives of the firm to undergo considerable legal scrutiny in the civil and criminal arenas.

In deciding to become a whistle-blower, Sherron Watkins no doubt was motivated by what she regarded as a moral obligation. The decision she made was more highly publicized than most decisions of that nature, but was otherwise of a type that many employees have faced and will continue to face. You may be among those persons at some point in your career. Various questions, including the ones set forth below, may therefore be worth pondering. As you do so, you may find it

useful to consider the perspectives afforded by the ethical theories discussed in Chapter 4.

- When an employee learns of apparently unlawful behavior on the part of his or her employer, does the employee have an ethical duty to blow the whistle on the employer?
- Do any ethical duties or obligations of the employee come into conflict in such a situation? If so, what are they, and how does the employee balance them?
- What practical consequences may one face if he or she becomes a whistle-blower? What role, if any, should those potential consequences play in the ethical analysis?
- What other consequences are likely to occur if the whistle is blown? What is likely to happen if the whistle isn't blown? Should these likely consequences affect the ethical analysis? If so, how?

necessary if society is to gain more effective control over corporate activities.

Various novel criminal penalties have been suggested in the individual liability setting. For example, white-collar offenders could be sentenced to render public service in addition to, or in lieu of, being incarcerated or fined. Some have even suggested the licensing of managers, with license suspensions as a penalty for offenders. The common thread in these and other similar approaches is an attempt to create penalties that are meaningful yet not so severe that judges and juries are unwilling to impose them.

A promising suggestion regarding corporate liability involves imaginative judicial use of corporate probation for convicted corporate offenders. For example, courts could require convicted corporations to do self-studies identifying the source of a violation and proposing appropriate steps to prevent future violations. If bureaucratic failures caused the violation, the court could order a limited restructuring of the corporation's internal decision-making processes as a condition of obtaining probation or avoiding a penalty. Possible orders might include requiring the collection and monitoring of the data necessary to discover or prevent future violations and mandating the creation of new executive positions to monitor such data. Restructuring would minimize the previously discussed harm to innocent persons that often accompanies corporate financial penalties. In addition, restructuring could be a more effective way to achieve corporate rehabilitation than relying exclusively on a

corporation's desire to avoid future fines as an incentive to police itself.

The Federal Sentencing Guidelines, discussed earlier in this chapter in Figure 1, contain good reasons for corporations to institute measures to prevent regulatory violations. This is true even though, as Figure 1 indicates, the Supreme Court's 2005 decision in *Booker* made the Guidelines advisory rather than mandatory. Under the subset of rules known as the Corporate Sentencing Guidelines, organizations convicted of violating federal law may face greatly increased penalties for certain offenses, with some crimes carrying fines as high as \$290 million. The penalty that may be imposed on an organization depends on its "culpability score," which increases (thus calling for a more severe penalty) if, for example, high level corporate officers were involved in the offense or the organization had a history of such offenses. Even apart from the potentially severe penalties, however, the Corporate Sentencing Guidelines provide an incentive for corporations to adopt compliance programs designed "to prevent and detect violations of the law." The presence of an effective compliance program may reduce the corporation's culpability score for sentencing purposes. Prior to the time the Corporate Sentencing Guidelines were developed, courts generally concluded that the existence of a compliance program should not operate as a mitigating factor in the sentencing of a convicted organization.

In recent years, the Justice Department has made increased use of deferred prosecution agreements (DPAs),

under which corporations avoid formal criminal charges and trials in return for their agreement to pay monetary penalties and submit to outside monitoring of their activities. Proponents of DPAs see them as a way to encourage more responsible behavior from corporations without the “hammer” of the criminal sanction. Critics, however, see the increased use of DPAs as sending a signal to corporations that they may engage in wrongful activities but still have available, in a figurative sense, a “get-out-of-jail-almost-free” card.

Important White-Collar Crimes

Regulatory Offenses Numerous state and federal regulatory statutes on a wide range of subjects prescribe criminal as well as civil liability for violations. The Food, Drug, and Cosmetic Act, at issue in the case discussed in Figure 2, is an example of such a statute. Other major federal regulatory offenses are discussed in later chapters. These include violations of the Sherman Antitrust Act, the Securities Act of 1933, the Securities Exchange Act of 1934, and certain environmental laws.

Fraudulent Acts Many business crimes involve some fraudulent conduct. In most states, it is a crime to obtain money or property by fraudulent pretenses, issue fraudulent checks, make false credit statements, or give short weights or measures. Certain forms of fraud in bankruptcy proceedings, such as false claims by creditors or fraudulent concealment or transfer of a debtor’s assets, are federal criminal offenses. The same is true of securities fraud. In addition, federal mail fraud and wire fraud statutes make criminal the use of the mail, telephone, or telegrams to accomplish a fraudulent scheme. (See, for instance, the case asked about in the Online Research section at the end of this chapter.) Another federal law makes it a crime to travel or otherwise use facilities in interstate commerce in order to commit criminal acts.

The Sarbanes–Oxley Act In response to a series of highly publicized financial scandals and accounting controversies involving Enron, Arthur Andersen, Global Crossing, WorldCom, and other firms, Congress enacted the Sarbanes–Oxley Act of 2002. The Sarbanes–Oxley Act created the Public Company Accounting Oversight Board and charged it with regulatory responsibilities concerning public accounting firms’ audits of corporations. The statute also established various requirements designed to ensure auditor independence; bring about higher levels of accuracy in corporate

reporting of financial information; and promote responsible conduct on the part of corporate officers and directors, auditors, and securities analysts.

Additional portions of the broad-ranging Sarbanes–Oxley Act were given separate and more informative titles such as the Corporate and Criminal Fraud Accountability Act and the White-Collar Crime Penalty Enhancement Act. In those other portions of the statute, Congress:

- Established substantial fines and/or a maximum of 20 years of imprisonment as punishment for the knowing alteration or destruction of documents or records with the intent to impede a government investigation or proceeding.
- Made it a crime for an accountant to destroy corporate audit records prior to the appropriate time set forth in the statute and in regulations to be promulgated by the Securities and Exchange Commission.
- Classified debts resulting from civil judgments for securities fraud as nondischargeable in bankruptcy.
- Lengthened the statute of limitations period within which certain securities fraud cases may be filed.
- Provided legal protections for corporate employees who act as whistle-blowers regarding instances of fraud on the part of their employers.
- Established substantial fines and/or imprisonment of up to 25 years as the punishment for certain securities fraud offenses.
- Increased the maximum term of imprisonment for mail fraud and wire fraud to 20 years.
- Made attempts and conspiracies to commit such offenses subject to the same penalties established for the offenses themselves.
- Enhanced the penalties for certain violations of the Securities Exchange Act of 1934 by providing for a maximum fine of \$5 million or a maximum 20-year prison term for individual violators, and a maximum fine of \$25 million for corporate violators.
- Instructed the U.S. Sentencing Commission to review the Federal Sentencing Guidelines’ treatment of obstruction of justice offenses, white-collar crimes, and securities fraud offenses, in order to ensure that deterrence and punishment purposes were being adequately served.

Bribery and Giving of Illegal Gratuities

State and federal law has long made it a crime to offer public officials gifts, favors, or anything of value to influence official decisions for private benefit. In 1977, Congress enacted the Foreign Corrupt Practices Act (FCPA), which criminalized the offering or giving of anything of

value to officials of *foreign* governments in an attempt to influence their official actions. Individuals who violate the FCPA's bribery prohibition may be fined up to \$100,000 and/or imprisoned for a maximum of five years. Corporate violators of the FCPA may be fined as much as \$2 million. Chapter 45 discusses the FCPA in more depth. As explained in the nearby Global Business Environment box, the 1990s marked the emergence of international agreements as additional devices for addressing the problem of bribery of government officials.

Most states in the United States also have commercial bribery statutes. These laws prohibit offering or providing kickbacks and similar payoffs to private parties in order to secure some commercial advantage.

RICO When Congress passed the Racketeer Influenced and Corrupt Organizations Act (RICO) as part of the Organized Crime Control Act of 1970, lawmakers were primarily concerned about organized crime's increasing entry into legitimate business enterprises. RICO's broad language, however, allows the statute to be applied in a wide variety of cases having nothing to do

with organized crime. As a result, RICO has become one of the most controversial pieces of legislation affecting business. Supporters of RICO argue that it is an effective and much-needed tool for attacking unethical business practices. Its critics, however, see RICO as an overbroad statute that needlessly taints business reputations. Critics also argue that RICO has operated unduly to favor plaintiffs in civil litigation rather than serving as an aid to law enforcement.

Criminal RICO Under RICO, it is a federal crime for any person to (1) use income derived from a "pattern of racketeering activity" to acquire an interest in, establish, or operate an enterprise; (2) acquire or maintain an interest in an enterprise through a pattern of racketeering activity; (3) conduct or participate in, through a pattern of racketeering activity, the affairs of an enterprise by which he is employed or with which he is affiliated; or (4) conspire to do any of the preceding acts.

RICO is a compound statute because it requires proof of "predicate" criminal offenses that constitute the necessary pattern of racketeering activity. *Racketeering*

The Global Business Environment

At varying times since the 1977 enactment of the Foreign Corrupt Practices Act, the United States has advocated the development of international agreements designed to combat bribery and similar forms of corruption on at least a regional, if not a global, scale. These efforts and those of other nations sharing similar views bore fruit during the past decade.

In 1996, the Organization of American States (OAS) adopted the Inter-American Convention Against Corruption (IACAC). When it ratified the IACAC in September 2000, the United States joined 20 other subscribing OAS nations. The IACAC prohibits the offering or giving of a bribe to a government official in order to influence the official's actions, the solicitation or receipt of such a bribe, and certain other forms of corruption on the part of government officials. It requires subscribing nations to make changes in their domestic laws, in order to make those laws consistent with the IACAC. The United States has taken the position that given the content of the Foreign Corrupt Practices Act and other U.S. statutes prohibiting the offering and solicitation of bribes as well as various other forms of corruption, its statutes already are consistent with the IACAC.

The Organization for Economic Cooperation and Development (OECD) is made up of 29 nations that are leading exporters. In 1997, the OECD adopted the Convention on

Combating Bribery of Officials in International Business Transactions. The OECD Convention, subscribed to by the United States, 28 other OECD member nations, and five non-member nations, prohibits the offering or giving of a bribe to a government official in order to obtain a business advantage from the official's action or inaction. It calls for subscribing nations to have domestic laws that contain such a prohibition. Unlike the IACAC, however, the OECD neither prohibits the government official's solicitation or receipt of a bribe nor contains provisions dealing with the other forms of official corruption contemplated by the IACAC.

In 1999, the Council of Europe adopted the Criminal Law Convention on Corruption, which calls upon European Union (EU) member nations to develop domestic laws prohibiting the same sorts of behaviors prohibited by the IACAC. Many European Union members have signed on to this convention, as have three nonmembers of the EU. One of those is the United States.

Because the IACAC, the OECD Convention, and the Criminal Law Convention are relatively recent developments, it is too early to determine whether they have been effective international instruments for combating bribery and similar forms of corruption. Much will depend upon whether the domestic laws contemplated by these conventions are enforced with consistency and regularity.

activity includes the commission of any of more than 30 state or federal criminal offenses. Although most offenses that qualify (e.g., arson, gambling, extortion) have no relation to normal business transactions, such offenses as mail and wire fraud, securities fraud, and bribery are also included. Thus, many forms of business fraud may be alleged to be a racketeering activity. To show a *pattern* of such activity, the prosecution must first prove the defendant's commission of at least two acts of racketeering activity within a 10-year period. The pattern requirement also calls for proof that these acts are related and amount to, or pose the threat of, continuing racketeering activity. Most courts have interpreted the statutory term *enterprise* broadly, so that it includes partnerships and unincorporated associations as well as corporations.

Individuals found guilty of RICO violations are subject to substantial fines and imprisonment for up to 20 years. In addition, RICO violators risk the forfeiture of any interest gained in any enterprise as a result of a violation, as well as forfeiture of property derived from the prohibited racketeering activity. To prevent defendants from hiding assets that may be forfeitable upon conviction, federal prosecutors may seek pretrial orders freezing a defendant's assets. Some RICO critics argue that the harm such a freeze may work on a defendant's ability to conduct business, coupled with the threat of forfeiture of most or all of the business upon conviction, has led some defendants to make plea bargains rather than risk all by fighting prosecutions they believe to be unjustified.

Civil RICO Under RICO, the government may also seek various civil penalties for violations. These include divestiture of a defendant's interest in an enterprise, dissolution or reorganization of the enterprise, and injunctions against future racketeering activities.

RICO's most controversial sections, however, allow private individuals to recover treble damages (three times their actual loss) and attorney's fees for injuries caused by a statutory violation. To qualify for recovery under RICO, a plaintiff must prove that the defendant violated RICO's provisions (as explained above) and that the plaintiff was "injured in his business or property by reason of" the RICO violation. In the *Anza* case, which appears shortly, the Supreme Court emphasizes the direct causation link that must exist between the RICO violation and the harm experienced by the plaintiff.

Aided by the Supreme Court's refusal, in *Sedima, S.P.R.L. v. Imrex Co.* (1985), to give a narrowing construction to the broadly phrased RICO, private plaintiffs have brought a large number of civil RICO cases in recent years. In *Sedima*, the Court rejected, as an erroneous statutory interpretation, some lower federal courts' approach of requiring civil RICO plaintiffs to prove that the defendant had actually been criminally convicted of a predicate offense. The Court also rejected the argument that civil RICO plaintiffs should be expected to prove a "distinct racketeering injury" as a precondition of recovery. The Court acknowledged lower courts' concern about RICO's breadth and noted the fact that most civil RICO cases are filed against legitimate businesses rather than against "the archetypal, intimidating mobster." Nevertheless, the Court observed that "[t]his defect—if defect it is—is inherent in the statute as written, and its correction must lie with Congress."

Various RICO reform proposals have been unsuccessfully introduced in Congress. A 1995 reform measure that did become law, however, established that a civil RICO case cannot be based on conduct that would have been actionable as securities fraud unless the conduct amounting to securities fraud had resulted in a criminal conviction.

Anza v. Ideal Steel Supply Corp.

547 U.S. 451 (U.S. Sup. Ct. 2006)

Ideal Steel Supply Corporation sold steel mill products along with related supplies and services. National Steel Supply, Inc., owned by Joseph and Vincent Anza, was Ideal's principal competitor. Both Ideal and National had stores in New York City. Ideal sued the Anzas and National (often referred to below as "the petitioners") in federal district court in New York. Ideal based its claim on the Racketeer Influenced and Corrupt Organizations Act (RICO), 18 U.S.C. §§ 1961–1968. In § 1962, RICO prohibits certain conduct involving a "pattern of racketeering activity." RICO's § 1964(c) recognizes a private right of action in favor of "[a]ny person injured in his business or property by reason of a violation" of the statute's substantive restrictions.

In its complaint, Ideal alleged that National had adopted a practice of failing to charge the requisite New York sales tax to cash-paying customers. This practice supposedly allowed National to reduce its prices without affecting its profit margin. Ideal asserted that the petitioners submitted fraudulent tax returns to the New York State Department of Taxation and Finance

in an effort to conceal their conduct. According to *Ideal's* complaint, the petitioners' submission of the fraudulent tax returns constituted various acts of mail fraud (when they sent the returns by mail) and wire fraud (when they sent the returns electronically). Mail fraud and wire fraud are forms of "racketeering activity," according to RICO's § 1961. *Ideal* contended that the petitioners' conduct amounted to a "pattern of racketeering activity" because the fraudulent returns were submitted on an ongoing and regular basis. In particular, *Ideal* claimed that the petitioners violated RICO's § 1962(c), which makes it unlawful for "any person employed by or associated with any enterprise engaged in, or the activities of which affect, interstate or foreign commerce, to conduct or participate, directly or indirectly, in the conduct of such enterprise's affairs through a pattern of racketeering activity or collection of unlawful debt." The complaint asserted that the allegedly unlawful racketeering scheme gave *National* a competitive advantage over *Ideal* in terms of sales and market share, and that *Ideal* had therefore been injured "by reason of" the scheme for purposes of § 1964(c)'s private right of action.

Ruling that *Ideal's* complaint failed to state a claim upon which relief could be granted, the district court granted the petitioners' motion to dismiss the case. The U.S. Court of Appeals for the Second Circuit reversed, concluding that *Ideal* had adequately pleaded a causation link between the alleged pattern of racketeering activity and the harm experienced by *Ideal*. The U.S. Supreme Court granted certiorari at the petitioners' request.

Kennedy, Justice

RICO prohibits certain conduct involving a "pattern of racketeering activity." One of RICO's enforcement mechanisms is a private right of action, available to "[a]ny person injured in his business or property by reason of a violation" of the Act's substantive restrictions. § 1964(c). In *Holmes v. Securities Investor Protection Corp.*, 503 U.S. 258 (1992), this Court held that a plaintiff may sue under § 1964(c) only if the alleged RICO violation was the proximate cause of the plaintiff's injury. The instant case requires us to apply the principles discussed in *Holmes* to a dispute between two competing businesses.

Our analysis begins—and, as will become evident, largely ends—with *Holmes*. That case arose from a complaint filed by the Securities Investor Protection Corporation (SIPC), a private corporation with a duty to reimburse the customers of registered broker-dealers who became unable to meet their financial obligations. SIPC claimed that Robert Holmes conspired with others to manipulate stock prices. When the market detected the fraud, the share prices plummeted, and the "decline caused [two] broker-dealers' financial difficulties resulting in their eventual liquidation and SIPC's advance of nearly \$13 million to cover their customers' claims." SIPC sued on several theories, including that Holmes participated in the conduct of an enterprise's affairs through a pattern of racketeering activity in violation of § 1962(c) and conspired to do so in violation of § 1962(d).

The Court held that SIPC could not maintain its RICO claims against Holmes for his alleged role in the scheme. The decision relied on a careful interpretation of § 1964(c), which provides a civil cause of action to persons injured "by reason of" a defendant's RICO violation. The Court recognized that the phrase "by reason of" could be read broadly to require merely that the claimed violation was a "but for" cause of the plaintiff's injury. It rejected this reading, however, noting the

"unlikelihood that Congress meant to allow all factually injured plaintiffs to recover." Proper interpretation of § 1964(c) required consideration of the statutory history, which [caused the *Holmes* Court to conclude that § 1964(c)'s "by reason of" language called for private plaintiffs to prove that the defendants' violations directly caused the plaintiffs' harm and thus were the "proximate cause" thereof].

The *Holmes* Court turned to the common-law foundations of the proximate-cause requirement, and specifically the "demand for some direct relation between the injury asserted and the injurious conduct alleged." It concluded that [SIPC's] RICO claims could not satisfy this requirement of directness. The deficiency, the Court explained, was that "the link is too remote between the stock manipulation alleged and the customers' harm, being purely contingent on the harm suffered by the broker-dealers."

Applying the principles of *Holmes* to the present case, we conclude *Ideal* cannot maintain its claim based on § 1962(c). [That section], as noted above, forbids conducting or participating in the conduct of an enterprise's affairs through a pattern of racketeering activity. The Court has indicated that the compensable injury flowing from a violation of that provision "necessarily is the harm caused by predicate acts sufficiently related to constitute a pattern, for the essence of the violation is the commission of those acts in connection with the conduct of an enterprise." [Case citation omitted.]

Ideal's theory is that Joseph and Vincent Anza harmed it by defrauding the New York tax authority and using the proceeds from the fraud to offer lower prices designed to attract more customers. The RICO violation alleged by *Ideal* is that the Anzas conducted *National's* affairs through a pattern of mail fraud and wire fraud. The direct victim of this conduct was the State of New York, not *Ideal*. It was the State that was being defrauded and the state that lost tax revenue as a result.

To be sure, Ideal asserts it suffered its own harms when the Anzas failed to charge customers for the applicable sales tax. The cause of Ideal's asserted harms, however, is a set of actions (offering lower prices) entirely distinct from the alleged RICO violation (defrauding the state). The attenuation between the plaintiff's harms and the claimed RICO violation arises from a different source in this case than in *Holmes*, where the alleged violations were linked to the asserted harms only through the broker-dealers' inability to meet their financial obligations. Nevertheless, the absence of proximate causation is equally clear in both cases.

This conclusion is confirmed by considering the directness requirement's underlying premises. One motivating principle is the difficulty that can arise when a court attempts to ascertain the damages caused by some remote action. [As noted in *Holmes*,] "the less direct an injury is, the more difficult it becomes to ascertain the amount of a plaintiff's damages attributable to the violation, as distinct from other, independent, factors." The instant case is illustrative. The injury Ideal alleges is its own loss of sales resulting from National's decreased prices for cash-paying customers. National, however, could have lowered its prices for any number of reasons unconnected to the asserted pattern of fraud. It may have received a cash inflow from some other source or concluded that the additional sales would justify a smaller profit margin. Its lowering of prices in no sense required it to defraud the state tax authority. Likewise, the fact that a company commits tax fraud does not mean the company will lower its prices; the additional cash could go anywhere from asset acquisition to research and development to dividend payouts.

There is . . . a second discontinuity between the RICO violation and the asserted injury. Ideal's lost sales could have resulted from factors other than petitioners' alleged acts of fraud. Businesses lose and gain customers for many reasons, and it would require a complex assessment to establish what portion of Ideal's lost sales were the product of National's decreased prices.

The attenuated connection between Ideal's injury and the Anzas' injurious conduct thus implicates fundamental concerns expressed in *Holmes*. [A further problem] is the speculative

nature of the proceedings that would follow if Ideal were permitted to maintain its claim. A court considering the claim would need to begin by calculating the portion of National's price drop attributable to the alleged pattern of racketeering activity. It next would have to calculate the portion of Ideal's lost sales attributable to the relevant part of the price drop. The element of proximate causation recognized in *Holmes* is meant to prevent these types of intricate, uncertain inquiries from over-running RICO litigation.

The requirement of a direct causal connection is especially warranted where the immediate victims of an alleged RICO violation can be expected to vindicate the laws by pursuing their own claims. [As stated in *Holmes*,] "directly injured victims can generally be counted on to vindicate the law as private attorneys general, without any of the problems attendant upon suits by plaintiffs injured more remotely." [Here,] Ideal accuses the Anzas of defrauding the State of New York out of a substantial amount of money. If the allegations are true, the state can be expected to pursue appropriate remedies. The adjudication of the state's claims, moreover, would be relatively straightforward; while it may be difficult to determine facts such as the number of sales Ideal lost due to National's tax practices, it is considerably easier to make the initial calculation of how much tax revenue the Anzas withheld from the state. There is no need to broaden the universe of actionable harms to permit RICO suits by parties who have been injured only indirectly.

The Court of Appeals [reasoned] that because the Anzas allegedly sought to gain a competitive advantage over Ideal, it is immaterial whether they took an indirect route to accomplish their goal. This rationale does not accord with *Holmes*. A RICO plaintiff cannot circumvent the proximate-cause requirement simply by claiming that the defendant's aim was to increase market share at a competitor's expense. When a court evaluates a RICO claim for proximate causation, the central question it must ask is whether the alleged violation led directly to the plaintiff's injuries. In the instant case, the answer is no.

Second Circuit's judgment reversed and case remanded for further proceedings.

Computer Crime

As computers have come to play an increasingly important role in our society, new opportunities for crime have arisen. In some instances, computers may be used to accomplish crimes such as theft, embezzlement, espionage, and fraud. In others, computers or the information

stored there may be targets of crimes such as unauthorized access, vandalism, tampering, or theft of services. The law's response to computer crimes has evolved with this new technology. For example, computer hacking—once viewed by some as a mischievous but clever activity—can now lead to significant prison sentences and fines.

CYBERLAW IN ACTION

Does the federal Computer Fraud and Abuse Act provide a basis for a lawsuit when the defendant allegedly misappropriated trade secret information from a database owned by the plaintiff? In *Garelli Wong & Associates, Inc. v. Nichols*, 2008 U.S. Dist. LEXIS 3288 (N.D. Ill. 2008), the court gave “no” as the answer.

Garelli Wong, a provider of accounting and financial personnel services, created a database containing confidential client tracking information. The firm took steps to maintain the confidentiality of the information and thereby obtain the competitive advantage that the information provided. The case arose when William Nichols, a former employee of Garelli Wong and a corporation that had later acquired the firm, allegedly used some of the confidential information in the database after he had taken a job with a competing firm. Nichols’s supposed use of the information allegedly breached a contract he had entered into with Garelli Wong when he was employed there. Garelli Wong and the successor corporation sued Nichols in federal court, contending that his actions violated the Consumer Fraud and Abuse Act (CFAA), 18 U.S.C. § 1030 *et seq.*, and constituted breach of contract in violation of state common law. Nichols moved to dismiss the plaintiffs’ CFAA claim because of a supposed failure to state a claim upon which relief could be granted.

Section 1030(a)(5) of the CFAA calls for liability to be imposed on one who:

- (5)(A)(i) knowingly causes the transmission of . . . information . . . and as a result of such conduct, intentionally causes damage without authorization, to a protected computer;

- (ii) intentionally accesses a protected computer without authorization, and as a result of such conduct, recklessly causes damage; or
- (iii) intentionally accesses a protected computer without authorization, and as a result of such conduct, causes damage . . . ; and
- (5)(B)(i) by conduct described in clause (i), (ii), or (iii) of subparagraph (A), caused . . . loss to 1 or more persons during any 1-year period . . . aggregating at least \$5,000 in value.

The court noted that in view of the above language, a plaintiff must properly plead both *damage* and *loss* in order to allege a civil CFAA violation. A definition section of the CFAA defines *damage* as “impairment to the integrity or availability of data, a program, a system, or information.” Applying these definitions, the court agreed with Nichols that even if he used information in the database, he did not impair the integrity or availability of the information or the database. Accordingly, the court held that the CFAA does not extend to cases in which trade secret information is merely used—even if in violation of a contract or state trade secret law—because such conduct by itself does not constitute *damage* as that term is defined in the CFAA. Because the plaintiffs could not properly allege damage, their CFAA claim was subject to dismissal regardless of whether they had properly pleaded loss.

With the CFAA claim having been dismissed, the court agreed with Nichols that the basis for federal court jurisdiction was gone and that the plaintiff’s state law–based claim for breach of contract should also be dismissed. The plaintiffs’ recourse, then, would be to refile the breach of contract claim in a state court, perhaps along with a misappropriation of trade secret claim under state law. (For more information on misappropriation of trade secret claims, see Chapter 8.)

The technical nature of computer crime complicates its detection and prosecution. Traditional criminal statutes have often proven inadequate because they tend not to address explicitly the types of crime associated with the use of computers. Assume, for example, that a general statute on theft defines the offense in terms of stealing “property,” and that the defendant is charged with violating the statute by taking and using computer data without authorization. The court could decide to dismiss this case if categorizing data stored in a computer as “property” strikes the court as a strained interpretation of the statute. Although some courts have interpreted existing criminal laws narrowly so as to exclude instances of computer abuse, other courts have construed them more broadly. In light of the uncertainties attending statutory

interpretation, legislatures on the state and federal levels have become increasingly aware of the need to revise their criminal codes to be certain that they explicitly cover computer crime.

Almost all states have now enacted criminal statutes specifically outlawing certain abuses of computers. Common provisions prohibit such acts as obtaining access to a computer system without authorization, tampering with files or causing damage to a system (e.g., by spreading a virus or deleting files), invading the privacy of others, using a computer to commit fraud or theft, and trafficking in passwords or access codes.

On the federal level, computer crime has been prosecuted with some success under existing federal statutes, primarily those forbidding mail fraud, wire fraud,

transportation of stolen property, and thefts of property. As has been true at the state level, successful prosecution of these cases often depends on broad interpretation of the statutory prerequisites. Another federal law deals more directly with improper uses of computers. Among the crimes covered by this federal statute are intentionally gaining unauthorized access to a computer used by or for the U.S. government, trafficking in passwords and other access devices, and using a computer to obtain government information that is protected from disclosure. It is also a crime to gain unauthorized access to the computer system of a private financial institution that has a connection with the federal government (such as federal insurance for the deposits in the financial institution). In addition, the statute criminalizes the transmission of codes, commands, or information if the transmission was

intended to damage such an institution's computers, computer system, data, or programs.

The federal Computer Fraud and Abuse Act (CFAA) allows the imposition of criminal and civil liability on one who "knowingly, and with intent to defraud, accesses a protected computer without authorization, or exceeds authorized access, and by means of such conduct furthers the intended fraud and obtains anything of value." In addition, the CFAA provides that criminal and civil liability may attach to one who transmits a program, information, code, or command knowingly, intentionally, and without authorization, if the act results in damage to a computer system used by the government or a financial institution or otherwise in interstate commerce. For a case applying the CFAA, see the nearby Cyberlaw in Action box.

Problems and Problem Cases

1. Ahmad Ressay attempted to enter the United States by car ferry at Port Angeles, Washington. Hidden in his rental car's trunk were explosives that he intended to detonate at the Los Angeles International Airport. After the ferry docked, a customs official questioned Ressay. On the customs declaration form the official instructed Ressay to complete, Ressay identified himself on the form by a false name and falsely referred to himself as a Canadian citizen even though he was Algerian. Ressay was then directed to a secondary inspection station, where another official performed a search of his car. This search uncovered explosives and related items in the car's spare tire well. Ressay was later convicted of a number of crimes, including the felony of making a false statement to a United States customs official, in violation of 18 U.S.C. § 1001, and the offense of carrying an explosive "during the commission of" the just-noted felony, in violation of 18 U.S.C. § 844(h)(2). The latter offense was "Count 9" in the indictment against Ressay. The U.S. Court of Appeals for the Ninth Circuit set aside Ressay's conviction on Count 9 because it interpreted the word "during," as used in § 844(h)(2), as including an implicit requirement that the explosive be carried *in relation to* the underlying felony. The Ninth Circuit concluded that because Ressay's carrying of explosives did not relate to the underlying felony of making a false statement to a customs official, the conviction on Count 9 could not stand. Did the Ninth Circuit correctly interpret the "during the commission of" language in the statute on which Count 9 was based?
2. An informant told the Eagan, Minnesota, police that while walking past the window of a ground-floor apartment, he had observed people putting a white powder into bags. Officer Thielen went to the apartment building to investigate. He looked in the window through a gap in the closed blind and observed the bagging operation for several minutes. When two men left the building in a previously identified Cadillac, other police officers stopped the car. While one of the car's doors was open, the officers observed a black zippered pouch and a handgun on the floor of the vehicle. The officers arrested the car's occupants, Carter and Johns. A later search of the vehicle resulted in the discovery of pagers, a scale, and 47 grams of cocaine in plastic baggies. After seizing the car, the officers returned to the apartment and arrested its occupant, Thompson. A search of the apartment (conducted on the basis of a warrant) revealed cocaine residue on the kitchen table and plastic baggies similar to those found in the Cadillac. Officer Thielen identified Carter, Johns, and Thompson as the persons he had observed taking part in the bagging operation. It was later learned that Thompson was the apartment's lessee and that Carter and Johns, both of whom lived in Chicago, had come to the apartment for the sole purpose of packaging the cocaine. Carter and Johns had never been to the apartment before and were in the apartment for approximately two and one-half hours

at the general time the bagging operation was conducted. In return for the use of the apartment, Carter and Johns had given some of the cocaine to Thompson. Carter and Johns were charged with controlled substance–related crimes. Prior to trial, they moved to suppress all evidence obtained from the apartment and the Cadillac. They contended that Officer Thielen’s observation of them through the apartment window was an unreasonable search in violation of the Fourth Amendment and that all evidence obtained as a result was inadmissible. Were Carter and Johns entitled to claim the protection of the Fourth Amendment?

3. A federal grand jury was investigating “John Doe,” president and sole shareholder of “XYZ” corporation, concerning possible violations of federal securities and money-laundering statutes. During the investigation, the government learned that XYZ had paid the bills for various telephone lines, including those used in Doe’s homes and car. Grand jury subpoenas calling for the production of documents were then served on the custodian of XYZ’s corporate records, on Doe, and on the law firm Paul, Weiss, Rifkind, Wharton & Garrison (Paul–Weiss), which represented Doe. These subpoenas sought production of telephone bills, records, and statements of account regarding certain telephone numbers, including those used by Doe. The District Court determined after an evidentiary hearing that the documents sought were XYZ’s, and not Doe’s.

Paul–Weiss, which had received copies of these documents from its client, refused to produce them, arguing that it was exempted from doing so by Doe’s privilege against self-incrimination. Was Paul–Weiss correct in its assertion?

4. Dow Chemical Company operated a 2,000-acre chemical manufacturing facility at Midland, Michigan. The facility consisted of numerous covered buildings, with manufacturing equipment and piping conduits between various buildings plainly visible from the air. Dow maintained elaborate security around the perimeter of the complex to bar ground-level public views of these areas. It also investigated any low level flights by aircraft over the facility. Dow did not, however, attempt to conceal all manufacturing equipment within the complex from aerial views because the cost would have been prohibitive. With Dow’s consent, enforcement officials of the Environmental Protection Agency (EPA) made an on-site inspection of two power plants in this complex. When Dow denied EPA’s request for another

inspection, EPA did not seek an administrative search warrant. Instead, EPA employed a commercial aerial photographer, who used a standard floor-mounted, precision aerial mapping camera to take photographs of the facility from altitudes of 12,000, 3,000, and 1,200 feet. At all times, the aircraft was lawfully within navigable airspace. EPA did not inform Dow of this aerial photography. Was EPA’s taking of aerial photographs of the Dow complex a search prohibited by the Fourth Amendment?

5. Sun-Diamond Growers of California was a trade association engaged in marketing and lobbying activities on behalf of its member cooperatives, which were owned by 5,000 producers of raisins, figs, walnuts, prunes, and hazelnuts. A federal grand jury indicted Sun-Diamond for an alleged violation of the illegal gratuity statute, 18 U.S.C. § 201(1)(A), which criminalizes a private party’s giving of “anything of value” to a public official “for or because of any official act performed or to be performed” by the public official. According to the indictment, Sun-Diamond violated the statute by giving then-Secretary of Agriculture Michael Espy gratuities valued at approximately \$5,900 (tickets to the U.S. Open Tennis Tournament, luggage, meals, a framed print, and a crystal bowl). The indictment alluded to two Department of Agriculture–related matters in which Sun-Diamond had an interest in favorable treatment at the time Sun-Diamond gave the gifts to Secretary Espy. Nevertheless, the indictment did not allege a specific connection between either of the two matters and Sun-Diamond’s conferral of the gifts. A federal district court jury found Sun-Diamond guilty. Holding that the district judge erred in instructing the jury that “it is sufficient if Sun-Diamond provided Espy with unauthorized compensation simply because he held public office,” the U.S. Court of Appeals for the District of Columbia Circuit reversed and remanded. The U.S. Supreme Court granted certiorari. How did the Supreme Court rule?
6. Border Patrol Agent Cesar Cantu boarded a bus in Texas to check the immigration status of its passengers. As he walked off the bus, he squeezed the soft luggage that passengers had placed in the storage racks above their seats. After squeezing a green canvas bag belonging to Steven DeWayne Bond, Cantu concluded that it contained a “brick-like” object. Bond allowed Cantu to open the bag. Upon doing so, Cantu found a “brick” of methamphetamine, which had been wrapped in duct tape and then

rolled in a pair of pants. Did Cantu's physical manipulation of Bond's luggage constitute an "unreasonable search and seizure" for purposes of the Fourth Amendment?

7. Cedric Kushner Promotions Ltd. (Kushner), a corporate promoter of boxing matches, sued Don King, the president and sole shareholder of a rival corporation, alleging that King had conducted his corporation's affairs in violation of § 1962(c) of the Racketeer Influenced and Corrupt Organizations Act. A federal district court dismissed the complaint. In affirming, the U.S. Court of Appeals for the Second Circuit expressed its view that § 1962(c) applies only where a plaintiff shows the existence of two separate entities, a "person" and a distinct "enterprise," whose affairs that "person" improperly conducts. It was undisputed that King was an employee of his corporation and was acting within the scope of his authority. Under the Second Circuit's analysis, King was part of the corporation rather than a "person" distinct from the "enterprise." In cases presenting similar facts, other federal courts of appeal had concluded that the sole shareholder of a corporation was a "person" distinct from the corporate "enterprise." Kushner appealed the Second Circuit's decision, and the U.S. Supreme Court granted certiorari. Which interpretation of § 1962(c) did the Supreme Court adopt—the Second Circuit's or the one followed by other federal courts of appeal?
8. Muniz was arrested on a charge of driving under the influence of alcohol. He was taken to a booking center, where he was asked several questions by a police officer without first being given the *Miranda* warnings. Videotape (which included an audio portion) was used to record the questions and Muniz's answers. The officer asked Muniz his name, address, height, weight, eye color, date of birth, and current age. Muniz stumbled over answers to two of these questions. The officer then asked Muniz the date of his sixth birthday, but Muniz did not give the correct date. At a later point, Muniz was read the *Miranda* warnings for the first time. He was later convicted of the charged offense, with the trial court denying his motion to exclude the videotape (both video and audio portions) from evidence. Assume that the video portion of the tape violated neither the Fifth Amendment nor *Miranda*. Should all or any part of the audio portion of the tape (which contained Muniz's stumbling responses to two questions plus his incorrect answer to the sixth birthday date question) have been excluded as a violation of either the Fifth Amendment or *Miranda*?
9. Explorica, Inc., was founded to compete with EF Cultural Travel, which dominated the market in global tours for high school students. Setting Explorica's tour prices lower than EF's became an important Explorica objective. EF's tour prices were accessible through the firm's Web site, where the user who desired information would enter various price-determining factors, such as desired date of departure and destination. The Web site would translate the user's preferences to a special code, decipherable only by the site's servers and human operators, and would submit the code to the server. The server would determine travel options and prices suited to the user's specifications, and then send them to the user's computer. In view of the large number of possible factor combinations that a user might submit to EF, Explorica realized that manually obtaining price information on every tour that EF could offer would be nearly impossible. Explorica therefore wrote a "scraper" program, using code information provided by Explorica Vice President Phil Gormley, a former employee of EF. The scraper automatically submitted codes representing all possible factor combinations to EF's server and then recorded the results in a spreadsheet. Explorica's use of the scraper resulted in a compilation of 60,000 lines—the rough equivalent of eight telephone books—of data. Explorica used this information to undercut EF's prices. When EF learned of Explorica's actions, EF sued Explorica, alleging civil violations of the Computer Fraud and Abuse Act (CFAA). Section 1030(a)(4) of the CFAA is violated when a person "knowingly, and with intent to defraud, accesses a protected computer without authorization, or exceeds authorized access, and by means of such conduct furthers the intended fraud and obtains anything of value." EF sought a preliminary injunction that would bar further use of the scraper and would require the return of all materials generated by the scraper. Was EF entitled to the preliminary injunction?
10. Notra Trulock served as Director of the Office of Intelligence of the U.S. Department of Energy (DOE) from 1994 to 1998. During those years, Trulock claimed to have uncovered evidence that Chinese spies had infiltrated U.S. weapons facilities and that the White House, the Federal Bureau of Investigation (FBI), and the Central Intelligence Agency (CIA) had ignored his warnings about the espionage.

Trulock testified before congressional committees on this subject and, after he no longer worked for the DOE, published a related article that criticized the White House, the FBI, and the CIA. Trulock contended that he did not reveal any classified information in the article. Linda Conrad, a DOE employee, owned a townhouse at which she and Trulock lived. After Trulock had left the DOE, Conrad's DOE supervisor told her that FBI agents wanted to talk with her about Trulock, that the FBI had a warrant to search her townhouse, and that if she did not cooperate, FBI agents would break down the townhouse's door while the press observed. Conrad submitted to a three-hour interview by FBI agents, who asked about Trulock's personal records and computer files. Conrad told the agents that she and Trulock shared a computer, which was located at the townhouse. She also said that she and Trulock maintained separate password-protected files on the computer's hard drive, and that neither knew the other's password. At the end of the interview, Conrad signed a form whose terms revealed her supposed consent to a search of the townhouse. The agents said nothing to Conrad about whether they had, or did not have, a search warrant. In fact, they did not have one.

The agents searched the townhouse pursuant to Conrad's supposed consent and without seeking Trulock's permission. During the search, the agents found the computer Conrad had mentioned. Aided by an FBI computer specialist, an agent examined the computer's files, including Trulock's password-protected files. In a civil action in which they alleged that the FBI had acted unconstitutionally, Conrad and Trulock contended that their Fourth Amendment rights had been violated. Was Conrad's supposed consent to the search of the townhouse valid and hence sufficient to defeat *her* claim of a Fourth Amendment violation? If Conrad legitimately consented to the search, was her consent binding on *Trulock* with regard to the FBI agents' (a) search of the townhouse itself, (b) examination of computer files to which both Conrad and Trulock had access, and (c) examination of Trulock's password-protected computer files?

11. A grand jury indicted Automated Medical Laboratories, Inc. (AML), Richmond Plasma Corporation (RPC) (a wholly owned AML subsidiary), and three former RPC managers for engaging in a conspiracy

that included falsification of logbooks and records required to be maintained by businesses producing blood plasma. The falsification was designed to conceal from the Food and Drug Administration (FDA) various violations of federal regulations governing the plasmapheresis process and facilities. The evidence introduced at trial indicated that the managers and several other members of the team charged with ensuring compliance with FDA regulations had actively participated in record falsification. AML was convicted and appealed on the ground that there was no evidence that any officer or director of AML knowingly or willfully participated in or authorized the unlawful practices at RPC. Was AML's conviction in the absence of such proof proper?

12. While under arrest for an unrelated offense, Raymond Levi Cobb confessed to a home burglary, but denied knowledge relating to the disappearance of a woman and child from the home. Cobb was indicted on a charge of burglary, and an attorney was appointed to represent him. Later, while Cobb was out on bond, Cobb's father informed police that Cobb had confessed to him that he (Cobb) had murdered the woman and child. Police then took Cobb into custody. Cobb waived his *Miranda* rights, confessed to the murders, and led officers to the place where the bodies were buried. He appealed his consequent conviction and death sentence, arguing that because police had not secured the permission of his attorney from the burglary case before conducting the interrogation regarding the murders, his confession should have been suppressed. Was he correct?

Online Research

Wire Fraud

According to the federal wire fraud statute, it is a criminal offense to use interstate wires to carry out "any scheme or artifice to defraud, or for obtaining money or property by means of false or fraudulent pretenses." Can a plot to deprive the Canadian government of tax revenue violate this statute if the plot is hatched in the United States through the use of telephones? The U.S. Supreme Court answered this question in a 2005 decision. Use an online source to locate this decision. After reading the case, prepare a case brief of the sort described in the Appendix to Chapter 1.

chapter 6

INTENTIONAL TORTS

“The Mating Habits of the Suburban High School Teenager” served as the headline for a *Boston* magazine article that addressed sexuality and promiscuity among teenagers in the Boston area. An accompanying subheading, which appeared in lettering smaller than that used for the headline, read this way: “They hook up online. They hook up in real life. With prom season looming, meet your kids—they might know more about sex than you do.”

According to the article, sexual experimentation had become increasingly common among high school students in recent years, with today’s teenagers being both “sexually advanced” and “sexually daring.” The author wrote that it had become common for “single boys and girls with nothing to do [to] go in a group to a friend’s house . . . drink or smoke pot, then pair off and engage in no-strings hookups.” Concerning the supposed prevalence of sexual promiscuity, the author quoted a teenager as saying that “everybody’s having casual sex and pretty much everybody’s doing it with multiple partners.” Throughout the article, the author included excerpts from her interviews with Boston-area students about their sexual experiences and views on sexuality.

A large photograph accompanied the beginning portion of the article. The photograph, which took up a full page plus part of a facing page, showed five formally attired students standing near an exit door at a high school prom. Three students were smoking cigarettes, and a fourth was drinking from a plastic cup. The fifth student, Stacey Stanton, was looking in the direction of the camera with an apparently friendly expression. Her face and a portion of her body were readily visible. She wore a formal dress and was neither smoking nor drinking. Beneath the headlines and the article’s opening text, and on the same page as the large photograph, there appeared the following caption and disclaimer: “*The photos on these pages are from an award-winning five-year project on teen sexuality by photojournalist Dan Habib. The individuals pictured are unrelated to the people or events described in this story. The names of the teenagers interviewed for the story have been changed.*” Of the type sizes used on the page, the one used for the caption and disclaimer was the smallest. Other pictures that did not depict Stanton accompanied later portions of the article.

Stanton, who was not named in the article, neither consented to the use of the large photograph nor participated in Habib’s supposed “project on teen sexuality.” She filed suit against Metro Corporation, the publisher of *Boston* magazine. According to Stanton’s complaint, the juxtaposition of the large photograph and the article created the false impression that she was a person engaged in the activities described in the article. Therefore, Stanton contended that she had been the victim of defamation. She also regarded the caption’s reference to “project on teen sexuality” as having created the false and defamatory impression that she had participated in the project. Moreover, Stanton contended that the publication of the large photograph amounted to an invasion of her privacy.

The federal district court, however, ruled that Stanton had stated neither a valid defamation claim nor a valid invasion of privacy claim. Therefore, the court granted Metro’s motion to dismiss Stanton’s complaint. Stanton then appealed.

As you read Chapter 6, decide whether you agree with the district court's ruling on the defamation and invasion of privacy claims, and identify the reasons why or why not. Then make a prediction about how the appellate court ruled. Regardless of your conclusion on whether Stanton alleged valid defamation and invasion of privacy claims, think about this question: Did *Boston* magazine personnel act *ethically* in connection with the use of the large photograph, the caption, and the disclaimer? Be prepared to justify your position.

A **TORT IS A *civil wrong*** that is not a breach of a contract. Tort cases and treatises identify different types of wrongfulness, culpability, or fault and define them in varying ways. In this chapter and in Chapter 7, we will refer to the four types of wrongfulness defined below.

1. *Intent*. We define intent as the desire to cause certain consequences or the substantial certainty that those consequences will result from one's behavior. For example, if D pulls the trigger of a loaded handgun while aiming it at P for the purpose of killing him or with a substantial certainty that P would be killed, D intended to kill P. This chapter discusses several *intentional torts*, most of which require, as the name of this category of torts suggests, intent on the part of the defendant.

2. *Recklessness*. The form of intent involving substantial certainty blends by degrees into a different kind of fault: recklessness (sometimes called "willful and wanton conduct"). We define recklessness as a conscious indifference to a known and substantial risk of harm created by one's behavior. Suppose that simply because he likes the muzzle flash and the sound, D fires his handgun at random in a crowded subway station. One of D's shots injures P. D acted recklessly if he had no desire to hit P or anyone else and was not substantially certain that anyone would be hit, but nonetheless knew that this could easily result from his behavior. When legal responsibility is assigned in the civil context, recklessness is often treated as a near equivalent of intentional wrongdoing. Recklessness is considered a more severe degree of fault than the next type to be discussed: negligence.

3. *Negligence*. We define negligence as a failure to use reasonable care, with harm to another party occurring as a result. Negligent conduct falls below the level necessary to protect others against unreasonable risks of harm. Assume that without checking, D pulls the trigger on what he incorrectly and unreasonably thinks is an unloaded handgun. If the gun goes off and wounds P, D has negligently harmed P. Chapter 7 discusses negligence law in detail.

4. *Strict liability*. Strict liability is liability without fault or more precisely, liability irrespective of fault. In a strict liability case, the plaintiff need not prove intent, recklessness, negligence, or any other kind of wrongfulness on the defendant's part. However, strict liability is not automatic liability. A plaintiff must prove certain things in any strict liability case, but fault is not one of them. Chapter 7 discusses various types of strict liability, some of which are examined more fully in other chapters.

Tort law contemplates civil liability for those who commit torts. This distinguishes it from the criminal law, which also involves wrongful behavior. As you saw in Chapter 1, a civil case is normally a suit between private parties. In criminal cases, a prosecutor represents the government in confronting the defendant. The standard of proof that the plaintiff must satisfy in a tort case is the *preponderance of the evidence* standard, not the more stringent beyond-a-reasonable-doubt standard applied in criminal cases. This means that the greater weight of the evidence introduced at the trial must support the plaintiff's position on every element of the tort case. Finally, the remedy allowed in civil cases (most often, damages) differs from the punishment imposed in criminal cases (e.g., imprisonment or a fine). Of course, the same behavior may sometimes give rise to both civil and criminal liability. For example, one who commits a sexual assault is criminally liable and will also be liable for some or all of the torts of assault, battery, false imprisonment, and intentional infliction of emotional distress.

A plaintiff who wins a tort case usually recovers **compensatory damages** for the harm she suffered as a result of the defendant's wrongful act. Depending on the facts of the case, these damages may be for direct and immediate harms such as physical injuries, medical expenses, and lost wages and benefits, or for seemingly less tangible harms such as loss of privacy, injury to reputation, and emotional distress. If the defendant's behavior was particularly bad, injured victims may also be able to recover **punitive damages**. Punitive damages are not intended to compensate tort victims for their losses.

Instead, they are designed to punish flagrant wrongdoers and to deter them, as well as others, from engaging in similar conduct in the future. Punitive damages are reserved for the worst kinds of wrongdoing and thus are not routinely assessed against the losing defendant in a tort case. Certainly, however, some behaviors amounting

to recklessness or giving rise to intentional tort liability are regarded as reprehensible enough to justify an assessment of punitive damages.

The *Mathias* case, which follows, reviews the types of fault discussed above and explains the role that punitive damages may play in certain cases.

Mathias v. Accor Economy Lodging, Inc.

347 F.3d 672 (7th Cir. 2003)

Burl and Desire Mathias were bitten by bedbugs when they stayed at a Motel 6 in downtown Chicago. They filed suit against the corporation that owns and operates the Motel 6 chain. Alleging that the defendant's personnel refused to act in response to the complaints of various guests and otherwise knowingly disregarded clear evidence of a bedbug infestation problem, the plaintiffs sought both compensatory and punitive damages on the theory that the defendant had engaged in "willful and wanton conduct." A federal court jury returned a verdict in favor of the Mathiases, awarding them compensatory damages for their injuries and assessing a punitive damages award against the defendant. On appeal to the U.S. Court of Appeals for the Seventh Circuit, the defendant argued that any fault on its part did not amount to willful and wanton conduct and that the award of punitive damages was therefore unwarranted. Further facts pertinent to the case are discussed in the edited version of the Seventh Circuit's opinion, which appears below.

Posner, Circuit Judge

[B]edbugs . . . are making a comeback in the U.S. as a consequence of more conservative use of pesticides. The plaintiffs claim that in allowing guests to be attacked by bedbugs in a motel that charges upwards of \$100 a day for a room and would not like to be mistaken for a flophouse, the defendant was guilty of "willful and wanton conduct" and thus [should be] liable for punitive as well as compensatory damages. The jury agreed and awarded each plaintiff \$186,000 in punitive damages, though only \$5,000 in compensatory damages.

The defendant argues that at worst it is guilty of simple negligence, and if this is right the plaintiffs were not entitled . . . to any award of punitive damages. [The defendant] also complains that the [punitive damages] award was excessive. . . . The first complaint has no possible merit, as the evidence of . . . recklessness, in the strong sense of an unjustifiable failure to avoid a *known* risk, was amply shown. In 1998, EcoLab, the extermination service that the motel used, discovered bedbugs in several rooms in the motel and recommended that it be hired to spray every room, for which it would charge the motel only \$500; the motel refused. The next year, bedbugs were again discovered in a room but EcoLab was asked to spray just that room. The motel tried to negotiate "a building sweep [by EcoLab] free of charge," but, not surprisingly, the negotiation failed. By the spring of 2000, the motel's manager "started noticing that there were refunds being given by my desk clerks and reports coming back from the guests that there were ticks in the rooms and bugs in the rooms that were biting." She looked in some of the rooms and discovered bedbugs. The defendant asks us to disregard her testimony as that of a disgruntled ex-employee,

but of course her credibility was for the jury, not the defendant, to determine.

Further incidents of guests being bitten by insects and demanding and receiving refunds led the manager to recommend to her superior in the company that the motel be closed while every room was sprayed, but this was refused. This superior, a district manager, was a management-level employee of the defendant, and his knowledge of the risk and failure to take effective steps either to eliminate it or to warn the motel's guests are imputed to his employer for purposes of determining whether the employer should be liable for punitive damages. The employer's liability for compensatory damages is of course automatic on the basis of the principle of *respondeat superior*, since the district manager was acting within the scope of his employment. [Under the *respondeat superior* principle, employers are liable for torts committed by employees if those torts occurred within the scope of employment.]

The infestation continued and began to reach farcical proportions, as when a guest, after complaining of having been bitten repeatedly by insects while asleep in his room in the hotel, was moved to another room only to discover insects there; and within 18 minutes of being moved to a third room he discovered insects in that room as well and had to be moved still again. (Odd that at that point he didn't flee the motel.) By July, the motel's management was acknowledging to EcoLab that there was a "major problem with bedbugs" and that all that was being done about it was "chasing them from room to room." Desk clerks were instructed to call the "bedbugs" "ticks," apparently on the theory that customers would be less alarmed, though in fact ticks are more dangerous than bedbugs because

they spread Lyme Disease and Rocky Mountain Spotted Fever. Rooms that the motel had placed on “Do not rent, bugs in room” status nevertheless were rented.

It was in November that the plaintiffs checked into the motel. They were given Room 504, even though the motel had classified the room as “DO NOT RENT UNTIL TREATED,” and it had not been treated. Indeed, that night 190 of the hotel’s 191 rooms were occupied, even though a number of them had been placed on the same don’t-rent status as Room 504.

Although bedbug bites are not as serious as the bites of some other insects, they are painful and unsightly. Motel 6 could not have rented any rooms at the prices it charged had it informed guests that the risk of being bitten by bedbugs was appreciable. Its failure either to warn guests or to take effective measures to eliminate the bedbugs amounted to fraud and probably to [the intentional tort of] battery as well. [See, for example,] the famous case of *Garratt v. Dailey*, 279 P.2d 1091 (Wash. Sup. Ct. 1955), [in which the court] held that the defendant would be guilty of battery if he knew with substantial certainty that when he moved a chair the plaintiff would try to sit down where the chair had been and would land on the floor instead. There was, in short, sufficient evidence of “willful and wanton conduct” [that is, of recklessness as opposed to mere negligence] to permit an award of punitive damages in this case.

But in what amount? In arguing that \$20,000 was the maximum amount of punitive damages that a jury could constitutionally have awarded each plaintiff, the defendant points to the U.S. Supreme Court’s recent statement that “few awards [of punitive damages] exceeding a single-digit ratio between punitive and compensatory damages, to a significant degree, will satisfy due process.” *State Farm Mutual Automobile Insurance Co. v. Campbell*, 538 U.S. 408 (2003). The Court went on to suggest that “four times the amount of compensatory damages might be close to the line of constitutional impropriety.” Hence the defendant’s proposed ceiling in this case of \$20,000, four times the compensatory damages awarded to each plaintiff. The ratio of punitive to compensatory damages determined by the jury was, in contrast, 37.2 to 1.

The Supreme Court did not, however, lay down a 4-to-1 or single-digit-ratio rule—it said merely that “there is a presumption against an award that has a 145-to-1 ratio”—and it would be unreasonable to do so. We must consider why punitive damages are awarded and why the Court has decided that due process requires that such awards be limited. The second question is easier to answer than the first. The term “punitive damages” implies punishment, and a standard principle of penal theory is that “the punishment should fit the crime” in the sense of being proportional to the wrongfulness of the defendant’s action, though the principle is modified when the probability of

detection is very low (a familiar example is the heavy fines for littering) or the crime is potentially lucrative (as in the case of trafficking in illegal drugs).

Another penal precept is that a defendant should have reasonable notice of the sanction for unlawful acts, so that he can make a rational determination of how to act; and so there have to be reasonably clear standards for determining the amount of punitive damages for particular wrongs. [A] third precept, the core of the Aristotelian notion of corrective justice, and more broadly of the principle of the rule of law, is that sanctions should be based on the wrong done rather than on the status of the defendant; a person is punished for what he does, not for who he is, even if the who is a huge corporation.

What follows from these principles, however, is that punitive damages should be admeasured by standards or rules rather than in a completely ad hoc manner, and this does not tell us what the maximum ratio of punitive to compensatory damages should be in a particular case. To determine that, we have to consider why punitive damages are awarded in the first place.

England’s common law courts first confirmed their authority to award punitive damages in the eighteenth century, at a time when the institutional structure of criminal law enforcement was primitive and it made sense to leave certain minor crimes to be dealt with by the civil law. And still today one function of punitive-damages awards is to relieve the pressures on an overloaded system of criminal justice by providing a civil alternative to criminal prosecution of minor crimes. An example is deliberately spitting in a person’s face, a criminal assault but because minor readily deterrable by the levying of what amounts to a civil fine through a suit for damages for the tort of battery. Compensatory damages [unaccompanied by punitive damages] would not do the trick in such a case, . . . for three reasons: because [compensatory damages] are difficult to determine in the case of acts that inflict largely [dignity-related] harms; because in the spitting case [compensatory damages] would be too slight to give the victim an incentive to sue, and he might decide instead to respond with violence—and an age-old purpose of the law of torts is to provide a substitute for violent retaliation against wrongful injury; and because to limit the plaintiff to compensatory damages would enable the defendant to commit the offensive act with impunity provided that he was willing to pay.

When punitive damages are sought for billion-dollar oil spills and other huge economic injuries, the considerations that we have just canvassed fade. As the Court emphasized in *Campbell*, the fact that the plaintiffs in that case had been awarded very substantial compensatory damages—\$1 million for a dispute over insurance coverage—greatly reduced the need for giving them a huge award of punitive damages (\$145 million) as well in order to provide an effective remedy. Our case is

closer to the spitting case. The defendant's behavior was outrageous but the compensable harm done was slight and at the same time difficult to quantify because a large element of it was emotional. And the defendant may well have profited from its misconduct because by concealing the infestation it was able to keep renting rooms. Refunds were frequent but may have cost less than the cost of closing the hotel for a thorough fumigation. The hotel's attempt to pass off the bedbugs as ticks, which some guests might ignorantly have thought less unhealthful, may have postponed the instituting of litigation to rectify the hotel's misconduct. The award of punitive damages in this case thus serves the additional purpose of limiting the defendant's ability to profit from its fraud by escaping detection and (private) prosecution. If a tortfeasor is "caught" only half the time he commits torts, then when he is caught he should be punished twice as heavily in order to make up for the times he gets away.

Finally, if the total stakes in the case were capped at \$50,000 ($2 \times [\$5,000 + \$20,000]$), the plaintiffs might well have had difficulty financing this lawsuit. It is here that the defendant's aggregate net worth of \$1.6 billion becomes relevant. A defendant's wealth is not a sufficient basis for awarding punitive damages. *BMW of North America, Inc. v. Gore*, 517 U.S. 559 (1996). That would be discriminatory and would violate the rule of law, as we explained earlier, by making punishment depend on status rather than conduct. Where wealth in the sense of resources enters is in enabling the defendant to mount an extremely aggressive defense against suits such as this and by doing so to make litigating against it very costly, which in turn may make it difficult for the plaintiffs to find a lawyer willing to handle their case, involving as it does only modest stakes, for the usual 33–40 percent contingent fee. In other words, the defendant is investing in developing a reputation intended to deter plaintiffs. It is difficult otherwise to explain

the great stubbornness with which it has defended this case, making a host of frivolous evidentiary arguments despite the very modest stakes even when the punitive damages awarded by the jury are included.

All things considered, we cannot say that the award of punitive damages was excessive, albeit the precise number chosen by the jury was arbitrary. It is probably not a coincidence that $\$5,000 + \$186,000 = \$191,000/191 = \$1,000$: that is, \$1,000 per room in the hotel. But as there are no [rigid] punitive-damages guidelines, . . . it is inevitable that the specific amount of punitive damages awarded . . . will be arbitrary. (Which is perhaps why the plaintiffs' lawyer did not suggest a number to the jury.) The judicial function is to police a range, not a point.

But it would have been helpful had the parties presented evidence concerning the regulatory or criminal penalties to which the defendant exposed itself by deliberately exposing its customers to a substantial risk of being bitten by bedbugs. That is an inquiry recommended by the Supreme Court [in *Campbell*]. [However,] we do not think its omission invalidates the award. We can take judicial notice that deliberate exposure of hotel guests to the health risks created by insect infestations [potentially] exposes the hotel's owner to [criminal fines] under Illinois and Chicago law that in the aggregate are comparable in severity to that of the punitive damage award in this case. [W]hat is much more important, a Chicago hotel that permits unsanitary conditions to exist is subject to revocation of its license, without which it cannot operate. [Citation of city ordinance omitted.] We are sure that the defendant would prefer to pay the punitive damages assessed in this case than to lose its license.

District court's judgment in favor of plaintiffs affirmed.

Interference with Personal Rights

This chapter examines two categories of intentional torts: (1) those involving interference with personal rights, and (2) those involving interference with property rights. A third category, business or competitive torts, will be discussed in Chapter 8.

Battery Battery is the intentional and harmful or offensive touching of another without his consent. Contact is *harmful* if it produces bodily injury. However, battery also includes nonharmful contact that is *offensive*—

calculated to offend a reasonable sense of personal dignity. The *intent* required for battery is either (1) the intent to cause harmful or offensive contact or (2) the intent to cause apprehension that such contact is imminent. Assume, for instance, that in order to scare Pine, Delano threatens to "shoot" Pine with a gun that Delano mistakenly believes is unloaded. If Delano ends up shooting Pine even though that had not been his specific intent, Delano is liable for battery. For battery to occur, moreover, the person who suffers the harmful or offensive contact need not be the person the wrongdoer intended to injure. Under a concept known as *transferred intent*, a defendant who intends to injure one person but actually injures another is liable to the person injured, despite

the absence of any specific desire to injure him. So, if Dudley throws a rock at Thomas and hits Pike instead, Dudley is liable to Pike for battery. The *Stoshak* case, which follows shortly, provides a further example of the transferred intent principle's operation.

As the previous examples suggest, the *touching* necessary for battery does not require direct contact between the defendant's body and the plaintiff's body. Dudley is therefore liable if he successfully lays a trap for Pike or poisons him. There is also a touching if the defendant causes contact with anything attached to the plaintiff's body. If the other elements of a battery are present, Dudley is thus liable to Pike if he shoots off Pike's hat. Finally, the plaintiff need not be aware of the battery at the time it occurs. This means that Dudley is liable if he sneaks up behind Pike and knocks Pike unconscious, without Pike's ever knowing what hit him.

There is no liability for battery, however, if the plaintiff *consented* to the touching. As a general rule, consent must be freely and intelligently given to be a defense to battery. Consent also may be inferred from a person's voluntary participation in an activity, but it is ordinarily limited to contacts that are a normal consequence of the activity. A professional boxer injured by his opponent's punches to the head, therefore, would not win a battery lawsuit against the opponent. However, a professional boxer whose ear is partially bitten off by his opponent should have a valid battery claim against the ear-biter. In addition, the law infers consent to many touchings that are customary or reasonably necessary in normal social life. Thus, Preston could not recover for battery if Dean tapped him on the shoulder to ask directions or brushed against him on a crowded street. Of course, many such contacts are neither harmful nor offensive anyway.

Stoshak v. East Baton Rouge Parish School Board 959 So.2d 996 (La. App. 2007)

The statutes of Louisiana establish two different injury leave pay provisions for public school teachers who sustain injuries on the job, depending on the cause of the injury. A statute commonly referred to as the physical contact pay provision states that if a public school teacher "is injured or disabled as a result of physical contact with a student while providing physical assistance to a student to prevent danger or risk of injury to the student," the teacher is entitled to "receive sick leave for a period up to one calendar year without reduction in pay . . . while injured or disabled as a result of rendering such assistance." A separate statute, commonly referred to as the assault or battery pay provision, states that if a public school teacher "is injured or disabled while acting in his official capacity as a result of assault or battery by any student or person[, the teacher] shall receive sick leave without reduction in pay . . . while disabled as a result of such assault or battery."

John Stoshak, a teacher at a Baton Rouge, Louisiana, public high school, was injured when he attempted to break up a fistfight between two of his male students. During the fight, a punch thrown by one of the students struck Stoshak in the back of the head, causing him to fall to the ground and lose consciousness. Although neither student admitted to hitting Stoshak, one acknowledged that when Stoshak tried to break up the fight, the two students continued fighting. Stoshak later stated that he did not believe either of the boys had punched him deliberately; rather, he was struck when he sought to separate the boys who, in Stoshak's words, were "tear[ing] each other up."

Stoshak's employer, the East Baton Rouge Parish School Board (Board), placed Stoshak on leave without reduction in pay for a period of one year following the incident, in accordance with the physical contact pay statute quoted above. When it became clear that the Board would not pay benefits for more than a year after the incident, Stoshak sued the Board in a Louisiana court. Stoshak contended that he was injured as a result of an "assault or battery by any student or person," that he continued to suffer a resulting disability, and that in accordance with the assault or battery pay statute, he was entitled to leave without reduction in pay for the disability's full duration. Stoshak and the Board filed opposing motions for summary judgment. The trial court granted the Board's motion, concluding that Stoshak's injuries fell under the physical contact pay statute. The court therefore dismissed Stoshak's claim for continued benefits. Stoshak appealed to the Court of Appeals of Louisiana.

McClendon, Judge

The parties' motions for summary judgment required a determination of whether Stoshak's injuries fell under the *assault or battery pay* provision, which would entitle Stoshak to leave without reduction in pay for the duration of his disability, or the

physical contact pay provision, pursuant to which Mr. Stoshak's entitlement to leave without reduction in pay would cease one year after the incident causing his injury. Appellate courts review summary judgments [by asking] the same questions as does the trial court in determining whether summary judgment

is appropriate: whether there is any genuine issue of material fact, and whether the mover is entitled to summary judgment as a matter of law.

In this case, the material facts are undisputed. Stoshak attested that he was hit in the head by a punch that was delivered by one of two students engaged in a fistfight. The Board did not introduce any evidence to controvert Stoshak's version of the incident. Moreover, while there is no evidence to suggest that the student intended to punch Stoshak, it is undisputed that the student who struck Stoshak intended to strike the other student and was physically attempting to injure the other student.

Stoshak contends the student who hit him committed an assault or battery as those terms are defined under Louisiana's criminal and civil law, entitling him to benefits under the *assault or battery pay* provision. The Board submits that the *assault or battery pay* provision applies only when a teacher is the direct, targeted victim of an assault or battery by a student or other person, while the *physical contact pay* provision applies in all other circumstances where there is a mere physical contact with a student resulting in injury to the teacher. The Board contends that the *physical contact pay* provision applies in this case because it is undisputed that the student intended to cause harmful physical contact to the other student, but not to Stoshak.

We disagree with the Board's narrow interpretation of [the *assault or battery pay* statute]. It is well-settled that the starting point for the interpretation of any statute is the language of the statute itself. When a law is clear and unambiguous and its application does not lead to absurd consequences, the law is applied as written, and no further interpretation may be made in search of legislative intent. It is presumed that in enacting a law, the legislature was aware of existing statutes, rules of construction, and judicial decisions interpreting those statutes.

The term "assault" is defined in the criminal law [of Louisiana] as "an attempt to commit a battery, or the intentional placing of another in reasonable apprehension of receiving a battery." [Statutory citation omitted.] The term "battery" is defined in the criminal law as the "intentional use of force or violence upon the person of another." [Statutory citation omitted.] Under the tort law, a battery has been defined as a "harmful or offensive contact with a person, resulting from an act intended to cause the plaintiff to suffer such a contact." [Case citation omitted.]

In defining what type of conduct constitutes a battery, our courts have employed the doctrine of transferred intent. Under this theory, if a person intended to inflict serious bodily injury while trying to hit another person, but missed and accidentally hit someone else instead, such intent is transferred to the actual victim. We must presume that in enacting [the *assault or battery pay* provision], the legislature was cognizant of the fact that our courts have interpreted the term "battery" to encompass an unintentional injury of one person if the person inflicting the injury specifically intended to injure someone else. The legislature authorized . . . benefits [that could extend beyond one year] to a teacher injured as a result of "assault or battery by any student or person." There is no language in this provision requiring that the teacher be the intended victim of an assault or battery, and we decline to read such a requirement into the statute.

Accordingly, we construe the benefits provided for in the *assault or battery pay* provision to apply whenever the teacher is the victim of a battery at the hands of a student. The benefits provided for under the *physical contact pay* provision apply to injuries a teacher sustains when coming to the aid of a student [if the injuries] result from physical contacts that do not rise to the level of an assault or battery. See, e.g., *Garnier v. Orleans Parish School Board*, 829 So.2d 433 (La. App. 2001) (holding that the *physical contact pay* provision applied to injuries sustained by a teacher who fell to the ground when a student she was attempting to restrain from harming another student jerked away from her).

Applying this construction of the statute, we hold that as a matter of law, Stoshak is entitled to benefits under the *assault or battery pay* [statute]. [T]he student who hit Stoshak committed a battery because he intended the physical act of throwing the punch, and he intended to injure another person by throwing the punch. Under the doctrine of transferred intent, the student who hit Stoshak while attempting to hit the other student is deemed to have had the requisite intent to commit a battery on Stoshak. Therefore, because Stoshak's injuries resulted from a battery by a student, the Board was obligated to provide him with leave without reduction in pay for the duration of his disability.

Trial court's grant of summary judgment in favor of the Board reversed; summary judgment entered in favor of Stoshak.

Assault Assault occurs when there is an intentional attempt or offer to cause a harmful or offensive contact with another person, if that attempt or offer causes a reasonable apprehension of imminent battery in the other

person's mind. The necessary *intent* is the same as the intent required for battery. In an assault case, however, it is irrelevant whether the threatened contact actually occurs. Instead, the key thing is the plaintiff's *apprehension* of a

harmful or offensive contact. Apprehension need not involve fear; it might be described as a mental state consistent with this thought: “I’m just about to be hit.”

The plaintiff’s apprehension must pertain to an anticipated battery that would be *imminent or immediate*. Threats of some future battery, therefore, do not create liability for assault. In addition, the plaintiff must experience apprehension *at the time the threatened battery occurs*. For instance, if Dinwiddie fires a rifle at Porter from a great distance and misses him, and only later does Porter learn of the attempt on his life, Dinwiddie is not liable to Porter for assault. The plaintiff’s apprehension must also be *reasonable*. As a result, threatening words normally are not an assault unless they are accompanied by acts or circumstances indicating the defendant’s intent to carry out the threat.

Intentional Infliction of Emotional Distress

For many years, courts refused to allow recovery for purely emotional injuries unless the defendant had committed some recognized tort. Victims of such torts as assault, battery, and false imprisonment could recover for the emotional injuries resulting from these torts, but courts would not recognize an independent tort of infliction of emotional distress. The reasons for this judicial reluctance included a fear of spurious or trivial claims, concerns about proving purely emotional harms, and uncertainty about the proper boundaries of an independent tort. However, increased confidence in our knowledge about emotional injuries and a greater willingness to compensate such harms have helped to overcome these judicial impediments. Most courts today allow recovery for severe emotional distress, under appropriate circumstances, regardless of whether the elements of any other tort are proven.

The courts are not, however, in complete agreement on the elements of this relatively new tort. All courts do require that a wrongdoer’s conduct be *outrageous* before liability for emotional distress arises. The *Restatement (Second) of Torts* speaks of conduct “so outrageous in character, and so extreme in degree, as to go beyond all possible bounds of decency, and to be regarded as atrocious, and utterly intolerable in a civilized community.” This means that many instances of boorish, insensitive behavior are not “bad enough” to give rise to liability for this tort. Courts also agree in requiring *severe* emotional distress. The *Restatement (Second)* sets forth another clear majority rule: that the defendant must *intentionally or recklessly* inflict the distress in order to be liable. A few courts, however, still fear fictitious claims and require proof of some bodily harm resulting from the victim’s emotional distress.

In addition, some courts say that the plaintiff’s distress must be distress that a reasonable person of ordinary sensibilities would suffer. The focus on whether the severely distressed person had ordinary sensibilities is sometimes minimized, however, when the defendant behaves outrageously by abusing a position or relation that gives him authority over another. Examples include employers, police officers, landlords, and school authorities.

The courts also differ in the extent to which they allow recovery for emotional distress suffered as a result of witnessing outrageous conduct directed at persons other than the plaintiff. The *Restatement (Second)* suggests that, at minimum, plaintiffs should be allowed to recover for severe emotional distress resulting from witnessing outrageous behavior toward a member of their immediate family.

The *Khan* case, which follows, addresses the elements of intentional infliction of emotional distress.

Khan v. Parsons Global Services, Ltd.

521 F.3d 421 (D.C. Cir. 2008)

Azhar Ali Khan, an employee of Parsons Global Services, Ltd., was working for Parsons in the Phillipines. On one of his days off, when Parsons’ offices were closed, Khan was kidnapped. He was later tortured. According to allegations made by Mr. Khan and his wife, Asma Azhar Khan, in the complaint referred to below, Parsons delayed paying the ransom that was demanded until after Mr. Khan’s kidnappers carried out their threat to cut off part of his ear.

The Khans filed suit against Parsons in an effort to obtain damages for the physical and emotional harms they experienced as a result of the kidnapping incident and Parsons’ response to it. In a portion of the complaint not addressed here, Mr. Khan sought damages from Parsons on a negligence theory. In another portion of the complaint, Mrs. Khan brought an intentional infliction of emotional distress claim against Parsons. Ruling that Mrs. Khan had failed to state a lawful cause of action, the federal district court dismissed Mrs. Khan’s claim. Mrs. Khan then appealed to the U.S. Court of Appeals for the D.C. Circuit.

Rogers, Circuit Judge

[Mrs. Khan's intentional infliction of emotional distress claim focuses on] Parsons' alleged mishandling of ransom demands by Mr. Khan's kidnapers.

Under District of Columbia law, a claim of intentional infliction of emotional distress requires a showing of "(1) extreme and outrageous conduct on the part of the defendant which (2) intentionally or recklessly (3) causes the plaintiff severe emotional distress." [Case citation omitted.] Whether conduct is "extreme and outrageous" depends on "applicable contemporary community standards of offensiveness and decency, and the specific context in which the conduct took place." [Case citation omitted.] More specifically, the conduct must constitute, as Parsons notes [in its brief], behavior that is "atrocious and utterly intolerable." Although this standard is demanding, the allegations in the Khans' complaint are sufficient to state a claim.

[In its written opinion,] the district court reasoned that Parsons had not engaged in "extreme or outrageous" conduct and that "there is no evidence that this situation was caused either directly or indirectly by [Parsons]." As to the former, the Khans alleged, among other things, that Parsons had disregarded Mr. Khan's safety in favor of minimizing future corporate kidnappings, thereby provoking Mr. Khan's kidnapers to

torture him, to cut off a piece of his ear, and to send a videotape of the event to Parsons, causing the Khans severe mental distress. Mrs. Khan certainly can allege facts, consistent with the complaint, that are "so outrageous in character, and so extreme in degree, as to go beyond all possible bounds of decency." [Case citation omitted.] For example, Parsons' alleged successful efforts to prevent Mrs. Khan from privately paying the ransom, despite threats of torture and mutilation, may have exposed her to the guilt of knowing that she could have prevented Mr. Khan's suffering and disfigurement if she had been able to convince Parsons to provide the ransom details that Parsons withheld from her. In the context of Mr. Khan's employment by Parsons, this could certainly be considered "atrocious" conduct. The complaint also alleges that Parsons' actions were intentional and that Mrs. Khan suffered severe emotional distress.

We hold that the Khans' allegations are sufficient to meet the criteria for intentional infliction of emotional distress [and that the district therefore court erred in dismissing Mrs. Khan's claim].

District court's dismissal of intentional infliction of emotional distress claim reversed, and case remanded for further proceedings.

Most intentional infliction of emotional distress cases are based on allegedly outrageous *conduct*. What about allegedly outrageous *speech*? May it be the basis of a valid emotional distress claim? The potential First Amendment implications of allowing emotional distress liability to be based on speech—particularly when the plaintiff is a famous person who was the target or subject of the defendant's statements—occupied the attention of the U.S. Supreme Court in *Hustler Magazine, Inc. v. Falwell* (1986). On First Amendment grounds, the Court unanimously struck down a damages award received in the lower courts by the Rev. Jerry Falwell as a result of offensive statements about him in an adult magazine. In doing so, the Court severely restricted the ability of *public figures* to win speech-related intentional infliction of emotional distress cases by requiring that such plaintiffs prove the same stern First Amendment-based requirements imposed on public figure plaintiffs in defamation cases. (A later section in this chapter includes extensive discussion of defamation law, including the First Amendment-based requirements that public figures must satisfy when they sue for defamation.)

The Court had no occasion to rule in *Falwell* on whether the First Amendment would restrict the ability of a private figure (i.e., a person who is not well known and thus is not a public figure) to base an emotional distress claim on a defendant's allegedly outrageous speech. Presumably, however, the First Amendment would have less of a role to play in such a case than in the public figure's case. Of course, when a defendant's *conduct*—as opposed to speech—is what the plaintiff complains about in an emotional distress case, the First Amendment does not even potentially furnish the defendant any protection against liability.

False Imprisonment False imprisonment is the intentional *confinement* of another person for an *appreciable time* (a few minutes is enough) *without his consent*. The confinement element essentially involves the defendant's keeping the plaintiff within a circle that the defendant has created. It may result from physical barriers to the plaintiff's freedom of movement, such as locking a person in a room with no other doors or windows, or from the use or threat of physical force against the plaintiff.

Confinement also may result from the unfounded assertion of legal authority to detain the plaintiff, or from the detention of the plaintiff's property (e.g., a purse containing a large sum of money). Likewise, a threat to harm another, such as the plaintiff's spouse or child, can also cause confinement if it prevents the plaintiff from moving.

The confinement must be *complete*. Partial confinement of another by blocking her path or by depriving her of one means of escape where several exist, such as locking one door of a building having several unlocked doors, is not false imprisonment. The fact that a means of escape exists, however, does not relieve the defendant of liability if the plaintiff cannot reasonably be expected to know of its existence. The same is true if using the escape route would present some unreasonable risk of harm to the plaintiff or would involve some affront to the plaintiff's sense of personal dignity.

Although there is some disagreement on the subject, courts usually hold that the plaintiff must have *knowledge*

of his confinement in order for liability for false imprisonment to arise. In addition, there is no liability if the plaintiff has *consented* to his confinement. Such consent, however, must be freely given; consent in the face of an implied or actual threat of force or an assertion of legal authority is not freely given.

Today, many false imprisonment cases involve a store's detention of persons suspected of shoplifting. In an attempt to accommodate the legitimate interests of store owners, most states have passed statutes giving them a *conditional privilege* to stop suspected shoplifters. To obtain this defense, the owner usually must act with reasonable cause and in a reasonable manner, and must detain the suspect for no longer than a reasonable length of time. These privilege statutes typically extend to other intentional torts besides false imprisonment.

The *Pope* case, which follows, examines the elements of false imprisonment and considers the role a privilege statute may play.

Pope v. Rostraver Shop and Save

2008 U.S. Dist. LEXIS 31690 (W.D. Pa. 2008)

Nicky Pope filed a false imprisonment lawsuit against the Rostraver Shop'n Save store (Shop'n Save) and its manager, Howard Russell, on the basis of the incident described below. In addition, Pope named Rostraver Township, the township's police department, and one of its police officers, George MilKent, as defendants. Pope claimed that those three defendants were liable for assault, battery, and false imprisonment, along with violations of federal civil rights laws. Pope, Russell, and MilKent all gave deposition testimony in the case.

The lawsuit-triggering incident began when Pope entered the Shop'n Save store, stopped at the bakery counter, and purchased a cup of coffee and a piece of cake to eat while in the store. She then browsed through the store, walking through every aisle. Upon notification by another employee that Pope was walking back and forth without much in her shopping cart, Russell began watching her. Russell observed that she was wearing a long-sleeved, unbuttoned flannel shirt over a T-shirt. He testified in his deposition that he saw Pope's hand going "underneath and back into the . . . flannel shirt," followed by a "movement made down, possibly into the pants." Thereafter, her "arm came back out." Russell further observed what appeared to be a "protrusion . . . from the left area of [Pope's] back, at about the belt area." Finally, Russell testified that because of Pope's shirt as well as her movement and "the way she was positioned at the cart," he could not see whether Pope had actually concealed any item.

After Pope proceeded to the checkout stand and paid for her items, Russell stopped her in the store's vestibule area and asked to see her receipt. Russell verified that Pope's bakery receipt and store receipt matched her purchased items. He then asked Pope to lift up her outer shirt so that he could see whether she had concealed any items. Pope refused. As Pope acknowledged in her deposition, Russell did not touch her and did not create any physical barrier to prevent her from exiting the store. During their in-store exchange, however, Pope became upset at being accused of shoplifting. Pope told Russell that she believed she was being stopped because she was black and that she intended to sue. Russell informed Pope that he was calling the police and that she should not leave the premises. According to her deposition testimony, Pope believed that because the police had been called, she was not free to leave. During the five to ten minutes it took for the police to arrive, Pope neither asked to leave the store premises nor made any attempt to leave. She also stated in her deposition that she decided to wait for the police.

Officer MilKent was dispatched to Shop'n Save in response to Russell's call. Upon his arrival, MilKent observed Russell waiting for him outside the store and Pope waiting alone in the vestibule area. Russell informed MilKent of what he had observed. Pope exited the store and approached MilKent, who, according to his deposition testimony, told Pope that she could

leave any time she wished and that she was not under arrest. When Milkent asked Pope whether she had any items under her shirt, she responded “no.” Milkent then asked Pope to lift up her outer shirt, and Pope complied. Milkent testified that based upon his observations, he could not be sure whether Pope had a concealed item. When asked at his deposition why he did not arrest Pope, Milkent responded that he did not feel comfortable escalating the situation. Pope alleged that after she lifted her shirt, Milkent proceeded to poke her pants area two or three times. Milkent denied having done so. Pope testified that after the alleged poking occurred, she was told she could leave. The exchange with Milkent took approximately 10 minutes. Pope, who was never charged with shoplifting, testified in her deposition that since the incident, she had suffered from panic attacks and lack of sleep.

A Pennsylvania statute, the Retail Theft Act, provides as follows:

A peace officer, merchant or merchant’s employee or an agent under contract with a merchant, who has probable cause to believe that retail theft has occurred or is occurring on or about a store or other retail mercantile establishment and who has probable cause to believe that a specific person has committed or is committing the retail theft may detain the suspect in a reasonable manner for a reasonable time on or off the premises for all or any of the following purposes: to require the suspect to identify himself, to verify such identification, to determine whether such suspect has in his possession unpurchased merchandise taken from the mercantile establishment and, if so, to recover such merchandise, to inform a peace officer, or to institute criminal proceedings against the suspect. Such detention shall not impose civil or criminal liability upon the peace officer, merchant, employee, or agent so detaining.

Following the completion of discovery in the case, Pope filed a motion for summary judgment. All defendants also moved for summary judgment. The U.S. District Court for the Western District of Pennsylvania considered all of the summary judgment motions together.

Fischer, District Judge

Summary judgment under Federal Rule of Civil Procedure 56(c) is appropriate “if the pleadings, the discovery and disclosure materials on file, and any affidavits show that there is no genuine issue as to any material fact and that the movant is entitled to judgment as a matter of law.” The Court will first address the . . . claim of false imprisonment against [Shop ’n Save and Russell, referred to here as] the Shop ’n Save Defendants.

In a claim for false imprisonment, the plaintiff seeks to protect his or her interest in the freedom from restraint of movement. Under the law of Pennsylvania, a plaintiff bears the burden of proving (1) that the defendant acted intentionally to confine the plaintiff within boundaries fixed by the defendant; (2) that the act of the defendant either directly or indirectly resulted in said confinement of the plaintiff; and (3) that the plaintiff is either conscious of said confinement or is harmed by it. *Caswell v. BJ’s Wholesale Co.*, 5 F.Supp.2d 312, 319 (E.D. Pa. 1998).

In order for there to be a false imprisonment, the confinement must be complete. [*Caswell* indicates that] “[i]f a known, safe means of escape, involving only a slight inconvenience exists, there is no false imprisonment.” The confinement can be effectuated either through physical means and barriers or through threats or coercion. [As noted in *Caswell*,] “[t]he fact that a plaintiff merely believes she is not free to leave is not enough to support a claim of false imprisonment. A plaintiff must make some attempt to determine whether her belief that her freedom of movement has been curtailed has basis.” [Such

an] attempt could be made if the plaintiff [requests to leave but the request is denied].

The Shop ’n Save Defendants cite *Caswell* as an example of an unreasonable belief of confinement. [They argue] that Pope’s belief of confinement is equally unreasonable. *Caswell* involved a plaintiff claiming to have been confined in a back room of the store when the store managers sought to question the plaintiff about incriminating photographs that the plaintiff had developed at the store [(photographs evidencing possible child abuse)]. The managers informed the plaintiff that they were calling the police. The plaintiff spoke to the managers for approximately 10 minutes [before leaving] the room to move her car from a no-parking zone. At no time during this incident did the managers touch the plaintiff or make any threats toward her. Based upon these facts, the court held that no reasonable jury could find that the managers falsely imprisoned the plaintiff [and] that the calling of the police and the standing in the doorway [were] not enough to create an issue of confinement for the jury. [T]he court [also] held [that] there could not be any confinement when the plaintiff was able to and did walk out of the room to her car unimpeded by the managers.

In contrast, Pope cites *Pinkett v. Super Fresh Food Markets, Inc.*, 1988 U.S. Dist. LEXIS 2553 (E.D. Pa.1988). [There,] the plaintiff was in line at a grocery store when an employee came up from behind her, grabbed [her] arm, demanded that he [be allowed to] look in her purse, and accused her of shoplifting. The plaintiff told the employee that she was not going to let him search her purse. The employee responded . . . that she

[would not be allowed to] leave the store unless he was able to check her bag. [After] the employee's repeated insistence that "you are not going to leave the store until I search your bag," the plaintiff summoned a store security guard and opened her purse for him. The security guard indicated that there were no stolen goods in her purse. The plaintiff was then able to finish checking out and [leave] the store unimpeded. The whole incident took approximately 10 minutes. The court held that the jury's verdict in favor of the plaintiff that there was a false imprisonment was not unreasonable given the repeated threats of the store employee. [The court noted that] "[w]hile there was no confinement in the literal sense of physical barriers, the repeated threats of the store employee that 'you are not going to leave the store until I search your bag' could reasonably be construed as constituting confinement by submission to duress or coercion." Further, when combined with the store employee grabbing the plaintiff's arm, the Court concluded that sufficient evidence existed to support the jury's verdict.

Using *Caswell* and *Pinkett* as guideposts for what is a reasonable or unreasonable belief of confinement, respectively, the Court finds that the facts of this case are more closely aligned with *Caswell* and that Pope's belief that she was imprisoned is not well-founded. It is undisputed by the parties that at no time did Russell touch Pope or any of her property. Hence, it is only what Russell allegedly said to Pope that could possibly constitute a threat to coerce her into being confined within the Shop 'n Save. Pope's deposition indicates that Russell informed her that he was going to call the police and that she [could] not leave. However, her deposition further indicates that she never tested whether she could leave or made a request to leave. In addition, Milkent stated at his deposition that Pope wasn't being detained when he arrived at the scene.

The Court recognizes that while the facts of this case have some similarity to *Pinkett*, the differences are material and determine a different outcome. The store employee in *Pinkett* grabbed the plaintiff's arm and repeatedly demanded that the plaintiff show the employee what was inside her purse. Here, Pope does not claim that Russell asked to search her repeatedly. In *Pinkett*, the store employee informed the plaintiff that she was not going to leave the store until he searched her purse. Such a statement made in conjunction with the grabbing of the plaintiff's arm allowed for a reasonable inference that the store employee was making a threat of physical force. Here, Pope was never touched by Russell and she stated it was her choice to wait and to talk to the police. As a result, Russell's actions never resulted in Pope being confined.

Pope argues that Russell confined her by asserting legal authority when he stated that he intended to call the police. [However], Russell's statement does not constitute an assertion of legal authority merely because he told her that he intended to

call the police. In *Caswell*, the plaintiff was not confined when the store managers told her that the police were being called and that the store managers had seen what they thought was evidence of a crime. Although the context of *Caswell* is different, the result is the same.

The Shop 'n Save defendants argue that even if there was a confinement of Pope, it was not a complete confinement because there was a means of escape that Pope did not use. Pope admitted that she never asked [whether] she could leave, nor did she make any attempts to leave. When Russell told Pope that he was calling the police and not to leave, she was in the front vestibule area and had an open means of escape, i.e., the doors to exit the store. Because Pope never tested whether her confinement was complete, Pope is only left with her belief that her confinement was complete and, as previously stated, a belief of confinement is not sufficient to prove a claim of false imprisonment. Moreover, Pope chose to wait, thus making her belief that she was confined all the more unreasonable.

In addition, [although the issue was] not raised in the Shop 'n Save defendants' motion for summary judgment, this Court finds that the Pennsylvania Retail Theft Immunity Act would apply to [Russell's] actions. Russell's observations of Pope provided him with probable cause to reasonably detain Pope for a reasonable time. Hence, Russell [and Shop 'n Save are] entitled to immunity from liability [on] Plaintiff's false imprisonment claim [even if there had otherwise been a confinement for purposes of potential false imprisonment liability].

As a result, because Russell's conduct did not constitute a confinement and Pope never tested the reasonableness of her belief of confinement, Pope's claim for false imprisonment fails. [Alternatively], . . . Russell [and Shop 'n Save are] entitled to immunity under the Pennsylvania Retail Theft Immunity Act [even if the elements of false imprisonment had been present]. Accordingly, the Shop 'n Save defendants' motion for summary judgment will be granted.

[Note: In a portion of the opinion not included here, the court granted the motions for summary judgment filed by Milkent, the police department, and the township (the Rostraver defendants). The court concluded that based on what Russell had told him and based on his own observations, Milkent had probable cause to detain Pope briefly before releasing her. Therefore, the Pennsylvania Retail Theft Immunity Act protected the Rostraver defendants against liability for false imprisonment. Although the court indicated that the elements of assault and battery probably were not present anyway, the Retail Theft Immunity Act would provide an alternative ground for insulating the Rostraver defendants against any liability in connection with those supposed causes of action. Finally, the court saw no basis on which the Rostraver defendants could be held liable under federal civil rights laws.]

Defendants' motions for summary judgment granted.

Defamation The tort of defamation protects the individual's interest in his reputation. Defamation is ordinarily defined as the (1) unprivileged (2) publication of (3) false and defamatory (4) statements concerning another. Before examining each of these elements, we must consider the distinction between two forms of defamation: **libel** and **slander**.

The Libel–Slander Distinction Libel refers to written or printed defamation or to other defamation having a more or less permanent physical form, such as a defamatory picture, sign, or statue. Slander refers to all other defamatory statements—mainly oral defamation. Today, however, the great majority of courts treat defamatory statements in radio and television broadcasts as libel. The same is true of defamatory statements made on the Internet.

Why does the libel–slander distinction matter? Because of libel's more permanent nature and the seriousness we usually attach to the written word, the common law has traditionally allowed plaintiffs to recover for libel without proof of **special damages** (actual reputational injury and other actual harm). **Presumed damages** have long been allowed by the common law in libel cases. Described by the U.S. Supreme Court as an “oddity of tort law,” presumed damages “compensate” for reputational harm that is presumed to have occurred but does not have to be proven by the plaintiff.

Slander, on the other hand, is generally not actionable without proof of special damages, unless the nature of the slanderous statement is so serious that it can be classified as *slander per se*. In cases of slander per se, presumed damages are allowed by the common law. Slander per se ordinarily includes false statements that the plaintiff (1) has committed a crime involving moral turpitude or potential imprisonment, (2) has a loathsome disease, (3) is professionally incompetent or guilty of professional misconduct, or (4) is guilty of serious sexual misconduct.

False and Defamatory Statement Included among the elements of defamation are the separate requirements that the defendant's statement be both *false* and *defamatory*. Truth is a complete defense in a defamation case. A defamatory statement is one that is likely to harm the reputation of another by injuring his community's estimation of him or by deterring others from associating or dealing with him.

“Of and Concerning” the Plaintiff Because the defamation cause of action serves to protect reputation, an essential element of the tort is that the alleged defamatory

statement must be “of and concerning” the plaintiff. That is, the statement must be about—and thus bear upon the reputation of—the party who brought the case. This requirement presents problems whose many complexities are beyond the scope of this text. The rules sketched below, therefore, are sometimes subject to exceptions not explained here.

What about allegedly *fictional accounts* whose characters resemble real people? Most courts say that fictional accounts may be defamatory if a reasonable reader would identify the plaintiff as the subject of the story. Similarly, *humorous or satirical accounts* ordinarily are not defamation unless a reasonable reader would believe that they purport to describe real events.

Statements of pure *opinion* do not amount to defamation because they are not statements of “fact” concerning the plaintiff. However, statements that mix elements of opinion with elements of supposed “fact” may be actionable. *Mann v. Abel*, 885 N.E.2d 884 (N.Y. App. 2008), furnishes a recent example of a fact-versus-opinion determination. The plaintiff, Mann, was the attorney for the Town of Rye. He based his defamation case on statements that appeared in “The Town Crier” column, a feature in a newspaper that served the Rye area. The writer of the column referred to Mann as a “political hatchet man” and as “one of the biggest powers behind the throne” in local government. The writer also asserted that “Mann pulls the strings” and raised the question whether Mann was “leading the Town of Rye to destruction.” Although Mann won his case in the lower courts, the New York Court of Appeals reversed and ordered that his complaint be dismissed. The Court of Appeals held that considering the tone of the statements, the column's content as a whole, and the fact that the column was accompanied by an editor's note indicating that the column set forth the views of the writer, the statements complained about by Mann were nonactionable opinion rather than false statements of supposed fact.

Do defamatory statements concerning particular *groups* of people also defame the individuals who belong to those groups? Generally, an individual member of a defamed group cannot recover for damage to her own reputation unless the group is so small that the statement can reasonably be understood as referring to individual group members.

Finally, courts have placed some limits on the persons or entities that can suffer injury to reputation. No liability attaches, for example, to defamatory statements concerning the dead. Corporations and other business entities have reputational interests and can recover for defamatory statements that harm them in their business

or deter others from dealing with them. Statements about a corporation's officers, employees, or shareholders normally are not defamatory regarding the corporation, however, unless the statements also reflect on the manner in which the corporation conducts its business.¹

Publication Liability for defamation requires **publication** of the defamatory statement. As a general rule, no widespread communication of a defamatory statement is necessary for publication. The defendant's communication of the defamatory statement to one person other than the person defamed ordinarily suffices.

So long as no one else receives or overhears it, however, an insulting message communicated directly from the defendant to the plaintiff is not actionable. The long-standing rule is that publication does not take place when *the plaintiff herself* communicates the offensive statement to another. In recent years, some courts have made an exception to this rule in cases where a discharged employee is forced to tell a potential future employer about false and defamatory statements made to her by her prior employer.

Some courts still follow the older rule that intracorporate statements (statements by one corporate officer or employee to another officer of the same corporation) do not involve publication. Most courts, however, follow the modern trend and hold that there is publication in such situations.

The general rule is that one who repeats a false and defamatory statement is liable for defamation. This is true even if he identifies the source of the statement or expresses his disagreement with it.

A party other than the person who initially made a defamatory statement may be liable along with the original speaker or writer if that other party served as a *publisher* of the defamatory falsehood, but not if the other party was a mere *distributor*. According to defamation law's traditional publisher vs. distributor distinction, a company that publishes a book or a newspaper may be held liable for defamation on the basis of statements that appear in the book or in the newspaper's articles. The rationale is that the publishing company possessed considerable editorial control over the content of the book or the articles, and would have had the ability to remove the defamatory falsehoods. (The writer of the statements, of course, would be liable as well.) Libraries and bookstores,

however, are mere distributors because they lack the editorial control that publishers have. Therefore, libraries and bookstores are not liable for defamation even if defamatory falsehoods appear in books they lend to users or sell to customers.

What about Internet service providers and Web site operators? Can they be held liable as publishers of statements posted online by other parties? The answer might initially seem to be "yes" in instances where the service provider or Web site operator reserved some measure of editorial control, but the actual answer is "no." Section 230 of the federal Communications Decency Act establishes a national rule that "no provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider." This section has been applied by courts in a significant number of defamation cases and in various other types of cases in which liability for someone else's online statements is at issue. (For further discussion of § 230, refer back to the Cyberlaw in Action box in Chapter 1.)

Defenses and Privileges Even though defamation is called an intentional tort, the common law contemplated a form of strict liability for defamation. Defenses are available, however, in certain defamation cases. Of course, the truth of the defamatory statement is a complete defense to liability. Defamatory statements may be *privileged* as well. Privileges to defamation liability recognize that in some circumstances, other social interests are more important than an individual's right to reputation. Privileges can be *absolute* or *conditional*.

An **absolute privilege** shields the author of a defamatory statement regardless of her knowledge, motive, or intent. When such a privilege applies, it operates as a complete defense to defamation liability. Absolutely privileged statements include those made by participants in judicial proceedings, by legislators or witnesses in the course of legislative proceedings, by certain executive officials in the course of their duties, and by one spouse to the other in private. In each case, the theory underlying the privilege is that complete freedom of expression is essential to the proper functioning of the relevant activity, and that potential liability for defamation would inhibit free expression.

Conditional (or qualified) privileges give the defendant a defense unless the privilege is *abused*. What constitutes abuse varies with the privilege in question. In general, conditional privileges are abused when the statement is made with knowledge of its falsity or with reckless disregard for the truth, when the statement does not

¹As Chapter 8 reveals, statements concerning the quality of a corporation's products or the quality of its title to land or other property may be the basis of an injurious falsehood claim.

advance the purposes supporting the privilege, or when it is unnecessarily made to inappropriate people.

There are various conditional privileges. One important conditional privilege involves *statements made to protect or further the legitimate interests of another*. One of the most common business-related examples is the employment reference. Suppose that Parker's former employer, Dorfman, has good reason to believe—and does in fact believe—that Parker embezzled money from Dorfman's business while Parker was a Dorfman employee. Trumbull, who is deciding whether to hire Parker, contacts Dorfman to ask about Parker's work record and performance as an employee. During the conversation, Dorfman tells Trumbull that he believes Parker committed embezzlement while working for him. On these facts, Dorfman will be protected by a conditional privilege against defamation liability to Parker because Dorfman's statement was designed to further Trumbull's legitimate interest in making an

intelligent hiring decision. Dorfman's good faith and reasonably based belief in the truth of his statement about Parker is critical to his ability to rely on the conditional privilege. If Dorfman had known his statement was false or had made it with reckless disregard for the truth, Dorfman would have abused the conditional privilege and would have lost its protection against liability.

A second important type of conditional privilege concerns *statements made to promote a common interest*. Intra-corporate communications are one example. Such communications normally would abuse the privilege, however, if they are also communicated to the public at large. Finally, the privilege called *fair comment* protects fair and accurate media reports of defamatory matter that appears in proceedings of official government action or originates from public meetings.

DeNardo v. Box, which follows, addresses conditional privilege issues.

DeNardo v. Box

147 P.3d 672 (Alaska Sup. Ct. 2006)

Daniel DeNardo and Joy Bax had been co-workers at Alaska Newspapers, Inc. (ANI). After DeNardo no longer worked for ANI, he filed a defamation lawsuit against Bax because she had told other employees of the company she was "worried" that DeNardo was "stalking" her. DeNardo contended that he had not stalked Bax and that her statements were therefore false. Bax moved for summary judgment, arguing that her statements were not false because they were based on her own observations and subjective concern that DeNardo was following and possibly stalking her. She also asserted that her conversations with co-workers were conditionally privileged because co-workers share a common interest in workplace safety. DeNardo countered by arguing that Bax had abused any conditional privilege to which she might otherwise have been entitled.

An Alaska trial court granted Bax's summary judgment motion, concluding that Bax's statements to co-workers were conditionally privileged and that DeNardo had not produced evidence demonstrating abuse of the privilege. DeNardo appealed to the Alaska Supreme Court.

Fabe, Justice

We review a grant of summary judgment de novo, affirming if the record contains no genuine issue of material fact and the moving party is entitled to judgment as a matter of law. When considering a motion for summary judgment, all reasonable inferences of fact from the proffered evidence must be drawn against the moving party and in favor of the non-moving party.

Whether a statement is defamatory and whether a statement is afforded privilege are questions of law. If the relevant facts of the case are disputed, a jury must determine [whether] a conditional privilege has been abused. When considering legal issues of first impression, such as whether a previously unrecognized privilege applies, we will adopt the rule of law that is most persuasive in light of precedent, reason, and policy.

In order for a defamation claim to succeed [under Alaska law], a plaintiff must establish: (1) a false and defamatory statement; (2) an unprivileged publication to a third party; (3) fault amounting at least to negligence; and (4) the existence of either "per se" actionability or special harm. The superior court determined that DeNardo failed to establish the second element, an unprivileged communication, and granted summary judgment in favor of Bax. The superior court reasoned that the statements Bax made to coworkers that she felt she was being stalked were conditionally privileged as statements of concern about personal safety in the workplace.

DeNardo does not challenge the superior court's determination that Bax's statements were privileged. Rather, he raises a claim that he was entitled to a jury trial on whether Bax abused the conditional privilege. But because we have never directly

addressed the question whether a conditional privilege exists with respect to statements among coworkers about personal safety in the workplace, we first recognize that such a privilege applies.

In the past, “we have recognized a conditional privilege based on a joint business interest or an employer/employee relationship when a statement is made ‘for the protection of a lawful business, professional, property or other pecuniary interest.’” [Case citation omitted.] And in [another case] we found that “speech on matters of public safety is privileged.” While communications among coworkers concerning personal safety in the workplace do not fall squarely within the ambit of either of these recognized privileges, our previous acknowledgment of the importance of protecting speech regarding business interests and public health and safety lends support to recognition of a privilege in this case.

We will acknowledge a conditional privilege when a person “having a common interest in a particular subject matter believes that there is information that another sharing the common interest is entitled to know.” [Case citation omitted.] According to the *Restatement (Second) of Torts*, “[a]n occasion makes a publication conditionally privileged if the circumstances induce a correct or reasonable belief that (a) there is information that affects a sufficiently important interest of the publisher, and (b) the recipient’s knowledge of the defamatory matter will be of service in the lawful protection of the interest.” Where, as here, a worker reveals to coworkers that she is concerned that another coworker might be stalking her, a sufficiently important interest to the statement’s publisher, her personal safety, is at stake. Furthermore, by alerting coworkers to her fears, Bax protected her interest in personal safety by attuning coworkers to the possibility that she was the victim of dangerous behavior. Recognition of a privilege under these circumstances is necessary in order to facilitate an environment in which employees feel safe while performing their duties.

At the summary judgment stage, it was Bax’s initial burden to establish that she was entitled to prevail as a matter of law, by demonstrating that a conditional privilege applies and that she did not abuse the applicable conditional privilege. In the trial court, Bax satisfied this initial burden [by] present[ing] evidence that she did not abuse the privilege. [In particular, she pointed to an affidavit she submitted in a separate wrongful termination case that DeNardo filed against his former employer. That affidavit stated:] “When we [Bax and DeNardo] worked together at ANI, there were several occasions when Mr. DeNardo followed me in his vehicle. I was worried that he was ‘stalking’ me.” Bax’s affidavit shows that [the very similar stalking-related statements she made to coworkers—the statements giving rise to DeNardo’s defamation case against her—] were not made [with knowledge that] they were false [or] with reckless disregard for the truth.

Once Bax established a prima facie case that a conditional privilege applied and that she did not abuse the privilege, the burden shifted to DeNardo to show that the privilege had been abused. We have established that a conditional privilege may be abused:

- (1) when there is malice—the publisher had knowledge or reckless disregard as to the falsity of the defamatory matter;
- (2) because the defamatory matter is published for some purpose other than that for which the particular privilege is given;
- (3) because the publication is made to some person not reasonably believed to be necessary for the accomplishment of the purpose of the particular privilege; or
- (4) because the publication includes defamatory matter not reasonably believed to be necessary to accomplish the purpose for which the occasion is privileged.

Before the superior court, DeNardo contended that Bax abused the conditional privilege because she acted with [actual] malice: knowledge or reckless disregard as to the falsity of her statements. Because the actual malice test for determining abuse of a conditional privilege is subjective, at the summary judgment stage the court must determine “whether there is a genuine issue of material fact on whether [the defendant] entertained serious doubts as to the truth of the statements.” We note that the false and defamatory comment that Bax allegedly made was that Bax was worried that DeNardo was stalking her and not that he was in fact stalking her. On summary judgment, DeNardo therefore has the burden of raising a material issue of fact on the question whether Bax entertained serious doubts about the truth of her statement that she was subjectively worried DeNardo was stalking her.

In support of DeNardo’s claim that Bax’s statement was made with [actual] malice, DeNardo essentially makes [these] arguments: (1) since Bax did not publish her statement of concern widely enough, she was not actually worried that DeNardo was stalking her; [and] (2) Bax had a motive to lie because she and DeNardo had a workplace rivalry. Even drawing all reasonable inferences in favor of DeNardo as the non-moving party, these allegations fail to raise a genuine issue of material fact on the question whether Bax entertained serious doubts as to the truth of her statement that she subjectively believed DeNardo was stalking her.

On the issue of the narrow scope of publication, DeNardo noted in his opposition to Bax’s summary judgment motion that Bax only spoke to her “sales manager . . . and [two] coworkers. . . . Bax never told her husband, children, family, neighbors, [corporate] management, . . . or any governmental authority about plaintiff’s stalking!” DeNardo does not meet his burden by pointing to the limited scope of Bax’s publication. As DeNardo concedes, Bax expressed her concerns solely

to her coworkers—those who knew DeNardo and were in the best position to observe the interaction between Bax and DeNardo in the workplace on a daily basis. It would not be reasonable to infer that Bax had serious doubts that her statements were true simply because she only discussed her concerns with those most familiar with her situation and those best able to assist her if DeNardo, [then] a coworker, turned out to in fact be stalking her.

Moreover, excessive publication to persons not reasonably believed to be necessary for the accomplishment of the purpose of the privilege would constitute abuse of the privilege. That Bax limited the publication of her statement to two coworkers and her supervisor—those most suited to respond if Bax’s subjective fear that DeNardo was stalking her proved true—supports the conclusion that her statement was well within the bounds of the common interest privilege in workplace safety, and not that Bax doubted the truth of her statements.

DeNardo points to evidence that Bax had a motive to defame him because she coveted his customer lists and commissions and because there was ill will between DeNardo and Bax when they were coworkers at ANI. But evidence of ill will alone is not sufficient to establish abuse of the privilege. In most jurisdictions, evidence that a defendant disliked a plaintiff

is insufficient to establish abuse of the privilege. “If the defendant’s statements were made to further the interest protected by the privilege, it matters not that defendant also despised plaintiff.” [Case citation omitted.] Here DeNardo alleges that Bax harbored ill will toward him because she competed with him for customers and commissions when they were employees at ANI and [for other reasons]. But evidence that Bax might have disliked DeNardo does not cast doubt upon her statement that she feared DeNardo was stalking her.

Bax’s publication was made for the purpose of protecting the interest in question, workplace safety, and therefore the fact that the publication might have been “inspired in part by resentment or indignation [in regard to DeNardo] does not constitute an abuse of the privilege.” [Case citation omitted.] While DeNardo arguably set forth sufficient evidence to establish that Bax disliked him, he set forth no evidence to establish that Bax entertained serious doubts as to the truth of the statements. Because DeNardo has failed to meet his burden, we affirm the superior court’s decision.

Trial court’s grant of summary judgment in favor of defendant affirmed.

CYBERLAW IN ACTION

The late Evel Knievel, a motorcycle daredevil, acquired considerable fame as a result of his widely publicized and dangerous stunts during a career that began in the mid-1960s. Knievel’s exploits have been featured in several books and movies and in a Smithsonian Museum exhibit. Prior to his death in 2007, Knievel served as an advertising spokesman for various well-known corporations. He also devoted considerable time to the promotion of antidrug and motorcycle safety programs.

In 2001, ESPN held its Action Sports and Music Awards ceremony. Celebrities from the field of “extreme” sports attended, as did famous rap and heavy-metal musicians. Knievel, sometimes known as the “father of extreme sports,” attended along with his wife, Krystal. In one of the many photographs ESPN arranged to have taken at the ceremony, Knievel was pictured with his right arm around his wife and his left arm around an unidentified woman. Knievel was wearing a motorcycle jacket and rose-tinted sunglasses.

The photograph of the Knievels and the unidentified woman was one of 17 photographs that ESPN published on the “Green Carpet Gallery” section of its “EXP.com” Web site. That site featured information and photographs concerning motorcycle racing and various other “extreme” sports.

The Green Carpet Gallery section was devoted to pictures of celebrity attendees of the Action Sports and Music Awards ceremony. A viewer who clicked on the Green Carpet Gallery icon was first directed to a photograph of two men grasping hands, with an accompanying caption stating that “Colin McKay and Cary Hart share the love.” By clicking on the “next” icon, the viewer could scroll through the remaining photographs and corresponding captions. A photograph of a woman in a black dress had this caption: “Tara Dakides lookin’ sexy, even though we all know she is hardcore.” Another photograph showed a sunglasses-wearing man, with a caption stating that “Ben Hinkley rocks the shades so the ladies can’t see him scoping.” The photograph of the Knievels was the tenth in the sequence and could not be viewed without first viewing the photographs that preceded it. Its caption read this way: “Evel Knievel proves that you’re never too old to be a pimp.”

Evel and Krystal Knievel sued ESPN for defamation, contending that the caption, as used in connection with the photograph, falsely charged them with “immoral and improper behavior” and otherwise harmed their reputations. In particular, they alleged that after the publication of the photograph and caption, several of the corporations for which Evel had

done product endorsements no longer wanted him associated with their products.

ESPN moved to dismiss the Knievels' complaint for failure to state a claim on which relief could be granted. According to the defendant, defamation could not have occurred because reasonable persons would not have interpreted the caption as an allegation that Evel was a criminal "pimp" or that Krystal was a prostitute. The federal district court granted the motion to dismiss. The Knievels appealed to the U.S. Court of Appeals for the Ninth Circuit.

In *Knievel v. ESPN*, 393 F.3d 1068 (9th Cir. 2005), the Ninth Circuit affirmed the lower court's dismissal of the plaintiffs' complaint. The court began its analysis by noting that "[i]n enforcing laws that impose liability for mere speech, a right explicitly guaranteed to the people in the United States Constitution, states tread perilously close to the limits of their authority." The court stated that "to survive ESPN's motion to dismiss, the Knievels must not only establish that the photograph and caption about which they complain are 'reasonably capable of sustaining a defamatory meaning,' they must also show that they are not mere 'comment within the ambit of the First Amendment.'" [Citation of quoted case omitted.]

The Ninth Circuit noted that in determining whether a statement can reasonably be seen as communicating a defamatory message, courts must view the statement as an average reader would, and must consider the statement in the context in which it appeared rather than in isolation. Applying that standard, the court concluded that even though "the word 'pimp' may be reasonably capable of a defamatory meaning when read in isolation," the district court had been correct in determining that the term lost its defamatory meaning when it was used in the context of the defendant's Web site. The Ninth Circuit also emphasized that as interpreted in *Milkovich v. Lorain Journal Co.*, 497 U.S. 1 (U.S. Sup. Ct. 1990), and *Hustler Magazine v. Falwell*, 485 U.S. 46 (1988), the First Amendment bars holding a speaker or writer liable for statements that cannot reasonably be regarded as having stated actual facts about the plaintiff. Such a rule is necessary to provide "assurance that public debate will not suffer for lack of 'imaginative expression' or the 'rhetorical hyperbole' which has traditionally added much to the discourse of our Nation." *Milkovich* (quoting *Falwell*).

As part of its consideration of the context in which the statement about the Knievels appeared, the court took into account the general nature and tone of the EXPN.com main page. The Ninth Circuit observed that the main page was "lighthearted, jocular, and intended for a youthful audience." The court also noted that in directing the viewer to "check

out what the rock stars and prom queens were wearing" and in offering a "'behind the scenes look at all the cool kids, EXPN-style,'" the page employed various slang phrases that were not subject to literal interpretation and almost certainly would not be "uttered by anyone but a teenager or young adult." This caused the court to conclude that "[a] reasonable viewer exposed to the main page would expect to find precisely that type of youthful, non-literal language on the rest of the site."

Continuing its consideration of the relevant context, the court examined the Green Carpet Gallery photographs and captions that viewers of the Web site would have seen when viewing the Knievel photograph and caption. The court again found an "overwhelming presence of slang," noting captions using terms such as "hardcore," "scoping," "throwing down a pose," "put a few back," and "hottie of the year." These terms, the court observed, were not "intended to be interpreted literally, if indeed they have a literal meaning at all." Accordingly, the court believed that "any reasonable viewer would have interpreted the word 'pimp' in the same loose, figurative sense as well." Although the Ninth Circuit conceded that the traditional dictionary definition of "pimp" contemplates a man who is in charge of prostitutes, the court cited online dictionaries of slang terms as indicating that slang uses of "pimp" may be in the nature of a compliment to a man for being "cool" or for having mastered some subject matter. Alternatively, "pimp" may be meant as a way of commenting negatively on a man's appearance, behavior, or attitudes.

Importantly, however, the court emphasized that even if a viewer of the Green Carpet Gallery had interpreted "pimp" literally, he or she would have "interpreted the photograph and caption, in the context in which they were published, as an attempt at humor." A reader or viewer who recognizes that a statement is an attempt at humor presumably does not take the statement as one of actual fact. The Ninth Circuit stressed that the Green Carpet Gallery poked fun at celebrities pictured there, with captions such as "Shannon Dunn and Leslee Olson make it look easy to be cheesy" and "Todd Richards tells the camera man to step off his lady." The court reasoned that "[j]ust as no reasonable reader would interpret those captions as allegations of fact, no reasonable reader would interpret the photograph of the Knievels [and the accompanying caption] as a serious allegation of criminal wrongdoing." In view of the context created by the "satirical, risqué, and sophomoric slang found on the rest of the site," the word "pimp" could not reasonably be seen as a defamatory statement of supposed fact.

Defamation and the Constitution Until less than 50 years ago, the First Amendment's guarantees of freedom of speech and press were not considered relevant to defamation cases. The common law's strict liability

approach meant that unless one of the privileges discussed earlier applied, a speaker or writer who made a false statement believing it to be true had no more protection against defamation liability than the deliberate

liar had. In a series of cases dating back to 1964, however, the U.S. Supreme Court has concluded that the common law's approach may be too heavily weighted in favor of plaintiffs' reputational interests and not sufficiently protective of defendants' free speech and free press interests. The Court has recognized that when coupled with the potential availability of presumed damages, a strict liability regime could deter would-be speakers from contributing true statements to public debate out of fear of the costly liability that might result if the jury somehow concluded that the statements were false. Recognizing the need to guard against this "chilling effect" and the resulting restriction on the flow of information that is important to a free society, the Court determined in *New York Times Co. v. Sullivan* (1964) that the First Amendment has a role to play in certain defamation cases. The Court reasoned that judicial enforcement of the legal rules of defamation served as the government action necessary to trigger application of the First Amendment.

Public Official Plaintiff Cases In *New York Times*, the Court held that when a *public official* brings a defamation case, he or she must prove not only the usual elements of defamation but also a First Amendment-based fault requirement known as **actual malice**. The Court gave actual malice a special meaning: knowledge of falsity or reckless disregard for the truth. Thus, after *New York Times*, a defendant who makes a false and defamatory statement about a public official plaintiff will not be held liable unless the public official proves that the defendant made the statement either (1) knowing it was false, or (2) recklessly. Moreover, the Court held in *New York Times* that as a further First Amendment-based safeguard, the public official plaintiff must prove actual malice by *clear and convincing evidence*—a higher standard of proof than the preponderance of the evidence standard applicable to every other element of a defamation claim and to civil cases generally. The public official category includes many high level government officials, whether elected or appointed.

Public Figure Plaintiff Cases Three years after *New York Times*, the Supreme Court extended the proof-of-actual-malice requirement to defamation cases in which the plaintiff is a *public figure*. The Court also mandated that such a plaintiff prove actual malice by clear and convincing evidence. Individual persons or corporations are public figures if they either (1) are well known to large segments of society through their own voluntary efforts, or (2) have voluntarily placed themselves, in the words of the Supreme Court, at "the forefront of a particular public controversy." The first type of public figure,

sometimes given the "general-purpose" designation, includes well-known corporations, political candidates who are not already holders of public office, and ex-government officials. It also includes a diverse collection of celebrities, near celebrities, and well-known persons ranging from familiar actors, entertainers, and media figures to famous athletes or coaches and others with high public visibility in their chosen professions. The second type of public figure, sometimes assigned the "limited-purpose" label, is not well known by large segments of society but has chosen to take a prominent leadership role regarding a matter of public debate (e.g., the abortion rights controversy, the debate over whether certain drugs should be legalized, or disputes over the extent to which environmental regulations should restrict business activity). A general-purpose public figure must prove actual malice in any defamation case in which he, she, or it is the plaintiff. A limited-purpose public figure, on the other hand, must prove actual malice when the statement giving rise to the case relates in some sense to the public controversy as to which the plaintiff is a public figure.

The proof-of-actual-malice requirement poses a very substantial hurdle for public officials and public figures to clear. That is by design, according to the Supreme Court. Defendants have especially strong First Amendment interests in regard to statements about public officials and public figures, given the high level of public interest and concern that attaches almost automatically to matters involving such persons.

Knowledge of falsity—one of the two forms of actual malice—is difficult to prove. When the defendant who made a false statement can point to an arguably credible source on which he, she, or it relied as a supposed indicator of the statement's truth, the defendant presumably did not have knowledge of the statement's falsity. Neither did the defendant speak or write with the other form of actual malice—*reckless disregard for the truth*—in such an instance. According to the Supreme Court, reckless disregard has been demonstrated when the plaintiff proves either (1) that the defendant "in fact entertained serious doubts" about the statement's truth but made the statement anyway or (2) that the defendant consciously rejected overwhelming evidence of falsity and chose instead to rely on a much less significant bit of evidence that would have indicated truth only if the contrary evidence had not also been part of the picture. When the defendant relied on an arguably credible source that tended to indicate the statement was true, the defendant presumably did not entertain serious doubts and did not consciously reject overwhelming evidence of falsity. Such a

defendant, therefore, did not display reckless disregard for the truth. If a reasonable person in the defendant's position would not have relied on a lone source despite its credibility and would have ascertained the statement's falsity through further investigation, the defendant who failed to investigate further has been negligent. Negligence, however, is not as severe a degree of fault as reckless disregard and does not constitute actual malice.

Most defamation cases brought by public official or public figure plaintiffs are won by the defendant—if not at trial, then on appeal. That is often the result because the

plaintiff was unable to prove actual malice even though the statement was false and tended to harm reputation. Sometimes, however, the public official or public figure plaintiff accomplishes the daunting task of proving actual malice. When that occurs, the First Amendment does not bar such a plaintiff from winning the case and recovering compensatory damages (including those of the presumed variety) as well as punitive damages.

The *Hearst* case, which follows, focuses on the actual malice element that public official plaintiffs and public figure plaintiffs must prove.

Hearst Corp. v. Skeen

159 S.W.3d 633 (Tex. Sup. Ct. 2005)

The Hearst Corporation publishes the Houston Chronicle, whose June 11, 2000, edition included an article headlined "Justice Under Fire." Written by Evan Moore, the article contained pointed criticisms of the Smith County, Texas, criminal justice system. Under the subheading "Win at all costs' is Smith County's rule, critics claim," the lead article reported that Smith County "is noted for its own brand of justice," which is "driven by aggressive prosecutors who achieve some of the state's longest sentences." The article stated that "[c]ritics say Smith County's justice system is tainted and inequitable." It also declared that Smith County prosecutors "have been accused of serious infractions," including "suppressing evidence, encouraging perjury, and practicing selective prosecution."

Claiming that the article contained defamatory falsehoods, three Smith County prosecutors named in the article, District Attorney Jack Skeen and Assistant District Attorneys David Dobbs and Alicia Cashell, filed a defamation lawsuit against Hearst and Moore. A Texas trial court denied the defendants' motion for summary judgment. The state's intermediate court of appeals affirmed. Hearst and Moore appealed to the Supreme Court of Texas.

Per Curiam

To recover for defamation, the public-figure plaintiffs must prove that Hearst and Moore published a false and defamatory statement with actual malice. Although the parties disputed whether the article was capable of a defamatory meaning before the court of appeals, the issue was not raised here. Moreover, we need not decide whether the article was actually false to resolve this appeal. The plaintiffs can prevail here only if there is some evidence that Hearst and Moore published the article with actual malice.

To establish actual malice, the plaintiffs must prove Hearst and Moore published the article with either knowledge of falsity or reckless disregard for the truth. Knowledge of falsity is a relatively clear standard, but reckless disregard is much less so. Reckless disregard is a subjective standard, requiring evidence that Hearst and Moore entertained serious doubts as to the truth of the article at the time it was published.

A libel defendant is entitled to summary judgment [if the defendant] can negate actual malice as a matter of law. Hearst and Moore supported their motion for summary judgment with numerous exhibits, including Moore's affidavit, which stated he believed the article was true and accurate based on his extensive research. [With the defendants seemingly having]

negated actual malice, the burden shifted to the plaintiffs to raise a fact issue.

The plaintiffs contend that Moore knew the article was false because the ten cases discussed in the article were a relatively insignificant sample from which to conclude that the Smith County D.A.'s office routinely engaged in unethical practices to win convictions. At Moore's deposition, the plaintiffs' attorney pointed out that these ten cases amounted to only .04 percent of the total indictments handled during D.A. Skeen's service. Moore admitted that he had done no statistical analysis but had only focused on the problem cases he had discovered. The fact that Moore had not reviewed every indictment during D.A. Skeen's service or discussed a larger number of problem cases is not evidence that he knew the article contained false statements.

Arguing the article was published with reckless disregard for the truth, the plaintiffs claim Hearst and Moore purposefully avoided the truth, relied on dubious information from biased sources, deviated from professional standards of care, and were motivated to fabricate. "A failure to investigate fully is not evidence of actual malice; a purposeful avoidance of the truth is." *Bentley v. Bunton*, 94 S.W.3d 561 (Tex. Sup. Ct. 2002). We analyzed evidence of purposeful avoidance in *Bentley* when a

talk show host was sued for libel after repeatedly accusing a judge of being corrupt. Although the host claimed that his accusations were based on his investigations, there was a “complete absence of any evidence that a single soul . . . ever concurred in [the host’s] accusations of misconduct against [the judge]. All those who could have shown [the host] that his charges were wrong [were] deliberately ignored [by the host].” For example, the host made a false accusation that the judge had improperly delayed a criminal trial without even contacting any attorney involved in the case to inquire about the delay.

Similarly, in *Harte-Hanks Communications, Inc. v. Connaughton*, 491 U.S. 657 (U.S. Sup. Ct. 1989), a newspaper deliberately avoided verifying false allegations it printed about a judicial candidate. The candidate had persuaded a certain Stephens to give him a recorded statement concerning bribes that she had made to his opponent’s employee. Stephens’ sister, who was present for the recorded statement, told the newspaper that the candidate used “dirty tricks” to get Stephens’ statement with the intent of blackmailing his incumbent opponent into resigning before the election. Before printing the sister’s allegations, the newspaper failed to interview Stephens, the key witness, or listen to the tape provided of Stephens’ recorded statement. By ignoring the two sources that could objectively verify the sister’s allegations, the newspaper had purposefully avoided discovering facts that might show the falsity of the allegations.

In contrast, we held in *Huckabee v. Time Warner Entertainment Co.*, 19 S.W.3d 413 (Tex. Sup. Ct. 2000), that the purposeful avoidance theory did not apply because “no source could have easily proved or disproved the documentary’s allegations.” When a documentary criticized a judge’s order granting an allegedly abusive father custody of a child, the judge sued, arguing the filmmakers had purposefully avoided discovering the truth. The filmmakers’ extensive research, which involved interviewing several people on both sides of the story, including the judge, and reading transcripts of the case, precluded a finding of purposeful avoidance. “Although the filmmakers did not interview [the father or his lawyers], they were not required to continue their research until they could find one more person who agreed with [the judge’s] order.” [This statement indicates that] failure to track down every possible source is not purposeful avoidance.

Like the filmmakers’ research in *Huckabee*, Moore’s five months of research involved interviewing parties on both sides of the issue, including the plaintiffs, and reviewing the court records of the cases discussed in the article. Furthermore, no source existed that could have easily disproved the criticisms of the Smith County D.A.’s office included in the article. The evidence simply does not support a purposeful avoidance theory.

“An understandable misinterpretation of ambiguous facts does not show actual malice, but inherently improbable assertions and statements made on information that is obviously

dubious may show actual malice.” [Quoting *Bentley*.] In the current case, Moore had many sources corroborating the criticisms of the Smith County D.A.’s office. Moore testified that he spoke to over twenty attorneys, who told him that the Smith County D.A.’s office: was too aggressive; was too closely aligned with law enforcement; was overly influenced by prominence of the victim or accused; [had obtained] sentences that were harsh or excessive as compared to other jurisdictions; and had suppressed evidence or encouraged false testimony to win convictions. Although most conditioned their responses on anonymity, several attorneys, including perhaps most significantly a former Smith County D.A., allowed their names to appear in the article. The criticisms were not inherently improbable because Moore had reviewed multiple statements in court-filed documents alleging prosecutorial misconduct. Such documents included: a Court of Criminal Appeals opinion stating an assistant D.A. attempted to interview a defendant without his attorney’s knowledge; a writ of habeas corpus petition alleging the Smith County D.A.’s office suppressed exculpatory evidence . . . ; a deposition . . . of chief prosecutor Dobbs, in which he admitted confronting [a] malicious prosecution [case’s plaintiff] in a bar and asking “how much money would it take to make [the case] go away”; and [another case’s] motion for new trial [, which] included affidavits accusing the prosecutor, Cashell, of soliciting a key witness to perjure her testimony. Moore’s article was based on many sources that corroborated the criticisms, which his research showed were not inherently improbable. Therefore, no fact issue exists as to whether Moore relied on obviously doubtful sources of information for his article.

[In an attempt to] establish motivation for recklessly disregarding the truth, the plaintiffs presented evidence that Hearst and Moore ignored the plaintiffs’ letter questioning the truth of the article because they received the letter two days before the article’s publication deadline. This, however, is no evidence of actual malice. First, Hearst and Moore incorporated a portion of the letter into the article in the form of a quote by the plaintiffs. Second, “the mere fact that a defamation defendant knows that a public figure has denied harmful allegations or offered an alternative explanation of events is not evidence that the defendant doubted the allegations.” [Quoting *Huckabee*.] Third, without more, mere evidence that a newspaper was motivated to meet a publication deadline is no evidence of actual malice. See *Harte-Hanks*.

Viewing the evidence in its entirety, no fact issue is raised as to whether the article was published with actual malice. Accordingly, [we] reverse the court of appeals’ judgment and render summary judgment in favor of Hearst and Moore.

Denial of defendants’ summary judgment motion reversed; summary judgment entered in favor of defendants.

Private Figure Plaintiff Cases What about defamation cases brought by *private figures*, those corporations that are not public figures and those individual persons who are neither public figures nor public officials? In *Gertz v. Robert Welch, Inc.* (1974), the Supreme Court concluded that private figure plaintiffs should not be expected to prove actual malice in order to win defamation cases, despite defendants' meaningful free speech and press interests. The Court noted that such plaintiffs have neither sought, nor do they command, the higher level of attention desired and achieved by public officials and public figures. Requiring private figure plaintiffs to prove actual malice would tip the balance too heavily in favor of defendants' First Amendment interests and would do so at the expense of plaintiffs' reputational interests. The Court sought to balance the respective interests more suitably by developing, in *Gertz*, a two-rule approach under which the first rule focused on liability and the second focused on damages.

The first *Gertz* rule provided that in order to win a defamation case, the private figure plaintiff must prove some level of fault as set by state law, so long as that level of fault was at least negligence (in the sense discussed earlier). After *Gertz*, nearly every state chose negligence as the applicable fault requirement. The second *Gertz* rule addressed recoverable damages. It provided that if a private figure plaintiff proved only negligence on the defendant's part—the level of fault necessary to enable the plaintiff to win the case—the recoverable damages would be restricted to compensatory damages for proven reputational harm and other actual injury. Presumed damages and punitive damages would not be recoverable in such an instance. The second *Gertz* rule also spoke to the availability of presumed and punitive damages by providing that if the private figure plaintiff wanted to recover such damages (either instead of or in addition to damages for demonstrated harm), he, she, or it would need to prove actual malice by clear and convincing evidence.

In a 1985 decision, *Dun & Bradstreet, Inc. v. Greenmoss Builders, Inc.*, the Court injected a *public concern* vs. *private concern* distinction into at least the second, if not both, of the two *Gertz* rules. The Court held in *Dun & Bradstreet* that the second *Gertz* rule (the one requiring proof of actual malice as a condition of recovering presumed and punitive damages) applies only when the private figure plaintiff's case is based on a statement that addressed a matter of public concern. If the private figure plaintiff's case pertains to a statement that addressed a matter of only private concern, the second *Gertz* rule does not apply—meaning that presumed and punitive damages are recoverable instead of or in addition to

damages for proven actual injury, even though the plaintiff established nothing more than the negligence presumably necessary to win the case. “Presumably necessary” is an apt characterization because it is a matter of interpretation and debate whether, after *Dun & Bradstreet*, the basic fault requirement of negligence still applies to a private figure plaintiff case involving a statement on a matter of private concern.

Only the second *Gertz* rule was at issue in *Dun & Bradstreet*, which, according to the Court, was a private figure/private concern case. Negligence on the defendant's part was present in the facts and was not a contested issue when the case reached the Supreme Court. Even so, it is not unreasonable to assert that if the Court was injecting a public concern qualifier into the second *Gertz* rule, it logically would also have been contemplating a public concern qualifier for the first *Gertz* rule (the rule requiring proof of at least negligence to establish liability). Under this reading of *Dun & Bradstreet*, the common law's liability-without-fault approach would again govern defamation cases of the private figure/private concern variety. Those who read *Dun & Bradstreet* more narrowly, however, are inclined to restrict it to what the Supreme Court actually held (i.e., that a public concern element is part of the second *Gertz* rule) and to assume that the basic fault requirement of negligence continues to apply to *all* private figure plaintiff cases until the Supreme Court specifically holds to the contrary. The narrower reading of *Dun & Bradstreet* may have slightly more adherents among lower courts and legal commentators, but it is a close call.

As the above discussion indicates, public concern determinations have become important in private figure plaintiff cases. (Note that the Supreme Court has not made the public concern–private concern distinction a requirement for public officials' and public figures' defamation cases—probably because the public concern character of statements about such prominent persons is essentially a “given” that may safely be assumed.) What sorts of statements, then, deal with matters of public concern? The Supreme Court provided little guidance on this issue in *Dun & Bradstreet*. Lower court decisions, however, have consistently established that statements dealing with crime address matters of public concern. The same is true of a broad range of statements dealing with public health, safety, or welfare, or with comparably important matters that capture society's attention.

The Media–Nonmedia Issue (or Nonissue?) A final set of issues concerning defamation's First Amendment–based fault requirements is whether they apply only when the defendant is a member of the media (i.e., the

press), or in all defamation cases regardless of the defendant's media or nonmedia status. In phrasing its holdings in certain defamation decisions, the Supreme Court has sometimes employed media-oriented language. That may have been done, however, because the cases involved media defendants. The Court contributed to confusion on this point in one decision with an inaccurate footnote asserting that the Court had never decided whether the First Amendment–based fault requirements apply in nonmedia defendant cases. Yet the Court clearly had made such a decision. The landmark *New York Times* case included media and nonmedia defendants. There, the Court held that the public official plaintiff needed to prove actual malice on the part of all of the defendants.

Although the Court has not officially addressed the media–nonmedia issue in recent decisions, some justices have unofficially “rejected” such a distinction by making comments along those lines in concurring and dissenting opinions. In view of those comments, the decision in *New York Times*, the equal billing the First Amendment gives to freedom of “speech” and freedom of the “press,” and the disapproval of a media–nonmedia distinction by most lower courts and an overwhelming majority of legal commentators, it seems extremely likely that if the Supreme Court now faced the issue squarely, it would hold that the First Amendment–based fault requirements apply to all defamation cases without regard for whether the defendant is a member of the media.

Figure 1 summarizes the major First Amendment aspects of defamation law.

Invasion of Privacy In tort law, the term **invasion of privacy** refers to four distinct torts. Each involves a different sense of the term privacy.

Intrusion on Solitude or Seclusion Any intentional intrusion on the solitude or seclusion of another constitutes an invasion of privacy if that intrusion would be highly offensive to a reasonable individual. The intrusion in question may be physical, such as an illegal search of a person's home or body or the opening of his mail. It may also be a nonphysical intrusion such as tapping another's telephone, examining her bank account, or subjecting her to harassing telephone calls. However, the tort applies only where there is a reasonable expectation of privacy. As a general rule, therefore, there is no liability for examining public records concerning a person, or for observing or photographing him in a public place.

Public Disclosure of Private Facts Publicizing facts concerning someone's private life can be an invasion of privacy if the publicity would be highly offensive to a reasonable person. The idea is that the public has no legitimate right to know certain aspects of a person's private life. Thus, publicity concerning someone's failure to pay his debts, humiliating illnesses he has suffered, or information about his sex life constitutes an invasion of privacy. Truth is *not* a defense to this type of invasion of privacy because the essence of the tort is giving unjustified publicity to purely private matters. Here, in further contrast to defamation, publicity means a *widespread*

Figure 1 *Constitutional Aspects of Defamation—Fault Requirements and Rules on Damages**

| | Public Official Plaintiff or Public Figure Plaintiff | Private Figure Plaintiff and Subject of Public Concern | Private Figure Plaintiff and Subject of Private Concern |
|---|---|---|---|
| What Plaintiff Must Prove to Win Case | Actual malice, by clear and convincing evidence | Fault—at least negligence | Perhaps (probably?) fault—at least negligence |
| Damages Recoverable If Plaintiff Wins Case | Damages for proven actual injury and/or presumed damages, as well as punitive damages | Damages for proven actual injury, if plaintiff proves only negligence. For presumed and punitive damages, plaintiff must prove actual malice, by clear and convincing evidence. | Damages for proven actual injury and/or presumed damages, as well as punitive damages |

*These requirements and rules apply at least in defamation cases against a media defendant. Although the Supreme Court has left some uncertainty on this point, the requirements and rules set forth here probably apply in all defamation cases, regardless of the defendant's media or nonmedia status.

Ethics in Action

In *Hernandez v. Hillside, Inc.*, 48 Cal. Rptr. 3d 780 (2006), the California Court of Appeal considered an invasion of privacy case arising out of the defendants' installation of a video surveillance system in an office shared by the plaintiffs. The defendants were the director of a residential facility for abused children and the two companies that operated the facility. The two plaintiffs were employees at the facility. The defendant director had the video surveillance system installed in the plaintiffs' office without their knowledge because of reports from the defendants' computer technician that someone—evidently neither of the plaintiffs—had been accessing pornographic Web sites at night from one of the computers in the plaintiffs' office. After the plaintiffs discovered the surveillance system, they also learned that it had been allowed to run not only at night (when the unauthorized computer use had occurred) but also during the daytime. This meant that the plaintiffs' activities during working hours had been recorded. They sued on the theory that the installation and operation of the surveillance system constituted an unlawful intrusion on solitude.

Although a lower court granted summary judgment in favor of the defendants, the California Court of Appeal reversed, holding that the plaintiffs had a reasonable expectation of privacy in their office and that the defendants' actions would have been highly offensive to a reasonable person. As this book went to press in 2008, the defendants' appeal to the Supreme Court of California remained pending.

Regardless of the ultimate outcome in *Hernandez*, think about behaviors such as those giving rise to the case and consider relevant ethical questions that go beyond the pure legal issues facing the courts. Give some thought, for instance, to these questions:

- When employers seek to monitor employees' actions during working hours, are there ethical obligations that constrain—or should constrain—employers? If so, what are those obligations, and how are they satisfied? Does it matter whether the employers have reason to suspect wrongdoing on the part of employees?
- In the situation that led to the plaintiffs' lawsuit in *Hernandez*, did the defendants act ethically (a) in installing the surveillance system, (b) in allowing it to run during daytime hours as well as nighttime hours, and (c) in not informing the plaintiffs about the system? If the defendants had informed the plaintiffs of the plan to install the surveillance system but the plaintiffs objected, would it have been ethical for the defendants to proceed with the installation of the system anyway?
- If an employer owns the computers in employees' offices and the employer operates the network or system of which those machines are a part, is it ethical for the employer to engage in secret monitoring of employees' use of the computers?

Be prepared to discuss the above questions and the reasons for the conclusions you draw.

communication of private details. For example, publication on the Internet would suffice.

As does defamation, this form of invasion of privacy potentially conflicts with the First Amendment. Courts have attempted to resolve this conflict in two major ways. First, no liability ordinarily attaches to publicity concerning matters of public record or legitimate public interest. Second, public figures and public officials have no right of privacy concerning information that is reasonably related to their public lives.

False Light Publicity Publicity that places a person in a false light in the public eye can be an invasion of privacy if that false light would be highly offensive to a reasonable person. What is required is unreasonable and highly objectionable publicity attributing to a person characteristics that she does not possess or beliefs that she does not hold. Examples include signing a person's name to a public letter that violates her deeply held beliefs or attributing authorship of an inferior scholarly or artistic

work to her. As in defamation cases, truth is a defense to liability. It is not necessary, however, that a person be defamed by the false light in which he is placed. For instance, signing a pro-life person's name to a petition urging increased abortion rights would create liability for false light publicity but probably not for defamation.

In view of the overlap between false light publicity and defamation, and the obvious First Amendment issues at stake, defendants in false light cases enjoy constitutional protections matching those enjoyed by defamation defendants.

Commercial Appropriation of Name or Likeness Liability for invasion of privacy can exist when, without that person's consent, the defendant commercially uses someone's name or likeness, normally to imply his endorsement of a product or service or a nonexistent connection with the defendant's business.

This form of invasion of privacy also draws on the personal property right connected with a person's identity

and his exclusive right to control it. In recent decades, recognition of this property right has given rise to a separate legal doctrine known as the *right of publicity*, under which public figures, celebrities, and entertainers have a cause of action against defendants who, without consent, use the right holders' names, likenesses, or identities for commercial purposes. Protected attributes of a celebrity's identity may include such things as a distinctive singing voice. Use of a celebrity's name or a "soundalike" of her in an advertisement for a product would be a classic example of a commercial use, as would use of an entertainer's picture as a commercially sold poster. Not all uses are commercial in nature, however, even if there is an underlying profit motive at stake. For example, though the cases are not entirely consistent on this point,

a television show or movie that uses a celebrity's name, likeness, or identity is likely to be classified as non-commercial and thus not a violation of the right of publicity. Some uses are close to the line and require courts to make difficult determinations regarding the use's commercial or noncommercial nature. Moreover, First Amendment issues sometimes arise in these cases, as indicated in the *C.B.C. Distribution* case, which follows shortly.

States that recognize the right of publicity usually consider it inheritable—meaning that it may survive the death of the celebrity who held the right during his or her lifetime. There is little agreement among the states, however, on how long the right persists after the celebrity's death.

C.B.C. Distribution & Marketing, Inc. v. Major League Baseball Advanced Media, L.P. 505 F.3d 818 (8th Cir. 2007)

C.B.C. Distribution & Marketing, Inc. (CBC), sells fantasy sports products via its Internet Web site, e-mail, mail, and the telephone. Its fantasy baseball products use the names of actual major league baseball players, as well as their performance and biographical data. Before the commencement of the major league baseball season each spring, participants form their fantasy baseball teams by "drafting" players from various major league baseball teams. Participants compete against other fantasy baseball "owners" who have also drafted their own teams. The success of a participant's team depends on the actual performance of the fantasy team's players on their respective actual teams during the course of the major league season. Participants in CBC's fantasy games pay fees to play and additional fees to trade players during the course of the season.

From 1995 through the end of 2004, CBC licensed its use of the names of and information about major league players from the Major League Baseball Players Association (Players Association) pursuant to agreements that it entered into with the association in 1995 and 2002. The 2002 agreement licensed to CBC "the names, nicknames, likenesses, signatures, pictures, playing records, and/or biographical data of each player" (the "Rights") to be used in association with CBC's fantasy baseball products.

In 2005, after the 2002 agreement expired, the Players Association licensed to Major League Baseball Advanced Media, L.P. (Advanced Media), the exclusive right to use baseball players' names and performance information "for exploitation via all interactive media." Advanced Media began providing fantasy baseball games on its Web site, MLB.com, the official Web site of major league baseball. It offered CBC, in exchange for a commission, a license to promote the MLB.com fantasy baseball games on CBC's Web site but did not offer CBC a license to continue to offer its own fantasy baseball products.

This conduct by Advanced Media prompted CBC to file a declaratory judgment action against Advanced Media. Alleging that it reasonably anticipated being sued by Advanced Media if it continued to operate its fantasy baseball games, CBC asked the federal district court to rule that CBC has the right to use, without license, the names of and information about major league baseball players in connection with its fantasy baseball products. Advanced Media counterclaimed, maintaining that CBC's fantasy baseball products violated rights of publicity belonging to major league baseball players and that the players, through their association, had licensed those rights to Advanced Media. The Players Association intervened in the case, joining in Advanced Media's claims. When the district court granted summary judgment in favor of CBC, Advanced Media and the Players Association appealed to the U.S. Court of Appeals for the Eighth Circuit.

Arnold, Circuit Judge

Because this appeal is from the district court's grant of summary judgment, our review is *de novo*, and we . . . view the evidence in the light most favorable to the nonmoving party.

Summary judgment is appropriate only if there is no genuine issue as to any material fact and the moving party is entitled to judgment as a matter of law. We also review *de novo* the district court's interpretation of state law, including its interpretation of

Missouri law regarding the right of publicity. When state law is ambiguous, we must predict how the highest court of that state would resolve the issue.

An action based on the right of publicity is a state-law claim. In Missouri, “the elements of a right of publicity action include: (1) That defendant used plaintiff’s name as a symbol of his identity (2) without consent (3) and with the intent to obtain a commercial advantage.” *Doe v. TCI Cablevision*, 110 S.W.3d 363, 369 (Mo. 2003). The parties all agree that CBC’s continued use of the players’ names and playing information after the expiration of the 2002 agreement was without consent. The district court concluded, however, that the evidence was insufficient to make out the other two elements of the claim, and we address each of these in turn.

With respect to the symbol-of-identity element, the Missouri Supreme Court has observed that “‘the name used by the defendant must be understood by the audience as referring to the plaintiff’” [and] that “[i]n resolving this issue, the fact-finder may consider evidence including ‘the nature and extent of the identifying characteristics used by the defendant, the defendant’s intent, the fame of the plaintiff, evidence of actual identification made by third persons, and surveys or other evidence indicating the perceptions of the audience.’” *Doe*, 110 S.W.3d at 370 (quoting *Restatement (Third) of Unfair Competition* § 46 cmt. d). Here, we entertain no doubt that the players’ names that CBC used are understood by it and its fantasy baseball subscribers as referring to actual major league baseball players. CBC itself admits that. In responding to the appellants’ argument that “this element is met by the mere confirmation that the name used, in fact, refers to the famous person asserting the violation,” CBC stated in its brief that “if this is all the element requires, CBC agrees that it is met.” We think that by reasoning that “identity,” rather than “mere use of a name,” “is a critical element of the right of publicity,” the district court did not understand that when a name alone is sufficient to establish identity, the defendant’s use of that name satisfies the plaintiff’s burden to show that a name was used as a symbol of identity.

It is true that with respect to the “commercial advantage” element of a cause of action for violating publicity rights, CBC’s use does not fit neatly into the more traditional categories of commercial advantage, namely, using individuals’ names for advertising and merchandising purposes in a way that states or intimates that the individuals are endorsing a product. See *Restatement (Third) of Unfair Competition* § 47 cmt. a, b. But the *Restatement*, which the Missouri Supreme Court has recognized as authority in this kind of case, also says that a name is used for commercial advantage when it is used “in connection with services rendered by the user” and that the plaintiff need not show that “prospective purchasers are likely to believe” that he or she endorsed the product or service. We note, moreover,

that in Missouri, “the commercial advantage element of the right of publicity focuses on the defendant’s intent or purpose to obtain a commercial benefit from use of the plaintiff’s identity.” *Doe*, 110 S.W.3d at 370–71. Because we think it is clear that CBC uses baseball players’ identities in its fantasy baseball products for purposes of profit, we believe that their identities are being used for commercial advantage and that the players therefore offered sufficient evidence to make out a cause of action for violation of their rights of publicity under Missouri law.

CBC argues that the First Amendment nonetheless trumps the right-of-publicity action that Missouri law provides. Though this dispute is between private parties, the state action necessary for First Amendment protections exists because the right-of-publicity claim exists only insofar as the courts enforce state-created obligations.

The Supreme Court has directed that state-law rights of publicity must be balanced against First Amendment considerations. See *Zacchini v. Scripps-Howard Broadcasting Co.*, 433 U.S. 562 (1977). [H]ere we conclude that the former must give way to the latter. First, the information used in CBC’s fantasy baseball games is all readily available in the public domain, and it would be strange law that a person would not have a First Amendment right to use information that is available to everyone. It is true that CBC’s use of the information is meant to provide entertainment, but “[s]peech that entertains, like speech that informs, is protected by the First Amendment because ‘[t]he line between the informing and the entertaining is too elusive for the protection of that basic right.’” *Cardtoons, L.C. v. Major League Baseball Players Ass’n*, 95 F.3d 959, 969 (10th Cir. 1996) (quoting *Winters v. New York*, 333 U.S. 507, 510, 68 S. Ct. 665, 92 L. Ed. 840 (1948)).

We also find no merit in the argument that CBC’s use of players’ names and information in its fantasy baseball games is not speech at all. We have held that “the pictures, graphic design, concept art, sounds, music, stories, and narrative present in video games” is speech entitled to First Amendment protection. See *Interactive Digital Software Ass’n v. St. Louis County*, 329 F.3d 954, 957 (8th Cir. 2003). Similarly, here CBC uses the “names, nicknames, likenesses, signatures, pictures, playing records, and/or biographical data of each player” in an interactive form in connection with its fantasy baseball products. This use is no less expressive than the use that was at issue in *Interactive Digital*.

Courts have also recognized the public value of information about the game of baseball and its players, referring to baseball as “the national pastime.” *Cardtoons*, 95 F.3d at 972. A California court, in a case where Major League Baseball was itself defending its use of players’ names, likenesses, and information against the players’ asserted rights of publicity, observed,

“Major league baseball is followed by millions of people across this country on a daily basis. . . . The public has an enduring fascination in the records set by former players and in memorable moments from previous games. . . . The records and statistics remain of interest to the public because they provide context that allows fans to better appreciate (or deprecate) today’s performances.” *Gionfriddo v. Major League Baseball*, 114 Cal. Rptr. 2d 307 (Cal. App. 2001). The Court in *Gionfriddo* concluded that the “recitation and discussion of factual data concerning the athletic performance of [players on Major League Baseball’s Web site] command a substantial public interest, and, therefore, is a form of expression due substantial constitutional protection.” We find these views persuasive.

In addition, the facts in this case barely, if at all, implicate the interests that states typically intend to vindicate by providing rights of publicity to individuals. Economic interests that states seek to promote include the right of an individual to reap the rewards of his or her endeavors and an individual’s right to earn a living. Other motives for creating a publicity right are the desire to provide incentives to encourage a person’s productive activities and to protect consumers from misleading advertising. See *Zacchini*, 433 U.S. at 573, 576; *Cardtoons*, 95 F.3d at 973. But major league baseball players are rewarded, and handsomely, too, for their participation in games and can earn additional large sums from endorsements and sponsorship arrangements. Nor is there any danger here that consumers will be misled, because the fantasy baseball games depend on the inclusion of all players and thus cannot create a

false impression that some particular player with “star power” is endorsing CBC’s products.

Then there are so-called nonmonetary interests that publicity rights are sometimes thought to advance. These include protecting natural rights, rewarding celebrity labors, and avoiding emotional harm. See *Cardtoons*, 95 F.3d at 973. We do not see that any of these interests are especially relevant here, where baseball players are rewarded separately for their labors, and where any emotional harm would most likely be caused by a player’s actual performance, in which case media coverage would cause the same harm. We also note that some courts have indicated that the right of publicity is intended to promote only economic interests and that noneconomic interests are more directly served by so-called rights of privacy. For instance, although the court in *Cardtoons* conducted a separate discussion of noneconomic interests when weighing the countervailing rights, it ultimately concluded that the noneconomic justifications for the right of publicity were unpersuasive as compared with the interest in freedom of expression. “Publicity rights . . . are meant to protect against the loss of financial gain, not mental anguish.” We see merit in th[e] approach [taken in *Cardtoons*].

[W]e hold that CBC’s First Amendment rights in offering its fantasy baseball products supersede the players’ rights of publicity.

District court’s grant of summary judgment in favor of CBC affirmed.

Misuse of Legal Proceedings Three intentional torts protect people against the harm that can result from wrongfully instituted legal proceedings. **Malicious prosecution** affords a remedy for the wrongful institution of criminal proceedings. Recovery for malicious prosecution requires proof that (1) the defendant caused the criminal proceedings to be initiated against the plaintiff without probable cause to believe that an offense had been committed; (2) the defendant did so for an improper purpose; and (3) the criminal proceedings eventually were terminated in the plaintiff’s favor. **Wrongful use of civil proceedings** is designed to protect people from wrongfully instituted civil suits. Its elements are very similar to those for malicious prosecution.

Abuse of process imposes liability on those who initiate legal proceedings, whether criminal or civil, for a primary purpose other than the one for which the proceedings were designed. Abuse of process cases often

involve situations in which the legal proceedings compel the other person to take some action unrelated to the subject of the suit. For example, Rogers wishes to buy Herbert’s property, but Herbert refuses to sell. To pressure him into selling, Rogers files a private nuisance suit against Herbert, contending that Herbert’s activities on his land interfere with Rogers’s use and enjoyment of his adjoining property. Rogers may be liable to Herbert for abuse of process even if Rogers had reason to file the case, and even if Rogers won the case.

Deceit (Fraud) **Deceit** (or fraud) is the formal name for the tort claim that is available to victims of knowing misrepresentations. Liability for fraud usually requires proof of a false statement of material fact that was knowingly or recklessly made by the defendant with the intent to induce reliance by the plaintiff, along with actual, justifiable, and detrimental reliance on the plaintiff’s past. Because most fraud actions arise in a

contractual setting, and because a tort action is only one of the remedies available to a victim of fraud, a more complete discussion of this topic is deferred until Chapter 13.

Interference with Property Rights

Trespass to Land **Trespass to land** may be defined as any unauthorized or unprivileged intentional intrusion upon another's real property. Such intrusions include (1) physically entering the plaintiff's land; (2) causing another to do so (e.g., by chasing someone onto the land); (3) remaining on the land after one's right to remain has ceased (e.g., staying past the term of a lease); (4) failing to remove from the land anything one has a duty to remove; (5) causing an object or other thing to enter the land (although some overlap with nuisance exists here); and (6) invading the airspace above the land or the subsurface beneath it (if property law and federal, state, and local regulations give the plaintiff rights to the airspace or subsurface and do not allow the defendant to intrude).

The intent required for trespass liability is simply the intent to be on the land or to cause it to be invaded. A person therefore may be liable for trespass even though the trespass resulted from his mistaken belief that his entry was legally justified. Where the trespass was specifically intended, no actual harm to the land is required for liability, but actual harm is required for reckless or negligent trespasses.

Private Nuisance In general, a **private nuisance** involves some interference with the plaintiff's use and enjoyment of her land. Unlike trespass to land, nuisance usually does not involve any physical invasion of the plaintiff's property. Trespass usually requires an invasion of tangible matter, whereas nuisance involves other interferences. Examples of such other interferences include odors, noise, smoke, light, and vibration. For nuisance liability to exist, however, the interference must be *substantial* and *unreasonable*. The defendant, moreover, must intend the interference.

The *Stephens* case, which follows, illustrates nuisance principles and explores issues concerning recoverable damages.

Stephens v. Pillen

681 N.W.2d 59 (Neb. App. 2004)

In December 2000, a group of 18 plaintiffs sued James D. Pillen and various other defendants, seeking injunctive relief and damages on the theory that the defendants' hog confinement operation constituted a private nuisance. The plaintiffs alleged that the hog confinement operation, which was conducted at four facilities in two different Nebraska counties, had been a nuisance since 1997. In addition, the plaintiffs alleged that they had been deprived of the normal use and enjoyment of their property, and that the defendants had been notified of the plaintiffs' concerns but had failed to take corrective action.

At a 2002 bench trial in a state district court, Pillen testified about the relevant facilities, each of which was classified as a "5,000 sow unit." The first of the four facilities was put into operation in 1996. The most recent facility was added in 1999. Pillen testified that he knew in May 1997 of a complaint from Nebraska's Department of Environmental Quality (DEQ) concerning "the odor from [an] incinerator" constructed at one of the facilities. Pillen believed that the DEQ complaint resulted from a complaint made to the DEQ by one of the plaintiffs. In addition, Pillen testified that he had discussed an odor problem with some of the plaintiffs prior to the end of September 1997.

All 18 plaintiffs testified concerning how the hog confinement operations had affected their lives and the use and enjoyment of their property. The testimony generally concerned the impact of odors from the hog confinement operation. The plaintiffs described the odors from the defendants' facilities as "unbearable," as "overwhelmingly a suffocating stench," as a "musty hog [excrement] smell," as a "sewage odor," as a "gas[-like] smell," and as an odor that "chokes you." Various plaintiffs said the smell was so bad that they had to keep their houses closed up at all times. The odor problem prevented them from spending time in their yards or gardens, from hanging laundry on outdoor clotheslines, and from participating in outside activities with children or grandchildren. One plaintiff testified that she was a "prisoner" in her own home.

According to Pillen's testimony, the defendants had tried various procedures to diminish the odors emanating from the facilities and the waste lagoons located there. These measures included the use of food additives, waste additives, and lagoon treatments. Pillen further testified that he did not think the hog confinement operation had changed the plaintiffs' quality of life or would ever disrupt their daily activities to such an extent that the operation should be changed.

The trial court ruled in favor of the plaintiffs and held that the defendants' four-facility operation constituted an intentional nuisance. The court ordered the defendants to explore the utility of processes to mitigate the odors and to implement

such processes. In addition, the court ordered that the defendants must, within 12 months, “abate the nuisance or cease operating” their hog confinement facilities. Although the court found that the plaintiffs had suffered at least “some damage” as a result of the nuisance, the court noted that “none of the plaintiffs [was] able to quantify any request for damages” and that the plaintiffs “had not adduced any evidence sufficient for the court to award them specific damages.” As a result, the court awarded no monetary recovery to any of the plaintiffs. On appeal to the Nebraska Court of Appeals, the defendants challenged the trial court’s conclusion that the hog confinement operation constituted a nuisance. The plaintiffs challenged the trial court’s failure to award damages.

Irwin, Chief Judge

We first address . . . whether the district court was correct in finding that the plaintiffs proved that the hog confinement facilities constitute a nuisance. The defendants assert that the district court erred in this regard and should have sustained the defendants’ motion to dismiss. We disagree because we conclude that the evidence supports a finding that the defendants have known since 1997 that the hog confinement facilities have invaded the plaintiffs’ private use and enjoyment of their land.

The appellate courts of Nebraska have adopted the law of nuisance as articulated in the *Restatement (Second) of Torts* (1979). A private nuisance is a nontrespassory invasion of another’s interest in the private use and enjoyment of his or her land. Section 822 of the *Restatement (Second)* provides that one is subject to liability for a private nuisance if, but only if, his or her conduct is a legal cause of an invasion of another’s interest in the private use and enjoyment of land and the invasion is intentional and unreasonable.

An intentional invasion of another’s interest in the private use and enjoyment of land exists when an actor purposefully causes the invasion, knows that the invasion is resulting from the actor’s conduct, or knows that the invasion is substantially certain to result from the actor’s conduct. To be “intentional,” an invasion of another’s interest in the use and enjoyment of land, or of the public right, need not be inspired by malice or ill will on the actor’s part toward the other. An invasion so inspired is intentional, but so is an invasion that the actor knowingly causes in the pursuit of a laudable enterprise without any desire to cause harm. It is the knowledge that the actor has at the time he acts or fails to act that determines whether the invasion resulting from his conduct is intentional or unintentional.

In this case, our review of the record indicates that the defendants knew, at least as early as September 1997 and perhaps as early as May 1997, that the operation of these facilities was causing an interference with the plaintiffs’ enjoyment of their land. Several of the plaintiffs testified that they complained to the defendants about the odor from the facilities. Pillen testified that he discussed the odor with some of the plaintiffs and wrote them a letter on the subject in September 1997. Pillen also testified that he had received complaints about [some of the] facilities in the past. Further, as discussed more fully below,

the evidence indicates that the interference with the plaintiffs’ enjoyment of their land was substantial and unreasonable. [T]he record adequately supports the district court’s finding that the plaintiffs proved that the defendants’ operation of these facilities constituted a knowing and intentional nuisance. As such, the [defendants’] assertions . . . are meritless.

The issue raised [by the plaintiffs] is whether the record supported an award of monetary damages, i.e., whether the district court erred in finding that it did not. Our review of the record indicates that many of the plaintiffs did present sufficient evidence to entitle them to an award of monetary damages. Some plaintiffs did not present sufficient evidence, and still other plaintiffs presented evidence which would have supported an award of monetary damages but affirmatively testified that they did not want any monetary damages.

We find that 11 of the plaintiffs presented sufficient evidence to support an award of monetary damages. [List of the 11 plaintiffs’ names omitted.] Each of these plaintiffs presented testimony that he or she has suffered significant discomfort, annoyance, and inconvenience in the use of his or her property.

Our review of the district court’s order leads us to conclude that the district court mistakenly applied rules applicable to special damages to the plaintiffs’ request for general damages. Although damages such as depreciation in market or rental value of property, medical expenses, and psychological expenses may be recoverable in a nuisance action, such damages would be special damages and would require specific proof to be awarded. General damages, however, do not require specific proof. General damages are such as the jury may give when the judge cannot point to any measure by which they are to be assessed except the opinion and judgment of a reasonable person. By definition, the very nature of general damages [means] that a court cannot point out any measure of damages for things such as discomfort, annoyance, or inconvenience. Nonetheless, such damages are recoverable in a nuisance action.

The 11 plaintiffs [referred to] above all presented sufficient testimony to establish significant damage to their way of life and their quality of life as a result of the nuisance in this case. They variously testified about significant interferences with their abilities to use and enjoy their homes and yards, including hanging laundry on the clothesline, spending time outside with

children and grandchildren, opening their windows to enjoy fresh air, and generally enjoying time outside. They [also] testified that they are forced to make sure windows and doors to their homes are closed at all times so that the odor does not invade the inside of their homes. Some of them testified that they had air conditioning and used it to keep their homes cool when the windows were shut. Kathleen Stephens identified herself as a “prisoner” in her own home and testified that she could not even eat things grown in her own garden because they had been “out in that smell” and thus were unappetizing as a result of the hog confinement facilities. Earl Stephens testified that he and Kathleen Stephens were considering moving and leaving land that had been in his family for years. James McIntosh testified that as a result of the odors, his family no longer plans any outdoor activities. Wanda Loseke testified that she has to put Mentholatum in her nose to be able to tolerate sitting on her porch to read. The 11 plaintiffs listed above all presented . . . similar testimony [sufficient] to establish that they have suffered compensable general damages as a result of the nuisance.

Although many of the 11 plaintiffs [referred to] above testified that they could not put a specific monetary value on these damages, none of them testified that he or she actually did not

want compensation for such damages. [We therefore] reverse the order of the district court denying monetary damages to these 11 plaintiffs and remand the matter to the district court with directions to award appropriate monetary damages to each of them, considering the extent of interference demonstrated by their testimony.

Note: In the remainder of its opinion, the Nebraska Court of Appeals concluded that two other plaintiffs had not presented sufficient evidence to support an award of damages because they testified only that they sometimes noticed a foul smell and not that there had been any significant effect on their lives or on their ability to use their property. The court also concluded that five other plaintiffs had presented evidence otherwise supportive of an award of general damages, but that those plaintiffs, when cross-examined, had specifically said they did not wish to recover damages. Therefore, the court ruled that the trial court had been correct in denying those plaintiffs an award of damages.

Trial court’s nuisance determination and issuance of injunction affirmed; trial court’s denial of damages to plaintiffs affirmed in part and reversed in part; case remanded for determination of damages to be awarded to qualifying plaintiffs.

Conversion Conversion is the defendant’s intentional exercise of dominion or control over the plaintiff’s personal property without the plaintiff’s consent. Usually, the personal property in question is the plaintiff’s goods. This can happen through the defendant’s (1) *acquisition* of the plaintiff’s property (e.g., theft, fraud, and even the purchase of stolen property); (2) *removal* of the plaintiff’s property (e.g., taking that property to the dump or moving the plaintiff’s car); (3) *transfer* of the plaintiff’s property (e.g., selling stolen goods or misdelivering property); (4) *withholding possession* of the plaintiff’s property (e.g., refusing to return a car one was to repair); (5) *destruction or alteration* of the plaintiff’s property; or (6) *using* the plaintiff’s property (e.g., driving a car left by its owner for storage purposes only).

In each case, the necessary intent is merely the intent to exercise dominion or control over the property. It is therefore possible for the defendant to be liable if she buys or sells stolen property in good faith. However, conversion is limited to *serious* interferences with the plaintiff’s property rights.

If there is a serious interference and conversion, the defendant is liable for the *full value* of the property. What happens when the interference is nonserious? Although it has largely been superseded by conversion and its elements are hazy, a tort called **trespass to personal property** may come into play here. Suppose that Richards

goes to McCrory Motors and asks to test-drive a new Corvette. If Richards either wrecks the car, causing major damage, or drives it across the United States, he is probably liable for conversion and obligated to pay McCrory the reasonable value of the car. On the other hand, if Richards is merely involved in a fender-bender, or keeps the car for eight hours, he is probably only liable for trespass. Therefore, he is only obligated to pay damages to compensate McCrory for the loss in value of the car or for its loss of use of the car.

A very different attempted application of trespass principles was unsuccessful in the *Intel* case, which is discussed in the nearby Cyberlaw in Action box.

Other Examples of Intentional Tort Liability

Chapter 8 discusses three additional intentional torts that protect various economic interests and often involve unfair competition: *injurious falsehood* (a type of business “defamation”); *intentional interference with contractual relations*; and *interference with prospective advantage*. Chapter 51 examines an intentional tortlike recovery for wrongful discharge called the *public policy* exception to employment at will. In Chapter 27, the text discusses the recoveries some states allow for *bad faith breach of contract*.

CYBERLAW IN ACTION

If a person uses a corporation's e-mail system to distribute unsolicited e-mails to large numbers of the corporation's employees and does so without the consent of the corporation, has the distributor committed the tort of trespass to personal property? That was the issue addressed by the Supreme Court of California in a 2003 decision.

After being fired from his job at Intel, Kourosh Hamidi obtained the company's e-mail address list without breaching Intel's computer security system; instead, an anonymous source sent the list to Hamidi on a computer disk. Over a period of approximately two years, Hamidi sent six e-mails to each of at least 8,000, and perhaps as many as 35,000, Intel employees. Hamidi's e-mails discussed his grievances against Intel and criticized the company's employment practices. A number of Intel employees complained to their employer about having received Hamidi's e-mails. Hamidi offered, however, to remove from his distribution list the addresses of Intel employees who requested that their addresses be removed. When employees so requested, Hamidi followed through on his removal offer.

After Intel's attempts to block Hamidi's e-mails proved largely unsuccessful and Hamidi ignored Intel's demands that he cease sending messages to the firm's employees, Intel sued Hamidi. Intel alleged that it owned the e-mail system, that the system was intended primarily for business use by Intel employees, that the address list was confidential, and that Hamidi had continued his mass e-mailings despite demands from Intel that he stop. Contending that Hamidi's actions amounted to trespass to chattels (i.e., trespass to personal property), Intel asked the court for an injunction barring Hamidi from sending further e-mails to Intel employees at their Intel addresses. A California trial court later granted summary judgment in favor of Intel and issued the requested injunction.

Hamidi appealed to the California Court of Appeal, which affirmed the lower court's decision. The appellate court conceded that injunctive relief was appropriate in view of the disruption to Intel's business that resulted from Hamidi's intentional interference with the company's e-mail system. This interference, the court reasoned, brought the case within the ownership and possession-related interests protected by the legal theory of trespass to personal property. The appellate court regarded its application of that "somewhat arcane" theory to the modern e-mail context as an illustration of how "[t]he common law adapts to human endeavor."

Again Hamidi appealed, this time to the Supreme Court of California. In *Intel Corp. v. Hamidi*, 71 P.3d 296 (2003), the Supreme Court reversed the lower courts' decisions.

The court observed that Hamidi's e-mails neither physically damaged nor functionally disrupted Intel's computers and did not prevent Intel from using its computers. These key facts caused the court to regard trespass to personal property as an ill-fitting theory. The court held that the trespass theory

does not encompass, and should not be extended to encompass, an electronic communication that neither damages the recipient computer system nor impairs its functioning. Such an electronic communication does not constitute an actionable trespass to personal property, i.e., the computer system, because it does not interfere with the possessor's use or possession of, or any other legally protected interest in, the personal property itself.

Although Intel argued that it had suffered harm in the form of lost productivity resulting from the fact that employees read and reacted to Hamidi's messages, the Supreme Court noted that any such harm did not help Intel establish the necessary elements of a trespass claim. Such supposed harm was "not an injury to the company's interest in its computers—which worked as intended and were unharmed by the communications—any more than the personal distress caused by reading an unpleasant letter would be an injury to the recipient's mailbox. . . ." Intel's real concern, the court concluded, pertained to the content of Hamidi's messages. The court was unwilling to allow the trespass to personal property theory, whether in traditional or modified form, to be employed as a means of squelching speech that Intel found objectionable. Although the court only briefly touched on the potential First Amendment implications of a contrary holding, the decision appeared to have been influenced by the free speech arguments of organizations that had filed *amicus curiae* (friend-of-the-court) briefs in the case.

In rejecting Intel's attempt to employ the trespass to personal property theory to the facts at hand, the Supreme Court emphasized that its holding would not prohibit Internet service providers (ISPs) from invoking trespass principles as a basis for legal relief against senders of "unsolicited commercial bulk e-mail, also known as 'spam.'" Citing cases in which spammers had been held liable to ISPs, the court noted that in those cases, the trespass to personal property theory was applicable because "the extraordinary quantity of [spam] impaired the [relevant] computer system's functioning." The supposed injury in *Intel v. Hamidi*, by contrast, took the form of "the disruption or distraction caused to recipients by the *contents* of the e-mail messages, an injury . . . not directly affecting the possession or value of personal property."

Problems and Problem Cases

1. Betty England worked at a Dairy Queen restaurant owned by S&M Foods in Tallulah, Louisiana. One day while she was at work, her manager, Larry Garley, became upset when several incorrectly prepared hamburgers were returned by a customer. Garley expressed his dissatisfaction by throwing a hamburger that hit England on the leg. Assume that while Garley was not trying to hit England with the hamburger, he was aware that she was substantially certain to be hit as a result of his action. Also, assume that England was not harmed by the hamburger. England sued Garley for battery. Did Garley have the necessary intent for battery liability? Does England's not suffering harm defeat her battery claim?
2. Martin Wishnatsky worked as a paralegal for attorney Peter Crary. While Crary was engaged in a conversation with North Dakota Assistant Attorney General David Huey in Crary's office, Wishnatsky attempted to enter the office. Huey then pushed the door closed in Wishnatsky's face, forcing him back into the hall. Wishnatsky, who suffered no physical injury as a result of Huey's action, sued Huey for battery. In an affidavit filed in opposition to Huey's motion for summary judgment, Wishnatsky stated that he was offended, shocked, and frightened as a result of Huey's action and the "You get out of here" statement Huey allegedly made to Wishnatsky as he (Huey) pushed the door closed. After the trial court granted Huey's motion for summary judgment, Wishnatsky appealed. Was Huey entitled to summary judgment?
3. Drs. Fuste and Vanden Hoek, the plaintiffs in the lawsuit referred to below, were employed as pediatricians by Riverside Healthcare Association, Inc. (RHA), for approximately five years until a dispute between the plaintiffs and RHA caused both physicians to terminate their employment with RHA. After opening a new medical practice, Drs. Fuste and Vanden Hoek filed a defamation lawsuit in a Virginia court against RHA, Riverside Hospital, Inc., and Riverside Physician Services, Inc. Also named as defendants were Peninsula Healthcare, Inc., and Healthkeepers, Inc. The plaintiffs based their defamation claim on false statements supposedly made about them after they left their employment with RHA. According to their complaint, the

statements were made by employees of RHA and the other defendants. The statements, supposedly made to patients, agents of other hospitals, and credentialing officials at area hospitals, charged that Drs. Fuste and Vanden Hoek were "unprofessional" and "uncooperative," that they had "left suddenly" and "abandoned their patients," and that there were "concerns about their competence." In addition, the plaintiffs alleged in their complaint that a caller to Healthkeepers was told that Drs. Fuste and Vanden Hoek would "never be put back on the Healthkeepers list of providers because of the way they left Riverside." When parents and grandparents of the plaintiffs' former patients inquired about the plaintiffs' whereabouts, RHA employees said that Drs. Fuste and Vanden Hoek had "left suddenly," that they "were not able to work in the area," that "their whereabouts were unknown," and that callers "should find another pediatrician." Finally, the plaintiffs alleged in their complaint that an RHA employee contacted a person who was contemplating working for Drs. Fuste and Vanden Hoek and told her that the plaintiffs' new practice "would be immediately shut down the day it opened" and that if she took a job there, she "would never have a future job with Riverside."

The defendants filed demurrers to the plaintiffs' complaint. A Virginia state court judge sustained the defendants' demurrers and dismissed the plaintiffs' complaint. In remarks from the bench, the judge observed that Drs. Fuste and Vanden Hoek had not stated a valid defamation claim because "the defamatory statements as alleged, on balance, appear to be opinions by and between people involved in the health care field." The plaintiffs appealed to the Supreme Court of Virginia. Did the trial judge rule correctly in sustaining the defendants' demurrers on the ground that the statements were nonactionable opinion?

4. While at a Dillard's department store that was located in a shopping mall, Lakesha Millbrook tried on a pair of jeans. She decided not to purchase that pair, but she eventually purchased a different pair and then proceeded to another area of the store to wait on a friend. Shortly thereafter, Millbrook and her companion exited Dillard's and entered the public area of the mall. A security officer wearing a police uniform (because he was an off-duty police officer retained by Dillard's) then approached Millbrook, grabbed

her shoulder, and stated that Millbrook needed to come back to Dillard's with him. The officer accompanied Millbrook to the store. The officer and a Dillard's employee then escorted Millbrook into a room. Millbrook's friend tried to join them, but the officer would not let him do so. Once they were in the room, the officer stated that Millbrook was responsible for a missing pair of jeans. Millbrook informed them that she had purchased a pair of jeans and offered her receipt as evidence. According to Millbrook, the officer, without looking at her receipt, searched her bag before he left the room. When the officer left the room, he stood outside the room in front of the door. The Dillard's employee remained inside the room with Millbrook. After roughly 20 minutes, the officer came back into the room and told Millbrook that she was free to leave. According to Millbrook, the incident caused her to start crying because she was hurt and embarrassed. Furthermore, she stated that she had done considerable crying at nights and had become fearful of being wrongly approached or accused. Millbrook missed no work as a result of the incident. Nor did she see any doctors, psychologists, therapists, or counselors as a result of the incident. Millbrook later sued Dillard's, bringing claims for assault, battery, and false imprisonment. Dillard's moved for summary judgment. How did the court rule in regard to each of Millbrook's claims?

5. Cindy Lourcey worked as a mail carrier for the United States Postal Service. While delivering mail by postal vehicle in Lebanon, Tennessee, Lourcey saw Charles Scarlett and his wife, Joanne Scarlett, in the middle of the street. Lourcey stopped her vehicle to provide assistance and spoke with Charles Scarlett, who said his wife was having a seizure. As Lourcey used her cell phone to call 911 to request help, Charles Scarlett pulled out a pistol and shot his wife in the head. He then turned and faced Lourcey, pointed the pistol at his head, and fatally shot himself.

Lourcey sued the estate of Charles Scarlett in a Tennessee court on the theory that Scarlett's conduct constituted intentional infliction of emotional distress. According to Lourcey's complaint, Scarlett's conduct caused Lourcey to experience post-traumatic stress disorder, depression, and emotional harm. Lourcey also alleged that the incident's lingering effects left her unable to return to work and caused

her to experience lost earning capacity. Arguing that the allegations in Lourcey's complaint were insufficient to state a legal claim, Scarlett's estate moved for dismissal. Were Lourcey's allegations sufficient to state a legal claim for intentional infliction of emotional distress?

6. Irma White, a churchgoing woman in her late forties, was employed at a Monsanto refinery. While working in the canning department, she and three other employees were told to transfer a corrosive and hazardous chemical from a larger container into smaller containers. After they asked for rubber gloves and goggles, a supervisor sent for the equipment. In the meantime, White began cleaning up the work area and one of the other employees went to another area to do some work. The other two employees sat around waiting for the safety equipment, contrary to a work rule requiring employees to busy themselves in such situations.

After learning that the group was idle, Gary McDermott, the canning department foreman, went to the work station. Once there, he launched into a profane one-minute tirade directed at White and the other two workers present, calling them "motherf—s," accusing them of sitting on their "f—g asses," and threatening to "show them to the gate." At this, White became upset and began to experience pain in her chest, pounding in her head, and difficulty in breathing. Her family physician met her at the hospital, where he admitted her, fearing that she was having a heart attack. She was later diagnosed as having had an acute anxiety reaction.

White later sued Monsanto for intentional infliction of emotional distress. Was her distress sufficiently severe for liability? Was McDermott's behavior sufficiently outrageous for liability?

7. Jonathan Harr's best-selling book, *A Civil Action*, is a dramatized account of real-life toxic tort litigation involving a tannery. The book discusses evidence that the protagonist, attorney Jan Schlichtmann, regarded as implicating tannery owner John Riley in the deaths of several children. Riley brought a defamation action against Harr and the book's publisher because, in Riley's view, the book had depicted him as a liar, a perjurer, a "killer," and a bully. One passage cited by Riley described Schlichtmann's reaction upon discovering a certain incriminating document:

This document was thirty years old and it dealt only with tannery waste, which might or might not have

contained TCE [a potentially harmful chemical]. But even so, Schlichtmann thought it had great value. Riley had sworn at his deposition that he had never dumped anything on the fifteen acres. Riley had lied then, and Schlichtmann—who didn't need much convincing—believed that Riley was also lying about using TCE.

Another passage described Schlichtmann's efforts to build a case against the tannery:

It seemed that everyone but Riley recognized the fifteen acres as a toxic waste dump. Riley must have known about the condition of the property. Perhaps, thought Schlichtmann, the tanner really had been running an unauthorized waste dump. Perhaps he had charged his neighbor, Whitney Barrel, a fee for the use of the land.

Did Riley have a meritorious defamation claim against Harr and the publishing company on the basis of the above statements?

8. Joseph Doescher, a hospital operating room perfusionist (the person who operates the heart/lung machine during open-heart surgeries) filed an assault lawsuit against Dr. Daniel Raess, a cardiovascular surgeon, following a verbal altercation that occurred near an Indiana hospital's open-heart surgery area. The case proceeded to trial. The evidence indicated that Raess was angry at Doescher over reports to the hospital administration about the defendant's treatment of other perfusionists. Doescher testified that Raess aggressively and rapidly advanced on Doescher with clenched fists, piercing eyes, a beet-red face, and popping veins, and that Raess was screaming and swearing at him. Doescher further testified that he (Doescher) backed up against a wall and put his hands up, believing that Raess was going to hit him, "[t]hat [Raess] was going to smack the s**t out of me or do something." Then, Raess suddenly stopped, turned, stormed past Doescher, and left the room, momentarily stopping to declare to Doescher that "you're finished, you're history." After the jury returned a verdict in favor of Doescher and awarded him damages, Raess appealed. Was there sufficient evidence to support the jury's conclusion that the elements of assault were present?
9. Wade Banks sued John Fritsch for false imprisonment, assault, and battery on the basis of an incident that occurred at a Kentucky high school. Prior to the incident, Banks had skipped out of or left agricultural wood construction class several times during the spring semester of his junior year at the school.

Banks testified at the trial that while he was walking to class, another student told him that the teacher, Fritsch, had a chain and was planning to chain Banks up to keep him from skipping class. When Banks entered the classroom, Fritsch had a large log chain over his shoulder and several key locks on his belt loop. Fritsch told Banks to put his leg up on a chair so that Fritsch could fasten the chain to Banks's ankle. Banks refused, but Fritsch repeated the instruction and Banks then complied. The entire class followed as Fritsch led Banks outside to a tree in an area where the class was painting wood troughs. Fritsch locked the chain to the tree and returned to the classroom. After several minutes of effort, Banks managed to free his ankle. When he attempted to leave the school premises, several classmates chased him down, tackled him, and carried him back to the tree. Fritsch returned and placed another chain around Banks's neck. Banks initially stood up and held up the chain to keep its weight off his neck. After 15 minutes, he tired of holding the chain, sat down, and began crying. When he told another student that the chain was bothering him, the student went to tell Fritsch. Fritsch came out and unfastened the neck chain, but tightened the ankle chain. Fritsch began discussing Banks's grade in the class and told Banks that he could pass if he painted the three remaining wood troughs. Fritsch removed the ankle chain when Banks agreed to do that painting.

Banks testified at the trial that he was deeply upset about the chaining and thought about it often. He received unwelcome attention from other students and the media about the incident. As a result, he spent his senior year in Columbia, Missouri, where his father lived. Banks testified that the move was traumatic, that he found it difficult to fit in at his new school, that he saw a psychologist once to discuss the chaining incident, and that he continued to cry and have flashbacks from it. His family stated that he seemed emotionally withdrawn. At the close of all of the evidence, Fritsch moved for a directed verdict. The trial judge granted the motion, ruling as a matter of law in favor of Fritsch instead of submitting the case to the jury. Was the trial court correct in granting Fritsch a directed verdict?

10. Bruno and Norma Ahnert lived across the street and approximately 500 feet from the Getty Granite Company. Asserting that Getty's business produced excessive noise and dust, the Ahnerts sued Getty for nuisance and trespass to land. They alleged that the

noise disturbed their sleep and made conversation, television watching, and radio or stereo listening difficult. In addition, the Ahnerts alleged that the dust prevented them from opening their windows for ventilation and rendered their outdoor premises unfit for use and enjoyment. Getty asked the court to dismiss the Ahnerts' claims for failure to state claims upon which relief could be granted. Did the Ahnerts state a valid trespass claim? Did they state a valid nuisance claim?

11. At the time of the events described below, California's statute dealing with a deceased celebrity's right of publicity read as follows: "Any person who uses a deceased personality's name, voice, signature, photograph, and likeness, in any manner, on or in products, merchandise, or goods, or for purposes of advertising or selling, or soliciting purchases of products, merchandise, goods, or services, without prior consent from [the legal owner of the deceased personality's right of publicity] shall be liable" to the right of publicity owner. The statute also set forth exemptions from the consent requirement for uses in news, public affairs, or sports broadcasts; in plays, books, magazines, newspapers, musical compositions, or film, television, or radio programs; or in other works of political or news-related value. There was also an exemption for "single and original works of fine art."

Comedy III Production, Inc., owns the rights of publicity of the deceased celebrities who, through their comedy act and films, had become familiar to the public as "The Three Stooges." Relying on the statute quoted above, Comedy III brought a right of publicity action against artist Gary Saderup and the corporation of which he was a principal. Without Comedy III's consent, the defendants (referred to here collectively as "Saderup") had produced and profited from the sale of lithographs and T-shirts bearing a depiction of The Three Stooges. The depiction had been reproduced from Saderup's charcoal drawing, which featured an accurate and easily recognizable image of the Stooges. The trial court awarded damages to Comedy III after concluding that Saderup had violated the right of publicity statute and that neither the exemptions set forth in statute nor the First Amendment furnished a defense. When the California Court of Appeals affirmed, Saderup appealed to the Supreme Court of California. Were the lower courts correct in ruling in favor of Comedy III?

12. James Albright began working as a bodyguard for Madonna in 1992. From that year until 1994, Albright was involved in a romantic relationship with the famous singer. Many details about this relationship, including its sexual aspects, appeared in a 2000 book about Madonna. The book, written by Andrew Morton, also contained a photograph of Madonna walking with a man. The photograph's caption identified the man as "Jimmy Albright" and stated that Albright had been Madonna's "secret lover and one-time bodyguard." The same picture later appeared in other books and magazines, with the man consistently being identified as Albright. However, the man pictured with Madonna was not Albright. Instead, the man was Jose Guitierrez, another former employee of Madonna. Albright filed a defamation lawsuit against author Morton, the publisher of Morton's book, and the publishers of the books and magazines in which the photograph later appeared. According to Albright's complaint, Guitierrez was a homosexual who "clearly represents his homosexual ideology in what many would refer to as sometimes graphic and offensive detail." Albright contended that the incorrect association of his name with what was actually a picture of Guitierrez would convey the erroneous impression that he (Albright) was gay. Did Albright state a valid claim for defamation?
13. Five passengers were injured when two cars collided during the operation of the "Starchaser," an indoor steel roller coaster at the Kentucky Kingdom amusement park. The collision and resulting investigation attracted immediate and continuing news coverage from WHAS-TV (a television station) and other media outlets. Kentucky Kingdom Amusement Co. (KKAC), which owns and operates Kentucky Kingdom, filed a defamation lawsuit against WHAS on the basis of certain statements made during the WHAS reports. At the trial, KKAC introduced evidence indicating that the statements were false and harmful to the reputation of Kentucky Kingdom. The jury returned a verdict calling for a substantial amount of damages to be awarded to KKAC. Among the issues on appeal was whether KKAC had adequately proved the fault requirement necessitated by the First Amendment. Assuming that KKAC is a public figure, what First Amendment-based fault requirement did KKAC have to prove in order to win the case? What does that fault requirement contemplate, and how does it differ from the fault requirement that would have been applicable if KKAC had been a private figure?

14. R&J Associates leased certain commercial real estate from T&C Associates, Inc., for a one-year period beginning May 1. The lease required that T&C give R&J 10 days' notice before canceling the lease. R&J operated the leased premises as a bar that featured seminude dancers but discontinued the business during the following March when it lost a necessary dance permit. In late March and early April, T&C noticed that the bar was not open and learned that R&J had lost its permit. R&J was behind on its rent at this time. Utility companies were seeking to shut off service to the premises because R&J was also behind on its utility bills. When T&C informed R&J that its monthly rent would be higher if it renewed the lease, R&J said it had no interest in renewing. For the above reasons, T&C took possession of the premises in April. T&C, however, did not give R&J the 10 days' notice referred to in the lease. T&C leased the premises to a new tenant later that month. At approximately the same time, R&J demanded the return of certain personal property items it had left on the premises. T&C told R&J to contact the new tenant, adding that there should be no problem with the return of the items of personal property. R&J contacted the new tenant, who told R&J to submit a list of its personal property because other parties were also claiming rights to what had been left on the premises. R&J did not submit this list and did not contact T&C again about the personal property

items. Later, R&J sued T&C for conversion of the personal property. Did R&J have a valid conversion claim?

Online Research

The Stanton Case

In this chapter's opening problem, you were asked to make a prediction about the ruling of a federal court of appeals in a case involving claims of defamation and invasion of privacy. Now, using an online source, locate the 2006 decision of the appellate court in that case, *Stanton v. Metro Corp.* Read the decision and see how its content matches up—or does not match up—with the prediction you made earlier. Then, prepare a brief memo that sets forth the appellate court's holdings and explains the court's supporting reasoning.

You Be the Judge

Consider completing the case "Defamation: Trashing the French Maid" from the You Be the Judge Web site element after you have read this chapter. Visit our Web site at www.mhhe.com/mallor14e for more information and activities regarding this case segment.

chapter 7

NEGLIGENCE AND STRICT LIABILITY

Tracey Bantz and Crystal Kiesau served as deputy sheriffs for the Buchanan County, Iowa, Sheriff's Department. In connection with her employment, Kiesau was involved with a K-9 training program for dogs. The Web site for the K-9 program included a photograph of a uniformed Kiesau standing with a police dog in front of a Sheriff's Department car. Bantz obtained the photograph from his home computer and digitally altered it so that Kiesau appeared to be exposing her breasts. During the next several months, Bantz showed and electronically mailed the altered photograph to numerous other persons. When she learned what Bantz had done, Kiesau sued him for defamation and invasion of privacy (legal theories about which you read in Chapter 6). A jury eventually returned a verdict in favor of Kiesau and against Bantz for compensatory and punitive damages totaling approximately \$160,000.

In addition, Kiesau's lawsuit named Buchanan County and its sheriff, Leonard Davis, as defendants. Making claims based on a legal theory about which you will read in this chapter, Kiesau contended that Davis and the county should face liability for negligent supervision of Bantz and for negligent retention of him as an employee. Davis and the county moved for summary judgment and sought dismissal of the claims made against them.

Evidence produced by Kiesau in opposition of the summary judgment motion revealed that Davis, who was Bantz's father-in-law, had received numerous complaints about Bantz's attitude and work habits. These complaints were lodged during a four-year period preceding Bantz's alteration and distribution of the photograph of Kiesau. For instance, a sergeant complained about Bantz's refusal to respond to a dispatch call and sent Davis a memo saying that "I am getting tired of people complaining that nothing ever happens to Deputy Bantz when a complaint is written up." As part of a recommendation that Davis terminate Bantz as a canine handler, a Lieutenant Furness mentioned Bantz's supposed lack of honesty, integrity, and sound judgment; his inability to work without supervision; and his failures to cooperate with other members of the Sheriff's Department. Furness, who described Bantz as "a lawsuit waiting to happen even without a dog," later provided Davis a written complaint asserting that Bantz was the cause of turmoil and low morale in the department. In addition, the lieutenant informed Davis that Bantz was "arrogant in his knowledge that he can do anything and nothing will happen to him." Furness also expressed the supposed view of fellow deputies that Bantz's actions would eventually lead to a lawsuit. The evidence also included a statement by a Captain Hepke, who noted that the number of complaints lodged against Bantz was the most he had seen filed against a single deputy in his 22 years of law enforcement experience. Davis apparently took no action in response to these complaints about Bantz.

The trial court granted summary judgment to Davis and the county and dismissed Kiesau's negligence claims against those defendants. Therefore, only the claims against Bantz were considered by the jury. Kiesau appealed the trial court's decision regarding her negligence claims against Davis and the county. As you read Chapter 7, consider these questions:

- What legal elements would Kiesau have to prove in order to win her negligent supervision and negligent retention claims against Davis and the county?

- Did Davis and the county owe any legally cognizable duty to Kiesau in connection with the supervision of Bantz and the retention of him as an employee? Was it foreseeable to Davis and the county that unless supervised closely, Bantz could cause harm to a fellow employee such as Kiesau?
- Was the trial court correct in dismissing Kiesau’s negligence claims against Davis and the county?
- If Davis and the county were to argue that they should not be held liable for a wrong committed by Bantz, what would be the appropriate response for Kiesau to make?
- When an employer decides to hire a particular employment applicant, does the employer owe any ethical obligations to persons other than the applicant? If so, what are they? If not, why not? Once a particular employee has been hired, does the employer owe others any ethical obligations in connection with the actions of that employee? If so, what are they? If not, why not?

THE INDUSTRIAL REVOLUTION THAT changed the face of 19th-century America created serious strains on tort law. Railroads, factories, machinery, and new technologies meant increased injuries to persons and harm to their property. These injuries did not fit within the intentional torts framework because most were unintended. In response, courts created the law of **negligence**.

Negligence law initially was not kind to injured plaintiffs. One reason was the fear that if infant industries were held responsible for all the harms they caused, the country’s industrial development would be seriously restricted. As a viable industrial economy emerged in the 20th century, this concern began to fade. Also fading over the same period was the 19th-century belief that there should be no tort liability without genuine fault on the defendant’s part. More and more, the injuries addressed by tort law have come to be seen as the inevitable consequences of life in a high-speed, technologically advanced society. Although modern negligence rules have not eliminated the fault feature, they sometimes seem consistent with a goal of imposing tort liability on the party better positioned to bear the financial costs of these consequences. That party often is the defendant. Negligence law has become more proplaintiff in recent decades, though statistics indicate that defendants tend to win negligence cases as often as plaintiffs do.

Because most tort cases that do not involve intentional torts are governed by the law of negligence, the bulk of this chapter will deal with negligence principles. In a narrow range of cases, however, courts dispense with the fault requirement of negligence and impose **strict liability** on defendants. Strict liability’s more limited application will be addressed during the latter part of this chapter. The chapter will conclude with discussion of recent years’ **tort reform** movement, whose primary

aims are to reduce plaintiffs’ ability to prevail in tort cases and limit the amounts of damages they may receive when they win such cases.

Negligence

The previous chapter characterized negligence as conduct that falls below the level reasonably necessary to protect others against significant risks of harm. The elements of a negligence claim are (1) that the defendant owed a **duty** of care to the plaintiff; (2) that the defendant committed a **breach** of this duty; and (3) that this breach was the **actual and proximate cause of injury** experienced by the plaintiff. In order to win a negligence case, the plaintiff must prove each of these elements, which will be examined in the following pages. Later in the chapter, **defenses** to negligence liability will be considered.

Duty and Breach of Duty

Duty of Reasonable Care Negligence law rests on the premise that members of society normally should behave in ways that avoid the creation of unreasonable risks of harm to others. As a general rule, therefore, negligence law contemplates that each person must act as a *reasonable person of ordinary prudence* would have acted under the same or similar circumstances. This standard for assessing conduct is often called either the “reasonable person” test or the “reasonable care” standard. In most cases, the duty to exercise reasonable care serves as the relevant duty for purposes of a negligence claim’s first element. The second element—breach of duty—requires the plaintiff to establish that the defendant failed to act as a reasonable person would have acted. Negligence law’s

focus on reasonableness of behavior leads to a broad range of applications in everyday personal life (e.g., a person's negligent driving of a car) and in business and professional contexts (e.g., an employer's negligent hiring of a certain employee, or an accountant's, attorney's, or physician's negligent performance of professional obligations).

Was the Duty Owed? Of course, there could not have been a breach of duty if the defendant did not owe the plaintiff a duty in the first place. It therefore becomes important, before we look further at *how* the reasonable person test is applied, to consider the ways in which courts determine *whether* the defendant owed the plaintiff a duty of reasonable care.

Courts typically hold that the defendant owed the plaintiff a duty of reasonable care if the plaintiff was among those who would foreseeably be at risk of harm

stemming from the defendant's activities or conduct, or if a special relationship logically calling for such a duty existed between the parties. Most courts today broadly define the group of foreseeable "victims" of a defendant's activities or conduct. As a result, a duty of reasonable care is held to run from the defendant to the plaintiff in a high percentage of negligence cases—meaning that the outcome of the case will hinge on whether the defendant breached the duty or on whether the requisite causation link between the defendant's breach and the plaintiff's injury is established.

The particular circumstances present in some cases, however, cause the court to conclude that the defendant did not owe the plaintiff a duty of reasonable care. When the court so holds, the plaintiff's negligence claim is dismissed for failure to prove the required initial element of such a claim. The *Raleigh* case, which follows, serves as an example.

Raleigh v. Performance Plumbing and Heating, Inc. 130 P.3d 1011 (Colo. Sup. Ct. 2006)

Performance Plumbing and Heating, Inc., was in the business of installing underground and in-house water and sewer plumbing at Denver-area construction sites. Unless assigned a company vehicle, employees of Performance Plumbing used their own vehicles to commute to and from work. Whether employees drove a company vehicle or their own vehicle, Performance Plumbing did not treat driving to work at the beginning of the day and back home at the end as part of the workday. Employees were neither compensated for such commute time nor reimbursed for commuting mileage.

Because Performance Plumbing employees were expected to drive for the company during the workday in order to transport job materials and company tools from the company's construction trailers to job sites (and vice versa), the employer required a valid driver's license as part of the employment application process. However, it relied on the applicant's truthfulness in stating whether he or she held a valid license. Performance Plumbing checked driver's licenses and driving records only as required by its insurance company when it assigned an employee a company vehicle to drive.

In 1996, Performance Plumbing hired Cory Weese as an apprentice plumber. Weese had completed a standard employment application that contained inquiries into the status of his driver's license and driving history. Weese stated in his application that he had a valid license and no moving violations. In reality, his license was then under suspension, though he was eligible for reinstatement of the license upon providing proof of insurance. Weese signed a standard release form, enabling Performance Plumbing to investigate the status of his driver's license, but in accordance with the company's practice, it conducted no further investigation because it was not assigning him a company vehicle to drive. If it had reviewed Weese's driving record, Performance Plumbing would have discovered two accident-related careless driving convictions during the early 1990s, along with other traffic violations during the same general time. At the time of one of the accidents giving rise to a careless driving citation, Weese was found to have been driving without insurance. Because of too many accumulated points resulting from his careless driving convictions and other violations, Weese's driver's license was suspended until August 1992. He drove without a valid license prior to reinstatement, causing reinstatement to be deferred for an additional year. Had it checked Weese's driving record, Performance Plumbing also would have discovered that in November 1995, Weese was convicted of another traffic violation and was again found to have been driving without insurance. His license was suspended as a result. When Performance Plumbing hired Weese in April 1996, he was eligible for license reinstatement upon providing proof of insurance coverage and paying a reinstatement fee, but he had not proceeded to obtain insurance and have his license reinstated.

In early 1997, Performance Plumbing equipped Weese's personal truck with a rack for transporting pipe from the company's construction trailers to work sites. The company paid Weese for travel time between the construction trailers and job

sites because it was part of his workday, but it did not pay or reimburse Weese for the use of his vehicle. In September 1997, after Weese's workday had ended and he was driving home, his truck collided with two cars. The collision resulted solely from negligence on Weese's part. Carolyn Raleigh and her son, Kevin, sustained severe injuries in the accident. They sued Performance Plumbing on two legal theories: respondeat superior (a doctrine under which an employer is held liable for the tort of an employee if the tort was committed within the scope of employment); and negligent hiring. (For a discussion of respondeat superior, see Chapter 36.) A Colorado jury ruled against the Raleighs on the respondeat superior claim because Weese was not acting within the scope of employment at the time of the accident. On the negligent hiring claim, however, the jury returned a verdict in favor of the Raleighs for a substantial amount of damages.

Colorado's intermediate court of appeals upheld the decision against the Raleighs on the respondeat superior claim. Concerning the negligent hiring claim, the appellate court concluded that Performance Plumbing was obligated to inquire into Weese's driving record as part of a duty of reasonable care to hire a safe driver who would not create an undue risk of harm to the public in performing his employment duties. The court of appeals also concluded that there was sufficient evidence for the jury to find a breach of the company's duty to the driving public. However, stressing what it regarded as the absence of the necessary element of causation, the appellate court invalidated the jury's negligent hiring award in light of the jury's determination that Weese was not acting within the scope of his employment when the accident occurred. The Raleighs appealed to the Supreme Court of Colorado. In a portion of the opinion not included here, the Supreme Court affirmed the lower courts' rulings on the respondeat superior claim. The edited portion included here focuses on the Raleighs' negligent hiring claim.

Hobbs, Justice

To obtain submittal of a negligence claim to a jury, the plaintiff must establish a prima facie case demonstrating the following elements: (1) the existence of a legal duty to the plaintiff; (2) the defendant breached that duty; (3) the plaintiff was injured; and (4) the defendant's breach of duty caused the injury. Thus, the first question in any negligence case is whether the defendant owed a legal duty to protect the plaintiff from injury. Whether a specific defendant owes a duty to a specific plaintiff under the circumstances involved with a tort claim is a question of law.

Negligent hiring cases are complex because they involve the employer's responsibility for the dangerous propensities of the employee, which were known or should have been known by the employer at the time of hiring, gauged in relation to the duties of the job for which the employer hires the employee. The employee's later intentional or non-intentional tort is the predicate for the plaintiff's action against the employer, so proof in the case involves both the employer's and the employee's tortious conduct. The lesson to be learned from a successful negligent hiring suit is that the employer should not have hired the employee in light of that person's dangerous propensities or, having hired him or her, must exercise that degree of control over the employee necessary to avert that employee from injuring persons to whom the employer owed the duty of care when making the hiring decision. But "[a] negligence claim against an employer will fail if it is based on circumstances in which the employer owed no duty of care." [Supporting citation omitted.]

We conclude in the case before us that the court of appeals erred in its ruling that the causation element of the tort of

negligent hiring came into play to bar the jury's award on the Raleighs' cause of action. The court of appeals utilized the jury's special verdict finding that Weese was not acting within the scope of his employment when he caused the accident. However, conduct of the employee outside of his or her employment can nonetheless be actionable as a breach of the employer's duty of care in a negligent hiring case, if the employer owed a duty of care to the plaintiff when making the hiring decision. Accordingly, we focus in this case on whether Performance Plumbing owed a duty of care to the Raleighs in the first instance.

In 1992, we joined the majority of states in formally recognizing the tort of negligent hiring. *Connes v. Molalla Transp. Sys., Inc.*, 831 P2d 1316, 1321 (Colo. 1992). *Connes* focused on the duty element of the tort. We posited the scope of the employer's legal duty upon the employer's actual knowledge at the time of hiring or reason to believe that the person being hired, by reason of some attribute of character or prior conduct, would create an undue risk of harm in carrying out his or her employment responsibilities. We observed that foreseeability of harm to the plaintiff is a prime factor in the duty analysis. A court should also weigh other factors, including the social utility of the defendant's conduct, the magnitude of the burden of guarding against the harm caused to the plaintiff, the practical consequences of placing such a burden on the defendant, and any additional elements disclosed by the particular circumstances of the case. No one factor is controlling; the question whether a duty should be imposed in a particular case is essentially one of fairness under contemporary standards—whether reasonable persons would recognize a duty and agree that it exists.

The tort of negligent hiring is independent of a *respondeat superior* theory; under appropriate circumstances, [negligent hiring principles] may apply to impose liability even though the employee is acting outside the scope of the employment. *Connes*, 831 P.2d at 1320–21. In fact, the vast majority of negligent hiring cases involve intentional torts committed by an employee who is not acting within the scope of his or her employment. In *Connes*, although we recognized a duty upon the employer of a commercial truck driver to hire a safe driver, we declined to require the employer to check the employee’s criminal record which, if checked, would have revealed a criminal record that included violent acts. In that case, the employee sexually assaulted a woman while he was on a cross-country commercial trip. We held that the driver’s contact with the woman was incidental to his employment, and the employer had no duty to further inquire into the employee’s denial of a criminal record in the course of the hiring process.

When the duties of the job will bring the employee into frequent contact with members of the public, or will involve close contact with particular individuals as a result of a special relationship between such persons and the employer, some courts have expanded the employer’s duty and have required the employer to go beyond the job application and make an independent inquiry into the applicant’s background. [However,] when the employment calls for incidental contact between the employee and other persons, there may be no reason for an employer to conduct any investigation of the applicant’s background beyond obtaining past employment information and personal data during the application process.

The employer’s duty to members of the public in both negligent hiring and negligent supervision cases stems from the principle that the employer receives benefits from having customers and business invitees and incurs responsibilities to them. The *Restatement (Second) of Agency* addresses the tort of negligent hiring as follows: “A person conducting an activity through servants or other agents is subject to liability for harm resulting from his conduct if he is negligent or reckless . . . in the employment of improper persons or instrumentalities in work involving risks of harm to others. *Restatement (Second) of Agency* § 213. The [official] comment to this [*Restatement* section] reveals that liability is predicated on the employer’s reason to believe at the time of hiring that undue risk of harm would exist from employing that person. [According to the comment,] “[l]iability results under the rule stated in [§ 213], not because of the relation of the parties, but because the employer antecedently had reason to believe that an undue risk of harm would exist because of the employment.”

The key word in this formulation, “antecedently,” refers to the time of hiring. In explaining the nature of the employer’s duty at the time of hiring, we have reiterated that the scope of

the employer’s duty in exercising reasonable care in a hiring decision depends on the employee’s anticipated degree of contact with other persons in carrying out the job for which the employee was hired. The job for which the defendant was hired in *Connes* consisted primarily of commercial vehicle driving. We recognized that employers of commercial drivers have a duty to investigate an applicant’s driving record, in addition to what he or she provides in response to application questions or an employment interview. But, we cautioned in *Connes* that the tort of negligent hiring does not function as an insurance policy for all persons injured by persons an employer hires. [*Connes* indicates that when] driving is involved in performance of the job responsibilities, the duty is “to use reasonable care in hiring a safe driver who would not create a danger to the public in carrying out the duties of the job.”

The Raleighs claim that Performance Plumbing owed a duty of care to them because Weese possessed a dangerous propensity in that he was a dangerous driver; had Performance Plumbing conducted a further investigation into his driving record, it would have discovered that Weese’s license was under suspension and he had a record of moving violations and automobile accidents, despite his false statements in answer to the employment application questions. They contend that Weese was expected to drive as part of his employment, and they put much emphasis on the benefit the employer obtained by outfitting his private vehicle with a pipe rack.

We agree with the Raleighs that Weese was expected to drive as part of his employment, but only as part of his work day from construction trailers to job sites and back from the job site to construction trailers. The job required employees to commute to and from work on their own time. In this regard, this company is no different from any of a large number of Colorado employers who expect their employees to get to work on their own time and in their own way, and do not assume liability as part of their hiring decision to act as a surety for automobile accidents their employees may cause when commuting to and from work.

Whether Performance Plumbing owed a duty of care to the Raleighs boils down to whether reasonable persons would recognize and agree that a duty exists. The scope of the employer’s duty of care in making the hiring decision extends to persons the employer should have reasonably foreseen the employee—who possesses the dangerous propensity the employer knew of, or reasonably should have known of—would come into contact with through the employment. Thus, [especially in light of the accidents that a check of Weese’s driving record would have revealed,] the case before us could have presented a jury question on the negligent hiring claim had the accident occurred when Weese was driving to a job site from a construction trailer or from a job site to a construction trailer as part of

his work. But our research has not disclosed any case that extends employer negligent hiring liability to off-duty driving of the type citizens undertake normally to get to and from their jobs.

There is precedent that cautions courts against extending the tort of negligent hiring to off-duty commute accidents. Otherwise, any employer who fails to check the license status of employees, and who knows that it is necessary that employees drive to and from work, could be considered to have brought the employee into contact with the third person via the vehicular collision, and could face potential liability for negligent hiring and retention as to injuries occurring from such a collision. We . . . make the further observation that this is properly part of the scope-of-the-employer's-duty analysis—however it might also play into a causation analysis—because the duty of reasonable care in hiring the employee appropriately focuses on the job

duties for which the employee is being hired in relation to persons the employer would reasonably foresee the employee coming into contact with through the employment.

We recognize that the Raleighs suffered serious injuries for which Weese bears responsibility. [He] caused the accident when he was commuting from his job on his way home from work. But, we conclude as a matter of law that the Raleighs are not among the members of the public to whom Performance Plumbing owed a legal duty. They did not come into contact with Weese through his employment. Accordingly, we affirm the judgment of the court of appeals dismissing the . . . negligent hiring claim against Performance Plumbing [, though we do so on a ground different from the one on which the court of appeals relied].

Judgment of court of appeals affirmed.

Was the Duty Breached? Assuming that the defendant owed the plaintiff a duty of reasonable care, whether the defendant satisfied or instead breached that duty depends upon the application of the reasonable person test. This test is *objective* in two senses. First, it compares the defendant's actions with those that a hypothetical person with ordinary prudence and sensibilities would have taken (or not taken) under the circumstances. Second, the test focuses on the defendant's behavior rather than on the defendant's *subjective* mental state. The reasonable person test has another noteworthy characteristic: flexibility. In contemplating that courts consider all of the relevant facts and circumstances, the test allows courts to tailor their decisions to the facts of the particular case being decided.

When applying this objective yet flexible standard to specific cases, courts consider and balance various factors. The most important such factor is the *reasonable foreseeability* of harm. This factor does double duty, helping to determine not only whether the defendant owed the plaintiff a duty (as noted above) but also what the defendant's duty of reasonable care entailed in the case at hand. Suppose that Donald falls asleep at the wheel and causes a car accident in which another motorist, Peter, is injured. Falling asleep at the wheel involves a foreseeable risk of harm to others, so a reasonable person would remain awake while driving. Because Donald's conduct fell short of this behavioral standard, he has breached a duty to Peter. However, this probably would not be true if Donald's loss of awareness resulted from a sudden,

severe, and unforeseeable blackout. On the other hand, there probably would be a breach of duty if Donald was driving and had a blackout to which a doctor had warned him he was subject.

Negligence law does not require that we protect others against all foreseeable risks of harm. Instead, the risk created by the defendant's conduct need only be an *unreasonable* one. In determining the reasonableness of the risk, courts consider other factors besides the foreseeability of harm. One such factor is the *seriousness* or *magnitude* of the foreseeable harm. As the seriousness of the harm increases, so does the need to take action to avoid it. Another factor is the *social utility* of the defendant's conduct. The more valuable that conduct, the less likely that it will be regarded as a breach of duty. A further consideration is the *ease or difficulty of avoiding the risk*. Negligence law normally does not require that defendants make superhuman efforts to avoid harm to others.

To a limited extent, negligence law also considers the *personal characteristics* of the defendant. For example, children are generally required to act as would a reasonable person of similar age, intelligence, and experience. A physically disabled person must act as would a reasonable person with the same disability. Mental deficiencies, however, ordinarily do not relieve a person from the duty to conform to the usual reasonable person standard. The same is true of voluntary and negligent intoxication.

Finally, negligence law is sensitive to the *context* in which the defendant acted. For example, someone

confronted with an emergency requiring rapid decisions and action need not employ the same level of caution and deliberation as someone in circumstances allowing for calm reflection and deliberate action.

The *Currie* case, which follows, focuses mainly on the duty and breach of duty elements of a negligence claim. It also furnishes an introduction to concepts dealt with more fully later in the chapter.

Currie v. Chevron U.S.A., Inc.

2008 U.S. App. LEXIS 4269 (11th Cir. 2008)

Acting in her own right and as personal representative of the estate of her deceased daughter (Nodiana Antoine), Tracye Currie sued Chevron U.S.A., Inc., and Chevron Stations, Inc. (collectively, “Chevron”), on the theory that Chevron negligently caused Antoine’s death. The facts giving rise to the case are summarized here.

For approximately two years, Antoine and Anjail Muhammad had had a close personal relationship. The relationship between the two women was a stormy one, with Muhammad sometimes threatening to inflict physical harm on Antoine. On the morning of May 25, 2003, Muhammad and Antoine were in Muhammad’s car, which Muhammad had parked in a restaurant parking lot in Marietta, Georgia. According to a statement Muhammad later made to the police, Muhammad and Antoine became involved in an argument, during which Antoine said that she wanted to end their relationship. Muhammad also said in her statement that Antoine left the car and started walking toward a Chevron gas station across the street to call her family. Muhammad followed her, and the women continued arguing as they walked across the street.

Pamela Robinson, a customer at the Chevron station, testified at the trial in Currie’s case that when she pulled into the station, she saw Muhammad and Antoine approach the Chevron station. Muhammad was pulling on Antoine’s neck or the collar of her clothing and essentially dragging Antoine. Robinson also stated that Muhammad appeared to tighten her grip on Antoine when Antoine tried to pull away. Robinson, who watched the two women move in the direction of gas pump number one, went inside the Chevron station when she realized that the pump she was seeking to use had to be activated by a Chevron cashier before it would work. Jyotika Shukla was the cashier at the Chevron station on that day. Robinson testified that she entered the station and “told [Shukla] immediately that there was something going on with the two young ladies out here and that she needed to contact the police immediately.” Robinson explained that she then pointed out the two women to Shukla.

Shukla testified at the trial that she did not know there was anything wrong outside until Robinson came into the station and told her, though an earlier statement by Shukla to the police indicated that Shukla saw the women before Robinson came into the station. Regardless of when she first saw the women, Shukla said that she did see the two women “verbally fighting” and that one woman was holding the other by her shirt. Shukla did not call the police because, according to her testimony, she thought the two women were or would be leaving the Chevron property.

Evidence adduced at the trial indicated that when customers at the Chevron station sought to use a gas pump, they had to lift a lever on the pump. A beeping sound inside the station would then inform the cashier that a customer had lifted the lever on a pump. In order for the customer to receive gas through the pump, the cashier would then have to hit the “authorize pump” button. After the gas pump was authorized, the beeping sound would stop.

The evidence established that Shukla authorized gas pump number one by pushing the appropriate button inside the station. This authorization of the pump enabled Muhammad to use it, even though Muhammad did not have a car on the premises. Shukla testified at trial that she authorized pump number one before Robinson came into the station and before she (Shukla) saw the women fighting, but Shukla’s deposition testimony and an earlier statement given to the police indicated that she could not remember whether she knew about or had seen the fighting before she authorized the pump.

Robinson’s testimony suggested that Shukla authorized a pump after Robinson told Shukla about the two women fighting. Based on her prior experience of working at a gas station, Robinson recognized that a beeping sound informed the cashier that a gas pump needed to be activated. Robinson testified that she heard a beeping sound when she entered the Chevron station. She also testified that the beeping sound stopped “right after” she told Shukla to call the police. Robinson also stated that she did not ask Shukla to authorize her gas pump until after she talked to Shukla about the two women fighting outside and showed Shukla where they were standing—by gas pump number one. Moreover, there were no other customers waiting for other pumps to be authorized.

Shukla’s testimony was inconsistent about whether she looked at gas pump number one before authorizing it. She first testified that she did not remember whether she had looked at pump number one before authorizing it, but later she said “[m]aybe yes.” In her statement to the police, Muhammad said that Shukla looked at pump number one before authorizing it.

Muhammad stated that “[e]verybody was really helpful like the lady . . . in the store. . . . [S]he just turned the pump on.” When a police detective asked, “Even though ya’ll didn’t have a car?” Muhammad responded, “Didn’t even have a car right next to it, she just turned it on, she looked at us and just turned the pump on.”

After Shukla authorized pump number one, Muhammad sprayed 65 cents worth of gasoline on Antoine. Robinson testified that she exited the station to return to her car to pump gas and immediately saw the two women “in the same position with [Muhammad] holding [Antoine].” Before Robinson got to her car, Muhammad asked Robinson whether she had a cigarette lighter. Robinson said she did not. She then watched the two women as they left the Chevron station, with Muhammad still pulling Antoine by her shirt.

According to Muhammad’s statement to the police, she and Antoine left the Chevron station and went back to Muhammad’s car. Muhammad then found a cigarette lighter in the car and used the lighter to set Antoine on fire. Antoine ran through the parking lot while on fire and tried to roll over in a grassy area in an effort to put out the flames. A passerby called 911, and Antoine was taken to the hospital. Several weeks later, Antoine died as a result of the burns she had suffered. Muhammad, who confessed to police that she set Antoine on fire, was later indicted on criminal charges of murder, aggravated battery, aggravated assault, and arson.

In Currie’s wrongful death lawsuit against Chevron, Currie alleged that Shukla negligently authorized the gas pump used by Muhammad and that Antoine died as a result. Under the respondeat superior principle discussed in Chapter 36 of this text, Chevron would be liable for any negligence on the part of its employee, Shukla, if that negligence occurred within the scope of Shukla’s employment. A federal district court jury returned a \$3,500,000 verdict in Currie’s favor. The court issued a judgment against Chevron for \$2,625,000, an amount that reflected a 25 percent reduction from \$3,500,000 because of the jury’s finding that Antoine’s own negligence accounted for 25 percent of the reason why she was killed. (Later in this chapter, you will learn about the comparative negligence principle applied by the court in reducing the amount of damages awarded.) Chevron unsuccessfully moved for judgment as a matter of law or, in the alternative, a new trial. Chevron then appealed to the U.S. Court of Appeals for the Eleventh Circuit.

Per Curiam

In this diversity case controlled by Georgia law, . . . Currie contended at trial that Chevron’s Shukla negligently activated the gas pump for Muhammad only after: (1) Shukla saw Muhammad pulling Antoine around the Chevron station’s property by her shirt and thought that something was wrong; (2) Shukla saw that Muhammad and Antoine did not have a vehicle; and (3) customer Pamela Robinson warned Shukla that there was a problem with the two women outside, asked Shukla to call the police, and showed Shukla where the two women were standing by gas pump number one. Currie claimed that, given this evidence, Shukla should have foreseen that Antoine would suffer some injury as a result of Shukla’s activating the gas pump for Muhammad. On appeal, Chevron argues that . . . Muhammad’s actions were not a reasonably foreseeable consequence of Shukla’s negligence; [that] Antoine failed to exercise ordinary care to avoid the consequences of Shukla’s negligence; [and that] Antoine’s negligence was equal to or greater than Shukla’s negligence.

A cause of action for negligence in Georgia must contain the following elements: (1) a legal duty to conform to a standard of conduct for the protection of others against unreasonable risks of harm; (2) a breach of this standard; (3) a legally attributable causal connection between the conduct and the resulting injury; and (4) some loss or damage resulting from the breach of the legal duty. In order to establish a breach of the

applicable standard of conduct, there must be evidence that the alleged negligent act (or omission) created a foreseeable, unreasonable risk of harm. “That is, it must appear that the alleged negligent condition was such as to put an ordinarily prudent person on notice that some injury might result therefrom.” [Case citations omitted.] As to foreseeability of injury, Georgia courts have stated that “in order for a party to be held liable for negligence, it is not necessary that he should have been able to anticipate the particular consequences which ensued. It is sufficient if, in ordinary prudence, he might have foreseen that some injury would result from his act or omission, and that consequences of a generally injurious nature might result.” [Case citations omitted.]

In Georgia, questions of negligence, proximate cause, and foreseeability are generally for the jury. [After reviewing the record in this case, we] conclude that reasonable minds could differ as to whether Shukla was aware at the moment she authorized gas pump number one that her action would create a foreseeable risk of injury to Antoine. There was evidence from which the jury could have inferred that Shukla was aware that Muhammad and Antoine were involved in a serious fight on the Chevron station’s property. In her statement to police on the day of the incident, Shukla said that she saw the two women walking on the station’s property, that Muhammad had “grabbed” and “pulled” Antoine by the front of her shirt, and that Shukla “thought something was wrong.” Shukla also testified at trial

that she saw the women fighting on the Chevron station's property. Robinson's testimony confirmed Shukla's observation that the fight was serious. Robinson testified that [Muhammad tightened her grip on Antoine] when Antoine try to pull away from her. Robinson [also testified] that Muhammad then pulled Antoine "down to the ground like an animal."

There also was evidence from which the jury could have found that Shukla was aware that Muhammad and Antoine were involved in a serious fight at the Chevron station *before* she activated gas pump number one for Muhammad. [Robinson's testimony so suggested. Moreover, Shukla's statement to the police and her testimony were subject to such an interpretation by the jury.] [In addition,] there was evidence from which the jury could have concluded that Shukla looked at Muhammad before authorizing gas pump number one. Muhammad told police on the day of the incident that ". . . she looked at us and just turned the pump on. . . ." Based on Muhammad's statement and Shukla's own testimony, the jury could have found that Shukla looked at gas pump number one before she authorized it, saw Muhammad (whom Shukla had seen fighting with Antoine on the station's property and had recognized did not have a car), and nevertheless authorized gas pump number one for Muhammad.

[Considering] the totality of this evidence . . . , the jury could have found that the beeping sound that Robinson heard inside the Chevron station was Muhammad seeking authorization of gas pump number one and that Shukla looked at Muhammad and authorized gas pump number one for her (thus stopping the beeping sound) *after* Shukla's conversation with Robinson. The jury also could have found that Shukla was aware at the time she authorized gas pump number one for Muhammad that: (1) Muhammad had been pulling Antoine around the Chevron station's property by her shirt as they were fighting; (2) the fight was sufficiently serious that Shukla herself thought something was wrong and that Robinson came into the station to warn Shukla that something was going on with the two women outside and to ask her to call the police; (3) Muhammad and Antoine were fighting by gas pump number one; and (4) Muhammad and Antoine did not have a car on the station's property. Thus, we conclude that there was, at the very least, a substantial conflict in the evidence such that reasonable and fair-minded jurors might reach different conclusions as to whether Shukla was aware before she authorized gas pump number one that her negligent action would create a foreseeable risk of injury to Antoine.

Chevron presented expert testimony from Rosemary Erickson, Ph.D., a forensic sociologist, that it was not reasonably foreseeable to Shukla that Muhammad would douse Antoine with gas and set her on fire. Dr. Erickson based her opinion on a review of the depositions, the police records, the

low crime rate in the area surrounding the Chevron station, the lack of previous violent crimes at this specific Chevron station, and the rarity of the particular crime that occurred here. In addition to Dr. Erickson's testimony, Shukla testified that she had never [witnessed] a crime or fire at the Chevron station before that day and never had to call the police. [The] former Chevron station manager testified that there had not been any criminal activity at the Chevron station in his eight to ten years working there before this incident.

However, in cross-examining Dr. Erickson, plaintiff's counsel asked, "You would agree with me . . . would you not, that if something is going on at a gas station and a clerk sees one person holding another at a gas pump and there's no car and no container, that it's foreseeable that the gas may be used inappropriately and harm can result. . . ." Dr. Erickson replied, "If all those factors were in evidence." Thus, even from Chevron's own witness, there was in effect testimony to support Currie's claim that Shukla should not have authorized the gas pump after Shukla saw Muhammad and Antoine fighting (or was told by Robinson they were fighting) and where Muhammad and Antoine had no car or gas container. [In addition, both the former station manager and Robinson[, who had worked at a gas station,] testified that they would not activate a gas pump if they saw people at the gas pump without a car or gas can.

In arguing that this incident was not foreseeable, Chevron cites Georgia premises liability cases providing that property owners have a duty to exercise ordinary care to protect invitees from foreseeable third-party criminal attacks where there are prior similar criminal acts occurring on the premises that put the property owner on notice of the dangerous condition. Chevron argues that the criminal attack by Muhammad on Antoine was not foreseeable because this particular Chevron station was in a low crime area and had not been the site of any criminal activity in previous years, much less violent crime.

First, while Currie raised a premises liability theory at trial, her primary theory of liability was that given the particularly serious events unfolding before Shukla and given Robinson's warning, Shukla then committed her own affirmative negligent act in activating gas pump number one for Muhammad, not that Chevron breached its duty to Antoine to keep its premises safe generally. Second, the lack of prior criminal activity at this Chevron station does not wholly foreclose the foreseeability issue. Even in cases grounded solely on a premises liability theory, Georgia courts have stated that "a showing of prior similar incidents on a proprietor's premises is not always required to establish that a danger was reasonably foreseeable. An absolute requirement of this nature would create the equivalent of a one free bite rule for premises liability, even if the proprietor otherwise knew that the danger existed." [Case citation omitted.]

This Court applied this same reasoning in a premises liability case to conclude that there was a jury question of whether hostilities throughout the evening of which bowling alley employees were, or should have been, aware were sufficient to make it reasonably foreseeable to them that a fight would erupt, even though there had been no similar prior altercations on the premises. [Case citation omitted.] Similarly, in this case, there was a sufficient conflict in the evidence for reasonable minds to differ as to whether the particular serious and exigent events unfolding right before Shukla at the Chevron station that morning, together along with Robinson’s warning, should have put her on notice that activating the gas pump for Muhammad would pose an unreasonable risk of harm to Antoine, even

though there was no history of prior similar incidents at this specific Chevron station.

Therefore, we cannot say that the district court erred in denying Chevron’s motion for judgment as a matter of law or a new trial.

[*Note:* In a later portion of the opinion not included here, the Eleventh Circuit concluded that the district judge had correctly instructed the jury on issues related to Antoine’s own failure to use reasonable care, that the jury’s assignment of a 25 percent degree of responsibility to Antoine was supported by the evidence, and that the court had therefore properly reduced the award of damages by 25 percent.]

Judgment in favor of Currie affirmed.

Special Duties In some situations, courts have fashioned particular negligence duties to supplement the general reasonable person standard. When performing their professional duties, for example, professionals such as doctors, lawyers, and accountants generally must exercise the knowledge, skill, and care ordinarily possessed and employed by members of the profession.¹ Also, common carriers and (sometimes) innkeepers are held to an extremely high duty of care approaching strict liability when they are sued for damaging or losing their customers’ property. Many courts say that they also must exercise great caution to protect their passengers and lodgers against personal injury—especially against the foreseeable wrongful acts of third persons. This is true even though the law has long refused to recognize any general duty to aid and protect others from third-party wrongdoing unless the defendant’s actions foreseeably increased the risk of such wrongdoing. Some recent decisions have imposed a duty on landlords to protect their tenants against the foreseeable criminal acts of others.

Duties to Persons on Property Another important set of special duties runs from possessors of real estate (land and buildings) to those who enter that property. Negligence cases that address these duties are often called *premises liability* cases. Traditionally, the duty owed by the possessor has depended on the classification into which the entering party fits. The three classifications are:

1. Invitees. Invitees are of two general types, the first of which is the “business visitor” who is invited to enter the property for a purpose connected with the possessor’s

business. Examples include customers, patrons, and delivery persons. The second type of invitees consists of “public invitees” who are invited to enter property that is held open to the public. Examples include persons using government or municipal facilities such as parks, swimming pools, and public offices; attendees of free public lectures and church services; and people responding to advertisements that something will be given away. The entry, however, must be for the purpose for which the property is held open. Accordingly, some—though not all—courts would hold that a person who enters a public library merely to meet a friend is not an invitee.

A possessor of property must exercise reasonable care for the safety of his invitees. In particular, he must take appropriate steps to protect an invitee against dangerous on-premises conditions that he knows about, or reasonably should discover, and that the invitee is unlikely to discover.

2. Licensees. A licensee enters the property for her own purposes, not for a purpose connected with the possessor’s business. She does, however, enter with the possessor’s consent. In some states, social guests are licensees, though they are invitees in other states. Other examples of licensees are door-to-door salespeople, solicitors of money for charity, and sometimes persons taking a shortcut across the property. As these examples suggest, consent to enter the property is often implied. The possessor usually is obligated only to warn licensees of dangerous on-premises conditions that they are unlikely to discover.

3. Trespassers. A trespasser enters the land without its possessor’s consent and without any other privilege. Traditionally, a possessor of land owed trespassers no duty

¹Chapter 46 discusses professional liability in greater detail.

Ethics in Action

Suppose that during regular work hours, an employee of XYZ Co. commits a sexual assault or other violent attack upon a member of the public. The employee, of course, is liable for the intentional tort of battery (about which you learned in Chapter 6), as well as a criminal offense. Although the doctrine of *respondeat superior* makes employers liable for their employees' torts when those torts are committed within the scope of employment, XYZ is quite unlikely to face *respondeat superior* liability for its employee's flagrantly wrongful act because a sexual assault or violent attack, even if committed during regular work hours, presumably would be outside the scope of employment.

However, as the principles explained in this chapter suggest, XYZ could be liable for its *own* tort if XYZ was negligent in hiring, supervising, or retaining the employee who committed the attack. A determination of whether XYZ was negligent would depend upon all of the relevant facts and circumstances.

Regardless of whether XYZ would or would not face legal liability, the scenario described above suggests related

ethical questions that may confront employers. Consider the following:

- Does an employer have an ethical obligation to take corrective or preventive action when the employer knows, or has reason to know, that the employee poses a danger to others?
- Does it matter whether the employer has irrefutable evidence that the employee poses a danger, or whether the employer has only a reasonable suspicion to that effect?
- If the employer has an ethical obligation to take corrective or preventive action, to whom does that obligation run and what should that obligation entail?
- Does the employer owe any ethical duty to the *employee* in such situations?

You may find it helpful to consider these questions through the frames of reference provided by the ethical theories discussed in Chapter 4 (e.g., utilitarianism, rights theories, and profit maximization). Then compare and contrast the results of the respective analyses.

to exercise reasonable care for their safety; instead, there was only a duty not to willfully and wantonly injure trespassers once their presence was known.

Recent years have seen some tendency to erode these traditional distinctions. Most notably, some courts no longer distinguish between licensees and invitees. These courts hold that the possessor owes a duty of reasonable care to persons regardless of whether they are licensees

or invitees. Some courts have created additional duties that possessors owe to trespassers. For example, a higher level of care is often required as to trespassers who are known to regularly enter the land, and as to children known to be likely to trespass.

In the *Delgado* case, which follows, the court discusses and applies the duty of reasonable care owed to invitees.

Delgado v. Trax Bar & Grill

113 P.3d 1159 (Cal. Sup. Ct. 2005)

On weekend nights, the employees on duty at Trax Bar & Grill (a California establishment) typically included two persons referred to here as "security guards," "guards," or "bouncers." One bouncer would be stationed inside the bar. The second would be stationed in the bar's parking lot.

At the trial in the case described below, Trax's manager testified that the guards were large, strong men who had been instructed to (1) patrol the parking lot to ensure that persons did not congregate or consume intoxicating beverages there; (2) check identifications in order to keep out underage patrons; and (3) call 911, rather than physically intervening, in any altercation involving patrons. In response to a question about whether the bar "had any responsibility for the safety of [its] customers in the parking lot," the manager testified, "To a certain point, yeah, to see that they got to their car."

The manager testified that the local police had recommended the no-physical-intervention policy, but he acknowledged that Trax's bouncers sometimes ignored the no-physical-intervention policy and personally interceded in fights between patrons, and that when the bouncers did so, they were not disciplined for a violation of procedure. A former guard at Trax testified as an expert witness that the practice of guards at local bars generally, and his own practice at the Trax bar, was to treat the safety of patrons as a "top priority" and to actively and physically intervene in altercations rather than simply to telephone 911. He also testified that prior to terminating his employment at Trax, he advised the manager that security was inadequate on busy nights.

The incident that gave rise to the case described below occurred on a Saturday night. Michael Delgado and his wife arrived at Trax between 10:00 PM and 10:30 PM. The 6 foot 1 inch, 230-pound Delgado had consumed two beers earlier in the evening. After entering the bar, and over the course of the following 60 to 90 minutes, he consumed one more beer. During this time, bar patron Jacob Joseph and his three or four companions stared at Delgado on numerous occasions, and Delgado stared back at the group. There was no verbal or physical interaction between Delgado and Joseph or his companions during this exchange of stares.

Prior to midnight, Delgado had become uncomfortable as a result of the continued staring, so he and his wife, Linette, considered leaving the bar. According to the trial testimony of Trax's interior guard, Jason Nichols, Linette approached him and expressed concern that "there was going to be a fight." Nichols himself then observed what appeared to be hostile stares between Delgado and Joseph and his companions. Concluding that a fight was imminent, Nichols determined that he would ask the Delgados to leave the bar because it would be easier to get them to depart than to get Jacob's group to do so. Nichols made that request and the Delgados exited the bar. Nichols did not escort the Delgados to their car, which was parked in Trax's lot approximately 40 feet from the door to the bar. Trax's second bouncer, who earlier had been posted outside the bar, no longer was present outside.

As the Delgados walked through the parking lot toward their car, a group of 12 to 20 men stood in the parking lot. This circumstance was contrary to the bar's policy of dispersing such gatherings. Joseph and his companions followed the Delgados into the parking lot and then accosted Michael Delgado, beating him severely. Some of the other persons who had congregated in the parking lot soon joined in on the attack on Delgado. During or immediately after the attack, a Trax employee telephoned 911 to seek police assistance. The police arrested Joseph, who later was convicted of felony assault.

Delgado suffered a fractured skull and a subdural hematoma, was hospitalized for 16 days, and experienced adverse personality changes as well as chronic headaches. He sued Joseph and Trax, alleging that Joseph committed battery and that Trax was negligent. After Joseph filed for bankruptcy, Delgado ceased pursuing the claim against him. In proceeding with his negligence claim against Trax, Delgado relied on premises liability principles. A California state court jury returned a verdict in favor of Delgado for approximately \$81,000 in damages. Trax appealed to the California Court of Appeal, which held that because there had been no evidence of prior parking lot incidents in which a Trax patron was attacked by a group of assailants (as opposed to fights of a more minor nature), foreseeability was lacking. Concluding that Trax therefore owed Delgado no obligation to furnish an outside security guard or to intervene to protect him, the Court of Appeal ruled that the jury's verdict for the plaintiff could not stand. Delgado appealed to the Supreme Court of California.

George, Chief Justice

Although "[a]s a general principle, a defendant owes a duty of care to all persons who are foreseeably endangered by his conduct," . . . it also is well established that, as a general matter, there is no duty to act to protect others from the conduct of third parties. [Case citation omitted.] But . . . courts have recognized exceptions to the general no-duty-to-protect rule, one of which—the "special relationship" doctrine—is dispositive in this case.

A defendant may owe an affirmative duty to protect another from the conduct of third parties if he or she has a "special relationship" with the other person. Courts have found such a special relationship in cases involving . . . business proprietors such as shopping centers, restaurants, and bars, and their tenants, patrons, or invitees. Accordingly, in *Ann M. v. Pacific Plaza Shopping Center*, 863 P.2d 207 (Cal. Sup. Ct. 1993), we recognized as "well established" the proposition that a proprietor's "general duty of maintenance, which is owed to tenants and patrons, . . . include[s] the duty to take reasonable steps to secure common areas against foreseeable criminal acts of third

parties that are likely to occur in the absence of such precautionary measures."

[The "reasonable steps" contemplated by the proposition just stated may or may not include an obligation to furnish security guards. As noted in *Ann M.*,] the scope of the duty is determined . . . by balancing the foreseeability of the harm against the burden of the duty to be imposed." [We also] stated in *Ann M.* that although

there may be circumstances where the hiring of security guards will be required to satisfy a landowner's duty of care, such action will rarely, if ever, be found to be a minimal burden. The monetary cost of security guards is not insignificant. Moreover, the obligation to provide patrols adequate to deter criminal conduct is not well defined. . . . Finally, the social costs of imposing a duty on landowners to hire private police forces are also not insignificant. For these reasons, we conclude that a high degree of foreseeability is required in order to find that the scope of a landlord's duty of care includes the hiring of security guards. We further conclude that the requisite degree of foreseeability rarely, if ever, can be proven in the absence of prior similar incidents of violent

crime on the landowner's premises. To hold otherwise would be to impose an unfair burden upon landlords and, in effect, would force landlords to become the insurers of public safety, contrary to well-established policy in this state.

[However, we followed the above statement in *Ann M.* with a footnote observing that] evidence other than prior similar crimes occurring on the proprietor's premises might [sometimes] be adequate to establish foreseeability. We stated: "It is possible that some other circumstances such as immediate proximity to a substantially similar business establishment that has experienced violent crime on its premises could provide the requisite degree of foreseeability. Because . . . no such evidence [was presented], we need not further consider this possibility."

Even when [a proprietor] has no duty under *Ann M.* to hire a security guard or to undertake other similarly burdensome preventative measures, [the proprietor] still owes a duty of due care to a patron or invitee by virtue of the special relationship. [T]here are circumstances, apart from the failure to provide a security guard or undertake other similarly burdensome preventative measures, that may give rise to liability based upon the proprietor's special relationship. For example, . . . a restaurant or bar proprietor also has a duty to warn patrons of known dangers and, in circumstances in which a warning alone is insufficient, has a duty to take other reasonable and appropriate measures to protect patrons or invitees from imminent or ongoing criminal conduct. Such measures may include telephoning the police or 911 for assistance or protecting patrons or invitees from an imminent and known peril lurking in a parking lot by providing an escort . . . to a car in that parking lot. [Case citations omitted.]

Moreover, . . . California decisions long have recognized, under the special relationship doctrine, that a proprietor who serves intoxicating drinks to customers for consumption on the premises must "exercis[e] reasonable care to protect his patrons from injury at the hands of fellow guests." *Saatzer v. Smith*, 122 Cal. App. 3d 512 (1981). [As noted in *Saatzer*, such] a duty arises

when one or more of the following circumstances exists: (1) [the] tavern keeper allowed a person on the premises who has a known propensity for fighting; (2) the tavern keeper allowed a person to remain on the premises whose conduct had become obstreperous and aggressive to such a degree the tavern keeper knew or ought to have known he endangered others; (3) the tavern keeper had been warned of danger from an obstreperous patron and failed to take suitable measures for the protection of others; (4) the tavern keeper failed to stop a fight as soon as possible after it started; (5) the tavern keeper failed to provide a staff adequate to police the premises; and (6) the tavern keeper tolerated disorderly conditions.

[In the case at hand,] Trax asserts that a showing of heightened foreseeability as defined by *Ann M.* and its progeny *always* is required when a plaintiff seeks to impose special-relationship-based liability upon a proprietor [in regard to] the criminal conduct of a third party. [This assertion is] inconsistent with our decisions in *Ann M.* and its progeny.

[W]e observe that [when] the burden of preventing future harm caused by third party criminal conduct is great or onerous (as when a plaintiff . . . asserts the defendant had a legal duty to provide guards or undertake equally onerous measures, or as when a plaintiff . . . asserts the defendant had a legal duty to provide bright lighting, activate and monitor security cameras, provide periodic "walk-throughs" by existing personnel, or provide stronger fencing), heightened foreseeability . . . will be required. [When heightened foreseeability is required, it may be] shown by prior similar criminal incidents or other indications of a reasonably foreseeable risk of violent criminal assaults in [the relevant] location. By contrast, [when] harm can be prevented by simple means or by imposing merely minimal burdens, only "regular" reasonable foreseeability, as opposed to heightened foreseeability, is required.

[I]t is undisputed that Trax, a bar proprietor, stood in a special relationship with Delgado, its patron and invitee. [Hence, Trax] owed a duty to undertake "reasonable steps to secure common areas against foreseeable criminal acts of third parties that [were] likely to occur in the absence of such precautionary measures" [quoting *Ann M.*] and to take such appropriate action as is reasonable under the circumstances to protect patrons. To the extent Delgado's special-relationship-based claim rests upon an assertion that the defendant was legally required to provide a guard or guards or to undertake any similarly burdensome measures, we initially must consider whether the defendant was obligated to do so under *Ann M.* and [later decisions]. In this respect, of course, Delgado was required to demonstrate heightened foreseeability in the form of prior similar criminal incidents *or* other indications of a reasonably foreseeable risk of violent criminal assaults in the bar or its parking lot. [W]e reject the suggestion of the Court of Appeal that in order to establish heightened foreseeability under *Ann M.*, the plaintiff was required to produce evidence not only of prior similar criminal assaults, but of "a coordinated gang attack on an individual patron." Heightened foreseeability is satisfied by a showing of prior *similar* criminal incidents (or other indications of a reasonably foreseeable risk of violent criminal assaults in that location) and does not require a showing of prior *nearly identical* criminal incidents.

Although the record refers to a few prior altercations between patrons, we agree with the conclusion of the Court of Appeal that the plaintiff produced insufficient evidence of heightened foreseeability in the form of prior similar incidents

or other indications of a reasonably foreseeable risk of a violent criminal assault . . . that would have imposed upon Trax an obligation to provide any guard, or additional guards, to protect against third party assaults. But the absence of heightened foreseeability in this case merely signifies that Trax owed no special-relationship-based duty to provide guards or undertake other similarly burdensome preventative measures; it does not signify that the defendant owed no *other* special-relationship-based duty to the plaintiff, such as a duty to respond to events unfolding in its presence by undertaking reasonable, relatively simple, and minimally burdensome measures. Indeed, the record clearly establishes the existence of such a minimally burdensome duty here.

[T]he record contains evidence that the defendant's employee, Nichols, was aware of facts that led him to conclude . . . that a fight was likely to occur between Joseph, his three or four companions, and the plaintiff, absent some intervention on Nichols's part. The record also establishes that Nichols formed the opinion that in order to avoid an altercation, it was necessary to separate Delgado from Joseph and his group by removing Delgado from the bar while simultaneously leaving Joseph and his group inside.

[U]nder the circumstances, it was foreseeable that an assault would occur absent separation of Joseph and his group from Delgado. [The other relevant facts] similarly support a determination that Trax had a special-relationship-based duty to respond to the unfolding events by taking reasonable, relatively simple, and minimally burdensome steps . . . to address the imminent danger that Nichols perceived, and . . . to accomplish the separation that he had determined was necessary.

Such minimally burdensome measures may have included, for example, Nichols attempting to maintain separation between the plaintiff and Joseph's group . . . by turning his attention to

Joseph and his companions in order to dissuade them from following Delgado (who, at Nichols's direction, was departing from the bar). And, in the face of the continuing threat of a five-on-one altercation if Nichols were unable to dissuade Joseph and his companions from following Delgado outside, [Nichols or other Trax personnel] also might have confirmed that the outside guard was at his post in the parking lot and was available, as necessary, to help maintain the desired separation between the plaintiff and Joseph and his companions.

We stress that . . . Trax's duty was to *attempt* to dissuade Joseph and his group from following the plaintiff. [W]e do not suggest that the defendant had a duty to guarantee that separation, or . . . to prevent any resulting attack and injury to the plaintiff. The question whether the ultimate group attack upon Delgado in the parking lot would not have occurred had Nichols successfully dissuaded Joseph and his companions from following Delgado implicates the sufficiency of the evidence to support the jury's implied findings of breach of duty and causation—issues that are not relevant to, and do not influence, our analysis of whether the defendant owed a duty of care under the circumstances.

We conclude that the Court of Appeal erred in [holding that] the defendant owed no duty to the plaintiff. Instead, . . . because Trax had actual notice of an impending assault involving Joseph and Delgado, its special-relationship-based duty included an obligation to take reasonable, relatively simple, and minimally burdensome steps to attempt to avert that danger. Whether there was sufficient evidence to support the jury's determinations of breach of duty and causation are matters to be addressed by the Court of Appeal on remand.

Decision of Court of Appeal reversed; case remanded for further proceedings.

Negligence Per Se Courts sometimes use statutes, ordinances, and administrative regulations to determine how a reasonable person would behave. Under the doctrine of **negligence per se**, the defendant's violation of such laws may create a breach of duty and may allow the plaintiff to win the case if the plaintiff (1) was within the

class of persons intended to be protected by the statute or other law, and (2) suffered harm of a sort that the statute or other law was intended to protect against. In the *Hargis* case, which follows, the court approves of the plaintiff's attempt to use the negligence per se principle against a defendant who violated a workplace safety regulation.

Hargis v. Baize

168 S.W.3d 36 (Ky. Sup. Ct. 2005)

Allen Baize owned a Kentucky lumberyard and sawmill known as Greenville Log and Lumber Co. Baize hired Darrell Hargis on an independent contractor basis to haul logs to and from Greenville and various other locations. For these services, Baize paid Hargis by the board-feet hauled. Hargis owned his own truck but hauled the logs on a semitrailer owned by Baize. Baize supposedly leased the trailer to Hargis and deducted the rentals from Hargis's weekly paycheck. During the last six months of his life, Hargis worked exclusively for Baize.

In November 1998, Baize dispatched Hargis to pick up a load of logs that Baize had purchased from Whitney & Whitney Lumber Co. Whitney's employees loaded the logs. Upon returning to Greenville, Hargis began releasing the binders on the logs in preparation for unloading by one of Baize's forklift drivers. Hargis did so in accordance with Baize's policy, which required all truck drivers to release the binders on their loads and then move at least two truck lengths in front of the truck in order to be in full view of the forklift operator while the logs were being unloaded. A Baize employee was standing by in his forklift waiting for Hargis to release the binders so that he could unload the logs. When Hargis released the binders, however, a large log rolled off the trailer, struck Hargis, and killed him.

Hargis's widow sued Baize in a Kentucky court. The plaintiff alleged that the fatal accident resulted from Baize's failure to comply with a certain Kentucky administrative regulation, which had been promulgated by the Kentucky Occupational Safety and Health Standards Board (KOSHSB) under authority granted by a state statute, the Kentucky Occupational Safety and Health Act [hereinafter "Kentucky OSHA"]. The KOSHSB regulation at issue in the case incorporated by reference the content of a federal administrative regulation dealing with the unloading of logs. That federal regulation, promulgated pursuant to the federal Occupational Safety and Health Act, provided in pertinent part that "[b]inders on logs shall not be released prior to securing with unloading ties or other unloading device."

Under the factual circumstances giving rise to the plaintiff's case, "securing" the logs with an "unloading device" meant using the forks of the forklift to stabilize the logs and keep them from rolling off the truck when the binders were released. Baize admitted that it was not his company's policy to comply with the above-quoted regulation. Baize's former safety officer testified in a deposition that an insurance representative had visited the Greenville site two weeks before Hargis was killed and had recommended implementation of the log-securing procedures required by the KOSHSB regulation. According to the safety officer, Baize's operations manager rejected the recommendation even though the operations manager himself had been injured recently in a similar accident. A state investigative report prepared after Hargis's death also recommended implementation of the securing procedure required by the KOSHSB regulation. When confronted with this recommendation, Baize's sales manager responded that the recommendation was "[n]ot implemented."

Following completion of discovery, the plaintiff moved for partial summary judgment on the issue of Baize's negligence. The plaintiff argued that the violation of the KOSHSB regulation was negligence per se and that the jury should be allowed to consider only issues of damages and contributory fault, if any, on the part of Hargis. Baize also moved for summary judgment, arguing that a violation of the KOSHSB regulation did not create a private right of action in favor of the plaintiff and that in any event, Baize's only duty to an independent contractor such as Hargis was to warn him of any hidden dangers on the premises. Agreeing with Baize, the trial court overruled the plaintiff's motion for partial summary judgment and granted summary judgment in favor of Baize. After the Kentucky Court of Appeals affirmed, the plaintiff appealed to the Supreme Court of Kentucky.

Cooper, Justice

[According to a Kentucky statute of general applicability,] "[a] person injured by the violation of any statute may recover from the offender such damages as he sustained by reason of the violation, although a penalty or forfeiture is imposed for such violation." [The Kentucky OSHA, under which the KOSHSB regulation at issue in this case was promulgated,] specifically provides that "each employer . . . shall comply with occupational safety and health standards promulgated [by the KOSHSB] under this chapter." Since those standards include the ones set forth in the KOSHSB regulation on unloading of logs,] the violation of [that] regulation would constitute a violation of the Kentucky OSHA, thus triggering the right of action created by [the above-quoted statute of general applicability].

Baize [relies] on *Carman v. Dunaway Timber Co., Inc.*, 949 S.W.2d 569 (Ky. Sup. Ct. 1997), [but that reliance] is misplaced. While the accident in *Carman* occurred under facts almost

identical to those in this case, the [injured] plaintiff in *Carman* was not within the class of persons . . . intended to be protected [by the Kentucky OSHA and the KOSHSB regulation on log unloading]. *Carman* was a private businessman . . . who was on Dunaway's premises for the purpose of selling his own logs to Dunaway. [Because] *Carman* was "neither an independent contractor nor an employee" [of Dunaway, he was not among those persons that Kentucky's workplace safety statute and regulations were meant to protect. Therefore, *Carman* could not rely on the negligence per se principle even though the log-unloading requirement of the KOSHSB regulation had been violated].

[The plaintiff in the case at hand erroneously asserts that in *Carman*, we adopted the rule stated in] *Teal v. E.I. DuPont de Nemours & Co.*, 728 F.2d 799 (6th Cir. 1984), which extended [the federal] Occupational Safety and Health Act's coverage [beyond an employer's own employees] to employees of independent contractors who work at another employer's workplace. [W]e did not . . . adopt *Teal* [in *Carman*]; there was no

need to do so because the holding in *Teal* did not apply to the facts in *Carman*. The holding in *Teal*, however, does apply to the facts of this case.

If this were a workers' compensation claim, it would be a close question whether Hargis was an employee or an independent contractor. In addition to the facts that Baize dispatched Hargis to pick up Baize's logs and transport them to Baize's place of business on a semi-trailer owned by Baize are the facts that Hargis had worked exclusively for Baize for six months immediately preceding the accident and [that Hargis,] though paid by the board-feet hauled, was paid on a weekly basis [instead of after] each individual trip. [These facts might seem to point toward a conclusion that Hargis was Baize's employee.] Nevertheless, the parties agree that Hargis was an independent contractor (for otherwise, the plaintiff's complaint would have been summarily dismissed as barred by . . . the "exclusive remedy" provision of [Kentucky's] Workers' Compensation Act).

Thus, we now reach the issue that we did not reach in *Carman*, i.e., whether the protections of the Kentucky OSHA [and the KOSHSB regulations promulgated thereunder] extend to workers on the job site other than direct employees of the owner or other person in control of the job site. We conclude, as did the Sixth Circuit in *Teal* [in regard to the similar federal statute], that the protections [of the Kentucky statute and regulations] extend to any employee, including an employee of an independent contractor, who is performing work at another employer's workplace. We adopt *Teal*'s analysis of the relevant [federal] provisions as our construction of the same provisions replicated in the Kentucky OSHA [and related regulations].

[The *Teal* court noted] that in the federal Occupational Safety and Health Act (OSHA), Congress imposed on employers a general duty "to protect its employees from hazards that are likely to cause death or serious bodily injury," [and] a specific duty . . . "to comply with the . . . regulations [promulgated under the federal statute]." [According to the *Teal* court's reading of the general duty clause in the statute,] "every employer owes [the general] duty regardless of whether it controls the workplace, whether it is responsible for the hazard, or whether it has the best opportunity to abate the hazard. In contrast, [in] the specific duty provision[, the] class of employers who owe a duty to comply with the OSHA regulations is defined with reference to control of the workplace and opportunity to comply with the OSHA regulations." [The content of OSHA's specific duty provision and the "broad remedial nature" of OSHA caused the court to conclude that]

Congress enacted [OSHA] for the special benefit of all employees, including the employees of an independent contractor, who perform work at another employer's workplace. . . . Consistent with the broad remedial nature of [OSHA], we interpret the scope of intended beneficiaries . . . in a broad fashion. In our view, once an employer

is deemed responsible for complying with OSHA regulations, it is obligated to protect every employee who works at its workplace[, regardless of whether that person is the employer's own employee or the employee of an independent contractor].

[Because the Kentucky OSHA is so similar in content and purpose to the federal OSHA, and because the KOSHSB regulations are so similar to regulations promulgated under OSHA, the analysis employed in *Teal* applies to this case as well. Therefore, the KOSHSB regulation on log unloading applies to all employees working at an employer's workplace, regardless of whether those persons are employees of that employer or employees of an independent contractor.]

Baize asserts that even if [the *Teal* rule] would apply to Hargis if he [had been] an *employee* of an independent contractor, it does not apply to him because Hargis was, in fact, *the* independent contractor. As illustrated by the analysis in *Teal*, to draw such a distinction would be ludicrous. Except for providing his own truck, Hargis was performing the same work duties and was exposed to the same work hazards as Baize's own truck-driver employees. [I]f Hargis had incorporated himself and paid himself a salary, as do many independent truckers, he would have been an "employee of an independent contractor." He is no less entitled to the Kentucky OSHA's protections because, technically, he was self-employed.

[Therefore, the negligence per se principle applies and enables the plaintiff to satisfy the first two elements of negligence, duty and breach of duty. The applicability of negligence per se] does not necessarily create liability[, however.]. [T]he violation [of the statute and administrative regulation] must have been a substantial factor in causing the result. Baize claims the accident occurred because of Hargis's own negligence in permitting his truck to be overloaded so as to increase the amount of board-feet hauled and, thus, his remuneration for the trip; and that such was the only substantial factor in causing his injuries. But even if Hargis's truck were overloaded, a jury could conclude that Baize's compliance with the applicable KOSHA regulations would have prevented Hargis's death and, conversely, that his failure, nay refusal, to comply with those regulations was a substantial factor in causing that death. "In many negligence per se cases, the statute or ordinance violated was intended to protect individuals from their own carelessness in certain dangerous situations." [Citation of authority omitted.] The issue of comparative fault in this case is one to be decided by a properly instructed jury.

Decision of Court of Appeals reversed; case remanded to trial court for entry of partial summary judgment in favor of plaintiff on issue of Baize's liability and for trial on remaining issues.

Causation of Injury Proof that the defendant breached a duty does not guarantee that the plaintiff will win a negligence case. The plaintiff must also prove that the defendant's breach caused her to experience injury. We shall look briefly at the injury component of this *causation of injury* requirement before examining the necessary causation link in greater depth.

Types of Injury and Damages *Personal injury*—also called “physical” or “bodily” injury—is harm to the plaintiff's body. It is the type of injury present in many negligence cases. Plaintiffs who experienced personal injury and have proven all elements of a negligence claim are entitled to recover compensatory damages. These damages may include not only amounts for losses such as medical expenses or lost wages but also sums for pain and suffering. Although the nature of the harm may make it difficult to assign a dollar value to pain and suffering, we ask judges and juries to determine the dollar value anyway. The rationale is that the plaintiff's pain and suffering is a distinct harm resulting from the defendant's failure to use reasonable care, and that merely totaling up the amounts of the plaintiff's medical bills and lost wages would not compensate the plaintiff for the full effects of the defendant's wrongful behavior.

Property damage—harm to the plaintiff's real estate or a personal property item such as a car—is another recognized type of injury for which compensatory damages are recoverable in negligence litigation. In other negligence cases, many of which arise in business or professional contexts, no personal injury or property damage is

involved. Instead, the plaintiff's injury may take the form of *economic loss* such as out-of-pocket expenses, lost profits, or similar financial harms that resulted from the defendant's breach of duty but have no connection to personal injury or property damages. Compensatory damages are available, of course, for losses of this nature.

Whatever the type of injury experienced by the plaintiff, the usual rule is that only compensatory damages are recoverable in a negligence case. As noted in Chapter 6, punitive damages tend to be reserved for cases involving flagrant wrongdoing. Negligence amounts to wrongdoing, but not of the more reprehensible sort typically necessary to trigger an assessment of punitive damages.

What if the plaintiff's claimed injury is *emotional* in nature? As you learned in Chapter 6, the law has long been reluctant to afford recovery for purely emotional harms. Until fairly recently, most courts would not allow a plaintiff to recover for emotional injuries resulting from a defendant's negligence without some impact on or contact with the plaintiff's person. Many courts have now abandoned this “impact rule” and allow recovery for foreseeable emotional injuries standing alone. Many such courts, however, still require proof that physical injury or symptoms resulted from the plaintiff's emotional distress. Other courts have dispensed with the injury requirement where the plaintiff has suffered serious emotional distress as a foreseeable consequence of the defendant's negligent conduct.

Atlantic Coast Airlines v. Cook, which follows, addresses issues that arise in negligent infliction of emotional distress litigation.

Atlantic Coast Airlines v. Cook

857 N.E.2d 989 (Ind. Sup. Ct. 2006)

On February 8, 2002—five months after the September 11, 2001, hijackings of airplanes and less than two months after a passenger on a Paris to Miami flight attempted to detonate explosives hidden in his shoe—Bryan and Jennifer Cook took a flight from Indianapolis to New York City. Delta Airlines handled the ticketing and Atlantic Coast Airlines operated the flight. While passengers waited to board, a man later identified as French national Frederic Girard ran toward the gate and abruptly stopped. Mr. Cook observed that the unaccompanied Girard had two tickets in his possession and that airline security had detained him at the boarding gate before allowing him to board. Mr. Cook further noticed that Girard's face was red and that his eyes were bloodshot and glassy.

In boarding the 32-passenger capacity plane, Girard ran up the steps and jumped inside. Rather than proceeding to his assigned seat, he attempted to sit in a seat nearest the cockpit. However, the flight attendant instructed him to sit in the back row. After taking a seat there, Girard repeatedly pressed the attendant call button and light switch above his head. Prior to takeoff, Mr. Cook approached the flight attendant and expressed concern that Girard was a possible security threat. The attendant acknowledged as much and explained that he had directed Girard to sit in the rear of the plane so he could keep an eye on him.

During takeoff, Girard disregarded instructions to remain seated. He lit a cigarette, disregarding directives from the flight attendant that smoking onboard was prohibited. Despite this admonition, Girard was permitted to retain his lighter. Mr. Cook approached three male passengers and asked for their assistance in the event that Girard's behavior grew dangerous. Girard moved about the plane, sat in various empty seats, and finally walked up the aisle toward the cockpit. Mr. Cook

blocked his path and instructed him to sit. Without any physical contact with Mr. Cook, Girard returned to his seat and lit another cigarette. The flight attendant again told him to extinguish the cigarette, and in response Girard stood and shouted, "Get back! Get back!" Mr. Cook and other passengers approached Girard and ordered him to sit down. Instead, Girard stomped his feet and shouted, mostly in French. The Cooks were able to discern the words "World Trade Center," "Americans," and "New York City." Eventually, a Delta employee convinced Girard to sit after speaking to him in French. The employee spent the remainder of the flight sitting across from Girard in the rear of the plane. The pilot diverted the flight to Cleveland, where police arrested Girard. The flight then continued to New York City.

Recalling the events of September 11th and reports of the shoe-bomber incident, the Cooks described their ordeal as one in which they "have never been so scared in their entire lives" (quoting a brief they filed in the litigation about to be described). They filed a small claims court action in Marion County, Indiana, naming Atlantic Coast as a defendant. The Cooks sought damages for negligent infliction of emotional distress. After the small claims court entered judgment against the Cooks, they appealed to the Marion County Superior Court, which denied Atlantic Coast's motion for summary judgment on the negligent infliction of emotional distress claim. Atlantic Coast appealed to the Indiana Court of Appeals. In upholding the Superior Court's denial of the summary judgment motion, the Court of Appeals rejected Atlantic Coast's argument that the Cooks' negligent infliction of emotional distress claim was precluded by Indiana's "modified impact" rule. Atlantic Coast appealed to the Supreme Court of Indiana.

Rucker, Justice

Claims for the negligent infliction of mental or emotional distress have long been the subject of scholarly debate. Creating rules, formulating tests, and applying them to address such claims have proven a challenge for most courts. The majority of jurisdictions employ some variation or combination of the following common law limiting tests for evaluating these claims: the "physical injury" rule, under which . . . the plaintiff's emotional distress must be accompanied by a physical injury or symptom; the "zone of danger" rule, under which recovery is limited to those plaintiffs who themselves were not physically injured but were placed in immediate risk of harm by a defendant's negligent conduct which injured another; and the "bystander" test, . . . which allows recovery to certain plaintiffs [who] witness the injury or death of a third party (typically a close relative of the bystander) that is caused by the defendant's negligence. [Case citations omitted.] The underlying policy reason binding together these judicially created approaches is that absent certain limitations, allowing recovery for emotional distress will open the floodgates to spurious claims.

Before 1991, Indiana followed the rule that damages for emotional distress were recoverable only when accompanied by and resulting from a physical injury. The underlying rationale for this rule was that "absent physical injury, mental anguish is speculative, subject to exaggeration, likely to lead to fictitious claims, and often so unforeseeable that there is no rational basis for awarding damages." [Case citation omitted.] But this court modified the rule in *Shuamber v. Henderson*, 579 N.E.2d 452, 456 (Ind. 1991). We held instead:

When . . . a plaintiff sustains a direct impact by the negligence of another and, by virtue of that direct involvement sustains an emotional trauma which is serious in nature and

of a kind and extent normally expected to occur in a reasonable person, . . . such a plaintiff is entitled to maintain an action to recover for that emotional trauma without regard to whether the emotional trauma arises out of or accompanies any physical injury to the plaintiff.

We further expounded upon the contours of what is now commonly referred to as the "modified impact rule" in two [1999] cases. In *Conder v. Wood*, 716 N.E.2d 432, 435 (Ind. 1999), we held [that]

"direct impact" is properly understood as the requisite measure of "direct involvement" in the incident giving rise to the emotional trauma. Viewed in this context, we find that it matters little how the physical impact occurs, so long as that impact arises from the plaintiff's direct involvement in the tortfeasor's negligent conduct.

[In *Conder*, we concluded] that a pedestrian suffered a direct impact by pounding upon the panels of a truck that was running over her co-worker. In *Ross v. Cheema*, 716 N.E.2d 435, 437 (Ind. 1999), we held [that]

[i]n causing the requisite physical injuries, the direct impact is properly understood as being physical in nature. Though removing the physical injury element, *Shuamber* in no way altered the impact element of the rule. For purposes of the modified rule, the direct impact sustained by the plaintiff must necessarily be a physical one.

[We held in *Ross* that the plaintiff did not sustain] the direct physical impact necessary to recover damages for negligent infliction of emotional distress [when she proved only that she heard] a loud pounding at her door.

As *Shuamber*, *Conder*, and *Ross* make clear, the modified impact rule maintains the requirement of a direct physical

impact. The impact, however, does not need to cause physical injury to the plaintiff. Additionally, the emotional trauma suffered by the plaintiff does not need to result from a physical injury caused by the impact. But how do we assess whether the degree of impact is sufficient to satisfy the requirement of the rule? We have answered this question as follows:

[W]hen the courts have been satisfied that the facts of a particular case are such that the alleged mental anguish was not likely speculative, exaggerated, fictitious, or unforeseeable, then the claimant has been allowed to proceed with an emotional distress claim for damages even though the physical impact was slight, or the evidence of physical impact seemed to have been rather tenuous.

Bader v. Johnson, 732 N.E.2d 1212, 1221 (Ind. 2000) (finding that mother's continued pregnancy and the physical transformation that her body underwent satisfied the direct impact requirement) (citing *Alexander v. Scheid*, 726 N.E.2d 272, 283–84 (Ind. 2000) (holding that patient suffering from the destruction of healthy lung tissue due to physician's failure to diagnose cancer was sufficient for negligent infliction of emotional distress); *Holloway v. Bob Evans Farms, Inc.*, 695 N.E.2d 991, 996 (Ind. Ct. App. 1998) (concluding that restaurant patron's ingestion of a portion of vegetables cooked with a worm was a direct physical impact under the modified impact rule); *Dollar Inn, Inc., v. Slone*, 695 N.E.2d 185, 189 (Ind. Ct. App. 1998) (finding that hotel guest stabbing herself in the thumb with a hypodermic needle concealed in a roll of toilet paper was sufficient for claim of emotional distress associated with guest's fear of contracting AIDS).

We acknowledge there have been calls to abandon the impact rule altogether. Among other things there are concerns that Indiana's impact rule, even as modified, may prohibit some litigants from recovering damages for bona fide emotional injury even though there has been no physical impact. These are respectable positions. It is our view[, however,] that the requirements under Indiana's rule are modest and that a less restrictive rule would raise the potential for a flood of trivial suits, pose the possibility of fraudulent claims that are difficult for judges and juries to detect, and result in unlimited and unpredictable liability. We therefore reaffirm that Indiana's impact rule continues to require a plaintiff to demonstrate a direct physical impact resulting from the negligence of another.

This Court [, however,] has carved out an exception to the physical impact requirement. [W]e recognized that there may be circumstances under which a "plaintiff does not sustain a direct impact" but is nonetheless "sufficiently directly involved in the incident giving rise to the emotional trauma that we are able to distinguish legitimate claims from the mere spurious." *Groves v. Taylor*, 729 N.E.2d 569, 572 (Ind. 2000). We thus

adopted what is now commonly referred to as the bystander rule. [As noted in *Groves*,]

where the direct impact test is not met, a bystander may nevertheless establish "direct involvement" by proving that the plaintiff actually witnessed or came on the scene soon after the death or severe injury of a loved one with a relationship to the plaintiff analogous to a spouse, parent, child, grandparent, grandchild, or sibling caused by the defendant's negligent or otherwise tortious conduct.

In sum, in order to recover damages for the negligent infliction [of] emotional distress, a plaintiff must satisfy either the modified impact rule or the bystander rule.

Turning to the case before us, the Cooks do not contend that the bystander rule applies to them. Rather, their claim rises or falls on whether they suffered a direct physical impact from the alleged negligence of Atlantic Coast. According to the Cooks, breathing the smoke from Girard's lit cigarette and experiencing the vibrations from Girard's stomping feet caused an actual physical impact. [In addition, the Cooks asserted in their brief that] "constructive impact occurred by virtue of the physical effects on the [Cooks'] vital body functions in increased breathing, sweating, pulse, heart rate, adrenaline, and acuteness of the senses." [N]either this Court nor the Court of Appeals has ever addressed or adopted a theory of "constructive impact" as part of Indiana's impact rule, and we decline to do so today.

In any event, citing this Court's opinion in *Alexander*, the Court of Appeals characterized what the Cooks contend amounts to constructive impact as "physical changes" that are "good enough" to satisfy the rule. In *Alexander*, the plaintiff sued her physician for failure to diagnose her lung cancer. Among other things she sought damages for emotional distress. Her healthcare providers argued that the plaintiff failed to satisfy the impact rule. We disagreed[, observing that] "allegedly as a result of the defendants' negligence, [the plaintiff] suffered the destruction of healthy lung tissue by a cancerous tumor. . . . This is good enough."

We decline to equate a physical change resulting from the destruction of healthy lung tissue with what can best be described[, in the Cooks' case,] as the human body's natural responses to fear and anxiety. Indeed, "increased breathing, sweating, pulse, heart rate, adrenaline, and acuteness of the senses" are more descriptive of stress-like symptoms experienced by many passengers during a normal airplane flight that is undergoing turbulence. They simply are not physical changes as anticipated by *Alexander*. Nor are they physical transformations [of the sort present in] *Bader* ([holding that the] plaintiff's "continued pregnancy and the physical transformation her body underwent as a result satisfy the direct impact requirement of our modified impact rule").

This leaves for our consideration whether smelling cigarette smoke and feeling floor vibrations satisfy the direct physical impact requirement of the rule. [A]t the very least, this stretches the outer limits of the impact requirement. But even assuming that in some theoretical sense these experiences may be characterized as physical impact, the impact was certainly very “slight” and “the evidence of physical impact seem[s] to have been rather tenuous” (quoting *Bader*). We thus explore whether the Cooks’ alleged mental anguish is “not likely speculative, exaggerated, fictitious, or unforeseeable” (quoting *Bader*).

Mr. Cook acknowledges that neither he nor his spouse has sought medical or mental health treatment for emotional distress. In his deposition, Mr. Cook described his emotional state as being “shaken up . . . anxious, just upset” and [stated] that he remained so “until [he and his wife] got to New York and got on the ground.” Mr. Cook also testified that he was “distracted” and “probably didn’t sleep well for at least a week and a half.” He further asserted “whenever I get on a flight, I’m concerned that something could happen.”

In her deposition, Mrs. Cook, who was seven months pregnant at the time of the incident, [stated] that after arriving in New York, she “was just having lower abdominal pains. Could have been brought on by stress.” Further, she reported that she started to feel better “[o]nce we got home and I got back into my normal routine.” Mrs. Cook also testified that she and her husband have traveled by air probably four times since this incident. On those flights, Mrs. Cook [is] “always nervous.” When asked about the harm she incurred from the flight of February 8, 2002, Mrs. Cook said, “I feared for my life. I thought I was going to die.” But she stopped having those fears “[w]hen we landed.” According to Mrs. Cook, “[i]t bothered me until we landed. It bothered me that it happened. It bothers me every time I get on a plane.”

Apparently the alleged mental and emotional distress the Cooks experienced manifested itself in fear and anxiety at the time the events were unfolding. But this fear and anxiety were transitory, disappearing once the Cooks completed their flight. Since that time, in their own words, the Cooks have experienced feelings of being “bothered,” “concerned,” and “nervous.” But these feelings about the world around us in general and air travel in particular is the plight of many citizens in this country, living as we do in a post-September 11 environment. As [the *Restatement (Second) of Torts* § 46 cmt. j (1965)] has explained:

[S]ome degree of transient and trivial emotional distress is a part of the price of living among people. The law intervenes only where the distress inflicted is so severe that no reasonable [person] could be expected to endure it. The intensity and the duration of the distress are factors to be considered in determining its severity.

We do not suggest that the Cooks’ fear and anxiety during the flight were trivial. But there was simply nothing before the trial court, and by extension before this Court, suggesting that the Cooks’ fear and anxiety were anything other than temporary. And it is pure speculation to assume that the Cooks’ later feelings of being bothered, concerned, and nervous are causally related to the events aboard the flight. Because the physical impact in this case was slight to nonexistent, allowing an emotional distress claim to proceed based on the Cooks’ lingering mental anguish would essentially abrogate the requirements of Indiana’s modified impact rule. In essence we view the alleged mental anguish here as speculative. Accordingly, the [lower courts] erred in denying Atlantic Coast’s motion for summary judgment on this issue.

Denial of Atlantic Coast’s summary judgment motion reversed.

The Causation Link Even if the defendant has breached a duty and the plaintiff has suffered actual injury, there is no liability for negligence without the necessary causation link between breach and injury. The causation question involves three issues: (1) Was the breach an *actual cause* of the injury? (2) Was the breach a *proximate cause* of the injury? and (3) What was the effect of any *intervening cause* arising after the breach and helping to cause the injury? Both actual and proximate cause are necessary for a negligence recovery. Special rules dealing with intervening causes sometimes apply, depending on the facts of the case.

Actual Cause Suppose that Dullard drove his car at an excessive speed on a crowded street and was therefore unable to stop the car in time to avoid striking and injuring Pence, who had lawfully entered the crosswalk. Dullard’s conduct, being inconsistent with the behavior of a reasonable driver, was a breach of duty that served as the actual cause of Pence’s injuries. To determine the existence of actual cause, courts often employ a “but-for” test. This test provides that the defendant’s conduct is the actual cause of the plaintiff’s injury when the plaintiff would not have been hurt but for (i.e., if not for) the defendant’s breach of duty. In the example employed above, Pence

clearly would not have been injured if not for Dullard's duty-breaching conduct.

In some cases, however, a person's negligent conduct may combine with another person's negligent conduct to cause a plaintiff's injury. Suppose that fires negligently started by Dustin and Dibble combine to burn down Potter's house. If each fire would have destroyed Potter's house on its own, the but-for test could absolve both Dustin and Dibble. In such cases, courts apply a different test by asking whether each defendant's conduct was a *substantial factor* in bringing about the plaintiff's injury. Under this test, both Dustin and Dibble are likely to be liable for Potter's loss.

Proximate Cause The plaintiff who proves actual cause has not yet established the causation link necessary to enable her to win the case. She must also establish the existence of proximate cause—a task that sometimes, though clearly not always, is more difficult than proving actual cause.

Questions of proximate cause assume the existence of actual cause. Proximate cause concerns arise because it may sometimes seem unfair to hold a defendant liable for all the injuries actually caused by his breach—no matter how remote, bizarre, or unforeseeable they are. Thus, courts typically say that a negligent defendant is liable only for the *proximate* results of his breach. Proximate cause, then, concerns the required degree of proximity or closeness between the defendant's breach and the injury it actually caused.

Courts have not reached complete agreement on the appropriate test for resolving the proximate cause question. In reality, the question is one of social policy. When deciding which test to adopt, courts must recognize that negligent defendants may be exposed to catastrophic liability by a lenient test for proximate cause, but that a restrictive test prevents some innocent victims from recovering damages for their losses. Courts have responded in various ways to this difficult question.

A significant number of courts have adopted a test under which a defendant who has breached a duty of care is liable only for the “natural and probable consequences” of his actions. In many negligence cases, the injuries actually caused by the defendant's breach would easily qualify as natural and probable consequences because they are the sorts of harms that are both likely and logical effects of such a breach. The Dullard–Pence scenario discussed earlier would be an example. It is to be expected that a pedestrian struck by a car would sustain personal injury.

In other negligence cases, however, either the fact that the plaintiff was injured or the nature of his harms may seem unusual or in some sense remote from the defendant's breach, despite the existence of an actual causation link. The presence or absence of proximate cause becomes a more seriously contested issue in a case of that nature. A great deal will depend upon how narrowly or broadly the court defines the scope of what is natural and probable.

Other courts have limited a breaching defendant's liability for unforeseeable harms by stating that he is liable only to plaintiffs who were within the “scope of the foreseeable risk.” Although this test is often characterized as a proximate cause rule, it is actually a rule dealing with the *duty* element, because courts adopting this rule hold that a defendant owes no duty to those who are not foreseeable “victims” of his actions. The *Restatement (Second) of Torts* takes yet another approach to the proximate cause question. It suggests that a defendant's breach of duty is not the legal (i.e., proximate) cause of a plaintiff's injury if, looking back after the harm, it appears “highly extraordinary” to the court that the breach would have brought about the injury.

Further discussion of proximate cause issues can be found in the *Stahlecker* case, which appears in this chapter's later discussion of intervening causes. In *Black v. William Insulation Co.*, which follows, the court rests its decision on the duty element of a negligence claim but engages in considerable discussion of the proximate cause concept.

Black v. William Insulation Co.

141 P.3d 123 (Wyo. Sup. Ct. 2006)

William Insulation Co. (WIC) was a subcontractor on an expansion project at the Exxon/LaBarge Shute Creek Plant. The plant was located in a remote Wyoming area approximately 26 and 40 miles, respectively, from the nearest population centers, the towns of Green River and Kemmerer. Given the remoteness of the work site, WIC provided \$30 per day in subsistence pay to each of its employees to defer part of the cost of a motel room or apartment in Green River or Kemmerer. WIC did not require its employees to spend the money on lodging. The employees were free to spend it—or not spend it—as they saw fit.

David Ibarra-Viernes, a WIC employee, was assigned by WIC to work on the above-described expansion project. Ibarra-Viernes received the \$30 per day subsistence pay from WIC, but he elected to make the commute to the plant from his home in Evanston, Wyoming, which was 90 miles away. Ibarra-Viernes carpooled with a group of co-workers, who took turns driving.

Ibarra-Viernes's work schedule was Monday through Friday, 7:00 AM to 5:30 PM, with a half-hour lunch and no, or minimal, breaks. In addition to his employment with WIC, Ibarra-Viernes worked a second job at night, washing dishes at a restaurant.

Ibarra-Viernes completed his regular shift at the plant on Tuesday, January 20, 2004, and returned to Evanston at 8:30 PM. He then worked his second job before going to bed around 11:00 PM. Ibarra-Viernes rose at 4:00 AM on January 21 to get his vehicle and collect his co-workers for the daily commute to the plant, where he worked his normal shift. The car pool, with Ibarra-Viernes driving, left the plant around 6:00 PM. Shortly thereafter, Ibarra-Viernes fell asleep at the wheel. His vehicle crossed the centerline of the highway and collided head-on with a vehicle in which Richard Black was a passenger. Richard Black died in the accident. His widow, Peggy Ann Cook Black, acting in her own right and as personal representative of her late husband's estate, filed a negligence-based wrongful death action against WIC in a Wyoming state court.

In her lawsuit, Black claimed that WIC owed a duty of care to other travelers on the highway to prevent injury caused by employees who had become exhausted after being required to commute long distances and work long hours. She contended in her complaint that WIC breached its duty by "failing to take precautionary measures to prevent employees from becoming so exhausted that they pose a threat of harm to the traveling public and failing to provide alternative transportation to its exhausted employees or, in the alternative, failing to provide living quarters to its employees within a reasonable distance from the plant site." WIC moved for summary judgment. The district court granted WIC's motion, concluding that WIC did not owe a duty to the decedent. Black appealed to the Supreme Court of Wyoming.

Hill, Justice

Black sets out [this issue] on appeal: Did the trial court err in failing to recognize a duty of care from an employer to innocent third parties who are injured, or in this case, killed, by its employees who are exhausted due to the working conditions imposed by the employer and thus fall asleep at the wheel? WIC responds [by arguing that] Wyoming law does not, and should not, impose a legal duty of reasonable care on Wyoming employers to protect the motoring public from the negligence of their off-duty employees when those off-duty employees drive to and from their Wyoming worksites in their personal vehicles outside the scope of their employment.

[Prior Supreme Court of Wyoming decisions have] set out in detail the analytical framework for determining whether a duty exists. "Whether a legal duty exists is a question of a law, and absent a duty, there is no liability." [Case citation omitted.] "'Duty' is not sacrosanct in itself, but is only an expression of the sum total of those considerations of policy which lead the law to say that the plaintiff is entitled to protection.'" *Andersen v. Two Dot Ranch, Inc.*, 49 P.3d 1011, 1024 (Wyo. 2002) (quoting *Gates v. Richardson*, 719 P.2d 193, 195 (Wyo. 1986)). A duty may arise by contract, statute, common law, "or when the relationship of the parties is such that the law imposes an obligation on the defendant to act reasonably for the protection of the plaintiff." [Case citation omitted.] The legal question to be answered by the court is

whether, upon the facts in evidence, such a relation exists between the parties that the community will impose a legal obligation upon one for the benefit of the other—or, more simply, whether the interest of the plaintiff which has suffered invasion was entitled to legal protection at the hands of the defendant.

[Case citation omitted.]

In deciding whether to adopt a particular tort duty, a court's focus must be much broader than just the case at hand. The judge's function in a duty determination involves complex considerations of legal and social policies which will directly affect the essential determination of the limits to government protection. Consequently, "the imposition and scope of a legal duty is dependent not only on the factor of foreseeability but involves other considerations, including the magnitude of the risk involved in defendant's conduct, the burden of requiring defendant to guard against that risk, and the consequences of placing that burden upon the defendant." [Case citations omitted.] In *Gates*, we further detailed the factors to be considered:

- (1) the foreseeability of harm to the plaintiff, (2) the closeness of the connection between the defendant's conduct and the injury suffered, (3) the degree of certainty that the plaintiff suffered injury, (4) the moral blame attached to the defendant's conduct, (5) the policy of preventing future harm, (6) the extent of the burden upon the defendant, (7) the consequences to the community and the court system, and (8) the availability, cost and prevalence of insurance for the risk involved.

[Other supporting case citations omitted.]

Before we can proceed to our analysis, we must identify the nature of the duty that Black seeks to impose on WIC. Black insists that she is not seeking . . . to establish a broad duty of care for an employer to control an off-duty employee's conduct. Instead, she argues that an employer has an obligation to ensure that the conditions of employment do not cause an employee to become fatigued and, to the extent that they do, the employer has a duty to take reasonable actions to protect the traveling public from the foreseeable consequences of those employees traveling from their worksite. Essentially, the question of duty

that we must determine in this case is whether WIC's actions and/or inactions prior to the accident created a foreseeable risk of harm that the employer had a duty to guard against. In other words: whether or not Ibarra-Viernes's fatigue arose out of, and in the course of, his employment.

We turn to the first *Gates* factor: *The foreseeability of harm to the plaintiff*. We recently stated that this factor is essentially a consideration of proximate cause. Proximate cause [exists when] "the accident or injury [is] the natural and probable consequence of the act of negligence." [Case citation omitted.] The ultimate test of proximate cause is foreseeability of injury. In order to qualify as a legal cause, the conduct must be a substantial factor in bringing about the plaintiff's injuries.

The question then is whether or not WIC's conduct was a substantial factor in bringing about the death of the decedent. Or more precisely, a showing of causation necessitates a showing that Ibarra-Viernes's work was a substantial contributing factor to his fatigue. This means that for an "employer to be liable for the actions of a fatigued employee on a theory of negligence, the fatigue must arise out of and in the course of employment . . . [because] . . . [t]o hold otherwise would charge an employer with knowledge of circumstances beyond his control." [Citation of quoted article omitted.] Naturally then, the scope of an employer's duty is "bound by activity that the employer can actually control within the employment relationship." [Article citation omitted.]

Black contends that the accident was a foreseeable consequence of WIC's conduct. Specifically, she claims that . . . WIC required its employees to work long hours and make long commutes. She argues that workers who were commuting and working twelve to fourteen hours a day would not have sufficient time in the day to take care of life activities and still get sufficient sleep. Given these conditions, Black contends that without employer supplied alternatives such as bus transport, it was foreseeable that sleep-deprived workers would likely fall asleep and cause injury to other travelers on the roads.

The most obvious factor within the employer's control that could cause fatigue in an employee is the number of hours the employee is required to work. On the day of the accident and those preceding it, Ibarra-Viernes worked his normal shift of ten hours. A ten-hour shift within a twenty-four-hour period is not, on its face, an objectively unreasonable period of work when compared with those situations where an employer was held liable for the damages caused by a fatigued employee driving home from work. Compare *Robertson v. LeMaster*, 301 S.E.2d 563, 568–69 (W.Va. 1983) (employee required to work 32 consecutive hours) and *Faverty v. McDonald's Restaurants of Oregon, Inc.*, 892 P.2d 703, 705 (Ore. App. 1995) (18-year-old employee worked 12½ hours in a 17-hour period). Crucially, in both of those cases, the employers had actual knowledge of their employee's fatigued state. There is no evidence that WIC

had notice that Ibarra-Viernes was fatigued on the day of the accident.

Black seeks to expand Ibarra-Viernes's hours of work to include the time of his commute, claiming that WIC "required" him to make the lengthy drive to and from the plant [by not providing alternative transportation such as a bus]. First, Black cites no authority for the proposition that WIC was required to provide its employees with alternatives, such as busing, to commuting. Furthermore, WIC did, in fact, provide an alternative to long-distance commuting for its employees: WIC provided its employees, including Ibarra-Viernes, with a daily \$30 subsistence payment to partially offset the cost of taking lodging closer to the worksite. Ibarra-Viernes, however, elected to pocket that money and commute every day from his home in Evanston. That was a voluntary choice made by Ibarra-Viernes.

In making her argument, Black fails to address a significant factor: Ibarra-Viernes's decision to work a second job. After returning to Evanston upon completion of his work day for WIC, Ibarra-Viernes would go to a second job at a restaurant. On the night before the accident, Ibarra-Viernes stated that he returned home about 8:30 PM and then went to work [at] his second job. Ibarra-Viernes said he got to bed around 11:00 PM that night. Certainly, the second job had an effect on Ibarra-Viernes's ability to get rest, if not actual sleep. Ibarra-Viernes admitted that he normally got only about five to six hours of sleep a night. Nevertheless, Black neglects to discuss the consequences of the second job in her brief. Her failure to do so seriously undermines her argument.

Ibarra-Viernes had 13½ hours between shifts during the work week. The burden was on him to manage his own time to ensure that he was capable of performing his job. Ibarra-Viernes elected to expend a significant portion of his time making a lengthy commute and working a second job. These were voluntary decisions made by Ibarra-Viernes for which he is responsible. Under these circumstances, it cannot be said that his employment was the substantial factor in contributing to Ibarra-Viernes's fatigue.

We conclude that decedent's injuries were not the "natural and probable consequence of" any acts of negligence by WIC in the course of Ibarra-Viernes's employment; rather, the decisions and conduct of Ibarra-Viernes were the substantial factor that brought about the injuries. Since the harm to Black's decedent was not a foreseeable consequence of WIC's actions (or inactions), we decline to impose a duty under the circumstances. Given this conclusion, the remaining *Gates* factors are not persuasive, and we decline to discuss them.

Under the circumstances of this case, the defendant employer did not owe a duty to the plaintiff's decedent.

Grant of summary judgment to WIC affirmed.

Later Acts, Forces, or Events In some cases, an act, force, or event occurring *after* a defendant's breach of duty may play a significant role in bringing about or worsening the plaintiff's injury. For example, suppose that after Davis sets a fire, a high wind comes up and spreads the fire to Parker's home, or that after Davis negligently runs Parker down with his car, a thief steals Parker's wallet while he lies unconscious. If the later act, force, or event was *foreseeable*, it will not relieve the defendant of liability. So, if high winds are an occurrence that may reasonably be expected from time to time in the locality, Davis is liable for the damage to Parker's home even though his fire might not have spread that far under the wind conditions that existed when he started it. In the second example, Davis is liable not only for Parker's physical injuries but also for the theft of Parker's wallet if the theft was foreseeable, given the time and location of the accident. (The thief, of course, would also be liable for the theft.)

Intervening Causes On the other hand, if the later act, force, or event that contributes to the plaintiff's injury was *unforeseeable*, most courts hold that it is an intervening cause, which absolves the defendant of liability for harms that resulted directly from the intervening cause. For example, Dalton negligently starts a fire that causes injury to several persons. The driver of an ambulance summoned to the scene has been drinking on duty and, as a result, loses control of his ambulance and runs up onto a sidewalk, injuring several pedestrians. Given the nature of the ambulance driver's position, his drinking while on duty is likely to make the ambulance crash an unforeseeable event and thus an intervening cause. Most courts, therefore, would not hold Dalton responsible for the pedestrians' injuries. The ambulance driver, of course, would be liable to those he injured.

An important exception to the liability-absolving effect of an intervening cause deals with unforeseeable later events that produce a foreseeable harm identical to the harm risked by the defendant's breach of duty. Why should the defendant escape liability on the basis that an easily foreseeable consequence of its conduct came about through unforeseeable means? For example, if the

owners of a concert hall negligently fail to install the number of emergency exits required by law, the owners will not escape liability to those burned and trampled during a fire just because the fire was caused by an insane concertgoer who set himself ablaze.

As suggested by some of the examples used above, when a defendant's breach of duty is followed by a third party's criminal or other wrongful act, the later act may be either foreseeable or unforeseeable, depending on the facts and circumstances. This state of affairs reflects the prevailing modern approach, which differs sharply from the traditional view that third parties' criminal acts were unforeseeable as a matter of law and thus were always intervening causes serving to limit or eliminate the original defendant's negligence liability. Today, courts do not hesitate to classify a third party's criminal act as foreseeable if the time and place of its commission and other relevant facts point to such a conclusion.

Assume, for instance, that XYZ, Inc., owns an apartment complex at which break-ins and prior instances of criminal activity had occurred. XYZ nevertheless fails to adopt the security-related measures that a reasonable apartment complex owner would adopt. As a result, a criminal intruder easily enters the complex. He then physically attacks a tenant. Because the intruder's act is likely to be seen as foreseeable—and thus not an intervening cause—XYZ faces negligence liability to the tenant for the injuries that the intruder directly inflicted on the tenant. (The intruder, of course, would face both criminal and civil liability for battery, but if his financial assets are limited, the injured tenant may find collecting a damages award from him either difficult or impossible.) Note that for purposes of the tenant's negligence claim, XYZ's breach of duty was a substantial factor in bringing about the plaintiff's injuries because the lack of reasonable security measures allowed the intruder to gain easy access to the premises. XYZ's breach thus would be considered the *actual cause* of the tenant's injuries under the previously discussed substantial factor test. It would also be considered the proximate cause under the various tests described earlier.

The *Stahlecker* case, which follows, illustrates the operation of intervening cause principles.

Stahlecker v. Ford Motor Co.

667 N.W.2d 244 (Neb. Sup. Ct. 2003)

During the early morning hours of April 29, 2000, Amy Stahlecker was driving a 1997 Ford Explorer equipped with Firestone Wilderness AT radial tires in a remote area of Nebraska. One of the tires failed, rendering the vehicle inoperable. Richard Cook encountered Amy while she was stranded as a result of the tire failure. Cook abducted Amy, sexually assaulted her, and then murdered her.

Susan and Dale Stahlecker, acting on behalf of themselves and as personal representatives of their daughter's estate, brought a wrongful death action in a Nebraska court against Cook, the Ford Motor Co. (manufacturer of the Explorer), and Bridgestone/Firestone Inc. (manufacturer of the tire that failed). The Stahleckers sought to make out negligence claims against Ford and Firestone. The plaintiffs alleged that Ford and Firestone knew of prior problems with the model of tire that was on the Explorer driven by Amy; knew those problems posed a greater-than-normal danger of tire failure; continued using a problematic model of Firestone tire on Explorers despite knowledge that tire failure would create a special risk of rollover and vehicle inoperability; failed to warn consumers of these dangers; and continued to advertise their tires and vehicles as suitable for uses of the sort Amy made immediately prior to the tire failure, even though they knew that drivers could become stranded in the event of tire failure. There was no allegation that the tire failure directly caused Amy to sustain physical harm prior to the obvious harm inflicted by Cook.

A state district court sustained demurrers filed by Ford and Firestone and dismissed the case as to those parties. The court concluded that the Stahleckers had not stated a valid cause of action against Ford and Firestone because Cook's criminal acts constituted an intervening cause that would relieve Ford and Firestone of any liability they might otherwise have had. The Stahleckers successfully petitioned to bypass the Nebraska Court of Appeals and pursue their appeal in the Supreme Court of Nebraska.

Stephan, Judge

In order to withstand a demurrer, a plaintiff must plead . . . “a narrative of events, acts, and things done or omitted which show a legal liability of the defendant to the plaintiff.” [Case citation omitted.] In determining whether a cause of action has been stated, a petition is to be construed liberally.

In order to prevail in a negligence action, a plaintiff must establish the defendant's duty to protect the plaintiff from injury, a failure to discharge that duty, and damages proximately caused by the failure to discharge that duty. The concept of “foreseeability” is a component of both duty and proximate cause, although its meaning is somewhat different in each context. We have noted this distinction in recent cases:

Foreseeability as a determinant of a [defendant's] duty of care . . . is to be distinguished from foreseeability as a determinant of whether a breach of duty is a proximate cause of an ultimate injury. Foreseeability as it impacts duty determinations refers to the knowledge of the risk of injury to be apprehended. The risk reasonably to be perceived defines the duty to be obeyed; it is the risk reasonably within the range of apprehension, of injury to another person, that is taken into account in determining the existence of the duty to exercise care. . . . Foreseeability that affects proximate cause, on the other hand, relates to the question of whether the specific act or omission of the defendant was such that the ultimate injury to the plaintiff reasonably flowed from defendant's breach of duty. . . . Foreseeability in the proximate cause context relates to remoteness rather than the existence of a duty.

[Case citations omitted.]

[B]y alleging that Ford and Firestone failed to exercise reasonable care in designing and manufacturing their tires, and failed to warn users of potential tire defects, the Stahleckers have alleged the existence of a legal duty and a breach thereof

by both Ford and Firestone. The remaining issue is whether the breach of this duty was the proximate cause of Amy's harm.

The proximate cause of an injury is “that cause which, in a natural and continuous sequence, without any efficient, intervening cause, produces the injury, and without which the injury would not have occurred.” [Case citation omitted.] Stated another way, a plaintiff must meet [these] basic requirements in establishing [causation]: (1) [the actual cause requirement] that without the negligent action, the injury would not have occurred, commonly known as the “but-for” rule; [and] (2) [the proximate cause requirement] that the injury was a natural and probable result of the negligence. [In addition, there cannot have been] an efficient intervening cause.

As to the first requirement, a defendant's conduct is the cause of the event if “the event would not have occurred but for that conduct; conversely, the defendant's conduct is not a cause of the event if the event would have occurred without it.” [Case citation omitted.] The petition alleges that Cook “found Amy alone and stranded as a direct result of the failure of the Firestone Wilderness AT Radial Tire and proceeded to abduct, terrorize, rape and murder Amy.” Firestone concedes that under the factual allegations of the Stahleckers' petition—that “but for” the failure of its tire—Amy would not have been at the place where she was assaulted and murdered.

The [tests governing] proximate cause [and intervening cause] are somewhat interrelated. Was the criminal assault and murder the “natural and probable” result of the failure to warn of potential tire failure, or did the criminal acts constitute an effective intervening cause that would preclude any causal link between the failure to warn and the injuries and wrongful death for which damages are claimed in this action? An efficient intervening cause is a new, independent force intervening between the defendant's negligent act and the plaintiff's injury. This force may be the conduct of a third person who had full

control of the situation, whose conduct the defendant could not anticipate or contemplate, and whose conduct resulted directly in the plaintiff's injury. An efficient intervening cause must break the causal connection between the original wrong and the injury.

In *Shelton v. Board of Regents*, 320 N.W.2d 748 (Neb. Sup. Ct. 1982), we considered whether criminal conduct constituted an intervening cause. *Shelton* involved wrongful death claims brought on behalf of persons who were poisoned by a former employee of the Eugene C. Eppley Institute for Research in Cancer and Allied Diseases (the Institute). In their actions against the Institute . . . , the plaintiffs alleged that [even though] the former employee had a prior criminal conviction involving an attempted homicide, the Institute hired him as a research technologist and gave him access to the poisonous substance which he subsequently used to commit the murders. The plaintiffs alleged that the Institute was negligent in hiring the employee, in allowing him to have access to the poisonous substance, and in failing to monitor its inventory of the substance. The plaintiffs further alleged that the Institute's negligence was the proximate cause of the injuries and deaths of the victims. The district court sustained a demurrer filed by the Institute and dismissed the actions. This court affirmed, holding . . . that the criminal acts of stealing the drug and administering it to the victims "were of such nature as to constitute an efficient intervening cause which destroys any claim that the alleged negligence of the [Institute] was the proximate cause of the appellants' injuries and damage." In reaching this conclusion, we relied upon *Restatement (Second) of Torts* § 448 (1965), which states the following rule:

The act of a third person in committing an intentional tort or crime is a superseding cause of harm to another resulting therefrom, although the actor's negligent conduct created a situation which afforded an opportunity to the third person to commit such a tort or crime, unless the actor at the time of his negligent conduct realized or should have realized the likelihood that such a situation might be created, and that a third person might avail himself of the opportunity to commit such a tort or crime.

We held [in *Shelton*] that the employee's criminal acts were the cause of the injuries for which damages were claimed and that "nothing which the [plaintiffs] claim the . . . Institute failed to do was in any manner related to those acts, nor could they have been reasonably contemplated by the . . . Institute."

We have, however, determined in certain premises liability cases and in cases involving negligent custodial entrustment that the criminal act of a third person does not constitute an efficient intervening cause. For example, in [one such case], a patron of a bar was seriously injured by another patron in the

parking lot after the two were instructed by the bartender to take their argument "outside." The injured patron sued the owner of the bar, alleging that the owner negligently failed to contact law enforcement, maintain proper security on the premises, and properly train his personnel. [R]evers[ing] a judgment on a jury verdict in favor of the owner, . . . [w]e reasoned that

because the harm resulting from a fight is precisely the harm against which [the owner] is alleged to have had a duty to protect [the patron], the "intervention" of [the other patron] cannot be said to be an independent act that would break the causal connection between [the owner's] negligence and [the patron's] injuries.

[Case citation omitted.]

We employed similar reasoning in [two other cases that] involved negligent placement of juvenile wards of the state in foster homes without disclosure of their known histories of violent acts. In each of those cases, we held that criminal acts of foster children perpetrated upon members of the foster parents' households could not be asserted as intervening causes to defeat liability for the negligent placement. Similarly, we recently held that a psychiatric patient's criminal assault upon a nurse was not an intervening cause as to the negligence of a state agency which breached its duty to disclose the violent propensities of the patient at the time of his admission to the hospital where the assault occurred. These decisions were based upon the principle . . . that "once it is shown that a defendant had a duty to anticipate [a] criminal act and guard against it, the criminal act cannot supersede the defendant's liability." [Case citation omitted.]

This principle requires that we determine whether the duty owed to Amy by Ford and Firestone, as manufacturers and sellers of the allegedly defective tires, included a duty to anticipate and guard against criminal acts perpetrated against the users of such tires. [As illustrated by the previously discussed cases dealing with juvenile wards and psychiatric patients,] we have recognized a duty to anticipate and protect another against criminal acts where the party charged with the duty has some right of control over the perpetrator of such acts or the physical premises upon which the crime occurs. [We have] recognized a duty on the part of the owner of business premises to protect invitees from criminal assault where there had been documented criminal activity in the immediate vicinity of the premises. [In addition, we have] held that a university had a duty to protect a student from physical hazing conducted in a fraternity house where similar incidents were known to have occurred previously[, and] that a university "owes a landowner-invitee duty to its students to take reasonable steps to protect against foreseeable acts of violence on its campus and the harm that naturally flows therefrom." [Case citation omitted.] However, we

have adopted *Restatement (Second) of Torts* § 315 (1965), which provides:

There is no duty so to control the conduct of a third person as to prevent him from causing physical harm to another unless . . . a special relation exists between the actor and the third person which imposes a duty upon the actor to control the third person's conduct, or . . . a special relation exists between the actor and the other which gives to the other a right to protection.

We have found no authority recognizing a duty on the part of the manufacturer of a product to protect a consumer from criminal activity at the scene of a product failure where no physical harm is caused by the product itself.

The Stahleckers argue that a duty to anticipate criminal acts associated with product failure arises from their allegations that Ford and Firestone knew or should have known of “the potential for similar dangerous situations arising as a result of a breakdown of a Ford Explorer and/or its tires.” They also allege that Ford and Firestone had or should have had “knowledge, to include statistical information, regarding the likelihood of criminal conduct and/or sexual assault against auto and tire industry consumers as a result of unexpected auto and/or tire failures in general.” Assuming the truth of these allegations, the most that can be inferred is that Ford and Firestone had general

knowledge that criminal assaults can occur at the scene of a vehicular product failure. However, it is generally known that violent crime can and does occur in a variety of settings, including the relative safety of a victim's home. The facts alleged do not present the type of knowledge concerning a specific individual's criminal propensity, or right of control over premises known to have been the scene of prior criminal activity, upon which we have recognized a tort duty to protect another from criminal acts.

The Stahleckers have not alleged, and could not allege, any special relationship between Ford and Firestone and the criminal actor (Cook) or the victim of his crime (Amy) that would extend their duty, as manufacturers and sellers of products, to protect a consumer from harm caused by a criminal act perpetrated at the scene of a product failure. In the absence of such a duty, [we must] conclude as a matter of law that the criminal assault constituted an efficient intervening cause which precludes a determination that negligence on the part of Ford and Firestone was the proximate cause of the harm [to Amy].

[Therefore,] the district court did not err in sustaining the demurrers of Ford and Firestone . . . and in dismissing the action as to them.

District court's decision affirmed.

Special Rules Whatever test for proximate cause a court adopts, most courts agree on certain basic causation rules. In case of a conflict, these rules supersede the proximate cause and intervening cause rules stated earlier. One such rule is that persons who are negligent “take their victims as they find them.” This means that a negligent defendant is liable for the full extent of her victim's injuries if those injuries are aggravated by some preexisting physical susceptibility of the victim—even though this susceptibility could not have been foreseen. Similarly, negligent defendants normally are liable for diseases contracted by their victims while in a weakened state caused by their injuries. Negligent defendants typically are jointly liable—along with the attending physician—for negligent medical care that their victims receive for their injuries.

Res Ipsa Loquitur In some cases, negligence may be difficult to prove because the defendant has superior knowledge of the circumstances surrounding the plaintiff's injury. It may not be in the defendant's best interests to disclose those circumstances if they point to

liability on his part. The classic example is an 1863 case, *Byrne v. Boadle*. The plaintiff was a pedestrian who had been hit on the head by a barrel of flour that fell from a warehouse owned by the defendant. The plaintiff had no way of knowing what caused the barrel to fall; he merely knew he had been injured. The only people likely to have known the relevant facts were the owners of the warehouse and their employees, but they most likely were the ones responsible for the accident. After observing that “[a] barrel could not roll out of a warehouse without some negligence,” the court required the defendant owner to show that he was not at fault.

Byrne v. Boadle eventually led to the doctrine of *res ipsa loquitur* (“the thing speaks for itself”). *Res ipsa loquitur* applies when (1) the defendant has exclusive control of the instrumentality of harm (and therefore probable knowledge of, and responsibility for, the cause of the harm); (2) the harm that occurred would not ordinarily occur in the absence of negligence; and (3) the plaintiff was in no way responsible for his own injury. Most courts hold that when these three elements are satisfied, a presumption of breach of duty and causation arises. The defendant then

CYBERLAW IN ACTION

A *Cyberlaw in Action* box in Chapter 1 addressed the effect of §230 of the federal Communications Decency Act (CDA) on certain defamation and injurious falsehood claims. As *Gentry v. eBay, Inc.*, 99 Cal. App. 4th 816 (2002) reveals, §230 may also apply to certain negligence claims.

Gentry was a case brought by buyers of sports memorabilia that bore autographs later determined not to be genuine. The plaintiffs contended that eBay, an online marketplace on which the items were sold, should bear legal responsibility on various legal grounds, including negligence. According to the plaintiffs, eBay had been negligent: (1) by maintaining an online forum that allowed any user, regardless of his or her purchase history, to give positive or negative feedback regarding dealers; and (2) by endorsing certain dealers on the basis of this feedback and the dealers' sales volume. The plaintiffs contended that these actions by eBay created a false sense of confidence in the collectibles' authenticity because most, if

not all, of the positive feedback about a dealer would be generated either by that dealer or by another cooperating dealer.

A California appellate court held in *Gentry* that §230 of the CDA provided eBay a meritorious defense against the plaintiffs' negligence claim. Section 230 states that "[n]o provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider." The court reasoned that eBay was a "provider . . . of an interactive computer service" and that the plaintiffs' negligence claim amounted, in substance, to an attempt to have eBay held liable for the effects of statements made by "another information content provider" or providers (i.e., those who, in the online forum, posted arguably misleading "feedback"). The court therefore regarded the plaintiffs' negligence claim as an effort to have eBay treated as the "publisher" of information provided by another party. Section 230, the court held, prohibited such treatment of eBay.

runs a significant risk of losing the case if he does not produce evidence to rebut this presumption.

Negligence Defenses The common law traditionally recognized two defenses to negligence: **contributory negligence** and **assumption of risk**. In many states, however, these traditional defenses have been superseded by new defenses called **comparative negligence** and **comparative fault**.

Contributory Negligence Contributory negligence is the plaintiff's failure to exercise reasonable care for her own safety. Where it still applies, contributory negligence is a complete defense for the defendant if it was a substantial factor in producing the plaintiff's injury. So, if Preston steps into the path of Doyle's speeding car without first checking to see whether any cars are coming, Preston would be denied any recovery against Doyle, in view of the clear causal relationship between Preston's injury and his failure to exercise reasonable care for his own safety.

Comparative Negligence Traditionally, even a minor failure to exercise reasonable care for one's own safety—only a slight departure from the standard of reasonable self-protectiveness—gave the defendant a complete contributory negligence defense. This rule, which probably stemmed from the 19th-century desire to protect railroads

and infant manufacturing interests from negligence liability, came under increasing attack in the 20th century. The main reasons were the traditional rule's harsh impact on many plaintiffs. The rule frequently prevented slightly negligent plaintiffs from recovering any compensation for their losses, even though the defendants may have been much more at fault.

In response to such complaints, all but a few states have adopted **comparative negligence** systems either by statute or by judicial decision. The details of these systems vary, but the principle underlying them is essentially the same: courts seek to determine the relative negligence of the parties and award damages in proportion to the degrees of negligence determined. The formula is:

$$\text{Plaintiff's recovery} = \text{Defendant's percentage share of the negligence causing the injury} \times \text{Plaintiff's proven damages}$$

For example, assume that Dunne negligently injures Porter and that Porter suffers \$100,000 in damages. A jury determines that Dunne was 80 percent at fault and Porter 20 percent at fault. Under comparative negligence, Porter would recover \$80,000 from Dunne. What if Dunne's share of the negligence is determined to be 40 percent and Porter's 60 percent? Here, the results vary depending on whether the state in question has adopted a *pure* or a *mixed* comparative negligence system. Under a pure system, courts apply the preceding

formula regardless of the plaintiff's and the defendant's percentage shares of the negligence. Porter therefore would recover \$40,000 in a pure comparative negligence state. Under a mixed system, the formula operates only when the defendant's share of the negligence is greater than (or, in some states, greater than or equal to) 50 percent. If the plaintiff's share of the negligence exceeds 50 percent, mixed systems provide that the defendant has a complete defense against liability. In such states, therefore, Porter would lose the case.

The *Currie* case, which appears earlier in the chapter, furnishes a further example of how comparative negligence principles are applied.

Assumption of Risk Assumption of risk is the plaintiff's *voluntary* consent to a *known* danger. Voluntariness means that the plaintiff accepted the risk of her own free will; knowledge means that the plaintiff was aware of the nature and extent of the risk. Often, the plaintiff's knowledge and voluntariness are inferred from the facts. This type of assumption of risk is sometimes called **implied** assumption of risk. For example, Pilson voluntarily goes for a ride in Dudley's car, even though Dudley has told Pilson that her car's brakes frequently fail. Pilson probably has assumed the risk of injury from the car's defective brakes.

A plaintiff can also **expressly** assume the risk of injury by entering into a contract that purports to relieve the defendant of a duty of care he would otherwise owe

to the plaintiff. Such contract provisions are called *exculpatory clauses*. Chapter 15 discusses exculpatory clauses and the limitations that courts have imposed on their enforceability. The most important such limitations are that the plaintiff have knowledge of the exculpatory clause (which often boils down to a question of its conspicuousness), and that the plaintiff must accept it voluntarily (which does not happen when the defendant has greatly superior bargaining power).

What happens to assumption of risk in comparative negligence states? Some of these states maintain assumption of risk as a separate and complete defense. Many other states now incorporate implied assumption of risk within the state's comparative negligence scheme. In such states, comparative negligence basically becomes **comparative fault**. Although the terms comparative negligence and comparative fault often are used interchangeably, technically the former involves only negligence and the latter involves all kinds of fault. In a comparative fault state, therefore, the fact-finder determines the plaintiff's and the defendant's relative shares of the fault—including assumption of risk—that caused the plaintiff's injury.

In the *Davenport* case, which follows, the court made implied assumption of risk part of the state's mixed comparative negligence scheme (effectively making it comparative fault). Note, however, that this was not true for express assumption of risk.

Davenport v. Cotton Hope Plantation

508 S.E.2d 565 (S.C. Sup. Ct. 1998)

Alvin Davenport, who leased a condominium at the Cotton Hope Plantation on Hilton Head Island, South Carolina, complained to Cotton Hope that the floodlights at the bottom of the stairway to his unit were not working. Before Cotton Hope got around to fixing the floodlights, Davenport was injured when he tried to descend the stairway one night. Specifically, he fell after attempting to place his foot on what appeared to be a step but actually was a shadow caused by the inoperative floodlight.

Davenport sued Cotton Hope for negligence in a South Carolina trial court. The trial court directed a verdict against him because he had assumed the risk of his injury, and, in the alternative, because he was more than 50 percent at fault in causing the injury. After Davenport appealed, the intermediate appellate court reversed, holding that under South Carolina's comparative negligence system, assumption of risk no longer was an independent defense, that it instead was just a factor to be considered in determining the parties' relative fault, and that that issue should have gone to the jury. Cotton Hope appealed to the South Carolina Supreme Court.

Toal, Judge

A threshold question is whether assumption of risk survives as a complete bar to recovery under South Carolina's comparative negligence system. In 1991, we adopted a modified version of comparative negligence. Under this system, a plaintiff in a negligence action may recover damages if his or her negligence is

not greater than that of the defendant. Not so clear was what would become of assumption of risk.

An overwhelming majority of jurisdictions that have adopted some form of comparative negligence have abolished assumption of risk as an absolute bar to recovery. In analyzing the continuing viability of assumption of risk in a comparative

negligence system, many courts distinguish between express assumption of risk and implied assumption of risk. Express assumption of risk applies when the parties expressly agree in advance, either in writing or orally, that the plaintiff will relieve the defendant of his or her legal duty toward the plaintiff. Even in those comparative fault jurisdictions that have abrogated assumption of risk, the rule remains that express assumption of risk continues as an absolute defense in an action for negligence. The reason is that express assumption of risk sounds in contract, not tort, and is based upon an express manifestation of consent. Implied assumption of risk arises when the plaintiff implicitly, rather than expressly, assumes known risks.

It is contrary to the basic premise of our fault system to allow a defendant, who is at fault in causing an accident, to escape bearing any of its cost, while requiring a plaintiff, who is no more than equally at fault, to bear all of its costs. The defendant's fault is not diminished solely because the plaintiff knowingly assumes a risk. In our comparative fault system, it would be incongruous to absolve the defendant of all liability based only on whether the plaintiff assumed the risk of injury. Comparative negligence seeks to assess and compare the negligence of both the plaintiff and the defendant. This goal would clearly be thwarted by adhering to the common law defense of

assumption of risk. Our conclusion that the absolute defense of assumption of risk is inconsistent with South Carolina's comparative negligence system is buttressed by our recent opinion in *Spahn v. Town of Port Royal* (1998), [where] we held that last clear chance had been subsumed by our adoption of comparative negligence. We therefore hold that a plaintiff is not barred from recovery by assumption of risk unless the degree of fault arising therefrom is greater than the negligence of the defendant.

Cotton Hope argues that we should affirm the trial court's ruling that, as a matter of law, Davenport was more than 50 percent negligent. The trial court based its ruling on the fact that Davenport knew of the danger weeks before his accident, and had a safe alternate route. However, there also was evidence suggesting that Cotton Hope was negligent in failing to properly maintain the lighting in the stairway. It could be reasonably concluded that Davenport's negligence in proceeding down the stairway did not exceed Cotton Hope's negligence. Thus, [that issue] is properly submitted for jury determination.

Court of Appeals decision returning the case to the trial court affirmed.

Strict Liability

Strict liability is liability without fault or, perhaps more precisely, irrespective of fault. This means that in strict liability cases, the defendant is liable even though he did not intend to cause the harm and did not bring it about through recklessness or negligence.

The imposition of strict liability is a social policy decision that the risk associated with an activity should be borne by those who pursue it, rather than by innocent persons who are exposed to that risk. Such liability is premised on the defendant's voluntary decision to engage in a particularly risky activity. When the defendant is a corporation that has engaged in such an activity, the assumption is that the firm can pass the costs of liability on to consumers in the form of higher prices for goods or services. Through strict liability, therefore, the economic costs created by certain harms are "socialized" by being transferred from the victims to defendants to society at large.

Strict liability, however, does not apply to the vast majority of activities. It therefore becomes important to consider which activities do trigger the liability-without-fault approach. The owners of trespassing livestock and the

keepers of naturally dangerous wild animals were among the first classes of defendants on whom the courts imposed strict liability. Today, the two most important activities subject to judicially imposed strict liability are abnormally dangerous (or ultrahazardous) activities and the manufacture or sale of defective and unreasonably dangerous products. We discuss the latter in Chapter 20 and the former immediately below.

Abnormally Dangerous Activities Abnormally dangerous (or ultrahazardous) activities are those necessarily involving a risk of harm that cannot be eliminated by the exercise of reasonable care. Among the activities treated as abnormally dangerous are blasting, crop dusting, stunt flying, and, in one case, the transportation of large quantities of gasoline by truck. (Most courts, however, would be unlikely to label the latter as abnormally dangerous.) Traditionally, contributory negligence has not been a defense in ultrahazardous activity cases, but assumption of risk has been a defense. The *Phillips* case, which follows, discusses the various factors that courts consider before deciding whether a particular activity should be classified as abnormally dangerous.

Phillips v. E.I. DuPont de Nemours & Co. (In re Hanford Nuclear Reservation Litigation)

521 F.3d 1028 (9th Cir. 2008)

During World War II, the U.S. government constructed the Hanford Nuclear Weapons Reservation in the state of Washington. The facility's mission was to produce plutonium for military purposes. Because it was not clear that the government possessed the expertise to operate Hanford, the government solicited E.I. DuPont de Nemours & Co. to run the facility. Despite initial reluctance, DuPont undertook operation of Hanford as a patriotic duty and neither sought nor earned a profit from its Hanford activities. Hanford ultimately helped make the atomic bomb that was dropped on Nagasaki, Japan, in World War II. (The bomb dropped on Hiroshima was uranium-based.) General Electric, Inc. (GE), took over operation of Hanford from DuPont in 1946 and continued in that role for a substantial number of years. As was the case with DuPont, GE neither sought nor earned a profit in regard to Hanford.

As part of the plutonium-production process, the Hanford facility emitted I-131, a fission byproduct known as radioiodine. I-131 was regarded in the 1940s and thereafter as having the potential to cause adverse health effects in humans. Although emissions of I-131 continued at Hanford for many years, a late-1980s study by the Centers for Disease Control and Prevention concluded that 88 percent of the I-131 emissions at Hanford occurred from 1944 to 1946. Emissions levels decreased significantly in later years after stronger restrictions on emissions were put in place. This study, which focused on potentially adverse health effects of the I-131 emissions, sparked a considerable amount of litigation. More than 2,000 persons sued DuPont, GE, and other defendants, contending that the I-131 emissions at Hanford caused them to experience thyroid disorders, thyroid cancer, and other forms of cancer.

Because the plaintiffs claimed to have been harmed by a nuclear incident (the I-131 emissions), the cases were filed under a federal statute, the Price-Anderson Act (PAA). That statute allows parties harmed in nuclear incidents to sue potentially liable private companies such as DuPont and GE, but calls for government indemnification for liable private companies in order to give them an incentive to take part in the nuclear industry. The PAA gives federal courts exclusive jurisdiction over claims arising from nuclear incidents, and allows such claims to be consolidated in a single federal court. However, according to the PAA, the substantive legal rules governing the case are the rules provided by state law.

The many Hanford-related lawsuits were consolidated in a single federal court. After litigation that extended for approximately 15 years, the parties agreed to a bellwether trial that was designed to produce a verdict highlighting the strengths and weaknesses of the parties' respective cases and increase the chances of a settlement to resolve the long-running litigation. The bellwether trial focused on six plaintiffs who were representative of the larger group of plaintiffs. The six bellwether plaintiffs claimed that they suffered thyroid cancer or other thyroid disorders as a result of the I-131 emissions at Hanford, and that the defendants should be held strictly liable under Washington law. With causation proving to be the key issue in the strict liability case, two of the bellwether plaintiffs ended up winning their claims and receiving a judgment for damages. DuPont, GE, and the other defendants appealed to the U.S. Court of Appeals for the Ninth Circuit.

Schroeder, Circuit Judge

A threshold issue [in this appeal] is whether the defendants may seek complete immunity under the common law government contractor defense, because they were operating Hanford at the request of the federal government. We hold that the defense is inapplicable as a matter of law, because Congress enacted the PAA before the courts recognized the government contractor defense, and the PAA provides a comprehensive liability scheme that precludes the defendants' reliance on such a defense.

In the alternative, the defendants argue that even if they are not immune, they are not strictly liable for any I-131 emissions. Specifically, the defendants contend that operating the Hanford facility does not constitute an "abnormally dangerous activity" under Washington law. We review *de novo* the question of whether an activity is abnormally dangerous.

Washington has adopted the *Restatement (Second) of Torts*, §§ 519 and 520, which outline the strict liability regime for abnormally dangerous activities. See *Klein v. Pyrodyne Corp.*, 810 P.2d 917 (Wash. 1991). Section 519 provides:

- (1) One who carries on an abnormally dangerous activity is subject to liability for harm to the person, land, or chattels of another resulting from the activity, although he has exercised the utmost care to prevent such harm.
- (2) Such strict liability is limited to the kind of harm, the risk of which makes the activity abnormally dangerous.

Section 520 lists the factors to be used when determining what constitutes an abnormally dangerous activity:

- (a) Whether the activity involves a high degree of risk of some harm to the person, land or chattels of another;

- (b) Whether the gravity of the harm which may result from it is likely to be great;
- (c) Whether the risk cannot be eliminated by the exercise of reasonable care;
- (d) Whether the activity is not a matter of common usage;
- (e) Whether the activity is inappropriate to the place where it is carried on; and
- (f) The value of the activity to the community.

A court does not have to weigh each of the elements listed in § 520 equally. One factor alone, however, is generally not sufficient to find an activity abnormally dangerous.

The defendants argue that at the time of the emissions in the 1940s, they did not know the risks that were attributable to radioiodine exposure, and therefore § 520's factors (a)–(c) cannot be weighed against them. Any possible injury from radiation, however, need not have been actually known by the defendants at the time of exposure in order to impose strict liability. Under Washington law, if the actual harm fell within a general field of danger which should have been anticipated, strict liability may be appropriate. Whether an injury should have been anticipated does not depend on whether the particular harm was actually expected to occur. It is sufficient that “the risk created [be] so unusual, either because of its magnitude or because of the circumstances surrounding it. . . .” [Case citation omitted.]

Statutory Strict Liability Strict liability principles are also embodied in modern legislation. The most important examples are the workers' compensation acts passed by most states early in this century. Chapter 51 contains more detailed discussion of such statutes, which allow employees to recover statutorily limited amounts from their employers without any need to show fault on the employer's part and without any consideration of contributory fault on the employee's part. Employers participate in a compulsory liability insurance system and are expected to pass the costs of the system on to consumers, who then become the ultimate bearers of the human costs of industrial production. Other examples of statutory strict liability vary from state to state.

Tort Reform

The risk-spreading strategy of tort law has not been trouble-free. During roughly the past 25 years, there has been considerable talk about a supposed crisis in the liability insurance system. From time to time over that

There is no question that the defendants should have anticipated some of the many risks associated with operating a nuclear facility, creating plutonium, and releasing I-131 into the atmosphere. It is exactly because of these risks, and the potential exposure to liability arising from them, that the government contracted with the defendants to limit liability in case of an accident. For these same reasons, . . . scientists [with whom the government contracted] recommended dosage limits.

We agree with the district court that the defendants' conduct at Hanford was an abnormally dangerous activity under the § 520 factors. There was a high degree of risk to people and property associated with the Hanford facility and the gravity of any harm was likely to be great. Regardless of the defendants' efforts to exercise reasonable care, some I-131 would be released, and developing plutonium is hardly an activity of common usage. While the value to the community at large, i.e., the nation, of developing an atomic bomb was perceived as high and there is pragmatically no very appropriate place to carry on such an activity, the § 520 factors on balance support holding that the defendants' activities were abnormally dangerous.

District court's judgment against defendants on strict liability claims affirmed.

period, the insurance system has been marked by outright refusals of coverage, reductions in coverage, and escalating premiums when coverage remains available. To some, this intermittent liability insurance crisis is largely the fault of the insurance industry. Among other things, such observers argue that insurers have manufactured the crisis to obtain unjustified premium increases and to divert attention from insurer mismanagement of invested premium income.

To other observers, however, the reason for the crisis is an explosion in tort liability in recent years. Examples include the tendency toward somewhat greater imposition of strict liability, increases in the frequency and size of punitive damage awards, and similar increases in awards for noneconomic harms such as pain and suffering. The greater costs imposed on defendants, observers say, operate to increase the price and diminish the availability of liability insurance. In some cases, therefore, businesses may be required to self-insure or go without insurance coverage. In others, they may be able to obtain insurance—but only at a price that cannot be completely passed on to consumers. Where the costs can be fully

passed on, the argument continues, they depress the economy by diminishing consumers' purchasing power or adding to inflation, or both. In addition, the argument concludes, the liability explosion impedes the development of new products and technologies that might result in huge awards for injured plaintiffs.

These beliefs have fueled a movement for tort reform. By the mid-1990s, most states had enacted some form of tort reform legislation. Such legislation typically follows one or both of two strategies: (1) limiting defendants' tort liability (plaintiffs' ability to obtain a judgment); and (2) limiting the *damages* plaintiffs can recover once they get a judgment. One example of the former is some states' legislation restricting the liability of social hosts or businesses for the damage caused by intoxicated people to whom they serve alcohol. The most common examples

of the latter are statutory caps or other limits on recoveries for punitive damages and noneconomic harm.

The battle for tort reform has not ended, however. Proponents continue to seek additional reform measures. Tort reform opponents who lost the fight in the legislature have sometimes continued it in the courts. They have done so primarily by challenging tort reform measures on state constitutional grounds. Such challenges have succeeded in some states but have been rebuffed in others.

In recent years, there have been calls in some quarters for Congress to enact caps on dollar amounts of damages for pain and suffering and similar noneconomic harm in certain negligence cases, most notably those involving alleged medical malpractice. As of the time this book went to press in 2008, no such federal measures had been enacted.

Problems and Problem Cases

1. Terry Williams sustained physical injuries in an accident involving a vehicle driven by Kellie Meagher. At the time of the accident, Meagher was allegedly using a cellular phone furnished by Cingular Wireless. Williams later sued Meagher and Cingular in an Indiana court. In the portion of the complaint pertaining to Cingular, Williams alleged that Cingular was negligent in furnishing a cellular phone to Meagher when it knew, or should have known, that the phone would be used while the user operated a motor vehicle. Cingular filed a motion to dismiss for failure to state a claim on which relief could be granted. After the trial court granted Cingular's motion, Williams appealed to the Indiana Court of Appeals. Was the trial court correct in granting Cingular's motion to dismiss?
2. A young man abducted R.M.V., age 10, from the sidewalk in front of her home and dragged her across the street to a vacant apartment at the Chalmette Apartments. He raped her, put her in the closet, told her not to leave, and disappeared. The apartment in question was described by the police officer called to the scene as "empty, filthy, dirty, and full of debris." Glass was broken from its windows and the front door was off its hinges. In the two years prior to the attack on R.M.V., Dallas police had investigated many serious crimes committed at the Chalmette Apartments complex. A Dallas City Ordinance established minimum standards for property owners, requiring them, among other things, to "keep the doors and windows of a vacant structure or vacant portion of a structure securely closed to prevent unauthorized entry." Gaile Nixon, R.M.V.'s mother, filed a negligence suit against Chalmette's owner and Mr. Property Management Company, Inc., the manager of the complex. Were the defendants correct in arguing that they owed no duty to R.M.V.?
3. Ludmila Hresil and her niece were shopping at a Sears retail store. There were few shoppers in the store at the time. Hresil spent about 10 minutes in the store's women's department, where she observed no other shoppers. After Hresil's niece completed a purchase in another part of the store, the two women began to walk through the women's department. Hresil, who was pushing a shopping cart, suddenly lost her balance and struggled to avoid a fall. As she did so, her right leg struck the shopping cart and began to swell. Hresil observed a "gob" on the floor where she had slipped. Later, a Sears employee said that "it looked like someone spat on the floor, like it was phlegm." Under the reasonable person standard, did Sears breach a duty to Hresil by not cleaning up the gob? *Hint:* Assume that Hresil could prove that the gob was on the floor only for the 10 minutes she spent in the women's department.
4. Daniel Scully operated a travel agency from a storefront that he leased in a one-story commercial building owned by William Fitzgerald. Attached to the back portion of that structure was a two-story building, which Fitzgerald also owned. The two-story building contained two apartments, one on each floor.

The rear portion of the first-floor apartment was a storage area, over which a deck extended from the second-floor apartment. During a summer heat wave, a fire that started in the storage area spread and destroyed most of the apartment building. The attached commercial building was significantly damaged by smoke and by water that firefighters used to extinguish the blaze. Scully suffered a total loss of his office property and had to relocate his business. In the area where the fire started, Fitzgerald had stored mulch, construction debris, gasoline, a gas engine lawn mower, a gas engine snowblower, old papers and other refuse that had accumulated over time, and garbage that was both in and out of trash cans. Because the storage area was unenclosed, it was freely accessible. The tenants who lived in the second-floor apartment regularly smoked cigarettes on the deck above the storage areas and dropped cigarette butts in and near the storage area. Fire officials who investigated the blaze found cigarette butts in that general area.

Scully sued Fitzgerald for negligence, alleging that Fitzgerald had failed to use reasonable care to maintain the storage area and that this failure caused the fire. The local fire chief, who determined that the fire originated in the storage area, testified in his deposition that he could not pinpoint the fire's exact cause but that he was able to eliminate potential causes such as the building's air conditioning units, the lawn mower and snowblower, the electrical outlets and lights, and the mulch. The fire chief offered his "best guess" that the fire started accidentally when a lit cigarette or match ignited loose debris. An expert witness for the plaintiff provided a report concluding that the storage of construction materials, equipment containing gasoline, and various other combustibles in the open storage area created an "unreasonable risk of fire" that "could have been avoided or greatly reduced by properly securing the area and/or prohibiting smoking in the area." In the expert's opinion, the failure to take those remedial steps led to the fire.

Fitzgerald moved for summary judgment. A New Jersey court granted his motion after ruling that Scully had failed to produce evidence of a breach of duty on the defendant's part. The court rejected the testimony of the plaintiff's expert because he did not identify a standard of care by reference to a building or fire code. Did the trial court rule correctly in granting Fitzgerald's motion for summary judgment?

5. While Sandra and Michael Morris were shopping at a Sam's Club store, Michael was pushing a shopping cart and Sandra was walking generally alongside him. The Morrises were proceeding through the frozen foods section of the store when, after rounding a corner, Sandra slipped on a wet substance. Sandra then fell, hitting a small portable freezer known as a "spot box" and landing on her lower back and buttocks. She attempted to pull herself up using the cart that Michael was holding, but slipped halfway up and fell a second time. Once Sandra was finally standing up, she noticed that her clothes and shoes were soaked. She thought that the substance on which she slipped was water from the spot box freezer. The store manager arrived on the scene and ordered an employee to clean up the pool of liquid. The employee who did so noted that the pool was approximately ten inches in diameter and was located "right there under the drain of the freezer." According to the Morrises, the store manager told them he thought the liquid was water that had leaked from the spot box freezer. They also contended that the manager pointed out to them that the plug on the bottom of the spot box freezer was out. Sandra, who was treated at a hospital emergency room, experienced severe bruises and considerable pain, for which she was prescribed medication. In accordance with her physician's advice, she remained off her feet for a week. Sandra filed a negligence lawsuit against Wal-Mart Stores, Inc., the owner of the Sam's Club store. In particular, she attempted to rely on the *res ipsa loquitur* theory. At the close of her case-in-chief, however, the court granted judgment as a matter of law in favor of the defendant. The court did so because it did not think Sandra had proven what was necessary to enable her to rely on *res ipsa loquitur*. Was the court correct?
6. Pyrodyne Corp. was hired to display the fireworks as part of a July 4 celebration at the Western Washington State Fairgrounds. During the display, a five-inch mortar was knocked into a horizontal position. A rocket inside the mortar then ignited, flew 500 feet parallel to the earth, and exploded near the crowd of onlookers. Danny and Marion Klein were injured as a result of the explosion. They filed a strict liability lawsuit against Pyrodyne. Pyrodyne moved for summary judgment, arguing that the Kleins' case should be governed by negligence principles rather than strict liability. Was Pyrodyne correct in arguing that that this was not a case in which strict liability should apply?

7. Ricky East was employed by Interim Personnel of Central Virginia, Inc., a firm that provided temporary employees to business and other organizations. When East applied at Interim, he falsely stated that he possessed a valid driver's license. In reality, however, his license had been suspended because of two criminal convictions for driving under the influence of alcohol (DUI). He later left Interim's employ before applying to return to work there. Again he falsely stated that he possessed a valid driver's license, and he did not list his DUI convictions in response to an application question about whether he had been convicted of criminal offenses. Interim rehired East without asking to see his driver's license and without performing a criminal background check. Later, Interim assigned East to work for the Alumni Association of the University of Virginia in a part-time building assistant's position that required driving for short distances during his work hours. In recommending East to the Alumni Association, Interim represented that East had a good driving record, that he had not been involved in any traffic accidents, that he had never "shown up drunk on the job," and that he had not been the subject of complaints from other employers to whom he had been assigned. The Alumni Association accepted East without asking him whether he had a valid driver's license.

East worked for the Alumni Association for two months, during which he regularly drove an Alumni Association truck for short distances as part of his job duties. On Wednesday of Thanksgiving week, East was told to keep a key to the alumni building during the holiday weekend because his supervisor, who normally locked and unlocked the alumni building, would be out of town. East was instructed to lock the building on Wednesday and unlock it on Saturday. On Wednesday, East used the building key to help him gain access to a key to the Alumni Association truck he usually drove. Without permission, East drove the truck to Richmond, Virginia, and then back to his home in Charlottesville, Virginia, on Friday. During the day on Friday, he consumed excessive amounts of alcohol and became intoxicated. While intoxicated, he drove the Alumni Association truck and caused an accident in which Mildred Messer was injured. Messer sued East, but also named the Alumni Association and Interim Personnel as defendants on the theory that they were negligent in hiring East. A Virginia jury returned a verdict in favor of Messer and against all three defendants.

East did not appeal, but the Alumni Association and Interim did, arguing that they should not have been held liable for negligent hiring. Were they correct in making this argument?

8. While he was a freshman at Auburn University, Jason Jones became a pledge at the Kappa Alpha (KA) fraternity. Over the next year, KA brothers hazed Jones in various ways, including (1) making him jump into a ditch filled with urine, feces, dinner leftovers, and vomit; (2) paddling his buttocks; (3) pushing and kicking him; (4) making him run a gauntlet in which he was pushed, hit, and kicked; and (5) making him attend 2:00 AM hazing meetings. Jones continued to participate in these and other hazing activities until he was suspended from Auburn for poor academic performance. Even though he knew that 20 to 40 percent of his pledge class had withdrawn from the pledge program, Jones kept participating because he wanted to become a full member of KA. Jones later sued the local and national KA organizations for, among other things, negligent hazing in violation of a state criminal statute that outlawed hazing. The defendants moved for summary judgment on Jones's negligence per se claim. They contended that in view of the facts, Jones had assumed the risk of hazing. Were the defendants entitled to summary judgment?
9. On April 16, 1947, the SS *Grandchamp*, a cargo ship owned by the Republic of France and operated by the French Line, was loading a cargo of fertilizer grade ammonium nitrate (FGAN) at Texas City, Texas. A fire began on board the ship, apparently as a result of a longshoreman's having carelessly discarded a cigarette or match into one of the ship's holds. Despite attempts to put out the fire, it spread quickly. Approximately an hour after the fire was discovered, the *Grandchamp* exploded with tremendous force. Fire and burning debris spread throughout the waterfront, touching off further fires and explosions in other ships, refineries, gasoline storage tanks, and chemical plants. When the conflagration was over, 500 persons had been killed and more than 3,000 had been injured. The United States paid out considerable sums to victims of the disaster. The United States then sought to recoup these payments as damages in a negligence case against the Republic of France and the French Line. The evidence revealed that even though ammonium nitrate (which constituted approximately 95 percent of the FGAN) was known throughout the transportation industry as an

oxidizing agent and a fire hazard, no one in charge on the *Grandchamp* had made any attempt to prohibit smoking in the ship's holds. The defendants argued that they should not be held liable because FGAN was not known to be capable of *exploding* (as opposed to simply being a fire hazard) under circumstances such as those giving rise to the disaster. Did the defendants succeed with this argument?

10. A railroad car leased by American Cyanamid (American) and containing 20,000 gallons of acrylonitrile manufactured by American began leaking while the car was sitting just south of Chicago in the Blue Island yard of the Indiana Harbor Belt Railroad (Indiana). The car was awaiting switching to Conrail for delivery to its final destination. Indiana's employees stopped the leak but were uncertain about how much of the car's contents had escaped. Because acrylonitrile is flammable, highly toxic, and possibly carcinogenic, Illinois authorities ordered homes near the yard temporarily evacuated. Later, it was discovered that only about a quarter of the car's contents had leaked, but the Illinois Department of Environmental Protection, fearing that the soil and water had been contaminated, ordered Indiana to take decontamination measures costing \$981,000. Indiana sued American on negligence and strict liability theories, seeking to recover its expenses. Evidence introduced at the trial included a list of 125 hazardous materials that are shipped in highest volume on the nation's railroads. Acrylonitrile was the 53rd most hazardous on the list. Was the trial court's entry of summary judgment for Indiana on the strict liability claim proper?
11. Universal Metrics, Inc. (UMI) sponsored an evening social gathering for its employees at a Wisconsin country club. UMI provided each attendee with two vouchers, each of which was redeemable for an alcoholic or a nonalcoholic beverage. Once the vouchers had been used, attendees could purchase additional beverages from a country club bartender. Michael Devine and John Kreuser were among the UMI employees in attendance. They drove separately to the event. At approximately 8:30 PM, Kreuser heard the bartender ask Devine whether he (Devine) had a ride home. Kreuser saw Devine make a motion with his head, suggesting that Kreuser would be responsible

for driving Devine home. Kreuser then indicated to the bartender that he would give Devine a ride home. After this indication by Kreuser, the bartender served Devine more drinks. Between 9:00 and 9:15 PM, Devine approached Kreuser and asked Kreuser to buy him a drink because the bartender had cut him off. Kreuser declined. He neither talked to nor saw Devine again during the evening. Kreuser and his wife left the party at approximately 10:00 PM. As they were leaving, Kreuser decided not to give Devine a ride home. Kreuser, who had driven Devine home under similar circumstances on two other occasions, did not tell Devine or anyone else that he did not intend to drive Devine home this time.

At approximately 10:40 PM, Devine was driving his own vehicle when he crossed the center line of the highway and struck a vehicle driven by Kathy Stephenson. Both drivers died as a result of injuries they suffered in the collision. Test results showed that Devine's blood alcohol concentration was more than three times greater than the legal limit. Devine's estate, of course, was legally liable to Kathy Stephenson's estate. Ricky Stephenson, Kathy's surviving spouse and personal representative of her estate, believed that others should be held liable as well. He therefore filed a negligence lawsuit against UMI and Kreuser. Were UMI and Kreuser liable for negligence?

Online Research

Negligent Hiring

Using an online source, find *Schechter v. Merchants Home Delivery, Inc.*, a 2006 decision of the District of Columbia Court of Appeals. Negligent hiring was one of the claims raised by the plaintiff in *Schechter*. Read the court's decision, draft a written case brief (see the appendix at the end of Chapter 1), and prepare a one-page essay in which you compare *Schechter* with *Raleigh v. Performance Plumbing and Heating, Inc.*, a case that appears early in Chapter 7. In your essay, state whether you think the courts in *Schechter* and *Raleigh* took irreconcilable approaches to determining whether a duty of care existed, or whether the two decisions can be harmonized. Explain your reasoning.

chapter 8

INTELLECTUAL PROPERTY AND UNFAIR COMPETITION

MasterCard International, Inc., issues credit cards through more than 23,000 banks and other financial institutions. Since 1997, MasterCard has aired television commercials that have come to be known as the “Priceless Advertisements.” These advertisements include a sequence of names and pictures of goods and services purchased by persons using their credit cards. Voiceovers and visual displays convey to the viewer the prices of these items. Each Priceless Advertisement concludes with mention of a priceless intangible that cannot be purchased (e.g., “a day where all you have to do is breathe”). The reference to the priceless intangible is followed with this statement: “Priceless. There are some things money can’t buy. For everything else there’s MasterCard.”

In August 2000, it came to MasterCard’s attention that Ralph Nader’s campaign committee was promoting Nader’s presidential campaign through use of a television advertisement that bore similarities to MasterCard’s commercials. Nader’s political advertisement listed this series of items and their supposed prices:

Grilled tenderloin for fund-raiser: \$1,000 a plate.

Campaign ads filled with half-truths: \$10 million.

Promises to special interest groups: over \$100 billion.

The advertisement concluded with “[f]inding out the truth: priceless. There are some things that money can’t buy.” Besides being aired on television during a period of roughly two weeks in August 2000, the Nader advertisement appeared on the candidate’s Web site during the remainder of the 2000 presidential campaign.

MasterCard complained to Nader’s campaign organization about the Nader advertisement’s similarity to the long-running MasterCard commercials, suggested in a letter that the Nader campaign develop a more “original” advertisement, and threatened litigation if use of the Nader advertisement continued. It soon became clear that there would be no agreement to resolve the dispute. Therefore, MasterCard filed suit against Nader and his campaign organization.

Consider this scenario and the following questions as you read Chapter 8:

- Which area of intellectual property law provides MasterCard the rights it sought to enforce against the defendants? Was this, for instance, a patent infringement case? Alternatively, was it a copyright infringement case? Or was it a trademark rights case? Could MasterCard have been relying on more than one of these areas of intellectual property law?
- What specific rights would MasterCard have been attempting to enforce in this litigation?
- What arguments would the defendants have made in an effort to avoid liability to MasterCard?
- What public policy issues are at stake in cases of this nature?
- How did this case turn out?
- What ethical questions are suggested by a person’s use of someone else’s intellectual property? What ethical issues attend intellectual property owners’ attempts to enforce their supposed rights?

THIS CHAPTER DISCUSSES LEGAL rules that allow civil recoveries for abuses of free competition. These abuses are (1) infringement of intellectual property rights protected by patent, copyright, and trademark law; (2) misappropriation of trade secrets; (3) the intentional torts of injurious falsehood, interference with contractual relations, and interference with prospective advantage; and (4) the various forms of unfair competition addressed by § 43(a) of the Lanham Act. Indeed, the term *unfair competition* describes the entire chapter. In general, competition is deemed unfair when (1) it discourages creative endeavor by robbing creative people of the fruits of their innovations, or (2) it renders commercial life too uncivilized for the law to tolerate.

Protection of Intellectual Property

Patents Patent law is exclusively federal in nature. A patent may be viewed as an agreement between an inventor and the federal government. Under that agreement, the inventor obtains the exclusive right (for a limited time) to exclude others from making, using, or selling his invention, in return for making the invention public by giving the government certain information about it. The patent holder's (or **patentee's**) monopoly encourages the creation and disclosure of inventions by stopping third parties from appropriating them once they become public.

The above reference to “inventor” should be taken literally. U.S. law adheres to the “first-to-invent” rule—meaning that only the true inventor is eligible for a patent on an invention. The first-to-invent rule places U.S. law at odds with the patent laws in many other nations, where the party eligible for a patent on an invention is the one who was first to file a patent application with the relevant government office. If a U.S. patent is issued to someone who appeared to be the first to invent but actually was not, the true inventor may use the first-to-invent rule as a basis for seeking cancellation of the erroneously granted patent. There has periodically been legislative discussion about whether to amend the Patent Act to make the United States a first-to-file nation. However, as of the time this book went to press in 2008, no such legislation had advanced beyond preliminary stages.

What Is Patentable? An inventor may patent (1) a *process* (a mode of treatment of certain materials to produce a given result), (2) a *machine*, (3) a *manufacture* or product, (4) a *composition of matter* (a combination of

elements with qualities not present in the elements taken individually, such as a new chemical compound), (5) an *improvement* of any of the above, (6) an *ornamental design* for a product, and (7) a *plant* produced by asexual reproduction. Certain business methods may also be patentable. As later discussion will reveal, the patentability of business methods has become a controversial matter. Naturally occurring things (e.g., a new wild plant) are not patentable. In addition, abstract ideas and scientific or mathematical concepts are not patentable, although their practical applications often are. In *Diamond v. Diehr* (1981), for instance, the Supreme Court held that a computer program may be patentable if it is part of a patentable process.¹

Even though an invention fits within one of the above categories, it is not patentable if it lacks novelty, is obvious, or has no utility.² One aspect of the *novelty* requirement is the rule that no patent should be issued if *before the invention's creation*, it has been (1) known or used in the United States, (2) patented in the United States or a foreign country, or (3) described in a printed publication in the United States or a foreign country. Another aspect is the requirement that no patent should be issued if more than one year before the *patent application*, the invention was (1) patented in the United States or a foreign country, (2) described in a printed publication in the United States or a foreign country, or (3) in public use or on sale in the United States. The *Pfaff* case, the first of two Supreme Court decisions that follow shortly, deals with the rule just noted.

In addition, there can be no patent if the invention would have been *obvious* to a person having ordinary skill in the area. *KSR International Co. v. Teleflex, Inc.*, which appears immediately after the *Pfaff* decision, addresses the obviousness basis for denial of a patent application. A patentable invention must also have *utility*, or usefulness. Finally, there can be no patent if the applicant did not create the invention in question, or if she abandoned the invention. *Creation* problems frequently arise where several persons allegedly contributed to the invention. *Abandonment* may be by express statement, such as publicly devoting an invention to humanity, or by implication from conduct, such as delaying for an unreasonable length of time before making a patent application.

¹As discussed later in this chapter, computer programs may obtain copyright and trade secret protection.

²Plant and design patents are subject to requirements that are slightly different from those stated here.

Obtaining a Patent The United States Patent and Trademark Office handles patent applications. The application must include a *specification* describing the invention with sufficient detail and clarity to enable a person skilled in the relevant field to make and use the invention. The application must also contain a *drawing* when this is necessary for understanding the subject matter to be

patented. The Patent Office then determines whether the invention meets the various tests for patentability. If the application is rejected, the applicant may resubmit it. Once any of the applicant's claims have been rejected twice, the applicant may appeal to the Office's Board of Patent Appeals and Interferences. Subsequent appeals to the federal courts are also possible.

Pfaff v. Wells Electronics, Inc.

525 U.S. 55 (1998)

Wayne Pfaff began development work on a new computer chip socket in November 1980. He prepared detailed engineering drawings that described the design and dimensions of the socket and the materials to be used in making it. Pfaff sent the drawings to a manufacturer in February or March 1981. Prior to March 17, 1981, he showed a sketch of his concept to representatives of Texas Instruments. On April 8, 1981, the Texas Instruments representatives provided Pfaff a written confirmation of a previously placed oral purchase order for 30,100 of the new sockets. The total purchase price was \$91,155. In accordance with his usual business practice, Pfaff did not make and test a prototype of the socket before offering to sell it.

The manufacturer to which Pfaff sent his drawings took a few months to develop the customized tooling necessary to produce the socket. The first actual sockets were not produced until the summer of 1981. Pfaff filled the Texas Instruments order in July 1981. Other orders followed, as the socket became a commercial success. On April 19, 1982, Pfaff applied for a patent on the socket. A patent was issued to him in January 1985. Pfaff later filed an infringement action against Wells Electronics, Inc., which produced a competing socket. Wells Electronics argued that Pfaff's patent was invalid under section 102(b) of the Patent Act of 1952, which states that a patent cannot be obtained for an invention if it has been "on sale" for more than a year before the filing of the patent application.

The federal district court rejected Wells Electronics' section 102(b) defense because Pfaff had filed the patent application less than a year after reducing the invention to practice (i.e., less than a year after the first actual sockets were produced and available for sale). The district court held Wells Electronics liable for infringement but the U.S. Court of Appeals for the Federal Circuit reversed. The Court of Appeals held that Pfaff's patent was invalid because the socket had been offered for sale on a commercial basis more than a year before the filing of the patent application. The U.S. Supreme Court granted certiorari.

Stevens, Justice

Section 102(b) of the Patent Act of 1952 provides that no person is entitled to patent an "invention" that has been "on sale" for more than one year before filing a patent application. We granted certiorari to determine whether the commercial marketing of a newly invented product may mark the beginning of the one-year period even though the invention has not yet been reduced to practice.

On April 19, 1982, Pfaff filed an application for a patent on the computer chip socket. Therefore, April 19, 1981 constitutes the critical date for purposes of the on-sale bar of section 102(b); if the one-year period began to run before that date, Pfaff lost his right to patent his invention.

The primary meaning of the word "invention" in the Patent Act unquestionably refers to the inventor's conception rather than to a physical embodiment of the idea. The statute does not contain any express requirement that an invention must be reduced to practice before it can be patented. Neither

the statutory definition of the term nor the basic conditions for obtaining a patent make any mention of "reduction to practice."

It is well settled that an invention may be patented before it is reduced to practice. In 1888, this Court upheld a patent issued to Alexander Graham Bell even though he had filed his application before constructing a working telephone. [In upholding the issuance of the patent to Bell, the Court stated:]

The law does not require that a discoverer or inventor, in order to get a patent for a process, must have succeeded in bringing his art to the highest degree of perfection. It is enough if he describes his method with sufficient clearness and precision to enable those skilled in the matter to understand what the process is, and if he points out some practicable way of putting it into operation.

The Telephone Cases, 126 U.S. 1 (1888).

When we apply the reasoning of *The Telephone Cases* to the facts of the case before us today, it is evident that Pfaff could

have obtained a patent on his novel socket when he accepted the purchase order from Texas Instruments for 30,100 units. At that time he provided the manufacturer with a description and drawings that had “sufficient clearness and precision to enable those skilled in the matter” to produce the device. The parties agree that the sockets manufactured to fill that order embody Pfaff’s conception. We can find no basis in the text of section 102(b) or in the facts of this case for concluding that Pfaff’s invention was not “on sale” within the meaning of the statute until after it has been reduced to practice.

When Pfaff accepted the purchase order for his new sockets prior to April 8, 1981, his invention was ready for patenting. The fact that the manufacturer was able to produce the socket using his detailed drawings and specifications demonstrates this fact. Furthermore, those sockets contained all the elements of the invention claimed in the patent. Therefore, Pfaff’s patent is invalid because the invention had been on sale for more than one year in this country before he filed his patent application.

Judgment of Court of Appeals affirmed.

KSR International Co. v. Teleflex, Inc.

127 S. Ct. 1727 (U.S. Sup. Ct. 2007)

In car engines without computer-controlled throttles, the accelerator pedal interacts with the throttle via cable or other mechanical link. During the 1990s, it became common to install computers in cars to control engine operation. Computer-controlled throttles open and close valves in response to electronic signals rather than through force transferred from the accelerator pedal by a mechanical link. For a computer-controlled throttle to respond to a driver’s operation of the car, the computer must know what is happening with the pedal. A cable or other mechanical link does not suffice for this purpose. At some point, an electronic sensor is necessary to translate the mechanical operation into digital data the computer can understand.

The traditional mechanical design of an accelerator pedal permitted the pedal to be pushed down or released, but its position in the footwell area of the car could not be adjusted by sliding the pedal forward or back. As a result, a driver who wished to be closer or farther from the pedal had to reposition himself in the driver’s seat or move the seat in some way. In cars with deep footwells, those were imperfect solutions for drivers of smaller stature. Inventors therefore designed pedals that could be adjusted to change their location in the footwell. The Asano patent, granted in 1989, used a mechanical link and revealed a pedal support housing that kept one of the pedal’s pivot points fixed even when the pedal location was adjusted relative to the driver.

Other patents granted during the 1990s contemplated the addition of electronic pedal sensors for computer-controlled throttles. These patents called for differing locations for the sensor but did not refer to mounting the sensor on a fixed pivot point. In a 1998 invention that resulted in the 2001 grant of a patent to him, Steven Engelgau developed an adjustable pedal involving use of an electronic sensor. Claim 4 of the Engelgau patent called for the sensor to be mounted on a fixed pivot point in the pedal assembly. Besides differing from the sensor locations contemplated in the earlier patents, the Engelgau patent’s sensor location appeared likely to lessen problems that had been experienced when the previously patented technology was used.

Engelgau licensed his patent on an exclusive basis to Teleflex, Inc.—meaning that Teleflex effectively stepped into Engelgau’s shoes in terms of ability to enforce rights under the patent. Teleflex soon learned that pursuant to a contract to supply adjustable pedal technology to General Motors for use in the company’s vehicles, KSR International, Inc., planned to add an electronic sensor to the adjustable pedal technology reflected in a patent it (KSR) had obtained some years earlier. KSR ignored Teleflex’s insistence that KSR’s plan would infringe the Engelgau patent and that KSR should therefore enter into a licensing agreement with Teleflex. When KSR refused to obtain a license and proceeded with its plan, Teleflex sued KSR for patent infringement, arguing in particular that KSR’s actions violated claim 4 of the Engelgau patent. In defense, KSR contended that the Engelgau patent was invalid on the ground of obviousness. A federal district court agreed that claim 4 of Engelgau’s invention was obvious, in light of the prior art. Therefore, the district court granted summary judgment in favor of KSR and held the Engelgau patent invalid. However, the U.S. Court of Appeals for the Federal Circuit reversed, holding that the district court had not properly applied the “teaching, suggestion, or motivation” (TSM) test for obviousness. The U.S. Supreme Court granted KSR’s petition for a writ of certiorari.

Kennedy, Justice

Section 103 [of the Patent Act, 35 U.S.C. § 103.] forbids issuance of a patent when “the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.” In *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966), the Court set out a framework for applying the statutory language of § 103. The analysis is objective:

Under § 103, the scope and content of the prior art are to be determined; differences between the prior art and the claims at issue are to be ascertained; and the level of ordinary skill in the pertinent art resolved. Against this background the obviousness or nonobviousness of the subject matter is determined. Such secondary considerations as commercial success, long felt but unsolved needs, failure of others, etc., might be utilized to give light to the circumstances surrounding the origin of the subject matter sought to be patented.

Seeking to resolve the question of obviousness with more uniformity and consistency, the Court of Appeals for the Federal Circuit has employed an approach referred to by the parties as the “teaching, suggestion, or motivation” test (TSM test), under which a patent claim is only proved obvious if “some motivation or suggestion to combine the prior art teachings” can be found in the prior art, the nature of the problem, or the knowledge of a person having ordinary skill in the art. [Case citation omitted.] [T]he Court of Appeals . . . ruled that the District Court had not been strict enough in applying the [TSM] test, having failed to make “findings as to the specific understanding or principle within the knowledge of a skilled artisan that would have motivated one with no knowledge of the invention to attach an electronic control to the support bracket of the Asano assembly.” The Court of Appeals held that . . . unless the “prior art references address[ed] the precise problem that the patentee was trying to solve,” the problem would not motivate an inventor to look at those references.

Here, the Court of Appeals found, the Asano pedal was designed to solve the “constant ratio problem”—that is, to ensure that the force required to depress the pedal is the same no matter how the pedal is adjusted—whereas Engelgau sought to provide a simpler, smaller, cheaper adjustable electronic pedal. As for [the] Rixon [patent, one of the pre-Engelgau patents calling for use of an electronic sensor,] the court explained that [Rixon’s adjustable] pedal suffered from the problem of wire chafing [and that the patent governing it] did not teach anything helpful to Engelgau’s purpose. [Another pre-Engelgau patent dealing with the use of an electronic

sensor] did not relate to adjustable pedals and did not “necessarily go to the issue of motivation to attach the electronic control [in the manner called for in the Engelgau patent].” When the [earlier] patents were interpreted in this way, the Court of Appeals held, they would not have led a person of ordinary skill to put a sensor on the sort of pedal described in Asano. That it might have been obvious to try the combination of Asano and a sensor was likewise irrelevant, in the court’s view, because “‘obvious to try’ has long been held not to constitute obviousness.”

We [reject] the rigid approach of the Court of Appeals. Throughout this Court’s engagement with the question of obviousness, [*Graham* and our other decisions] have set forth an expansive and flexible approach inconsistent with the way the Court of Appeals applied its TSM test here. [It is important to exercise] caution in granting [or upholding] a patent based on the combination of elements found in the prior art. For over a half century, the Court has held that a “patent for a combination which only unites old elements with no change in their respective functions . . . obviously withdraws what is already known into the field of its monopoly and diminishes the resources available to skillful men.” [Case citation omitted.] This is a principal reason for declining to allow patents for what is obvious. The combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable results.

[*Graham* and later decisions following the principles outlined there] are instructive when the question is whether a patent claiming the combination of elements of prior art is obvious. When a work is available in one field of endeavor, design incentives and other market forces can prompt variations of it, either in the same field or a different one. If a person of ordinary skill can implement a predictable variation, § 103 likely bars its patentability. For the same reason, if a technique has been used to improve one device, and a person of ordinary skill in the art would recognize that it would improve similar devices in the same way, using the technique is obvious unless its actual application is beyond his or her skill.

Following these principles may be more difficult in other cases than it is here because the claimed subject matter may involve more than the simple substitution of one known element for another or the mere application of a known technique to a piece of prior art ready for the improvement. Often, it will be necessary for a court to look to interrelated teachings of multiple patents; the effects of demands known to the design community or present in the marketplace; and the background knowledge possessed by a person having ordinary skill in the art, all in order to determine whether there was an apparent reason to combine the known elements in the fashion claimed by the patent at issue. As our precedents make clear, however,

the analysis need not seek out precise teachings directed to the specific subject matter of the challenged claim, for a court can take account of the inferences and creative steps that a person of ordinary skill in the art would employ.

When it first established the requirement of demonstrating a teaching, suggestion, or motivation to combine known elements in order to show that the combination is obvious, the Court of Customs and Patent Appeals captured a helpful insight. As is clear from [previous] cases . . . , a patent composed of several elements is not proved obvious merely by demonstrating that each of its elements was, independently, known in the prior art. Although common sense directs one to look with care at a patent application that claims as innovation the combination of two known devices according to their established functions, it can be important to identify a reason that would have prompted a person of ordinary skill in the relevant field to combine the elements in the way the claimed new invention does. This is so because inventions in most, if not all, instances rely upon building blocks long since uncovered, and claimed discoveries almost of necessity will be combinations of what, in some sense, is already known.

Helpful insights, however, need not become rigid and mandatory formulas; and when it is so applied, the TSM test is incompatible with our precedents. The obviousness analysis cannot be confined by a formalistic conception of the words teaching, suggestion, and motivation, or by overemphasis on the importance of published articles and the explicit content of issued patents. In many fields it may be that there is little discussion of obvious techniques or combinations, and it often may be the case that market demand, rather than scientific literature, will drive design trends. Granting patent protection to advances that would occur in the ordinary course without real innovation retards progress and may, in the case of patents combining previously known elements, deprive prior inventions of their value or utility.

In determining whether the subject matter of a patent claim is obvious, neither the particular motivation nor the avowed purpose of the patentee controls. What matters is the objective reach of the claim. If the claim extends to what is obvious, it is invalid under § 103. One of the ways in which a patent's subject matter can be proved obvious is by noting that there existed at the time of invention a known problem for which there was an obvious solution encompassed by the patent's claims. The first error of the Court of Appeals in this case was to foreclose this reasoning by holding that courts and patent examiners should look only to the problem the patentee was trying to solve. The Court of Appeals failed to recognize that the problem motivating the patentee may be only one of many addressed by the patent's subject matter. The question is not whether the combination was obvious to the patentee but whether the combination was obvious

to a person with ordinary skill in the art. Under the correct analysis, any need or problem known in the field of endeavor at the time of invention and addressed by the patent can provide a reason for combining the elements in the manner claimed.

The second error of the Court of Appeals lay in its assumption that a person of ordinary skill attempting to solve a problem will be led only to those elements of prior art designed to solve the same problem. The primary purpose of Asano was solving the constant ratio problem; so, the court concluded, an inventor considering how to put a sensor on an adjustable pedal would have no reason to consider putting it on the Asano pedal. Common sense teaches, however, that familiar items may have obvious uses beyond their primary purposes, and in many cases a person of ordinary skill will be able to fit the teachings of multiple patents together like pieces of a puzzle. Regardless of Asano's primary purpose, the design provided an obvious example of an adjustable pedal with a fixed pivot point. The idea that a designer hoping to make an adjustable electronic pedal would ignore Asano because Asano was designed to solve the constant ratio problem makes little sense. A person of ordinary skill is also a person of ordinary creativity, not an automaton.

The same constricted analysis led the Court of Appeals to conclude, in error, that a patent claim cannot be proved obvious merely by showing that the combination of elements was "obvious to try." When there is a design need or market pressure to solve a problem and there are a finite number of identified, predictable solutions, a person of ordinary skill has good reason to pursue the known options within his or her technical grasp. If this leads to the anticipated success, it is likely the product not of innovation but of ordinary skill and common sense. In that instance the fact that a combination was obvious to try might show that it was obvious under § 103.

When we apply the standards we have explained to the instant facts, claim 4 must be found obvious. [W]e see little difference between the teachings of Asano and [other earlier patents] and the adjustable electronic pedal disclosed in claim 4 of the Engलगau patent. The District Court was correct to conclude that, as of the time Engलगau designed the subject matter in claim 4, it was obvious to a person of ordinary skill to combine Asano with a pivot-mounted pedal position sensor. There then existed a marketplace that created a strong incentive to convert mechanical pedals to electronic pedals, and the prior art taught a number of methods for achieving this advance. The Court of Appeals considered the issue too narrowly by, in effect, asking whether a pedal designer writing on a blank slate would have chosen both Asano and a modular sensor similar to the ones used in [other previous patents]. The proper question to have asked was whether a pedal designer of ordinary skill, facing the wide range of needs created by developments in the

field of endeavor, would have seen a benefit to upgrading Asano with a sensor.

In automotive design, as in many other fields, the interaction of multiple components means that changing one component often requires the others to be modified as well. Technological developments made it clear that engines using computer-controlled throttles would become standard. As a result, designers might have decided to design new pedals from scratch; but they also would have had reason to make pre-existing pedals work with the new engines. Indeed, upgrading its own pre-existing model led KSR to design the pedal now accused of infringing the Engelgau patent.

For a designer starting with Asano, the question was where to attach the sensor. The consequent legal question, then, is whether a pedal designer of ordinary skill starting with Asano would have found it obvious to put the sensor on a fixed pivot point. The prior art discussed above leads us to the conclusion that attaching the sensor where both KSR and Engelgau put it would have been obvious to a person of ordinary skill.

We build and create by bringing to the tangible and palpable reality around us new works based on instinct, simple

logic, ordinary inferences, extraordinary ideas, and sometimes even genius. These advances, once part of our shared knowledge, define a new threshold from which innovation starts once more. And as progress beginning from higher levels of achievement is expected in the normal course, the results of ordinary innovation are not the subject of exclusive rights under the patent laws. Were it otherwise, patents might stifle, rather than promote, the progress of useful arts. See U.S. Const., Art. I, § 8, cl. 8. These premises led to [§ 103's] bar on patents claiming obvious subject matter. Application of the bar must not be confined within a test or formulation too constrained to serve its purpose.

KSR provided convincing evidence that mounting a modular sensor on a fixed pivot point of the Asano pedal was a design step well within the grasp of a person of ordinary skill in the relevant art. Its arguments, and the record, demonstrate that claim 4 of the Engelgau patent is obvious.

Court of Appeals judgment in favor of Teleflex reversed, and case remanded for further proceedings.

Ownership and Transfer of Patent Rights Until a relatively recent change in federal law, a patent normally gave the patentee exclusive rights regarding the patented invention for 17 years from the date the patent was granted. In order to bring the United States into compliance with the General Agreement on Tariffs and Trade (an international agreement commonly known as GATT), Congress amended the patent law to provide that the patentee's exclusive rights to exclude others from making, using, or selling the patented invention generally exist until the expiration of 20 years from the date the patent application was filed. This duration rule applies to patents that result from applications filed on or after June 8, 1995. (A design patent, however, exists for 14 years from the date it was granted.) A 1999 enactment of Congress allowed for the possible extension of a patent's duration if the Patent Office delayed an unreasonably long time in acting on and approving the patentee's application.

The patentee may transfer ownership of the patent by making a written *assignment* of it to another party. Alternatively, the patentee may retain ownership and *license* others to exercise some or all of the patent rights. As the Supreme Court recently made clear in *Quanta Computer v. LG Electronics*, 2008 U.S. LEXIS 4701

(U.S. Sup. Ct. 2008), once the patent owner licenses another party to make, use, or sell an item embodying the patented invention, the sale of the item exhausts the patent owner's rights regarding that item. For instance, if A licenses B to produce and sell an item that requires use of A's patent, B's production and sale of the item entitles A, of course, to payment of the licensing fee called for by the agreement between A and B. However, A is not entitled to enforce its patent against C in the event that B sells the licensed item to C and C then makes some use of the item (and hence of A's patented invention). B's sale of the item to C—a sale contemplated by the license A granted B—exhausted A's patent rights in regard to the item purchased by C. International licensing and patent rights issues are discussed in a Global Business Environment box that appears later in the chapter.

Usually, the party who created the invention is the patent holder. What happens, however, when the creator of the invention is an employee and her employer seeks rights in the invention? If the invention was developed by an employee *hired to do inventive or creative work*, she must use the invention solely for the employer's benefit and must assign any patents she obtains to the

employer. If the employee was hired for purposes *other than invention or creation*, however, she owns any patent she acquires. Finally, regardless of the purpose for which the employee was hired, the *shop right* doctrine gives the employer a nonexclusive, royalty-free *license* to use the employee's invention if it was created on company time and through the use of company facilities. Any patent the employee might retain is still effective against parties other than the employer.

Patent Infringement Patent infringement occurs when a defendant, without authorization from the patentee, usurps the patentee's rights by making, using, or selling the patented invention. Because the Patent Act does not have an extraterritorial reach, the allegedly infringing activities must have occurred within the United States in order for a valid infringement claim to be triggered. The making of an item that would infringe a U.S. patent if the item were made within the United States will not constitute infringement if the item is made, for instance, in China. However, a provision of the Patent Act potentially allows infringement liability to be imposed on a party who ships components of the patented invention from the United States with the intended result that the components are assembled, in another country, to produce an item covered by the terms of the patent.

Infringement may be established under principles of *literal* infringement or under a judicially developed approach known as the *doctrine of equivalents*. Infringement is literal in nature when the subject matter made, used, or sold by the defendant clearly falls within the stated terms of the claims of invention set forth in the patentee's application. Under the doctrine of equivalents, a defendant may be held liable for infringement even though the subject matter he made, used, or sold contained elements that were not identical to those described in the patentee's claim of invention, if the elements of the defendant's subject matter nonetheless may be seen as equivalent to those of the patented invention. A traditional formulation of the test posed by the doctrine of equivalents is whether the alleged infringer's subject matter performs substantially the same function as the protected invention in substantially the same way, in order to obtain the same result.

During the 1990s, an alleged infringer sought to convince the Supreme Court to abolish the doctrine of equivalents on the ground that it effectively allows patentees to extend the scope of patent protection beyond the stated terms approved by the Patent Office when it issued the patent. In *Warner-Jenkinson Co. v. Hilton Davis*

Chemical Co. (1997), however, the Court rejected this attack on the doctrine. The Court observed that in view of courts' long-standing use of the doctrine (use in which Congress seemingly acquiesced by not legislatively prohibiting it), arguments for abolishing the doctrine would be better addressed to Congress. The *Warner-Jenkinson* Court did acknowledge, however, that overly broad application of the doctrine of equivalents could lead to an unwarranted expansion of patent owners' rights. Therefore, the Court held that the doctrine of equivalents must be applied to the *individual elements* of the patentee's claims of invention rather than to the patentee's invention *as a whole*.

One who *actively induces* another's infringement of a patent is liable as an infringer if he knows and intends that the infringement occur. For example, if Ingram directly infringes Paxton's patent on a machine and Doyle knowingly sold Ingram an instruction manual for the machine, Doyle may be liable as an infringer. Finally, if one knowingly sells a direct patent infringer a component of a patented invention or something useful in employing a patented process, the seller may be liable for *contributory infringement*. The thing sold must be a material part of the invention and must not be a staple article of commerce with some other significant use. Suppose that Irving directly infringes Potter's patent for a certain electronic device by selling essentially identical electronic devices. If Davis sells Irving sophisticated circuitry with knowledge of Irving's infringement, Davis may be liable for contributory infringement, assuming that the circuitry is an important component of the electronic devices at issue and has no other significant uses.

The basic recovery for patent infringement is damages adequate to compensate for the infringement, plus court costs and interest. The damages cannot be less than a reasonable royalty for the use made of the invention by the infringer. The court may in its discretion award damages of up to three times those actually suffered. Injunctive relief is also available, and attorney's fees may be awarded in exceptional cases.

Because injunctions have so frequently been issued against defendants held liable for patent infringement, some courts had concluded that injunctions were effectively a mandatory remedy. In *eBay, Inc. v. MercExchange, LLC*, which follows shortly, the Supreme Court ruled that courts are not required to issue an injunction against a defendant who committed patent infringement, if damages would be an adequate remedy and the public interest would not be served by the granting of an injunction.

eBay, Inc. v. MercExchange, LLC

547 U.S. 388 (2006)

eBay, Inc., operates a popular Internet Web site that allows private sellers to list goods they wish to sell, either through an auction or at a fixed price. MercExchange, LLC, holds a number of patents, including a business method patent for an electronic market designed to facilitate the sale of goods between private individuals by establishing a central authority to promote trust among participants. MercExchange sought to license this patent to eBay, as it had previously done with other companies, but the parties failed to reach an agreement. Later, MercExchange sued eBay for patent infringement in a federal district court. A jury found that MercExchange's patent was valid, that eBay had infringed it, and that MercExchange was entitled to an award of damages.

Following the jury verdict, the district court denied MercExchange's motion for a permanent injunction to bar eBay from using MercExchange's patented method. The U.S. Court of Appeals for the Federal Circuit reversed the denial of the requested injunction. The U.S. Supreme Court granted eBay's petition for a writ of certiorari.

Thomas, Justice

[In reversing, the Court of Appeals applied] its “general rule that courts will issue permanent injunctions against patent infringement absent exceptional circumstances.” We granted certiorari to determine the appropriateness of this general rule.

According to well-established principles of equity, a plaintiff seeking a permanent injunction must satisfy a four-factor test before a court may grant such relief. A plaintiff must demonstrate: (1) that it has suffered an irreparable injury; (2) that remedies available at law, such as monetary damages, are inadequate to compensate for that injury; (3) that, considering the balance of hardships between the plaintiff and defendant, a remedy in equity is warranted; and (4) that the public interest would not be disserved by a permanent injunction. The decision to grant or deny permanent injunctive relief is an act of equitable discretion by the district court, reviewable on appeal for abuse of discretion.

These familiar principles apply with equal force to disputes arising under the Patent Act. As this Court has long recognized, “a major departure from the long tradition of equity practice should not be lightly implied.” [Case citation omitted.] Nothing in the Patent Act indicates that Congress intended such a departure. To the contrary, the Patent Act expressly provides that injunctions “may” issue “in accordance with the principles of equity.” 35 U.S.C. § 283.

To be sure, the Patent Act also declares that “patents shall have the attributes of personal property,” § 261, including “the right to exclude others from making, using, offering for sale, or selling the invention,” § 154(a)(1). According to the Court of Appeals, this statutory right to exclude alone justifies its general rule in favor of permanent injunctive relief. But the creation of a right is distinct from the provision of remedies for violations of that right. Indeed, the Patent Act itself indicates that patents shall have the attributes of personal property “[s]ubject to the provisions of this title,” 35 U.S.C. § 261, including, presumably, the provision that injunctive relief “may” issue only “in accordance with the principles of equity,” § 283.

This approach is consistent with our treatment of injunctions under the Copyright Act. Like a patent owner, a copyright holder possesses “the right to exclude others from using his property.” [Case citation omitted.] Like the Patent Act, the Copyright Act provides that courts “may” grant injunctive relief “on such terms as it may deem reasonable to prevent or restrain infringement of a copyright.” 17 U.S.C. § 502(a). And as in our decision today, this Court has consistently rejected invitations to replace traditional equitable considerations with a rule that an injunction automatically follows a determination that a copyright has been infringed.

Neither the District Court nor the Court of Appeals below fairly applied these traditional equitable principles in deciding respondent's motion for a permanent injunction. Although the District Court recited the traditional four-factor test, it appeared to adopt certain expansive principles suggesting that injunctive relief could not issue in a broad swath of cases. Most notably, it concluded that a “plaintiff's willingness to license its patents” and “its lack of commercial activity in practicing the patents” would be sufficient to establish that the patent holder would not suffer irreparable harm if an injunction did not issue. But traditional equitable principles do not permit such broad classifications. For example, some patent holders, such as university researchers or self-made inventors, might reasonably prefer to license their patents, rather than undertake efforts to secure the financing necessary to bring their works to market themselves. Such patent holders may be able to satisfy the traditional four-factor test, and we see no basis for categorically denying them the opportunity to do so. To the extent that the District Court adopted such a categorical rule, then, its analysis cannot be squared with the principles of equity adopted by Congress.

In reversing the District Court, the Court of Appeals departed in the opposite direction from the four-factor test. The court articulated a “general rule,” unique to patent disputes, “that a permanent injunction will issue once infringement and

validity have been adjudged.” The court further indicated that injunctions should be denied only in the “unusual” case, under “exceptional circumstances” and “in rare instances . . . to protect the public interest.” Just as the District Court erred in its categorical denial of injunctive relief, the Court of Appeals erred in its categorical grant of such relief.

Because we conclude that neither court below correctly applied the traditional four-factor framework that governs the award of injunctive relief, we vacate the judgment of the Court of Appeals, so that the District Court may apply that framework in the first instance. In doing so, we take no position on whether permanent injunctive relief should or should not issue in this particular case, or indeed in any number of other disputes arising under the Patent Act. We hold only that the decision whether to grant or deny injunctive relief rests within the equitable discretion of the district courts, and that such discretion must be exercised consistent with traditional principles of equity, in patent disputes no less than in other cases governed by such standards.

Court of Appeals judgment vacated and case remanded for further proceedings.

Roberts, Chief Justice, joined by Justices Scalia and Ginsburg, concurring

I agree with the Court’s holding [and] I join the opinion of the Court. That opinion rightly rests on the proposition that “a major departure from the long tradition of equity practice should not be lightly implied.” [Case citation omitted.]

From at least the early 19th century, courts have granted injunctive relief upon a finding of infringement in the vast majority of patent cases. This “long tradition of equity practice” . . . does not entitle a patentee to a permanent injunction or justify a general rule that such injunctions should issue. At the same time, there is a difference between exercising equitable discretion pursuant to the established four-factor test and writing on an entirely clean slate. When it comes to discerning and applying those standards, in this area as others, “a page of history is worth a volume of logic.” [Case citation omitted.]

Defenses to Patent Infringement One defense to a patent infringement suit is that the subject matter of the alleged infringement is neither within the literal scope of the patent nor substantially equivalent to the patented invention. This defense centers around the assertion that the defendant “designed around” the patent.

Kennedy, Justice, joined by Justices Stevens, Souter, and Breyer, concurring

The Court is correct . . . to hold that courts should apply the well-established, four-factor test—without resort to categorical rules—in deciding whether to grant injunctive relief in patent cases. The Chief Justice is also correct that history may be instructive in applying this test. The lesson of the historical practice, [however], is most helpful and instructive when the circumstances of a case bear substantial parallels to litigation the courts have confronted before.

In cases now arising trial courts should bear in mind that in many instances the nature of the patent being enforced and the economic function of the patent holder present considerations quite unlike earlier cases. An industry has developed in which firms use patents not as a basis for producing and selling goods but, instead, primarily for obtaining licensing fees. For these firms, an injunction, and the potentially serious sanctions arising from its violation, can be employed as a bargaining tool to charge exorbitant fees to companies that seek to buy licenses to practice the patent. When the patented invention is but a small component of the product the companies seek to produce and the threat of an injunction is employed simply for undue leverage in negotiations, legal damages may well be sufficient to compensate for the infringement and an injunction may not serve the public interest. In addition injunctive relief may have different consequences for the burgeoning number of patents over business methods, which were not of much economic and legal significance in earlier times. The potential vagueness and suspect validity of some of these patents may affect the calculus under the four-factor test.

The equitable discretion over injunctions, granted by the Patent Act, is well-suited to allow courts to adapt to the rapid technological and legal developments in the patent system. For these reasons it should be recognized that district courts must determine whether past practice fits the circumstances of the cases before them. With these observations, I join the opinion of the Court.

The alleged infringer may also defend by attacking the validity of the patent. Usually, the patent invalidity defense rests on the argument that the invention was not sufficiently novel or was obvious, and thus did not merit a patent. Despite the fact that the patent was issued by the supposed experts at the U.S. Patent and Trademark

Office (PTO), courts have the ability to second-guess the PTO and order the cancellation of a patent on the ground of invalidity. Challenges to the validity of patents prove to be successful with reasonable frequency.

One may also challenge a patent's validity without first being sued for infringement by filing a declaratory judgment action that seeks a court ruling of invalidity. What if one who wants to challenge the validity of the patent is a party to a licensing agreement with the patent owner? A formerly applicable rule provided that the patent challenger could not raise the issue of patent invalidity without first breaching the licensing agreement by refusing to pay the licensing fees and thereby risking an infringement lawsuit. In *MedImmune v. Genentech*, 127 S. Ct. 764 (2007), however, the U.S. Supreme Court held that the licensee need not breach the licensing agreement as a precondition to taking legal action to challenge the patent's validity.

In appropriate cases, the defendant can assert that the patentee has committed *patent misuse*. This is behavior that unjustifiably exploits the patent monopoly. For example, the patentee may require the purchaser of a license on his patent to buy his unpatented goods, or may tie the obtaining of a license on one of his patented inventions to the purchase of a license on another. One who refuses the patentee's terms and later infringes the patent may attempt to escape liability by arguing that the patentee misused his monopoly position.

Current Issues As this book went to press in 2008, various patent law issues were acquiring public attention. Most of these issues had a common ring to them: the notion among critics that the patent rights pendulum may have swung too far in favor of patent owners. For instance, the issuance of business method patents—first held appropriate in a late 1990s decision of the U.S. Court of Appeals for the Federal Circuit—continued to be controversial. Critics assert that many of the patents issued for business methods should never have been granted because the methods were nonnovel, obvious retreads of old business practices with merely a modern, Internet-oriented gloss placed on them. Thus, the argument goes, parties who should have been free to use certain business methods have had to expend time and money challenging the patents' validity. Although the continued patentability (and perhaps special conditions of patentability) of business methods could become the subject of legislative treatment at some future point, Congress had not taken such action as of the time this book went to press.

In recent years, other critics of the patent regime have lamented the size of the awards of damages sometimes

granted to patent owners when they win infringement cases. Still others have seen a problem with so-called “patent trolls”—parties that acquire patents from others, not for the purpose of producing the patented invention themselves but solely in order to exercise licensing leverage against users of the invention. Justice Kennedy's concurrence in *eBay v. MercExchange*, which appears above, suggests such a concern. Others, however, do not regard patent trolls as problematic. Legislative proposals regarding damages rules and trolling behavior have been floated but had not advanced beyond preliminary stages as of 2008.

Finally, those who regard patent law as having swung too far in favor of patent owners should take note of the Supreme Court's recent decisions in the *KSR v. Teleflex*, *eBay v. MercExchange*, *Quanta Computers v. LG Electronics*, and *MedImmune v. Genentech* cases (which either appear earlier as text cases or are discussed in earlier sections). In each of those cases, the Court's decision seems more aligned with the interests of users and of the public than with advancing or expanding the rights of patent owners.

LOG ON

United States government Web sites contain a wealth of information on patent, copyright, and trademark law and procedures. For information on patents and trademarks, visit the site of the U.S. Patent and Trademark Office, at www.uspto.gov. Information on copyrights may be found at www.loc.gov/copyright, the site of the U.S. Copyright Office.

Copyrights Copyright law gives certain exclusive rights to creators of *original works of authorship*. It prevents others from using their work, gives them an incentive to innovate, and thereby benefits society. Yet copyright law also tries to balance these purposes against the equally compelling public interest in the free movement of ideas, information, and commerce. It does so mainly by limiting the intellectual products it protects and by allowing the fair use defense described later.

Coverage The federal Copyright Act protects a wide range of works of authorship, including books, periodical articles, dramatic and musical compositions, works of art, motion pictures and other audiovisual works, sound recordings, lectures, computer programs, and architectural plans. To merit copyright protection, such works must be *fixed*—set out in a tangible medium of expression

from which they can be perceived, reproduced, or communicated. They also must be *original* (the author's own work) and *creative* (reflecting exercise of the creator's judgment). Unlike the inventions protected by patent law, however, copyrightable works need not be novel.

Copyright protection does not extend to ideas, facts, procedures, processes, systems, methods of operation, concepts, principles, or discoveries. Instead, it protects the *ways in which they are expressed*. The story line of a play, for instance, is protected, but the ideas, themes, or messages underlying it are not. Although there is no copyright protection over facts, the expression in nonfiction works and compilations of fact is protected.

Computer programs involve their own special problems. It is fairly well settled that copyright law protects a program's *object code* (program instructions that are machine-readable but not intelligible to humans) and *source code* (instructions intelligible to humans). There is less agreement, however, about the copyrightability of a program's nonliteral elements such as its organization, its structure, and its presentation of information on the screen. Most courts that have considered the issue hold that nonliteral elements may sometimes be protected by copyright law, but courts differ about the extent of this protection.

Creation and Notice A copyright comes into existence upon the creation and fixing of a protected work. Although a copyright owner may register the copyright with the U.S. Copyright Office, registration is not necessary for the copyright to exist. However, registration normally is a procedural prerequisite to filing a suit for copyright infringement. Even though it is not required, copyright owners often provide *notice* of the copyright. Federal law authorizes a basic form of notice for use with most copyrighted works. A book, for example, might include the term *Copyright* (or the abbreviation *Copr.* or the symbol ©), the year of its first publication, and the name of the copyright owner in a location likely to give reasonable notice to readers.

Duration The U.S. Constitution's Copyright Clause (Article I, section 8) empowers Congress to "promote the progress of Science and useful arts" by enacting copyright and patent laws that "secur[e] for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries." Thus, copyrights and patents cannot last forever. Even so, the history of copyright protection in the United States has featured various significant lengthenings of the "limited

time" a copyright endures. When a copyright's duration ends, the underlying work enters the public domain and becomes available for any uses other parties wish to make of it. The former copyright owner, therefore, loses control over the work and forfeits what had been valuable legal rights.

With the enactment of the Sonny Bono Copyright Term Extension Act (hereinafter "CTEA") in 1998, Congress conferred a substantial benefit on copyright owners. The CTEA added 20 years to the duration of copyrights, not only for works created after the CTEA's enactment *but also for any preexisting work that was still under valid copyright protection* as of the CTEA's October 1998 effective date. Copyright owners—especially some high-profile corporations whose copyrights on older works would soon have expired if not for the enactment of the CTEA—mounted a significant lobbying effort in favor of the term extension provided by the CTEA.

The CTEA's effect cannot be understood without discussion of the copyright duration rules that existed immediately before the CTEA's enactment. One set of rules applied to works created in 1978 or thereafter; another set applied to pre-1978 works. The copyright on pre-1978 works was good for a term of 28 years from first publication of the work, plus a renewal term of 47 years. (The renewal term had been only 28 years until Congress changed the law roughly three decades ago and added 19 more years to the renewal term for any work then under valid copyright protection.) As a result, 75 years of protection was available for pre-1978 works.

For works created in 1978 or thereafter, Congress scrapped the initial-term-plus-renewal-term approach, opting instead for a normally applicable rule that the copyright lasts for the life of the author/creator plus 50 years. This basic duration rule did not apply, however, if the copyrighted work, though created in 1978 or thereafter, was a work-for-hire. (The two types of work-for-hire will be explained below.) In a work-for-hire situation, the copyright would exist for 75 years from first publication of the work or 100 years from creation of it, whichever came first.

The CTEA tacked on 20 years to the durations contemplated by the rules discussed in the preceding two paragraphs. A pre-1978 work that was still under valid copyright protection as of late 1998 (when the CTEA took effect) now has a total protection period of 95 years from first publication—a 28-year initial term plus a renewal term that has been lengthened from 47 to 67 years. The copyright on Disney's "Steamboat Willie" cartoon—best known for its introduction of the famous

Mickey Mouse character—serves as an example. The protection period for the Steamboat Willie copyright began to run in the late 1920s, when the cartoon was released and distributed (i.e., published, for purposes of copyright law). Given the rule that existed immediately before the CTEA's enactment (an initial term of 28 years plus a renewal term of 47 years), the Steamboat Willie copyright would have expired within the first few years of the current century. The CTEA, however, gave Disney an additional 20 years of rights over the Steamboat Willie cartoon before it would pass into the public domain.

With the enactment of the CTEA, the basic duration rule for works created in 1978 or thereafter is now life of the author/creator plus 70 years (up from 50). The duration rule for a work-for-hire is now 95 years from first publication (up from 75) or 120 years from creation (up from 100), whichever comes first.

Critics of the CTEA mounted a constitutional challenge to the statute in *Eldred v. Ashcroft*, a case that made its way to the Supreme Court. Those challenging the CTEA argued that the statute violated the purpose of the “limited times” provision in the Constitution’s Copyright Clause by making copyright protection so lengthy in duration. They also contended that the Copyright Clause’s language empowering Congress to enact copyright laws to “promote the progress of science and useful arts” served as an *incentive-to-create* limitation on the exercise of that power, and that the CTEA—at least insofar as it applied to works already created as of 1998—unconstitutionally violated the *incentive-to-create* limitation. In its 2003 decision in *Eldred*, the Supreme Court rejected the constitutional challenge to the CTEA. The Court concluded that the CTEA may have been an unwise enactment as a matter of public policy, but that it fell within the authority extended to Congress by the Copyright Clause.

Works-for-Hire A work-for-hire exists when (1) an employee, in the course of her regular employment duties, prepares a copyrightable work; or (2) an individual or corporation and an independent contractor (i.e., nonemployee) enter into a written agreement under which the independent contractor is to prepare, for the retaining individual or corporation, one of several types of copyrightable works designated in the Copyright Act. In the first situation, the employer is legally classified as the work’s author and copyright owner. In the second situation, the party who (or which) retained the independent contractor is considered the resulting work’s author and copyright owner.

Ownership Rights A copyright owner has exclusive rights to reproduce the copyrighted work, prepare derivative works based on it (e.g., a movie version of a novel), and distribute copies of the work by sale or otherwise. With certain copyrighted works, the copyright owner also obtains the exclusive right to perform the work or display it publicly. The *Perfect 10* case, which appears later in this chapter’s section on fair use, contains discussion of the rights held by copyright owners.

Copyright ownership initially resides in the creator of the copyrighted work, but the copyright may be transferred to another party. Also, the owner may individually transfer any of her ownership rights, or a portion of each, without losing ownership of the remaining rights. Most transfers of copyright ownership require a writing signed by the owner or his agent. The owner may also retain ownership while licensing the copyrighted work or a portion of it.

Infringement Those who violate any of the copyright owner’s exclusive rights may be liable for copyright infringement. Infringement is fairly easily proven when direct evidence of significant copying exists; verbatim copying of protected material is an example. Usually, however, proof of infringement involves establishing that (1) the defendant had *access* to the copyrighted work; (2) the defendant engaged in enough *copying*—either deliberately or subconsciously—that the resemblance between the allegedly infringing work and the copyrighted work does not seem coincidental; and (3) there is *substantial similarity* between the two works.

Access may be proven circumstantially, such as by showing that the copyrighted work was widely circulated. The copying and substantial similarity elements, which closely relate to each other, necessarily involve discretionary case-by-case determinations. Of course, the copying and substantial similarity must exist with regard to the copyrighted work’s protected expression. Copying of general ideas, facts, themes, and the like (i.e., copying of unprotected matter) is not infringement. The defendant’s having paraphrased protected expression does not constitute a defense to what otherwise appears to be infringement. Neither does the defendant’s having credited the copyrighted work as the source from which the defendant borrowed.

Recent years’ explosion in Internet usage has led to difficult copyright questions. For instance, services such as Napster, Grokster, and StreamCast have allowed easy and free-of-charge access to musical recordings in digital files. Owners of copyrights on songs and recordings have

CYBERLAW IN ACTION

In the Digital Millennium Copyright Act of 1998 (DMCA), Congress addressed selected copyright issues as to which special rules seemed appropriate, in view of recent years' technological advances and explosion in Internet usage. One such issue was how narrowly or broadly to define the class of parties potentially liable for copyright infringement in an Internet context. If, without Osborne's consent, Jennings posts Osborne's copyrighted material in an online context made available by Devaney (an Internet service provider), is only Jennings liable to Osborne, or is Devaney also liable? In the DMCA, Congress enacted "safe harbor" provisions designed to protect many service providers such as Devaney from liability for the actions of direct infringers who posted or transmitted copyrighted material.

The DMCA also addressed the actions of persons who seek to circumvent technological measures (e.g., encryption, password-protection measures, and the like) that control access to or copying of a copyrighted work. With certain narrowly defined exceptions of very limited applicability, Congress outlawed both (1) the circumvention of such technological measures and (2) the activity of trafficking in programs or other devices meant to accomplish such circumvention.

In *Universal City Studios, Inc. v. Corley*, 273 F.3d 429 (2d Cir. 2001), the U.S. Court of Appeals for the Second Circuit rejected the arguments of an individual (Corley) who had been held liable to various movie studios for violating the antitrafficking provisions of the DMCA. Corley had written an article about the decryption program known as "DeCSS" and had posted the article on his Web site, along with a copy of the DeCSS program itself and links to other sites where DeCSS could be found. DeCSS had been developed by parties other than Corley as a means of decrypting the "CSS" encryption technology that movie studios place on copyrighted DVDs of their movies. If it is not circumvented, CSS prevents the

copying of the movie that appears on the DVD. A federal district court, holding that Corley had violated the DMCA's antitrafficking provisions, issued an injunction barring Corley from posting DeCSS on his Web site and from posting links to other sites where DeCSS could be found.

On appeal, Corley argued that his publication of the DeCSS program's codes was speech protected by the First Amendment and that the application of the DMCA to him was thus unconstitutional. The Second Circuit concluded that Corley was to some extent engaged in speech but that his actions also had a substantial nonspeech component. In any event, the Second Circuit reasoned, the DMCA's antitrafficking provisions served a substantial government interest in protecting the rights of intellectual property owners and were content-neutral restrictions unrelated to the suppression of free expression. The court therefore held that the antitrafficking provisions did not violate the First Amendment.

Some critics of the DMCA's anticircumvention and antitrafficking provisions have asserted that those provisions may operate to restrict users' ability to make fair use of copyrighted materials. Evidently attempting to convert this policy-based objection about what Congress enacted into a constitutional objection on which the court might be more inclined to rule, Corley argued that the fair use doctrine was required by the First Amendment and that the DMCA, insofar as it limited users' ability to rely on the fair use doctrine, was unconstitutional. The Second Circuit called it "extravagant" to assert that the fair use doctrine was constitutionally required, for there was no substantial authority to support such a contention. Moreover, the court reasoned that even if Corley's contention were not otherwise questionable, "[f]air use has never been held to be a guarantee of access to copyrighted material in order to copy it by the fair user's preferred technique or in the format of the original."

expressed concern over these services and have resorted to litigation against such providers on the theory that they materially contributed to or induced copyright infringement by their users. In its 2005 *Grokster* decision, the Supreme Court focused on the inducement basis for imposing liability on services such as Grokster and StreamCast. That case follows shortly.

The basic recovery for copyright infringement is the owner's actual damages plus the attributable profits received by the infringer. In lieu of the basic remedy, however, the plaintiff may usually elect to receive *statutory*

damages. The statutory damages set by the trial judge or jury must fall within the range of \$750 to \$30,000 unless the infringement was willful, in which event the maximum rises to \$150,000. These limits do not apply if the plaintiff elects the basic remedy, however. Injunctive relief and awards of costs and attorney's fees are possible in appropriate cases. Although it seldom does so, the federal government may pursue a criminal copyright infringement prosecution if the infringement was willful and for purposes of commercial advantage or private financial gain.

Metro-Goldwyn-Mayer Studios, Inc. v. Grokster, Ltd. 545 U.S. 913 (U.S. Sup. Ct. 2005)

Grokster, Ltd., and StreamCast Networks, Inc., defendants in the case described below, distributed free software products allowing computer users to share electronic files through peer-to-peer networks. The networks are called “peer-to-peer” because users’ computers communicate directly with each other rather than through central servers. Because they need no central computer server to mediate the exchange of information or files among users, the high-bandwidth communications capacity for a server may be dispensed with, and the need for costly server storage space is eliminated. The lack of a need for a central server eliminates possible server glitches and resulting server downtime. Given these benefits in security, cost, and efficiency, peer-to-peer networks are employed to store and distribute electronic files by universities, government agencies, corporations, and libraries.

Other users of peer-to-peer networks include individual recipients of Grokster’s and StreamCast’s software. Although the networks these persons enjoy through using the software can be employed for the sharing of any type of digital file, evidence produced in the case described below indicated that most users employed the networks in order to share copyrighted music and video files without authorization. Numerous copyright owners—including motion picture studios, recording companies, songwriters, and music publishers, but referred to here as “MGM” for convenience—filed separate lawsuits against Grokster and StreamCast in an effort to have them held liable for their users’ copyright infringements. The various cases were consolidated into one case in a federal district court.

Grokster’s software employed the FastTrack technology. StreamCast distributed a similar product except that its software, called Morpheus, relied on the Gnutella technology. A user who downloaded and installed either software possessed the protocol to send requests for files directly to the computers of others using software compatible with FastTrack or Gnutella. If the requested file was found, the requesting user could download it directly from the computer where it was located. The copied file would be placed in a designated sharing folder on the requesting user’s computer, where it was available for other users to download in turn, along with any other file in that folder. Grokster and StreamCast used no servers to intercept the content of the search requests or to mediate the file transfers conducted by users of the software.

Although Grokster and StreamCast therefore did not know when particular files were copied, searches using their software revealed what was available on the networks the software reached. A study by a statistician for MGM showed that nearly 90 percent of the files available for download on the FastTrack system were copyrighted works. Grokster and StreamCast disputed this figure and argued that free copying of copyrighted works is sometimes authorized by the copyright holders. The defendants also argued that potential noninfringing uses of their software were significant. Some musical performers, they noted, had gained new audiences by distributing their copyrighted works for free across peer-to-peer networks, and some distributors of public domain content (e.g., Shakespeare’s plays) had used peer-to-peer networks to disseminate files. MGM provided evidence tending to indicate, however, that the vast majority of users’ downloads were acts of infringement. With more than 100 million copies of the software in question having been downloaded, and billions of files being shared across the FastTrack and Gnutella networks each month, the number of instances of copyright infringement by users was potentially huge.

Grokster and StreamCast conceded that users employed their software primarily to download copyrighted files, even if the decentralized FastTrack and Gnutella networks failed to reveal which files were being copied. MGM produced evidence tending to indicate that from the time Grokster and StreamCast began to distribute their free software, each one voiced the objective that recipients use it to download copyrighted works. MGM presented further evidence suggesting that after a successful lawsuit by copyright owners effectively shut down the Napster file-sharing service, Grokster and StreamCast sought to promote their software as a device by which former Napster users could obtain ready access to desired files. Although Grokster and StreamCast distributed their software free of charge, they made money by selling advertising space and streaming the advertising to users of the software.

After discovery, all parties moved for summary judgment. The federal district court held that those who used the Grokster and StreamCast software to download copyrighted media files directly infringed MGM’s copyrights. However, the court granted summary judgment in favor of Grokster and StreamCast. Distributing their software gave rise to no liability, in the court’s view, because its use did not provide the distributors with actual knowledge of specific acts of infringement. The U.S. Court of Appeals for the Ninth affirmed, reading Sony Corp. of America v. Universal City Studios, Inc., 464 U.S. 417 (1984), as holding that distribution of a commercial product capable of substantial noninfringing uses could not give rise to contributory liability for infringement unless the distributor had actual knowledge of specific

instances of infringement and failed to act on that knowledge. Because the defendants' software was capable of substantial noninfringing uses and because the decentralized architecture of their software meant that the defendants had no actual knowledge of specific instances of infringement, the Ninth Circuit concluded that the defendants could not be held liable on a contributory infringement basis. The Ninth Circuit also ruled that Grokster and StreamCast could not be liable under a theory of vicarious infringement because the defendants did not monitor or control the use of the software, had no ability to supervise its use, and had no independent duty to police infringement. The U.S. Supreme Court granted MGM's petition for a writ of certiorari.

Souter, Justice

The question is under what circumstances the distributor of a product capable of both lawful and unlawful use is liable for acts of copyright infringement by third parties using the product.

MGM . . . fault[s] the Court of Appeals' holding for upsetting a sound balance between the respective values of supporting creative pursuits through copyright protection and promoting innovation in new communication technologies by limiting the incidence of liability for copyright infringement. The more artistic protection is favored, the more technological innovation may be discouraged; the administration of copyright law is an exercise in managing the trade-off.

The tension between the two values is the subject of this case, with its claim that digital distribution of copyrighted material threatens copyright holders as never before, because every copy is identical to the original, copying is easy, and many people (especially the young) use file-sharing software to download copyrighted works. [I]ndications are that the ease of copying songs or movies using software [such as] Grokster's and Napster's is fostering disdain for copyright protection. As the case has been presented to us, these fears are said to be offset by the different concern that imposing liability, not only on infringers but on distributors of software based on its potential for unlawful use, could limit further development of beneficial technologies.

The argument for imposing indirect liability in this case is, however, a powerful one, given the number of infringing downloads that occur every day using StreamCast's and Grokster's software. When a widely shared service or product is used to commit infringement, it may be impossible to enforce rights in the protected work effectively against all direct infringers, the only practical alternative being to go against the distributor of the copying device for secondary liability on a theory of contributory or vicarious infringement.

One infringes contributorily by intentionally inducing or encouraging direct infringement, and infringes vicariously by profiting from direct infringement while declining to exercise a right to stop or limit it. In the present case, MGM has argued [not only a contributory infringement theory but also] a vicarious liability theory. Because we resolve the case based on an inducement theory, there is no need to analyze separately MGM's vicarious liability theory.

Despite the currency of these principles of secondary liability, this Court has dealt with secondary copyright infringement in only one recent case. In *Sony Corp. v. Universal City Studios*, 464 U.S. 417 (1984), this Court addressed a claim that secondary liability for infringement can arise from the very distribution of a commercial product. There, the product, novel at the time, was what we know today as the videocassette recorder, or VCR. Copyright holders sued Sony, the manufacturer, claiming it was contributorily liable for infringement that occurred when VCR owners taped copyrighted programs because it supplied the means used to infringe, and it had constructive knowledge that infringement would occur. [T]he evidence showed that the principal use of the VCR was for "time-shifting," or taping a program for later viewing at a more convenient time, which the Court found to be a fair, not an infringing, use. There was no evidence that Sony had expressed an object of bringing about taping in violation of copyright or had taken active steps to increase its profits from unlawful taping. Although Sony's advertisements urged consumers to buy the VCR to "record favorite shows" or "build a library" of recorded programs, neither of these uses was necessarily infringing.

On those facts, with no evidence of stated or indicated intent to promote infringing uses, the only conceivable basis for imposing liability was on a theory of contributory infringement arising from its sale of VCRs to consumers with knowledge that some would use them to infringe. But because the VCR was "capable of commercially significant noninfringing uses," we [borrowed an approach followed in patent law] and held the manufacturer could not be faulted solely on the basis of its distribution. [This approach was designed to leave] breathing room for innovation and a vigorous commerce.

The parties . . . think the key to resolving [this case] is the *Sony* rule and, in particular, what it means for a product to be "capable of commercially significant noninfringing uses." MGM advances the argument that granting summary judgment to Grokster and StreamCast . . . gave too much weight to the value of innovative technology, and too little to the copyrights infringed by users of their software, given that 90 percent of works available on one of the networks was shown to be copyrighted. Assuming the remaining 10 percent to be its noninfringing use,

MGM says this should not qualify as “substantial.” Grokster and StreamCast reply by citing evidence that their software can be used to reproduce public domain works, and they point to copyright holders who actually encourage copying. Even if infringement is the principal practice with their software today, they argue, the noninfringing uses are significant and will grow.

We agree with MGM that the Court of Appeals misapplied *Sony*, which it read as limiting secondary liability quite beyond the circumstances to which the case applied. *Sony* barred secondary liability based on presuming or imputing intent to cause infringement solely from the design or distribution of a product capable of substantial lawful use, which the distributor knows is in fact used for infringement. The Ninth Circuit read *Sony*’s limitation to mean that whenever a product is capable of substantial lawful use, the producer can never be held contributorily liable for third parties’ infringing use of it; it read the rule as being this broad, even when an actual purpose to cause infringing use is shown by evidence independent of design and distribution of the product, unless the distributors had “specific knowledge of infringement at a time at which they contributed to the infringement, and failed to act upon that information” [quoting the Ninth Circuit’s opinion]. Because the Ninth Circuit found the StreamCast and Grokster software capable of substantial lawful use, it concluded on the basis of its reading of *Sony* that neither company could be held liable, since there was no showing that their software, being without any central server, afforded them knowledge of specific unlawful uses.

This view of *Sony*, however, was in error, converting the case from one about liability resting on imputed intent to one about liability on any theory. *Sony*’s rule limits imputing culpable intent as a matter of law from the characteristics or uses of a distributed product. But nothing in *Sony* requires courts to ignore evidence of intent if there is such evidence, and the case was never meant to foreclose rules of fault-based liability derived from the common law. Thus, where evidence goes beyond a product’s characteristics or the knowledge that it may be put to infringing uses, and shows statements or actions directed to promoting infringement, *Sony*’s . . . rule will not preclude liability.

The classic case of direct evidence of unlawful purpose occurs when one induces commission of infringement by another, or entices or persuades another to infringe, as by advertising. Thus at common law [and later under the Patent Act,] a patent defendant who “not only expected but invoked [infringing use] by advertisement” was liable for infringement “on principles recognized in every part of the law.” [Case citation omitted.]

For the same reasons that *Sony* [looked to] patent law as a model for its copyright safe-harbor rule [regarding the prospect of substantial noninfringing uses], the inducement rule, too, is a sensible one for copyright. We adopt it here,

holding that one who distributes a device with the object of promoting its use to infringe copyright, as shown by clear expression or other affirmative steps taken to foster infringement, is liable for the resulting acts of infringement by third parties. We are, of course, mindful of the need to keep from trenching on regular commerce or discouraging the development of technologies with lawful and unlawful potential. Accordingly, just as *Sony* did not find intentional inducement despite the knowledge of the VCR manufacturer that its device could be used to infringe, mere knowledge of infringing potential or of actual infringing uses would not be enough here to subject a distributor to liability. Nor would ordinary acts incident to product distribution, such as offering customers technical support or product updates, support liability in themselves. The inducement rule, instead, premises liability on purposeful, culpable expression and conduct, and thus does nothing to compromise legitimate commerce or discourage innovation having a lawful promise.

The only apparent question about treating MGM’s evidence as sufficient to withstand summary judgment under the theory of inducement goes to the need on MGM’s part to adduce evidence that StreamCast and Grokster communicated an inducing message to their software users. The classic instance of inducement is by advertisement or solicitation that broadcasts a message designed to stimulate others to commit violations. MGM claims that such a message is shown here. It is undisputed that StreamCast beamed onto the computer screens of users of Napster-compatible programs ads urging the adoption of [Streamcast’s] OpenNap program, which was designed, as its name implied, to [appeal to users] of Napster, then under attack in the courts for facilitating massive infringement. [See *A & M Records, Inc. v. Napster, Inc.*, 239 F.3d 1004 (9th Cir. 2001).] Those who accepted StreamCast’s OpenNap program were offered software to perform the same services, which a factfinder could conclude would readily have been understood in the Napster market as the ability to download copyrighted music files.

Grokster distributed an electronic newsletter containing links to articles promoting its software’s ability to access popular copyrighted music. And anyone whose Napster or free file-sharing searches turned up a link to Grokster would have understood Grokster to be offering the same file-sharing ability as Napster, and to the same people who probably used Napster for infringing downloads; that would also have been the understanding of anyone offered Grokster’s suggestively named Swaptor software, its version of OpenNap.

In StreamCast’s case, . . . the evidence just described was supplemented by other unequivocal indications of unlawful purpose in the internal communications and advertising designs aimed at Napster users. A kit developed by StreamCast

to be delivered to advertisers, for example, contained press articles about StreamCast's potential to capture former Napster users, and it introduced itself to some potential advertisers as a company "which is similar to what Napster was." It broadcast banner advertisements to users of other Napster-compatible software, urging them to adopt its OpenNap. An internal e-mail from a company executive stated: "'We have put this network in place so that when Napster pulls the plug on their free service . . . or if the Court orders them shut down prior to that . . . we will be positioned to capture the flood of their 32 million users that will be actively looking for an alternative.'" Here, the summary judgment record is replete with other evidence that Grokster and StreamCast, unlike the manufacturer and distributor in *Sony*, acted with a purpose to cause copyright violations by use of software suitable for illegal use.

Three features of this evidence of intent are particularly notable. First, each company showed itself to be aiming to satisfy a known source of demand for copyright infringement, the market comprising former Napster users. Grokster and StreamCast's efforts to supply services to former Napster users, deprived of a mechanism to copy and distribute what were overwhelmingly infringing files, indicate a principal, if not exclusive, intent on the part of each to bring about infringement. Second, this evidence of unlawful objective is given added significance by MGM's showing that neither company attempted to develop filtering tools or other mechanisms to diminish the infringing activity using their software.

Third, there is a further complement to the direct evidence of unlawful objective. It is useful to recall that StreamCast and Grokster make money by selling advertising space, by directing ads to the screens of computers employing their software. As the number of users of each program increases, advertising opportunities become worth more. While there is doubtless some demand for free Shakespeare, the evidence shows that

substantive volume is a function of free access to copyrighted work. Users seeking Top 40 songs, for example, or the latest release by Modest Mouse, are certain to be far more numerous than those seeking [free public domain works], and Grokster and StreamCast translated that demand into dollars. [T]he commercial sense of [the defendants'] enterprise turns on high-volume use, which the record shows is infringing [an extremely high percentage of the time]. The unlawful objective is unmistakable.

In addition to intent to bring about infringement and distribution of a device suitable for infringing use, the inducement theory of course requires evidence of actual infringement by recipients of the device, the software in this case. [In this case,] there is evidence of infringement on a gigantic scale, and there is no serious issue of the adequacy of MGM's showing on this point in order to survive the [defendants'] summary judgment requests.

In sum, this case is significantly different from *Sony*, and reliance on that case to rule in favor of StreamCast and Grokster was error. *Sony* dealt with a claim of liability based solely on distributing a product with alternative lawful and unlawful uses, with knowledge that some users would follow the unlawful course. The case struck a balance between the interests of protection and innovation by holding that the product's capability of substantial lawful employment should bar the imputation of fault and consequent secondary liability for the unlawful acts of others.

MGM's evidence in this case most obviously addresses a different basis of liability for distributing a product open to alternative uses. Here, evidence of the distributors' words and deeds going beyond distribution as such shows a purpose to cause and profit from third-party acts of copyright infringement.

Judgment of Court of Appeals vacated; case remanded for further proceedings.

Fair Use The Copyright Act states that uses for such purposes as criticism or comment, news reporting, teaching, scholarship, or research may be good candidates for the protection of the fair use defense against infringement liability. However, a court's fair use determination requires the weighing of factors whose application varies from case to case. These factors are (1) the purpose and character of the use, (2) the nature of the copyrighted work, (3) the amount and substantiality of the portion used in relation to the copyrighted work as a whole, and (4) the effect of the use on the potential markets for the copyrighted work or on its value. Even

one of the supposedly good candidates may be held not to be fair use once all of the factors are weighed and balanced.

The *Perfect 10* case, which follows, illustrates the application of the fair use factors and other fair use principles. Although the use at issue in *Perfect 10* was not a parody, the court engages in some discussion of why parody is often a good candidate for fair use treatment. After you read *Perfect 10*'s discussion of the fair use factors in the context of a nonparody case, think about how the factors would probably be applied in a case involving a parody of a copyrighted work.

Perfect 10, Inc. v. Amazon.com, Inc.**508 F.3d 1146 (9th Cir. 2007)**

Google Inc. operates a search engine that automatically accesses thousands of Web sites and indexes them within a database stored on Google's computers. When a user accesses the Google site and types in a search query, Google's software searches for sites responsive to the query. Google then sends relevant information to the user's computer, providing the search results in the form of text, images, or videos. The technology known as Google Image Search furnishes search results as a Web page of small images called "thumbnails," which are stored in Google's servers. The thumbnail images are reduced, lower-resolution versions of full-sized images stored on third-party computers.

When a user clicks on a thumbnail image, the user's browser program interprets HTML instructions on Google's Web page. These HTML instructions direct the browser to cause a rectangular window to appear on the user's computer screen. The browser fills the top section of the window with information from the Google Web page, including the thumbnail image and text. The HTML instructions also give the user's browser the address of the Web site publisher's computer, which stores the full-size version of the thumbnail. By following the HTML instructions, the user's browser connects to the Web site publisher's computer, downloads the full-size image, and makes the image appear at the bottom of the window on the user's screen. Google does not store the images that fill this lower part of the window and does not communicate the images to the user; Google simply provides HTML instructions directing a user's browser to access a third-party Web site. However, the top part of the window (containing the information from the Google Web page) appears to frame and comment on the bottom part of the window. Thus, the user's window appears to be filled with a single integrated presentation of the full-size image, but it is actually an image from a third-party site framed by information from Google's site. The process by which the Web page directs a user's browser to incorporate content from different computers into a single window is referred to as "in-line linking." The term "framing" refers to the process by which information from one computer appears to frame and annotate the in-line linked content from another computer.

Google generates revenue through a business program called "AdSense." Under this program, the owner of a Web site can register with Google to become an AdSense "partner." The Web site owner then places HTML instructions on its Web pages in order to signal Google's server to place relevant advertising on the Web pages. AdSense participants agree to share, with Google, the revenues that flow from such advertising.

As another revenue source, Google authorized Amazon.com to in-line link to Google's search results. Amazon.com gave its users the impression that it was providing search results, but Google actually did so. Amazon.com routed users' search queries to Google and automatically transmitted Google's responses to its users.

Perfect 10, Inc., which markets and sells copyrighted images of nude models, operates a subscription Web site. Subscribers pay a monthly fee to view Perfect 10 images in a password-protected "members' area" of the site. Google does not include the password-protected images from the members' area in Google's index or database. Perfect 10 has also licensed Fonestarz Media Limited to sell and distribute Perfect 10's reduced-size copyrighted images for download and use on cell phones.

Some Web site publishers republish Perfect 10's copyrighted images on the Internet without authorization. Google's search engine automatically indexes the Web pages containing these images and then provides thumbnail versions of images in response to user queries. When a user clicks on the thumbnail image, the user's browser accesses the third-party Web page and in-line links to the full-sized image stored on the third party's computer. This image appears, in its original context, on the lower portion of the window on the user's computer screen, framed by information from Google's Web page.

Perfect 10 sued Google, claiming that Google's thumbnail images and in-line linking to the full-size images infringed Perfect 10's copyrights on the images. Perfect 10 later filed a similar lawsuit against Amazon.com. In each case, Perfect 10 sought a preliminary injunction to prevent the defendants from continuing the actions that Perfect 10 regarded as infringing in nature. After consolidating the two cases, the federal district court denied the motion for a preliminary injunction against Amazon.com, but granted the motion for a preliminary injunction against Google in regard to its thumbnail images. In so ruling, the court held that the thumbnail images violated Perfect 10's right, as copyright owner, to display its copyrighted images, and that the thumbnail images did not amount to fair use. Concerning Google's in-line linking to the full-size images, the court held that Google's actions in that regard did not warrant preliminary injunctive relief because Google neither displayed nor distributed those images and thus did not violate rights belonging to Perfect 10. Both Google and Perfect 10 appealed to the U.S. Court of Appeals for the Ninth Circuit. The following edited version of the Ninth Circuit's opinion focuses on Perfect 10's claim against Google.

Ikuta, Circuit Judge

Preliminary injunctive relief is available to a party who demonstrates either: (1) a combination of probable success on the merits and the possibility of irreparable harm; or (2) that serious questions are raised and the balance of hardships tips in its favor. Perfect 10 claims that Google's search engine program directly infringes two exclusive rights granted to copyright holders: its display right and its distribution right. Even if [Perfect 10 establishes an apparent violation of either of these rights, Google] may avoid liability if it can establish that its use of the images is a "fair use" as set forth in [the Copyright Act].

Display Right

In considering whether Perfect 10 made a prima facie case of violation of its display right, the district court reasoned that a computer owner that stores an image as electronic information and [provides] that electronic information directly to the user is displaying the electronic information in violation of a copyright holder's exclusive display right. Conversely, the owner of a computer that does not store and serve the electronic information to a user is not displaying that information, even if such owner in-line links to or frames the electronic information. The district court referred to this test as the "server test." Applying the server test, the district court concluded that Perfect 10 was likely to succeed in its claim that Google's thumbnails constituted direct infringement but was unlikely to succeed in its claim that Google's in-line linking to full-size infringing images constituted a direct infringement. [T]his analysis comports with the language of the Copyright Act, we agree with the district court's resolution of both these issues.

Section 106(5) [of the Copyright Act] states that a copyright owner has the exclusive right "to display the copyrighted work publicly." The Copyright Act explains that "display" means "to show a copy of it, either directly or by means of a film, slide, television image, or any other device or process. . . ." 17 U.S.C. § 101. Section 101 defines "copies" as "material objects, other than phonorecords, in which a work is fixed by any method now known or later developed, and from which the work can be perceived, reproduced, or otherwise communicated, either directly or with the aid of a machine or device." Finally, [§ 101] provides that "[a] work is 'fixed' in a tangible medium of expression when its embodiment in a copy or phonorecord, by or under the authority of the author, is sufficiently permanent or stable to permit it to be perceived, reproduced, or otherwise communicated for a period of more than transitory duration."

We must now apply these definitions to the facts of this case. A photographic image is a work that is "fixed in a tangible medium of expression," for purposes of the Copyright Act,

when embodied (i.e., stored) in a computer's server (or hard disk, or other storage device). The image stored in the computer is the "copy" of the work for purposes of copyright law. The computer owner shows a copy "by means of a . . . device or process" when the owner uses the computer to fill the computer screen with the photographic image stored on that computer, or by communicating the stored image electronically to another person's computer. In sum, based on the plain language of the statute, a person displays a photographic image by using a computer to fill a computer screen with a copy of the photographic image fixed in the computer's memory.

There is no dispute that Google's computers store thumbnail versions of Perfect 10's copyrighted images and communicate copies of those thumbnails to Google's users. Therefore, Perfect 10 has made a prima facie case that Google's communication of its stored thumbnail images directly infringes Perfect 10's display right.

Google does not, however, display a copy of full-size infringing photographic images for purposes of the Copyright Act when Google frames in-line linked images that appear on a user's computer screen. Because Google's computers do not store the photographic images, Google does not have a copy of the images for purposes of the Copyright Act. In other words, Google does not have any "material objects . . . in which a work is fixed . . . and from which the work can be perceived, reproduced, or otherwise communicated" and thus cannot communicate a copy. 17 U.S.C. § 101.

Instead of communicating a copy of the image, Google provides HTML instructions that direct a user's browser to a website publisher's computer, [which] stores the full-size photographic image. Providing these HTML instructions is not equivalent to showing a copy. First, the HTML instructions are lines of text, not a photographic image. Second, HTML instructions do not themselves cause infringing images to appear on the user's computer screen. The HTML merely gives the address of the image to the user's browser. The browser then interacts with the computer that stores the infringing image. [T]his interaction . . . causes an infringing image to appear on the user's computer screen [but does not amount to a display by Google of Perfect 10's copyrighted images].

Perfect 10 argues that Google displays a copy of the full-size images by framing the full-size images, which gives the impression that Google is showing the image within a single Google webpage. While in-line linking and framing may cause some computer users to believe they are viewing a single Google webpage, the Copyright Act, unlike [trademark law], does not protect a copyright holder against acts that cause consumer confusion. [For the reasons already noted, framing of the sort relevant to this case does not constitute a display by Google of Perfect 10's copyrighted images.]

Distribution Right

The district court also concluded that Perfect 10 would not likely prevail on its claim that Google directly infringed Perfect 10's right to distribute its full-size images. The district court reasoned that distribution requires an "actual dissemination" of a copy. Because Google did not communicate the full-size images to the user's computer, Google did not distribute these images.

Again, the district court's conclusion on this point is consistent with the language of the Copyright Act. Section 106(3) provides that the copyright owner has the exclusive right "to distribute copies or phonorecords of the copyrighted work to the public by sale or other transfer of ownership, or by rental, lease, or lending." As noted, "copies" means "material objects . . . in which a work is fixed." 17 U.S.C. § 101. The Supreme Court has indicated that in the electronic context, copies may be distributed electronically. *See N.Y. Times Co. v. Tasini*, 533 U.S. 483, 498 (2001). Google's search engine communicates HTML instructions that tell a user's browser where to find full-size images on a website publisher's computer, but Google does not itself distribute copies of the infringing photographs. It is the website publisher's computer that distributes copies of the images by transmitting the photographic image electronically to the user's computer. Accordingly, the district court correctly concluded that Perfect 10 does not have a likelihood of success in proving that Google violates Perfect 10's distribution rights with respect to full-size images.

Fair Use Defense

Because Perfect 10 has succeeded in showing it would prevail in its prima facie case that Google's thumbnail images infringe Perfect 10's display rights, the burden shifts to Google to show that it will likely succeed [with the defense] that its use of thumbnails is a fair use of the images. The fair use defense permits the use of copyrighted works without the copyright owner's consent under certain situations. The defense encourages and allows the development of new ideas that build on earlier ones, thus providing a necessary counterbalance to the copyright law's goal of protecting creators' work product.

[Congress provided for the fair use defense in 17 U.S.C. § 107, which states that] "the fair use of a copyrighted work, including such use by reproduction in copies or phonorecords or by any other means . . . , for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research, is not an infringement of copyright." We must be flexible in applying a fair use analysis; it "is not to be simplified with bright-line rules, for the statute . . . calls for case-by-case analysis" [in which four factors required by § 107 are weighed and

balanced]. *Campbell v. Acuff-Rose Music, Inc.*, 510 U.S. 569, 577–78 (1994).

In applying the fair use analysis in this case, we are guided by *Kelly v. Arriba Soft Corp.*, 336 F.3d 811 (9th Cir. 2003), which considered substantially the same use of copyrighted photographic images as is at issue here. In *Kelly*, a photographer brought a direct infringement claim against Arriba, the operator of an Internet search engine. The search engine provided thumbnail versions of the photographer's images in response to search queries. We held that Arriba's use of thumbnail images was a fair use primarily based on the transformative nature of a search engine and its benefit to the public. We also concluded that Arriba's use of the thumbnail images did not harm the photographer's market for his image. [In comparing the case before us with *Kelly*, we use] the context of the four-factor fair use analysis [required by § 107].

The first factor requires a court to consider "the purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes." 17 U.S.C. § 107. The central purpose of this inquiry is to determine whether and to what extent the new work is "transformative." *Campbell*, 510 U.S. at 579. [According to *Campbell*, a new] work is "transformative" when [it] does not "merely supersede the objects of the original creation" but rather "adds something new, with a further purpose or different character, altering the first with new expression, meaning, or message." Conversely, if the new work "supersede[s] the use of the original," the use is likely not a fair use. *Harper & Row Publishers, Inc. v. Nation Enterprises*, 471 U.S. 539, 550–51 (1985) (publishing the "heart" of an unpublished work and thus supplanting the copyright holder's first publication right was not a fair use).

In *Kelly*, we concluded that Arriba's use of thumbnails was transformative because "Arriba's use of the images serve[d] a different function than Kelly's use—improving access to information on the Internet versus artistic expression." *Kelly*, 336 F.3d at 819. Although an image may have been created originally to serve an entertainment, aesthetic, or informative function, a search engine transforms the image into a pointer directing a user to a source of information. Just as a "parody has an obvious claim to transformative value" because "it can provide social benefit, by shedding light on an earlier work, and, in the process, creating a new one," *Campbell*, 510 U.S. at 579, a search engine provides social benefit by incorporating an original work into a new work, namely, an electronic reference tool. Indeed, a search engine may be more transformative than a parody because a search engine provides an entirely new use for the original work, while a parody typically has the same entertainment purpose as the original work. *See, e.g., id.* at 594–96 (holding that 2 Live Crew's parody of "Oh, Pretty Woman"

using the words “hairy woman” or “bald headed woman” was a transformative work, and thus [a strong candidate for] fair use [treatment]; *Mattel, Inc. v. Walking Mountain Productions*, 353 F.3d 792, 796–98, 800–06 (9th Cir. 2003) (concluding that photos parodying Barbie by depicting “nude Barbie dolls juxtaposed with vintage kitchen appliances” was a fair use). In other words, a search engine puts images “in a different context” so that they are “transformed into a new creation.” [Case citation omitted.]

The fact that Google incorporates the entire Perfect 10 image into the search engine results does not diminish the transformative nature of Google’s use. As the district court correctly noted, we determined in *Kelly* that even making an exact copy of a work may be transformative so long as the copy serves a different function than the original work. Here, Google uses Perfect 10’s images in a new context to serve a different purpose.

The district court nevertheless determined that Google’s use of thumbnail images was less transformative than Arriba’s use of thumbnails in *Kelly* because Google’s use of thumbnails superseded Perfect 10’s right to sell its reduced-size images for use on cell phones. The district court stated that “mobile users can download and save the thumbnails displayed by Google Image Search onto their phones,” and concluded [that] “to the extent that users may choose to download free images to their phone rather than purchase [Perfect 10’s] reduced-size images, Google’s use supersedes [Perfect 10’s].” Additionally, the district court determined that the commercial nature of Google’s use weighed against its transformative nature. Although *Kelly* held that the commercial use of the photographer’s images by Arriba’s search engine was less exploitative than typical commercial use, and thus weighed only slightly against a finding of fair use, the district court here distinguished *Kelly* on the ground that some website owners in the AdSense program had infringing Perfect 10 images on their websites. The district court held that because Google’s thumbnails “lead users to sites that directly benefit Google’s bottom line,” the AdSense program increased the commercial nature of Google’s use of Perfect 10’s images.

In conducting our case-specific analysis of fair use in light of the purposes of copyright, we must weigh Google’s superseding and commercial uses of thumbnail images against Google’s significant transformative use, as well as the extent to which Google’s search engine promotes the purposes of copyright and serves the interests of the public. Although the district court acknowledged the “truism that search engines such as Google Image Search provide great value to the public,” the district court did not expressly consider whether this value outweighed the significance of Google’s superseding use or the commercial nature of Google’s use. The Supreme Court,

however, has directed us to be mindful of the extent to which a use promotes the purposes of copyright and serves the interests of the public. See *Campbell*, 510 U.S. at 579.

We note that the superseding use in this case is not significant at present: the district court did not find that any downloads for mobile phone use had taken place. Moreover, while Google’s use of thumbnails to direct users to AdSense partners containing infringing content adds a commercial dimension that did not exist in *Kelly*, the district court did not determine that this commercial element was significant. The district court stated that Google’s AdSense programs as a whole contributed “\$630 million, or 46% of total revenues” to Google’s bottom line, but noted that this figure did not “break down the much smaller amount attributable to websites that contain infringing content.”

We conclude that the significantly transformative nature of Google’s search engine, particularly in light of its public benefit, outweighs Google’s superseding and commercial uses of the thumbnails in this case. In reaching this conclusion, we note the importance of analyzing fair use flexibly in light of new circumstances. We are also mindful of the Supreme Court’s direction that “the more transformative the new work, the less will be the significance of other factors, like commercialism, that may weigh against a finding of fair use.” *Campbell*, 510 U.S. at 579.

Accordingly, we disagree with the district court’s conclusion that because Google’s use of the thumbnails could supersede Perfect 10’s cell phone download use and because the use was more commercial than Arriba’s, this fair use factor weighed “slightly” in favor of Perfect 10. Instead, we conclude that the transformative nature of Google’s use is more significant than any incidental superseding use or the minor commercial aspects of Google’s search engine and website. Therefore, this factor weighs heavily in favor of Google.

With respect to . . . “the nature of the copyrighted work,” [the second factor required by § 107], our decision in *Kelly* is directly on point. There we held that the photographer’s images were “creative in nature” and thus “closer to the core of intended copyright protection than are more fact-based works.” However, because the photos appeared on the Internet before Arriba used thumbnail versions in its search engine results, this factor weighed only slightly in favor of the photographer.

Here, the district court found that Perfect 10’s images were creative but also previously published. The right of first publication is “the author’s right to control the first public appearance of his expression.” *Harper & Row*, 471 U.S. at 564. Because this right encompasses [what *Harper & Row* termed] “the choices of when, where, and in what form first to publish a work,” an author exercises and exhausts [the first publication] right by publishing the work in any medium. Once Perfect 10 . . . exploited

this commercially valuable right of first publication by putting its images on the Internet for paid subscribers, Perfect 10 [was] no longer entitled to the enhanced protection available for an unpublished work. Accordingly the district court did not err in holding that this factor weighed only slightly in favor of Perfect 10.

The third factor [set forth in § 107 requires consideration of] the amount and substantiality of the portion [of the copyrighted work] used, in relation to the work as a whole. [The key issue is whether the extent of the use was] “reasonable in relation to the purpose of the copying.” *Campbell*, 510 U.S. at 586. In *Kelly*, we held Arriba’s use of the entire photographic image was reasonable in light of the purpose of a search engine. Specifically, we noted, “[i]t was necessary for Arriba to copy the entire image to allow users to recognize the image and decide whether to pursue more information about the image or the originating [website].” Accordingly, we concluded that this factor did not weigh in favor of either party. Because the same analysis applies to Google’s use of Perfect 10’s image, the district court did not err in finding that this factor favored neither party.

The fourth factor is “the effect of the use upon the potential market for or value of the copyrighted work.” 17 U.S.C. § 107. In *Kelly*, we concluded that Arriba’s use of the thumbnail images did not harm the market for the photographer’s full-size images. We reasoned that because thumbnails were not a substitute for the full-sized images, they did not harm the photographer’s ability to sell or license his full-sized images. The district court here followed *Kelly*’s reasoning, holding that Google’s use of thumbnails did not hurt Perfect 10’s market for full-size images. We agree.

Perfect 10 also has a market for reduced-size images, an issue not considered in *Kelly*. The district court held that “Google’s use of thumbnails likely does harm the potential market for the downloading of [Perfect 10’s] reduced-size images onto cell phones.” The district court reasoned that persons who can obtain Perfect 10 images free of charge from Google

are less likely to pay for a download, and [that] the availability of Google’s thumbnail images would harm Perfect 10’s market for cell phone downloads. As we discussed above, the district court did not make a finding that Google users have downloaded thumbnail images for cell phone use. This potential harm to Perfect 10’s market remains hypothetical. We conclude that this factor favors neither party.

Having undertaken a case-specific analysis of all four factors, we now weigh these factors together. Google has put Perfect 10’s thumbnail images (along with millions of other thumbnail images) to a use fundamentally different than the use intended by Perfect 10. In doing so, Google has provided a significant benefit to the public. Weighing this significant transformative use against the unproven use of Google’s thumbnails for cell phone downloads, and considering the other fair use factors, all in light of the purpose of copyright, we conclude that Google’s use of Perfect 10’s thumbnails is a fair use. [Because the district court erred in concluding that Google is not likely to succeed with the fair use defense,] we vacate the preliminary injunction regarding Google’s use of thumbnail images.

District court’s preliminary injunction against Google vacated.

Note: In a portion of the opinion not included here, the Ninth Circuit affirmed the district court’s holdings that Amazon.com had neither displayed nor distributed Perfect 10’s copyrighted images and that, accordingly, a preliminary injunction against Amazon.com would be inappropriate. In another portion of the opinion not included here, the Ninth Circuit remanded the case to the district court for further consideration of Perfect 10’s alternative claims that Google and Amazon.com contributed to other parties’ acts of infringement or should be held vicariously liable for those acts. The Ninth Circuit determined that additional fact-finding and a more expansive inquiry on the part of the district court would be necessary in order for the contributory and vicarious infringement claims to be fairly evaluated.

Trademarks Trademarks help purchasers identify favored products and services. For this reason, they also give sellers and manufacturers an incentive to innovate and strive for quality. However, both these ends would be defeated if competitors were free to appropriate each other’s trademarks. Thus, the federal Lanham Act protects trademark owners against certain uses of their marks by third parties.³

³In addition, the owner of a trademark may enjoy legal protection under common law trademark doctrines and state trademark statutes.

Protected Marks The Lanham Act recognizes four kinds of marks. It defines a **trademark** as any word, name, symbol, device, or combination thereof used by a manufacturer or seller to identify its products and distinguish them from the products of competitors. Although trademarks consisting of single words or names are most commonly encountered, federal trademark protection has sometimes been extended to colors, pictures, label and package designs, slogans, sounds, arrangements of numbers and/or letters (e.g., “7-Eleven”), and shapes of goods or their containers (e.g., Coca-Cola bottles).

Ethics in Action

Significant ethical issues may arise as part of the clash between intellectual property rights and the claims of those who wish to make use of the protected invention, work, or item. Consider, for instance, these copyright-related questions:

- Is it ethical to use a Grokster-like service to obtain free-of-charge access to copyrighted musical compositions and recordings? Does it make a difference if the user downloads music only for his or her own personal use, as opposed to sharing files with other users? Does it make a difference whether the record companies supposedly have—or have not—made significant profits already on their copyrighted recordings? Is it ethical for record companies to seek, from Internet access providers, the names of their customers who

have a significant history of using Grokster-like services? (In thinking about these questions, you may find it useful to review the ethical theories discussed in Chapter 4.)

- If one has a plausible claim to the protection of the fair use doctrine, is it ethical to use portions of another party's copyrighted work even though the copyright owner has refused to grant permission for the use?
- How would profit maximizers, utilitarians, and rights theorists, respectively, be likely to assess the lobbying efforts of copyright owners who desired the significant increase in copyright duration that Congress enacted in the Sonny Bono Copyright Term Extension Act of 1998? (Feel free to review Chapter 4's discussion of the theories referred to in this question.)

Service marks resemble trademarks but identify and distinguish services. **Certification marks** certify the origin, materials, quality, method of manufacture, and other aspects of goods and services. Here, the user of the mark and its owner are distinct parties. A retailer, for example, may sell products bearing the Good Housekeeping Seal of Approval. **Collective marks** are trademarks or service marks used by organizations to identify themselves as the source of goods or services. Trade union and trade association marks fall into this category. Although all four kinds of marks receive federal protection, this chapter focuses on trademarks and service marks, using the terms *mark* or *trademark* to refer to both.

Distinctiveness Because their purpose is to help consumers identify products and services, trademarks must be *distinctive* to merit maximum Lanham Act protection. Marks fall into five general categories of distinctiveness (or nondistinctiveness):

1. Arbitrary or fanciful marks. These marks are the most distinctive—and the most likely to be protected—because they do not describe the qualities of the product or service they identify. The “Exxon” trademark is an example.

2. Suggestive marks. These marks convey the nature of a product or service only through imagination, thought, and perception. They do not actually describe the underlying product or service. The “Dietene” trademark for a dietary food supplement is an example. Although not

as clearly distinctive as arbitrary or fanciful marks, suggestive marks are nonetheless classified as distinctive. Hence, they are good candidates for protection.

3. Descriptive marks. These marks directly describe the product or service they identify (e.g., “Realemon,” for bottled lemon juice). Descriptive marks are not protected unless they acquire *secondary meaning*. This occurs when their identification with a particular source of goods or services has become firmly established in the minds of a substantial number of buyers. “Realemon,” of course, now has secondary meaning. Among the factors considered in secondary-meaning determinations are the length of time the mark has been used, the volume of sales associated with that use, and the nature of the advertising employing the mark. When applied to a package delivery service, for instance, the term *overnight* is usually descriptive and thus not protectible. It may come to deserve trademark protection, however, through long use by a single firm that advertised it extensively and made many sales while doing so. As will be seen, the same approach is taken concerning deceptively misdescriptive and geographically descriptive marks.

4. Marks that are not inherently distinctive. Although these marks are not distinctive in the usual senses of arbitrary nature, fanciful quality, or suggestiveness, proof of secondary meaning effectively makes these marks distinctive. They are therefore protectible if secondary meaning exists. The Supreme Court has held that under

appropriate circumstances, product color is a potentially protectible trademark of this type.

5. Generic terms. Generic terms (e.g., “diamond” or “truck”) simply refer to the general class of which the particular product or service is one example. Because any seller has the right to call a product or service by its common name, generic terms are ineligible for trademark protection.

Federal Registration Once the seller of a product or service uses a mark in commerce or forms a bona fide intention to do so very soon, she may apply to register the mark with the U.S. Patent and Trademark Office. The office reviews applications for distinctiveness. Its decision to deny or grant the application may be contested by the applicant or by a party who feels that he would be injured by registration of the mark. Such challenges may eventually reach the federal courts.

Trademarks of sufficient distinctiveness are placed on the Principal Register of the Patent and Trademark Office. A mark’s inclusion in the Principal Register (1) is prima facie evidence of the mark’s ownership, validity, and registration (which is useful in trademark infringement suits); (2) gives nationwide constructive notice of the owner’s claim of ownership (thus eliminating the need to show that the defendant in an infringement suit had notice of the mark); (3) entitles the mark owner to assistance from the Bureau of Customs in stopping the importation of certain goods that, without the consent of the mark owner, bear a likeness of the mark; and (4) means that the mark will be incontestable after five years of registered status (as described later).

Even though they are not distinctive, certain other marks may merit placement on the Principal Register if they have acquired secondary meaning. These include (1) marks that are *not inherently distinctive* (as discussed earlier); (2) *descriptive marks* (as discussed earlier); (3) *deceptively misdescriptive* marks (such as “Dura-Skin,” for plastic gloves); (4) *geographically descriptive* marks (such as “Indiana-Made”); and (5) marks that are *primarily a surname* (because as a matter of general policy, persons who have a certain last name should be fairly free to use that name in connection with their businesses). Once a mark in one of these classifications achieves registered status, the mark’s owner obtains the legal benefits described in the previous paragraph.

Regardless of their distinctiveness, however, some kinds of marks are denied placement on the Principal

Register. These include marks that (1) consist of the flags or other insignia of governments; (2) consist of the name, portrait, or signature of a living person who has not given consent to the trademark use; (3) are immoral, deceptive, or scandalous; or (4) are likely to cause confusion because they resemble a mark previously registered or used in the United States.

Transfer of Rights Because of the purposes underlying trademark law, transferring trademark rights is more difficult than transferring copyright or patent interests. A trademark owner may license the use of the mark, but only if the owner reserves control over the nature and quality of the goods or services as to which the licensee will use the mark. An uncontrolled “naked license” would allow the sale of goods or services bearing the mark but lacking the qualities formerly associated with it, and could confuse purchasers. Trademark rights may also be assigned or sold, but only along with the sale of the goodwill of the business originally using the mark.

Losing Federal Trademark Protection Federal registration of a trademark lasts for 10 years, with renewals for additional 10-year periods possible. However, trademark protection may be lost before the period expires. The government must cancel a registration six years after its date unless the registrant files with the Patent and Trademark Office, within the fifth and sixth years following the registration date, an affidavit detailing that the mark is in use or explaining its nonuse.

Any person who believes that he has been or will be damaged by a mark’s registration may petition the Patent and Trademark Office to cancel that registration. Normally, the petition must be filed within five years of the mark’s registration, because the mark becomes *incontestable* regarding goods or services with which it has continuously been used for five consecutive years after the registration. A mark’s incontestability means that the permissible grounds for canceling its registration are limited. Even an incontestable mark, however, may be canceled *at any time* if, among other things, it was obtained by fraud, has been abandoned, or has become the generic name for the goods or services it identifies. *Abandonment* may occur through an express statement or agreement to abandon, through the mark’s losing its significance as an indication of origin, or through the owner’s failure to use it. A mark acquires a *generic meaning* when it comes to refer to a class of

The Global Business Environment

Piracy and other unauthorized uses of American goods or technology protected by U.S. patent, copyright, and trademark law have become a major problem of American businesses. For example, foreign jeans manufacturers may without authorization place the Levi's label on their jeans, thereby damaging the business of Levi Strauss & Co. by depriving it of some of the jeans' market and damaging the value of the Levi trademark, especially if the imported jeans are of inferior quality. This is an example of **counterfeit goods**—goods that copy or otherwise purport to be those of the trademark owner whose mark has been unlawfully used on the nongenuine goods. Counterfeit goods may also unlawfully appropriate patented technology or copyrighted material. For example, a foreign musical recording company may pirate the latest Beck album and import thousands of copies of it into the United States without copyright permission.

American firms harmed by the importation of counterfeit goods may obtain injunctions and damages under the Tariff Act of 1930, the Lanham Act, the Copyright Act, and the patent statute. In addition, the Trademark Counterfeiting Act of 1984 establishes civil and criminal penalties for counterfeiting goods. It also allows an American firm to recover from a counterfeiter three times its damages or three times the counterfeiter's profits (whichever is greater).

Patent, copyright, and trademark piracy is increasing in many parts of the world, especially in developing nations. Some developing nations believe that technology should be transferred freely to foster their economic growth. Consequently, they either encourage piracy or choose not to oppose it.

Gray market goods are goods lawfully bearing trademarks or using patents and copyrighted material but entering the American market without authorization. For example, Parker Pen Co. may authorize a Japanese manufacturer to make and sell Parker pens only in Japan. When an American firm imports the Japanese-made Parker pens into the United States, the goods become gray market goods.

While importing gray market goods may violate the contract between the American firm and its foreign licensee, it is not clear in what contexts it violates U.S. importation, trademark, patent, or copyright law. Some courts find a Lanham Act or Tariff Act violation, but other courts do not. The Trademark Counterfeiting Act of 1984 specifically excludes gray market goods from its coverage. The Copyright Act deals with gray market goods in a provision barring the “[i]mportation into the United States, without the authority of the owner of the copyright . . . of copies or phonorecords of a work that has been acquired outside the United States.” Whether the items may lawfully enter the United States depends, therefore, on whether the copyright owner has provided “authority” for this to occur.

products or services rather than a particular source's product or service. For example, this has happened to such once-protected marks as aspirin, escalator, and thermos.

Trademark Infringement A trademark is infringed when, without the owner's consent, another party uses a substantially similar mark in connection with the sale of goods or services and this use is likely to cause confusion concerning their source or concerning whether there is an endorsement relationship or other affiliation between the mark's owner and the other party. The *Louis Vuitton* case, which appears later in the chapter, deals with trademark infringement. It also discusses many of the factors courts consider when determining whether the use is likely to cause confusion. A trademark owner who wins an infringement suit may obtain an injunction against uses of the mark that are likely to cause confusion. In addition, the owner may obtain money damages for provable injury resulting from the infringement, and sometimes the attributable profits realized by the infringing defendant.

Trademark Dilution Although trademark infringement is the usual legal theory employed when a mark owner seeks legal relief against one who used the mark without the owner's consent, trademark dilution—a legal theory to be explained more fully below—sometimes serves as an alternative to the standard claim of infringement. Roughly half the states have had laws recognizing the dilution doctrine for many years. Because of the geographic limitations inherent in state laws and because not all states have dilution statutes, trademark owners had long advocated enactment of a federal law recognizing dilution as a trademark rights theory. Congress finally obliged with the Federal Trademark Dilution Act of 1996 (FTDA), which was placed in the Lanham Act as § 43(c). However, a 2003 Supreme Court decision interpreting the FTDA made the statute less useful to trademark owners than it initially appeared to be. The Court concluded that in view of the FTDA's wording, proof of a § 43(c) violation required a showing of actual dilution of the plaintiff's mark rather than the likelihood of dilution required by state dilution laws. For trademark owners, the proof-of-actual-dilution requirement

enhanced the difficulty of winning dilution cases under the federal statute.

Congress responded to the 2003 Supreme Court decision by enacting the Trademark Dilution Revision Act of 2006 (TDRA), which amended § 43(c) to state explicitly that a showing of likelihood of dilution was sufficient. Under the TDRA, one who makes a commercial use of a “famous mark” without the mark owner’s consent faces liability if the use is “likely to cause dilution by blurring or dilution by tarnishment of the famous mark.” The TDRA thus makes clear that there are two types of dilution (to be explained below): “dilution by blurring” and “dilution by tarnishment.” In so providing, the TDRA responded to an expression of skepticism in the same 2003 Supreme Court decision over whether the tarnishment variety of dilution was contemplated by the federal law. Proof of a likelihood of either type of dilution satisfies the TDRA, assuming that the famous mark and commercial use elements are also met. Likelihood of confusion—the critical element in a trademark infringement case—need not be proven in a dilution case. Proof of competition between the plaintiff and the defendant is likewise unnecessary in a dilution case, as is proof of actual economic injury resulting from the defendant’s actions.

According to the TDRA, a mark is “famous” if it is “widely recognized by the general consuming public.” The TDRA goes on to define “dilution by blurring” as an “association arising from the similarity between a mark or trade name and a famous mark that impairs the distinctiveness of the famous mark.” Also recognized by the FTDA (the TDRA’s predecessor) and the patchwork quilt of state dilution laws, this type of dilution takes place when the defendant’s use of the plaintiff’s mark causes, or is likely to cause, the public to cease associating the mark solely with the plaintiff and instead to associate it with both the plaintiff and the defendant. When this occurs or appears likely to occur, the mark’s distinctiveness as a clear identifier of the plaintiff is in danger of being blurred or whittled away—in other words, diluted—even if the public recognizes that the plaintiff and defendant are not affiliated and that they provide very different products or services. Consider a classic example: the dilution claim won by Polaroid (the camera company) against a small heating and air conditioning business whose chosen name, Polaraid, presented the danger of blurring the source-identification image conjured up by the Polaroid name. Clearly, however, dilution by blurring does not occur in every instance in which the plaintiff’s mark and the defendant’s version are quite similar, as Mead Data Central found out when it unsuccessfully

sought to prove that its LEXIS mark (for legal research services) was diluted by Toyota’s use of LEXUS (for a luxury car model and division). For further discussion of the dilution by blurring theory, its potential application in appropriate cases, and its differences from the trademark infringement theory, see the *Louis Vuitton* case, which follows shortly.

The TDRA defines “dilution by tarnishment,” the other type of dilution it recognizes, as an “association arising from the similarity between a mark or trade name and a famous mark that harms the reputation of the famous mark.” This form of tarnishment is also recognized in state dilution laws. Although courts do not agree completely on what is necessary for likely tarnishment of a mark, various courts have concluded that the defendant’s use of the plaintiff’s mark in an unwholesome context—normally one suggesting illicit sexual or drug-related associations—may dilute a mark by tarnishing its reputation. The *Louis Vuitton* case contains a brief discussion of dilution by tarnishment.

Presumably to guard against overuse of the dilution theory, the TDRA states that certain uses cannot constitute dilution by blurring or dilution by tarnishment. The TDRA lists noncommercial uses and uses amounting to “news reporting and news commentary” in the protected category. In addition, the TDRA’s exclusions from dilution liability apply to “[a]ny fair use” of a famous mark to identify or describe that mark or its owner, as opposed to a defendant’s use of a version of the plaintiff’s mark “as a designation of source for the [defendant’s] own goods or services.” These fair uses may include a defendant’s references to the plaintiff’s mark in the context of comparative advertising of the parties’ respective goods or services, as well as a defendant’s references to the plaintiff’s mark in the course of “identifying and parodying, criticizing, or commenting upon the famous mark owner or the goods or services of the mark owner.” In the *Louis Vuitton* case, the court interprets this parody-protection provision in the TDRA and engages in further analysis of the role that parody may play when defendants seek to avoid dilution liability.

When the mark owner makes out a TDRA-based dilution claim, the standard (and normally sole) remedy is an injunction against the defendant’s continued use of the diluting version of the plaintiff’s mark. The same is true of successful dilution cases brought under state laws. The TDRA allows the prospect of recovering damages and the defendant’s attributable profits only if the evidence reveals that the defendant willfully sought to harm the mark’s reputation or to trade on the recognition associated with the mark.

The Global Business Environment

An American firm may enter the world market by licensing its product or service to a foreign manufacturer. In exchange for granting a license to the foreign licensee, the American licensor will receive royalties from the sale of the licensed product or service. Usually, the licensed product or service or the name under which it is sold will be protected by American intellectual property law, such as patent, trade secret, copyright, or trademark law. Because American intellectual property law does not protect the property outside the boundaries of the United States, a licensor needs to take steps to ensure that its intellectual property will acquire protection in the foreign nation. Otherwise, the licensor risks that a competitor may appropriate the intellectual property without penalty.

The World Trade Organization has attempted to increase the protection of intellectual property through passage of the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS). Effective in 1995, TRIPS covers patents, trade secrets, copyrights, and trademarks. It sets out minimum standards of intellectual property protection to be provided by each member nation. Some signatory nations, such as the United States, provide greater protection of intellectual property.

Patents and Trade Secrets

A patent filing must be made in each nation in which protection is desired. It is not especially difficult for a firm to acquire parallel patents in each of the major countries maintaining a patent system, because many countries (including the United States) are parties to the Paris Convention for the Protection of Industrial Property. This convention recognizes the date of the first filing in any nation as the filing date for all, but only if subsequent filings are in fact made within a year of the first filing.

When technology is not patented, either because it is not patentable or because a firm makes a business decision not to patent it, a licensor may control its use abroad under **trade secret** law. For example, an American firm can license its manufacturing know-how to a foreign manufacturer for use in a defined territory in return for promises to pay royalties and to keep the trade secret confidential.

Copyright

An American firm may license a foreign manufacturer to produce literary, artistic, or musical materials for which the firm holds an American copyright. For example, a computer software development firm may grant a license to a foreign manufacturer of software, or the American owner of copyrights protecting cartoon characters from the television program *The Simpsons* may license a Chinese firm to manufacture Homer, Marge, and Bart dolls.

There is no international copyright that automatically protects a copyrighted work everywhere in the world. Instead, copyright protection for a work must be secured under the laws of the individual nations in which protection is sought. International agreements, however, may smooth the way to copyright acquisition in many countries. The most notable is the Berne Convention, to which the United States and approximately 150 other nations subscribe. The Berne Convention guarantees that a work eligible for copyright in any signatory nation will be eligible for protection in all signatory nations. Although the Berne Convention does not completely standardize the copyright laws of the member nations, it does require each country's copyright laws to contain certain minimum guarantees of rights.

Another key aspect of the Berne Convention is its principle of *national treatment*, under which each signatory nation agrees to treat copyright owners from other subscribing countries according to the same rules it applies to copyright owners who are its own residents or citizens. Other international agreements to which the United States is a party operate in generally similar fashion. These include the Universal Copyright Convention and the World Intellectual Property Organization Copyright Treaty.

Trademarks

The holder of an American trademark may license the use of its trademark in a foreign nation. For example, McDonald's may license a French firm to use the McDonald's name and golden arches at a restaurant on the Champs-Élysées, or the holder of the Calvin Klein trademark may license a South Korean firm to manufacture Calvin Klein jeans.

An American trademark's owner, when licensing its product or services abroad, runs the risk of experiencing unwanted and largely uncontrollable uses of its trademark in a foreign market unless it has acquired trademark rights in that nation.

Trademark registrations normally must be made in each nation in which protection is desired. Parallel trademark registrations, however, may be made in compliance with the Paris Convention for the Protection of Industrial Property. Under the Paris Convention, the date of the first filing in any nation is the filing date for all nations, if the subsequent filings are made within six months of the first filing.

The European Union allows a single filing to be effective in all EU nations. An agreement known as the Madrid Protocol also permits a firm to register a trademark in all its signatory nations simultaneously by filing an application for registration in any signatory nation and with the World Intellectual Property Organization (WIPO) in Geneva. The United States joined the Madrid Protocol in 2003.

Louis Vuitton Malletier, SA v. Haute Diggity Dog, LLC

507 F.3d 252 (4th Cir. 2007)

Louis Vuitton Malletier, SA (LVM) is a well-known manufacturer of luxury luggage, leather goods, handbags, and accessories, which it markets and sells worldwide. In connection with the sale of its products, LVM has used certain widely recognized trademarks for many years. LVM has registered trademarks for LOUIS VUITTON (in connection with luggage and ladies' handbags), for a stylized monogram of LV (in connection with traveling bags and other goods), and for designs that combine the LV mark with images of stars, flowers, and circles (in connection with traveling bags and other products).

LVM's luggage, handbags, and other items featuring these marks are expensive. For instance, LVM's handbags cost \$1,000 or more at retail and LVM's travel bags sometimes fall in the \$5,000 range. LVM sells its products in LVM stores and in its own in-store boutiques that are contained within department stores. Although better known for its handbags and luggage, LVM also markets a limited selection of luxury pet accessories—collars, leashes, and dog carriers—which bear the above-described designs. These items range in price from approximately \$200 to \$1,600. LVM does not make dog toys.

Haute Diggity Dog, LLC, a Nevada company, manufactures and sells nationally—primarily through pet stores—a line of pet chew toys and beds whose names parody elegant high-end brands of products such as perfume, cars, shoes, sparkling wine, and handbags. In addition to Chewy Vuiton (LOUIS VUITTON), these include Chewnel No. 5 (Chanel No. 5), Furcedes (Mercedes), Jimmy Chew (Jimmy Choo), Dog Perignonn (Dom Perignon), Sniffany & Co. (Tiffany & Co.), and Dogior (Dior). The chew toys and pet beds are plush, made of polyester, and have a shape and design that loosely imitate the signature product of the targeted brand. They are mostly distributed and sold through pet stores. The dog toys generally sell for less than \$20. Larger versions of some of Haute Diggity Dog's plush dog beds sell for more than \$100.

Haute Diggity Dog's Chewy Vuiton dog toys loosely resemble miniature handbags and undisputedly evoke LVM handbags of similar shape, design, and color. Instead of the LOUIS VUITTON mark, the dog toy uses "Chewy Vuiton"; in lieu of the LV mark, it uses "CV"; and the other symbols and colors employed are imitations, but not exact ones, of those used in LVM's designs.

In view of the above facts, LVM sued Haute Diggity Dog in a federal district court, alleging claims of trademark infringement, trademark dilution, trade dress infringement, and copyright infringement. The district court granted Haute Diggity Dog's motion for summary judgment on all of LVM's claims. LVM appealed to the U.S. Court of Appeals for the Fourth Circuit.

Niemeyer, Circuit Judge

Trademark Infringement Claim

LVM contends that Haute Diggity Dog's marketing and sale of its Chewy Vuiton dog toys infringe its trademarks because the advertising and sale of the Chewy Vuiton [items] is likely to cause confusion. Haute Diggity Dog contends that [no] reasonable factfinder [could] conclude that there is a likelihood of confusion, because it successfully markets its products as parodies of famous marks such as those of LVM.

To prove trademark infringement, LVM must show (1) that it owns a valid and protectable mark; (2) that Haute Diggity Dog uses [the same mark or a substantially similar version] of that mark in commerce and without LVM's consent; and (3) that Haute Diggity Dog's use is likely to cause confusion. The validity . . . of LVM's marks [is] not at issue in this case, nor is the fact that Haute Diggity Dog uses a colorable imitation of LVM's mark. To determine whether the Chewy Vuiton product line creates a likelihood of confusion, we have identified several nonexclusive factors to consider: (1) the strength or distinctiveness of the plaintiff's mark; (2) the similarity of the

two marks; (3) the similarity of the goods or services the marks identify; (4) the similarity of the facilities the two parties use in their businesses; (5) the similarity of the advertising used by the two parties; (6) the defendant's intent; and (7) actual confusion. *See Pizzeria Uno Corp. v. Temple*, 747 F.2d 1522, 1527 (4th Cir. 1984). These *Pizzeria Uno* factors are not always weighted equally, and not all factors are relevant in every case.

Because Haute Diggity Dog's arguments with respect to the *Pizzeria Uno* factors depend to a great extent on whether its products and marks are successful parodies, we consider first whether Haute Diggity Dog's products, marks, and trade dress are indeed successful parodies of LVM's marks and trade dress. For trademark purposes, "[a] 'parody' is defined as a simple form of entertainment conveyed by juxtaposing the irreverent representation of the trademark with the idealized image created by the mark's owner." *People for the Ethical Treatment of Animals v. Doughney* ("PETA"), 263 F.3d 359, 366 (4th Cir. 2001). [According to PETA,] "[a] parody must convey two simultaneous—and contradictory—messages: that it is the original, but also that it is *not* the original and is instead a parody." Thus, "[a] parody relies upon a difference

from the original mark, presumably a humorous difference, in order to produce its desired effect.” *Jordache Enterprises, Inc. v. Hogg Wyld, Ltd.*, 828 F.2d 1482, 1486 (10th Cir. 1987) (finding the use of “Lardashe” jeans for larger women to be a successful and permissible parody of “Jordache” jeans).

[W]e agree with the district court that the Chewy Vuiton dog toys are successful parodies of LVM handbags and the LVM marks and trade dress used in connection with the marketing and sale of those handbags. The dog toy is shaped roughly like a handbag; its name Chewy Vuiton sounds like and rhymes with LOUIS VUITTON; its monogram CV mimics LVM’s LV mark; the repetitious design clearly imitates the design on the LVM handbag; and the coloring is similar. In short, the dog toy is a small, plush imitation of an LVM handbag carried by women, which invokes the marks and design of the handbag, albeit irreverently and incompletely. No one can doubt that LVM handbags are the target of the imitation.

At the same time, no one can doubt also that the Chewy Vuiton dog toy is not the “idealized image” of the mark created by LVM. The differences are immediate, beginning with the fact that the Chewy Vuiton product is a dog toy, not [a] luxury handbag. The toys are inexpensive; the handbags are expensive and marketed to be expensive. And, of course, [because it is] a dog toy, one must buy it with pet supplies and cannot buy it at an exclusive LVM store or boutique within a department store. In short, the Chewy Vuiton dog toy undoubtedly and deliberately conjures up the famous LVM marks and trade dress, but at the same time, it communicates that it is not the LVM product.

Finally, the juxtaposition of the similar and dissimilar—the irreverent representation and the idealized image of an LVM handbag—immediately conveys a joking and amusing parody. The furry little Chewy Vuiton imitation, as something to be *chewed by a dog*, pokes fun at the elegance and expensiveness of an LVM handbag, which must *not* be chewed by a dog. The LVM handbag is provided for the most elegant and well-to-do celebrity, to proudly display to the public and the press, whereas the imitation Chewy Vuiton “handbag” is designed to mock the celebrity and be used by a dog. The dog toy irreverently presents haute couture as an object for casual canine destruction. The satire is unmistakable. This parody is enhanced by the fact that Chewy Vuiton dog toys are sold with similar parodies of other famous and expensive brands—“Chewnel No. 5” targeting “Chanel No. 5”; “Dog Perignonn” targeting “Dom Perignon”; and “Sniffany & Co.” targeting “Tiffany & Co.”

Finding [as we do] that Haute Diggity Dog’s parody is successful, however, does not end the inquiry into whether Haute Diggity Dog’s Chewy Vuiton products create a likelihood of confusion. The finding of a successful parody only influences the way in which the *Pizzeria Uno* factors are applied.

As to the first *Pizzeria Uno* factor, the parties agree that LVM’s marks are strong and widely recognized. LVM maintains that a strong, famous mark is entitled, as a matter of law, to broad protection. While it is true that finding a mark to be strong and famous usually favors the plaintiff in a trademark infringement case, the opposite may be true when a legitimate claim of parody is involved. It is a matter of common sense that the strength of a famous mark allows consumers immediately to perceive the target of the parody, while simultaneously allowing them to recognize the changes to the mark that make the parody funny or biting. [P]recisely because LOUIS VUITTON is so strong a mark and so well-recognized as a luxury handbag brand from LVM, consumers readily recognize that when they see a Chewy Vuiton pet toy, they see a parody. Thus, the strength of LVM’s marks in this case does not help LVM establish a likelihood of confusion.

With respect to the second *Pizzeria Uno* factor, the similarities between the marks, the usage by Haute Diggity Dog again converts what might be a problem for Haute Diggity Dog into a disfavored conclusion for LVM. Haute Diggity Dog concedes that its marks are and were designed to be somewhat similar to LVM’s marks. But that is the essence of a parody. . . . While a trademark parody necessarily copies enough of the original design to bring it to mind as a target, a successful parody also distinguishes itself and, because of the implicit message communicated by the parody, allows the consumer to appreciate it. [Here, the] differences are sufficiently obvious and the parody sufficiently blatant that a consumer encountering a Chewy Vuiton dog toy would not mistake its source or sponsorship on the basis of mark similarity.

Nor does LVM find support from the third *Pizzeria Uno* factor, the similarity of the products themselves. It is obvious that a Chewy Vuiton plush imitation handbag, which does not open and is manufactured as a dog toy, is not a LOUIS VUITTON handbag sold by LVM. Even LVM’s most proximate products—dog collars, leashes, and pet carriers—are fashion accessories, not dog toys.

The fourth and fifth *Pizzeria Uno* factors [pertain] to the similarity of facilities and advertising channels. . . . LVM products are sold exclusively through its own stores or its own boutiques within department stores. It also sells its products on the Internet through an LVM-authorized website. In contrast, Chewy Vuiton products are sold primarily through traditional and Internet pet stores, although they might also be sold in some department stores. As a general matter, however, there is little overlap in the individual retail stores selling the brands. Likewise with respect to advertising, there is little or no overlap. LVM markets LOUIS VUITTON handbags through high-end fashion magazines, [whereas] Chewy Vuiton products are advertised primarily through pet-supply channels. The overlap

in facilities and advertising demonstrated by the record is so minimal as to be practically nonexistent. The *de minimis* overlap lends insignificant support to LVM on this factor.

The sixth factor, relating to Haute Diggity Dog's intent, again is neutralized by the fact that Haute Diggity Dog markets a parody of LVM products. As other courts have recognized, "[a]n intent to parody is not an intent to confuse the public." *Jordache*, 828 F.2d at 1486. Despite Haute Diggity Dog's obvious intent to profit from its use of parodies, this action does not amount to a bad-faith intent to create consumer confusion. To the contrary, the intent is to do just the opposite—to evoke a humorous, satirical association that *distinguishes* the products. This factor does not favor LVM.

On the actual confusion factor, it is well established that no actual confusion is required to prove a case of trademark infringement, although the presence of actual confusion can be persuasive evidence relating to a likelihood of confusion. LVM conceded in the district court that there was no evidence of actual confusion. . . . We conclude that this factor favors Haute Diggity Dog.

Recognizing that Chewy Vuiton is an obvious parody and applying the *Pizzeria Uno* factors, we conclude that LVM has failed to demonstrate any likelihood of confusion. Accordingly, we [agree that the district court correctly ruled] in favor of Haute Diggity Dog on the issue of trademark infringement.

Trademark Dilution Claim

LVM also contends that Haute Diggity Dog's advertising, sale, and distribution of the Chewy Vuiton dog toys dilutes its . . . famous and distinctive [marks]. Claims for trademark dilution are authorized by the Trademark Dilution Revision Act of 2006 ("TDRA"), which provides in relevant part:

Subject to the principles of equity, the owner of a *famous* mark . . . shall be entitled to an injunction against another person who . . . commences use of a mark or trade name in commerce that is likely to cause *dilution by blurring* or *dilution by tarnishment* of the famous mark, regardless of the presence or absence of actual or likely confusion, of competition, or of actual economic injury.

15 U.S.C. § 1125(c)(1) (emphasis added). A mark is "famous" when it is "widely recognized by the general consuming public of the United States as a designation of source of the goods or services of the mark's owner." § 1125(c)(2)(A). [T]he TDRA defines "dilution by blurring" as the "association arising from the similarity between a mark or trade name and a famous mark that impairs the distinctiveness of the famous mark." § 1125(c)(2)(B). It defines "dilution by tarnishment" as the "association arising from the similarity between a mark or trade name and a famous mark that harms the reputation of the famous mark." § 1125(c)(2)(C).

In the context of blurring, distinctiveness refers to the ability of the famous mark uniquely to identify a single source and thus maintain its selling power. In proving a dilution claim under the TDRA, the plaintiff need not show actual or likely confusion, the presence of competition, or actual economic injury. The TDRA creates three defenses based on the defendant's (1) "fair use" (with exceptions); (2) "news reporting and news commentary"; and (3) "noncommercial use." *Id.* § 1125(c)(3).

We address first LVM's claim for dilution by blurring. The first three elements of a trademark dilution claim are not at issue in this case. LVM owns famous marks that are distinctive; Haute Diggity Dog has commenced using Chewy Vuiton, CV, and designs and colors that are allegedly diluting LVM's marks; and the similarity between Haute Diggity Dog's marks and LVM's marks gives rise to an association between the marks, albeit a parody. The issue for resolution is whether the association between Haute Diggity Dog's marks and LVM's marks is likely to impair the distinctiveness of LVM's famous marks.

LVM suggests that any use by a third person of an imitation of its famous marks dilutes the famous marks as a matter of law. This contention misconstrues the TDRA. To determine whether a junior mark is likely to dilute a famous mark through blurring, the TDRA directs the court to consider all factors relevant to the issue, including six factors that are enumerated in the statute:

- (i) The degree of similarity between the mark or trade name and the famous mark.
- (ii) The degree of inherent or acquired distinctiveness of the famous mark.
- (iii) The extent to which the owner of the famous mark is engaging in substantially exclusive use of the mark.
- (iv) The degree of recognition of the famous mark.
- (v) Whether the user of the mark or trade name intended to create an association with the famous mark.
- (vi) Any actual association between the mark or trade name and the famous mark.

15 U.S.C. § 1125(c)(2)(B).

We begin by noting that parody is not automatically a complete *defense* to a claim of dilution by blurring where the defendant uses the parody as its own designation of source, i.e., *as a trademark*. Although the TDRA does provide that fair use is a complete defense and allows that a parody can be considered fair use, it does not extend the fair use defense to parodies used as a trademark. [The statute provides that uses] "not . . . actionable as dilution by blurring or dilution by tarnishment [include] [a]ny fair use . . . other than as a designation of source for the person's own goods or services, including use in connection with . . . parodying. . . ." 15 U.S.C. § 1125(c)(3)(A)(ii) (emphasis added). Under the statute's plain language, parodying a

famous mark is protected by the fair use defense . . . if the parody is *not* “a designation of source for the person’s own goods or services.”

The TDRA, however, does not require a court to ignore the existence of a parody that is used as a trademark, and it does not preclude a court from considering parody as part of the circumstances to be considered for determining whether the plaintiff has made out a claim for dilution by blurring. Indeed, the statute permits a court to consider “all relevant factors,” including the six factors supplied in § 1125(c)(2)(B).

Thus, it would appear that a defendant’s use of a mark as a parody is relevant to the overall question of whether the defendant’s use is likely to impair the famous mark’s distinctiveness. Moreover, the fact that the defendant uses its marks as a parody is specifically relevant to several of the listed factors. For example, factor (v) (whether the defendant intended to create an association with the famous mark) and factor (vi) (whether there exists an actual association between the defendant’s mark and the famous mark) directly invite inquiries into the defendant’s intent in using the parody, the defendant’s actual use of the parody, and the effect that its use has on the famous mark. While a parody intentionally creates an association with the famous mark in order to be a parody, it also intentionally communicates, if it is successful, that it is *not* the famous mark, but rather a satire of the famous mark. That the defendant is using its mark as a parody is therefore relevant in the consideration of these statutory factors.

Similarly, factors (i), (ii), and (iv)—the degree of similarity between the two marks, the degree of distinctiveness of the famous mark, and its recognizability—are directly implicated by consideration of the fact that the defendant’s mark is a successful parody. Indeed, by making the famous mark an object of the parody, a successful parody might actually enhance the famous mark’s distinctiveness by making it an icon. The brunt of the joke becomes yet more famous. In sum, while a defendant’s use of a parody as a mark does not support a “fair use” defense, it may be considered in determining whether the plaintiff-owner of a famous mark has proved its claim that the defendant’s use of a parody mark is likely to impair the distinctiveness of the famous mark.

[W]hen considering factors (ii), (iii), and (iv), it is readily apparent . . . that LVM’s marks are distinctive, famous, and strong. While the establishment of these facts satisfies essential elements of LVM’s dilution claim, the facts impose on LVM an increased burden to demonstrate that the distinctiveness of its famous marks is likely to be impaired by a successful parody. Even as Haute Diggity Dog’s parody mimics the famous mark, it communicates simultaneously that it is not the famous mark, but is only satirizing it. And because the famous mark is particularly strong and distinctive, it becomes more likely that a

parody will not impair the distinctiveness of the mark. In short, as Haute Diggity Dog’s Chewy Vuiton marks are a successful parody, we conclude that they will not blur the distinctiveness of the famous mark as a unique identifier of its source.

It is important to note, however, that this might not be true if the parody is so similar to the famous mark that it likely could be construed as actual use of the famous mark itself. If Haute Diggity Dog used the actual marks of LVM (as a parody or otherwise), it could dilute LVM’s marks by blurring, regardless of whether Haute Diggity Dog’s use was confusingly similar, whether it was in competition with LVM, or whether LVM sustained actual injury. Thus, “the use of DUPONT shoes, BUICK aspirin, and KODAK pianos would be actionable” under the TDRA because the unauthorized use of the famous marks *themselves* on unrelated goods might diminish the capacity of these trademarks to distinctively identify a single source. [Citation of authority omitted.]

But in this case, Haute Diggity Dog mimicked the famous marks; it did not come so close to them as to destroy the success of its parody and, more importantly, to diminish the LVM marks’ capacity to identify a single source. In a similar vein, when considering factors (v) and (vi), it becomes apparent that Haute Diggity Dog intentionally associated its marks, but only partially and certainly imperfectly, so as to convey the simultaneous message that it was not in fact a source of LVM products. [W]e readily [conclude] that LVM has failed to make out a case of trademark dilution by blurring.

LVM’s claim for dilution by tarnishment does not require an extended discussion. To establish [this] claim . . . , LVM must show . . . that Haute Diggity Dog’s use of the Chewy Vuiton mark on dog toys harms the reputation of [LVM’s] marks. LVM argues that the possibility that a dog could choke on a Chewy Vuiton toy causes this harm. It relies only on speculation about whether a dog could choke on the chew toys and a logical concession that a \$10 dog toy made in China was of “inferior quality” to the \$1,190 Louis Vuitton handbag. There is no record support, however, [indicating] that any dog has choked on a pet chew toy such as a Chewy Vuiton toy. [Nor is] there any basis from which to conclude that a dog would likely choke on such a toy. We agree with the district court that LVM failed to demonstrate a claim for dilution by tarnishment.

Other Claims

LVM raises [other] claims premised on the same basic facts. [It] argues that the district court erred in failing to address LVM’s trade dress claims. Although the district court did not explicitly discuss the trade dress issue, we find that this reflects economy rather than error. LVM’s trade dress claims under § 43(a) of the Lanham Act, 15 U.S.C. § 1125(a)(1), and under Virginia common law are based on essentially the same facts as its trademark

infringement claims. Haute Diggity Dog does not challenge LVM's claim that its trade dress is protectable. The only question before the court was whether confusion was likely. But the same *Pizzeria Uno* likelihood-of-confusion factors used for trademark infringement claims are applied to trade dress claims, and the two issues rise or fall together. Consequently, our conclusion affirming the district court that no confusion is likely to result with regard to LVM's trademarks is sufficient also to dispose of LVM's trade dress claims as well.

LVM [also] argues that the district court erred in finding that Haute Diggity Dog's use of "CV" and the background

design was a fair use of [one of] LVM's copyrighted designs. Because LVM attempts to use a copyright claim to pursue what is at its core a trademark and trade dress infringement claim, application of the fair-use factors under the Copyright Act to these facts is awkward. Nonetheless, after examining the record, we agree with the district court that Haute Diggity Dog's use as a parody of certain altered elements of LVM's design does not support a claim for copyright infringement.

District court's grant of summary judgment in favor of Haute Diggity Dog affirmed.

Trade Secrets

The law provides two partially overlapping means of protecting creative inventions. Owners of such inventions may go public and obtain monopoly patent rights. As an alternative, they may sometimes keep the invention secret and rely on trade secrets law to protect it.

The policies underlying patent protection and trade secrets protection differ. The general aim of patent law is to encourage the creation and disclosure of inventions by granting the patentee a temporary monopoly in the patented invention in exchange for his making it public.

Trade secrets, however, are nonpublic by definition. Although protecting trade secrets may stimulate creative activity, it also keeps the information from becoming public knowledge. Thus, the main justification for trade secrets protection is simply to preserve certain standards of commercial morality.

Definition of a Trade Secret A trade secret can be defined as any secret formula, pattern, process, program, device, method, technique, or compilation of information used in the owner's business, if it gives its owner an advantage over competitors who do not know it

CYBERLAW IN ACTION

Trademark infringement principles sometimes govern conflicts between one party's claim of trademark rights and another's claim of rights over a World Wide Web domain name. Such disputes sometimes raise dilution issues as well.

In a 1999 enactment, Congress paid special attention to the trademark rights–domain name rights conflict by enacting the Anticybersquatting Consumer Protection Act (hereinafter "ACPA"). The ACPA authorizes a civil action in favor of a trademark owner against any person who, having a "bad faith intent to profit" from the owner's mark, registers, sells, purchases, licenses, or otherwise uses a domain name that is identical or confusingly similar to the owner's mark (or would dilute the mark, if it is famous). Among the factors listed in the ACPA as relevant to the existence of bad faith intent to profit are a defendant's intent to divert consumers from the mark owner's online location to a site that could harm the mark's goodwill, and a defendant's offer to sell the domain name to the mark owner without having used, or intended to use, the domain name in the offering of goods or services.

If the trademark owner wins a cybersquatting action, the court may order the forfeiture or cancellation of the domain name or may order that it be transferred to the mark owner. The successful trademark owner may also recover actual damages as well as the cybersquatter's attributable profits. Borrowing the statutory damages concept from the Copyright Act, the ACPA provides that in lieu of actual damages plus profits, the trademark owner may elect to recover statutory damages falling within a range of \$1,000 to \$100,000 per domain name, "as the court considers just."

Many cases in which a trademark owner complains about another party's registration of a domain name have been submitted to arbitration, rather than to a court, in recent years. When a party registers an Internet address with the Internet Corporation for Assigned Names and Numbers, the registrant must agree to submit to arbitration in the event that a trademark owner claims a right to the domain name. The World Intellectual Property Organization is a leading provider of arbitrators for this process.

or use it.⁴ Examples include chemical formulas, computer software, manufacturing processes, designs for machines, and customer lists. To be protectible, a trade secret must usually have sufficient value or originality to provide an actual or potential competitive advantage. It need not possess the novelty required for patent protection, however.

The *North Atlantic Instruments* case, which follows shortly, considers factors courts may examine when determining whether a trade secret exists. As some of the factors suggest, a trade secret must actually be *secret*. A substantial measure of secrecy is necessary, but it need not be absolute. Thus, information that becomes public knowledge or becomes generally known in the industry cannot be a trade secret. Similarly, information that is reasonably discoverable by proper means may not be protected. “Proper means” include independent invention of the secret, observation of a publicly displayed product, the owner’s advertising, published literature, product analysis, and reverse engineering (starting with a legitimately acquired product and working backward to discover how it was developed).

In addition, a firm claiming a trade secret must usually show that it took *reasonable measures to ensure secrecy*. Examples include advising employees about the secret’s secrecy, limiting access to the secret on a need-to-know basis, requiring those given access to sign a nondisclosure agreement, disclosing the secret only on a confidential basis, and controlling access to an office or plant. Computer software licensing agreements commonly forbid the licensee to copy the program except for backup and archival purposes, require the licensee and its employees to sign confidentiality agreements, call for those employees to use the program only in the course of their jobs, and require the licensee to use the program only in a central processing unit. Because the owner must only make *reasonable* efforts to ensure secrecy, however, she need not adopt extreme measures to block every ingenious form of industrial espionage.

Ownership and Transfer of Trade Secrets The owner of a trade secret is usually the person who developed it or the business under whose auspices it was generated. Establishing the ownership of a trade secret can pose problems, however, when an

employee develops a secret in the course of her employment. In such cases, courts often find the *employer* to be the owner if (1) the employee was hired to do creative work related to the secret, (2) the employee agreed not to divulge or use trade secrets, or (3) other employees contributed to the development of the secret. Even when the employee owns the secret, the employer still may obtain a royalty-free license to use it through the shop right doctrine discussed in the section on patents.

The owner of a trade secret may transfer rights in the secret to third parties. This may occur by assignment (in which case the owner loses title) or by license (in which case the owner retains title but allows the transferee certain uses of the secret).

Misappropriation of Trade Secrets Misappropriation of a trade secret can occur in various ways, most of which involve *disclosure* or *use* of the secret. For example, misappropriation liability occurs when the secret is disclosed or used by one who did one of the following:

1. Acquired it by *improper means*. Improper means include theft, trespass, wiretapping, spying, bugging, bribery, fraud, impersonation, and eavesdropping.
2. Acquired it from a party who *is known or should be known* to have obtained it by improper means. For example, a freelance industrial spy might obtain one firm’s trade secrets by improper means and sell them to the firm’s competitors. If those competitors know or have reason to know that the spy obtained the secrets by improper means, they are liable for misappropriation along with the spy.
3. *Breached a duty of confidentiality regarding the secret*. If an employer owns a trade secret, for example, an employee is generally bound not to use or disclose it during his employment or thereafter.⁵ The *North Atlantic Instruments* case, which follows shortly, presents an application of this rule. The employee may, however, utilize general knowledge and skills acquired during her employment.

Remedies for misappropriation of a trade secret include damages, which may involve both the actual loss caused by the misappropriation and the defendant’s unjust enrichment. In some states, punitive damages are awarded for willful and malicious misappropriations. Also, an injunction may be issued against actual or threatened misappropriations.

⁴This definition comes mainly from *Restatement (Third) of Unfair Competition* § 39 (1995), with some additions from *Uniform Trade Secrets Act* § 1(4) (1985). Many states have adopted the Uniform Trade Secrets Act (UTSA) in some form. The discussion in this chapter is a composite of the *Restatement’s* and the UTSA’s rules.

⁵This is an application of the agent’s duty of loyalty, which is discussed in Chapter 35.

North Atlantic Instruments, Inc. v. Haber

188 F.3d 38 (2d Cir. 1999)

North Atlantic Instruments, Inc., manufactured electronic equipment used on ships, tanks, and aircraft. In August 1994, North Atlantic acquired Transmagnetics, Inc. (TMI), which designed, manufactured, and sold customized electronic devices to a limited number of engineers in the aerospace and high-tech industries. At the time North Atlantic acquired TMI, Fred Haber was a one-third owner of TMI, as well as its president and head of sales. This position allowed Haber to develop extensive client contacts. North Atlantic conditioned its agreement to acquire TMI on Haber's continuing to work for North Atlantic in a role similar to the role he had played at TMI.

The specialized nature of TMI's business made the identity of the relatively small number of engineers who required its products especially crucial to its business success. Even in companies employing thousands of engineers, a very small number of those engineers—sometimes only two—might need the technology produced by TMI. The identity and needs of that small number of engineers (i.e., TMI's client contacts) would have been very difficult for any company to derive on its own. TMI's list of client contacts was among the intangible assets for which North Atlantic paid when it acquired TMI.

North Atlantic retained Haber as president of its new TMI division. An employment agreement between North Atlantic and Haber ran until July 31, 1997. Its terms obligated Haber not to disclose North Atlantic's customer lists, trade secrets, or other confidential information, either during his employment by North Atlantic or after that employment ceased. As president of the TMI division, Haber had access through desktop and laptop computers to information about North Atlantic's technology and customer bases, including lists of clients and information about their individual product needs and purchases. In July 1997, Haber left North Atlantic to join Apex Signal Corp., which manufactured products targeted toward the same niche market as North Atlantic's TMI division. According to North Atlantic, Apex began targeting North Atlantic's customer base, with Haber allegedly asking clients he had dealt with at North Atlantic and TMI to do business with Apex. North Atlantic also contended that Haber had taken its confidential client information with him when he joined Apex.

North Atlantic sued Haber and Apex for misappropriation of trade secrets and requested a preliminary injunction. The federal district court referred the injunction request to a magistrate, who conducted an extensive hearing and issued a report recommending issuance of the injunction. The district court adopted the magistrate's report and preliminarily enjoined Haber and Apex from using the individual client contacts Haber had developed at North Atlantic and TMI. Haber and Apex appealed.

Straub, Circuit Judge

To succeed on a claim for the misappropriation of trade secrets under New York law, a party must demonstrate: (1) that it possessed a trade secret, and (2) that the defendants used the trade secret in breach of an agreement, confidential relationship, or duty, or as a result of discovery by improper means.

A trade secret is any formula, pattern, device, or compilation of information which is used in one's business, and which gives the owner an opportunity to obtain an advantage over competitors who do not know or use it. [Precedent cases indicate that a] customer list developed by a business through substantial effort and kept in confidence may be treated as a trade secret and protected at the owner's instance against disclosure to a competitor, provided the information it contains is not otherwise readily ascertainable.

The Magistrate Judge concluded that the list of *companies* to which North Atlantic's TMI division sold was not a trade secret. By contrast, [he] determined that the *identities of individual contact people* with whom Haber dealt while at North Atlantic or TMI were protectable trade secrets. The Magistrate Judge . . . determin[ed] that information on specific contact people was

not readily available to others in the industry. That is, Haber generated the list of specific contact people—the people who required the customized technology produced by TMI and North Atlantic's TMI division—over the 50 years he had worked in the industry, more than half of which he spent at TMI. The Magistrate Judge relied . . . on the testimony of North Atlantic's chief executive, who described the needle-in-the-haystack character of the search for the handful of engineers in companies of 100,000 employees who might have a use for one of North Atlantic's customized products.

The Magistrate Judge [also] conclud[ed] that North Atlantic took numerous appropriate measures to prevent unauthorized disclosure of the information contained in its list of client contacts. [These measures included the use of nondisclosure provisions in employment agreements and other access restrictions.] The Magistrate Judge next assessed the value of the list of client contacts and the energy and effort necessary to create it. [H]e pointed to the testimony by North Atlantic's chief executive stating that “in the technology business, the most expensive thing to replicate is your relationships with your customers.” [In addition,] the Magistrate Judge concluded that the client contact

list assembled over Haber's years at TMI and North Atlantic's TMI division could probably be duplicated, but only with great difficulty.

We hold that the District Court did not err in adopting the Magistrate Judge's extensive and detailed factual determination that the identity of North Atlantic's client contacts was a protectable trade secret. Numerous cases applying New York law have held that where, as here, it would be difficult to duplicate a customer list because it reflected individual customer preferences, trade secret protection should apply.

We next consider whether the defendants' use of a trade secret—specifically the list of client contacts—was in breach of a duty. Both this Circuit and numerous New York courts have held that an agent has a duty not to use confidential knowledge acquired in his employment in competition with his principal. Such a duty exists as well after the employment is terminated as during its continuance . . . and is implied in every contract of employment. [Moreover, the employment agreement between North Atlantic and Haber] provided expressly that Haber had a comparable duty to maintain the confidentiality of TMI's and North Atlantic's trade secrets. In this way, [the employment agreement] makes explicit an employee's implied duties under New York law with respect to confidential information.

[A]t the hearing before the Magistrate Judge, North Atlantic produced a printout of confidential client information from North Atlantic's customer database, printed by Haber on September 5, 1997—over one month after he had left North Atlantic—and found in Apex's files. Haber clearly used the information on the day he printed the file. That day, he sent a fax to a contact listed on the form. Testimony at the hearing suggested that it would have been impossible for Haber to have generated th[e] information [in the file printed on September 5, 1997] unless he had taken files with him when he left North Atlantic.

Based on the facts in the record, it is clear that Haber violated the duties imposed both by the employment agreement and by New York's laws. [T]he District Court properly concluded that North Atlantic has demonstrated a likelihood of success on the merits of its misappropriation of trade secrets claim. Finally, [w]e have held [in a prior case] that the loss of trade secrets cannot be measured in money damages because a trade secret, once lost, is, of course, lost forever. We conclude that North Atlantic would be irreparably harmed in the absence of an injunction.

Decision of District Court affirmed.

Commercial Torts

In addition to the intentional torts discussed in Chapter 6, other intentional torts involve business or commercial competition. These torts may help promote innovation by protecting creative businesses against certain competitive abuses. Their main aim, however, is simply to uphold certain minimum standards of commercial morality.

Injurious Falsehood Injurious falsehood also goes by names such as product disparagement, slander of title, and trade libel. This tort involves the publication of false statements that disparage another's business, property, or title to property, and thus harm her economic interests. One common kind of injurious falsehood involves false statements that disparage either a person's *property rights* in land, things, or intangibles, or their *quality*. The property rights in question include virtually all legally protected property interests that can be sold; examples include leases, mineral rights, trademarks, copyrights, and corporate stock. Injurious falsehood also includes false statements that harm another's economic interests even though they do not disparage property or

property rights as such. For example, the seller of a bodybuilding program was held to have stated a valid claim for injurious falsehood against a book publisher regarding a false statement that the plaintiff's program was isometric in nature. The harm to the plaintiff's economic interest in the sale of its bodybuilding program stemmed from the juxtaposition of the untrue statement about the program with a statement concerning supposed dangers of isometric exercise programs.

Elements and Damages In injurious falsehood cases, the plaintiff must prove that the defendant made a false statement of the sort just described, and that the statement was communicated to a third party. The degree of fault required for liability is unclear. Sources often say that the standard is malice, but formulations of this differ. The *Restatement* requires either knowledge that the statement is false, or reckless disregard as to its truth or falsity. There is usually no liability for false statements that are made negligently and in good faith.

The plaintiff must also prove that the false statement played a substantial part in causing him to suffer *special damages*. These may include losses resulting from the

diminished value of disparaged property; the expense of measures for counteracting the false statement (e.g., advertising or litigation expenses); losses resulting from the breach of an existing contract by a third party; and the loss of prospective business. In cases involving the loss of prospective business, the plaintiff is usually required to show that some specific person or persons refused to buy because of the disparagement. This rule is often relaxed, however, where these losses are difficult to prove.

The special damages that the plaintiff is required to prove are his usual—and typically his only—remedy in injurious falsehood cases. Damages for personal injury or emotional distress, for instance, are generally not recoverable. However, punitive damages and injunctive relief are sometimes obtainable.

Injurious Falsehood and Defamation Injurious falsehood may or may not overlap with the tort of defamation discussed in Chapter 6. Statements impugning a businessperson's character or conduct are probably defamatory. If, on the other hand, the false statement is limited to the plaintiff's business, property, or economic interests, his normal claim is for injurious falsehood. Both claims are possible when the injurious falsehood implies something about the plaintiff's character and affects his overall reputation. An example is a defendant's false allegation that the plaintiff knowingly sells dangerous products to children. As in defamation cases, statements of pure opinion (as opposed to false statements of supposed fact) do not give rise to injurious falsehood liability.

Defamation law's absolute and conditional privileges generally apply in injurious falsehood cases.⁶ Certain other privileges protect defendants who are sued for injurious falsehood. For example, a rival claimant may in good faith disparage another's property rights by asserting his own competing rights. Similarly, one may make a good faith allegation that a competitor is infringing one's patent, copyright, or trademark. Finally, a person may sometimes make unfavorable comparisons between her product and that of a competitor. This privilege is generally limited to sales talk asserting the superiority of one's own product and does not cover unfavorable statements about a competitor's product.

Interference with Contractual Relations

In a lawsuit for intentional interference with contractual relations, one party to a contract claims that the defendant's interference with the other party's performance

of the contract wrongly caused the plaintiff to lose the benefit of that performance. One can interfere with the performance of a contract by causing a party to repudiate it, or by wholly or partly preventing that party's performance. The means of interference can range from mere persuasion to threatened or actual violence. The agreement whose performance is impeded, however, must be an *existing* contract. This includes contracts that are voidable, unenforceable, or subject to contract defenses, but *not* void bargains, contracts that are illegal on public policy grounds, or contracts to marry. Finally, the defendant must have *intended* to cause the breach; there is usually no liability for negligent contract interferences.

Even if the plaintiff proves these threshold requirements, the defendant is liable only if his behavior was *improper*. Despite the flexible, case-by-case nature of such determinations, a few generalizations about improper interference are possible.

1. If the contract's performance was blocked by such clearly improper means as threats of physical violence, misrepresentations, defamatory statements, bribery, harassment, or bad faith civil or criminal actions, the defendant usually is liable. Liability is also likely where the interference was motivated *solely* by malice, spite, or a simple desire to meddle.

2. If his means and motives are legitimate, a defendant generally escapes liability when his contract interference is in the *public interest*—for example, when he informs an airport that an air traffic controller habitually uses hallucinogenic drugs. The same is true when the defendant acts to *protect a person for whose welfare she is responsible*—for example, when a mother induces a private school to discharge a diseased student who could infect her children.

3. A contract interference resulting from the defendant's good faith effort to protect her own *existing* legal or economic interests usually does not create liability so long as appropriate means are used. For example, a landowner can probably induce his tenant to breach a sublease to a party whose business detracts from the land's value. However, business parties generally cannot interfere with existing contract rights merely to further some *prospective* competitive advantage. For example, a seller cannot entice its competitors' customers to break existing contracts with those competitors.

The *Carey Station Village* case, which follows shortly, explores the issues surrounding a defendant's privilege to interfere with a contract in order to protect his own interests. In addition, *Carey Station Village* reveals that

⁶Chapter 6 discusses those privileges.

liability for interference with contractual relations will not attach to one who is not a “stranger” to the relationship at issue.

4. Finally, competitors are unlikely to incur liability where, as is still often true of employment contracts, the agreement interfered with is *terminable at will*. The reason is that in such cases, the plaintiff has only an expectancy that the contract will continue, and not a right to have it continued. Thus, a firm that hires away its competitors’ at-will employees usually escapes liability.

The basic measure of damages for intentional interference with contractual relations is the value of the lost contract performance. Some courts also award compensatory damages reasonably linked to the interference (including emotional distress and damage to reputation). Sometimes the plaintiff may obtain an injunction prohibiting further interferences.

Interference with Prospective Advantage The rules and remedies for intentional interference with prospective advantage parallel those for interference with contractual relations. The main difference is

that the former tort involves interferences with *prospective* relations rather than existing contracts. The protected future relations are mainly potential contractual relations of a business or commercial sort. Liability for interference with such relations requires intent; negligence does not suffice.

The “improper interference” factors weighed in interference-with-contract cases generally apply to interference with prospective advantage as well. One difference, however, is that interference with prospective advantage can be justified if (1) the plaintiff and the defendant are in competition for the prospective relation with which the defendant interferes; (2) the defendant’s purpose is at least partly competitive; (3) the defendant does not use such improper means as physical threats, misrepresentations, and bad faith lawsuits; and (4) the defendant’s behavior does not create an unlawful restraint of trade under the antitrust laws or other regulations. Thus, a competitor ordinarily can win customers by offering lower prices and attract suppliers by offering higher prices. Unless this is otherwise illegal, he can also refuse to deal with suppliers or buyers who also deal with his competitors.

Carey Station Village Homeowners Association, Inc. v. Carey Station Village, Inc. 602 S.E.2d 233 (Ga. App. 2004)

Carey Station Village, Inc., referred to below as “the developer,” purchased real estate near a Georgia lake in 1987. The developer planned to create a large residential subdivision known as Carey Station Village. Although the developer continued to own a number of the lots in the subdivision, it relinquished control of the subdivision to Carey Station Village Homeowners Association, Inc., referred to below as “the association,” in 1994. In 1999, the developer began to sell off some of the lots whose ownership it had retained. These lots had been improved with double-wide, modular homes. The developer provided owner financing for a number of the purchases. Within the first three months of advertising the lots for sale, the developer had sold over one-half of the lots. Later, however, the developer was required to foreclose on 16 of the 21 parcels of property it had sold.

The association brought suit against the developer in 2001 to recover dues and assessments it claimed were owed by the developer in regard to the developer’s remaining lots. The developer and the association had been involved in an earlier lawsuit that resulted in a settlement in which the developer forgave a promissory note from the association, and in exchange, the association released the developer from any liability for association dues or assessments through the year 1999. The developer paid all dues and assessments owing in 2000, but did not make any payments during the subsequent years.

The developer filed a counterclaim asserting that the association committed the tort of interference with contractual relations. According to the developer, actions by the association caused a number of purchasers of the developer’s lots to default on their promissory notes. In addition, the developer contended that the association’s actions adversely affected the developer’s ability to sell its remaining lots at market value. The developer sought to recover damages resulting from the foreclosures referred to above, as well as damages allegedly incurred when the developer’s remaining 27 lots were sold at a price below market value.

The case was tried to a jury in a Georgia court. The trial judge denied the association's motion for a directed verdict on the developer's interference with contractual relations counterclaim. The jury found in favor of the association on its claim for unpaid dues and assessments and awarded it \$40,527.09. The jury also found in favor of the developer on its counterclaim and awarded it \$211,250. The trial judge entered a judgment in favor of the developer in the amount of \$170,722.91, the net amount once the damages awarded to the association were offset against the greater amount of damages awarded to the developer. The trial judge denied the association's motions for new trial and judgment notwithstanding the verdict. The association appealed to the Georgia Court of Appeals.

Adams, Judge

The association asserts that the trial court erred in failing to grant [it a] directed verdict [and a judgment notwithstanding the verdict] on the developer's claim of tortious interference with contractual relations. The association contends that it is not liable because it acted with privilege and because it was not a stranger to the relationship between the developer and the purchasers. [This argument causes us to explore the elements of interference with contractual relations.]

To establish [its] claim of interference with a contract or business relations, [the developer] must prove:

- (1) improper action or wrongful conduct by the [association] without privilege; (2) the [association] acted purposely and . . . with the intent to injure; (3) the [association] induced a breach of a contractual obligation or caused a . . . third party to discontinue or fail to enter into an anticipated . . . relationship with the [developer]; and (4) the [association's] tortious conduct proximately caused damage to the developer.

Culpepper v. Thompson, 562 S.E.2d 837 (Ga. App. 2002). "Privilege" in this context means "a legitimate or bona fide . . . interest of the defendant or a legitimate relationship of the defendant with the contract, which causes the defendant not to be considered a stranger, interloper, or meddler to the contract." [Case citation omitted.]

In *Culpepper*, . . . we held that the president of a county farm bureau could not be liable for tortious interference with the employment contract between Georgia Farm Bureau Mutual Insurance Company and one of its agents because the president had a legitimate interest in that contract, and thus acted with privilege in requesting the agent's transfer to another county. [We] reached this conclusion based upon the fact that the agent was required to maintain good relations with the local board of directors of the farm bureau, because the farm bureau had a vested business interest in the success of the insurance company from premiums generated in the county, and [because] the farm bureau's board also approved the placement of the agent within the county.

Here, the evidence at trial showed that each subdivision lot, including those owned by the developer, was subject to "An Amended and Restated Declaration of Protective Covenants" governing the subdivision. That document was signed by both the developer and the association. Under these protective covenants, the association was granted the power to enforce the covenants and collect dues and assessments. And the Georgia Property Owners' Association Act gives the covenants the force of law. Thus, each of the warranty deeds executed in connection with the developer's sale of its lots recites that the property is subject to these protective covenants. Accordingly, the association acted with privilege when it took action as outlined under the protective covenants, such as attempting to collect dues and assessments.

But even if the actions of the association exceeded this privilege, as the developer asserts, the interference [with contractual relations] claim fails because the association is not a stranger to the relationship between the developer and the purchasers. To be liable for interference with contractual or business relations, "one must be a stranger to both the contract and the business relationship giving rise to and underpinning the contract. In other words, . . . parties to a comprehensive interwoven set of contracts [cannot be held] liable for tortious interference with any of the contracts or business relationships." *Galardi v. Steele-Inman*, 597 S.E.2d 571 (Ga. App. 2004).

Under the circumstances here, we cannot say that the association was a stranger to the contracts or relationship between the developer and the purchasers of the developer's lots. Rather, they are all parties to a "comprehensive interwoven set of contracts." [We conclude] that the association cannot be liable for interference with the contracts or business relationship between the developer and the lot purchasers. [Therefore,] the trial court erred in denying the association's motion for judgment notwithstanding the verdict.

Trial court's decision reversed; judgment to be entered in favor of association on developer's counterclaim.

Lanham Act Section 43(a)

Section 43(a) of the Lanham Act basically creates a federal law of unfair competition. Section 43(a) is not a consumer remedy; it is normally available only to commercial parties, who usually are the defendant's competitors. The section creates civil liability for a wide range of false, misleading, confusing, or deceptive representations made in connection with goods or services. Section 43(a)'s many applications include:

1. *Tort claims for "palming off" or "passing off."* This tort involves false representations that are likely to induce third parties to believe that the defendant's goods or services are those of the plaintiff. Such representations include imitations of the plaintiff's trademarks, trade names, packages, labels, containers, employee uniforms, and place of business.
2. *Trade dress infringement claims.* These claims resemble passing-off claims. A product's trade dress is its overall appearance and sales image. Section 43(a) prohibits a party from passing off its goods or services as

those of a competitor by employing a substantially similar trade dress that is likely to confuse consumers as to the source of its products or services. For example, a competitor that sells antifreeze in jugs that are similar in size, shape, and color to a well-known competitor's jugs may face section 43(a) liability.

3. *Claims for infringement of both registered and unregistered trademarks.*
4. *Commercial appropriation of name or likeness claims and right of publicity claims* (discussed in Chapter 6).
5. *False advertising claims.* This important application of section 43(a) includes ads that misrepresent the nature, qualities, or characteristics of either the *advertiser's* products and services or a *competitor's* products and services. Section 43(a) applies to ads that are likely to mislead buyers even if they are not clearly false on their face, and to ads with certain deceptive *omissions*. In the *Time Warner Cable* case, the court discusses the types of statements that may violate section 43(a) and those that may not.

Time Warner Cable, Inc. v. DIRECTV, Inc.

497 F.3d 144 (2d Cir. 2007)

Time Warner Cable, Inc. (TWC), and DIRECTV, Inc., are major players in the multichannel video service industry. TWC is the second-largest cable company in the United States. TWC and other cable providers are required by law to operate through franchises issued by local government entities. At the time of the litigation described below, TWC was the franchisee in the greater part of New York City. DIRECTV is one of the country's largest satellite service providers. Because DIRECTV broadcasts directly via satellite, it is not subject to the franchise limitations applicable to cable companies. Therefore, in the markets where TWC is the franchisee, DIRECTV and other satellite providers pose the greatest threat to its market share.

Both TWC and DIRECTV offer high-definition (HD) service on some of their respective channels. HD provides the home viewer with theater-like picture quality on a wider screen. The picture quality of HD is governed by standards recommended by an international nonprofit organization that develops voluntary standards for digital television. TWC and DIRECTV meet these standards in their HD programming. To view programming in HD format, customers of either provider must have an HD television set. Evidence adduced in the litigation described below established that the HD programming consumers could see on TWC and DIRECTV was equivalent in picture quality.

*In 2006, DIRECTV launched a multimedia advertising campaign based on the "Source Matters" theme. The campaign was designed to educate consumers that to obtain HD-standard picture quality, it is not enough to buy an HD television set; consumers must also receive HD programming from the "source," that is, the television service provider. As part of this campaign, DIRECTV began running a television commercial featuring celebrity Jessica Simpson. In the commercial, Simpson, portraying her character of Daisy Duke from the movie *The Dukes of Hazzard*, says to some of her customers at the local diner:*

Y'all ready to order? Hey, 253 straight days at the gym to get this body and you're not gonna watch me on DIRECTV HD? You're just not gonna get the best picture out of some fancy big screen TV without DIRECTV. It's broadcast in 1080i [a reference to a technical term dealing with HD resolution]. I totally don't know what that means, but I want it.

The commercial concluded with a narrator saying, "For an HD picture that can't be beat, get DIRECTV."

Another television commercial in the DIRECTV campaign featured actor William Shatner as Captain James T. Kirk, his character from the popular Star Trek television show and film series. The following conversation takes place on the starship Enterprise:

Mr. Chekov: Should we raise our shields, Captain?

Captain Kirk: At ease, Mr. Chekov. Again with the shields. I wish he'd just relax and enjoy the amazing picture clarity of the DIRECTV HD we just hooked up. With what Starfleet just ponied up for this big screen TV, settling for cable would be illogical.

The commercial ended with the announcer saying, "For an HD picture that can't be beat, get DIRECTV."

As a further part of its advertising campaign, DIRECTV placed banner advertisements on various Web sites. The banner ads opened by showing an image so blurry that it was impossible to discern what was being depicted. On top of this indistinct image was superimposed the slogan, "Source Matters." After about a second, a vertical line split the screen into two parts, one labeled "Other TV" and the other "DIRECTV." On the other TV side of the line, the picture was extremely distorted, as the opening image had been. In contrast, the picture on the DIRECTV side was exceptionally sharp and clear. The DIRECTV screen revealed that what viewers had been looking at was an image of New York Giants quarterback Eli Manning; in another ad, it was a picture of two women snorkeling in tropical waters. The ads then invited browsers to "[f]ind out why DIRECTV's picture beats cable" and to "[l]earn more" about a special offer by clicking on a link to the HDTV section of DIRECTV's Web site.

In addition to the banner ads, DIRECTV created an ad that it featured on its own Web site. The visual content of this was very similar to that of the banner ads. The "Other TV" part of the split screen was later identified in the ad as representing "basic cable." The very blurry picture on the "Other TV" side was accompanied by the following text: "If you're hooking up your high-definition TV to basic cable, you're not getting the best picture on every channel. For unparalleled clarity, you need DIRECTV HD."

Shortly after DIRECTV began running the above-described television commercials and Internet ads, TWC sued DIRECTV in the U.S. District Court for the Southern District of New York. TWC, which claimed that DIRECTV had engaged in false advertising in violation of § 43(a) of the Lanham Act, moved for a preliminary injunction against the commercials and ads. When the federal district court granted the preliminary injunction, DIRECTV appealed to the U.S. Court of Appeals for the Second Circuit.

Straub, Circuit Judge

A party seeking preliminary injunctive relief must establish: (1) either (a) a likelihood of success on the merits of its case or (b) sufficiently serious questions going to the merits to make them a fair ground for litigation and a balance of hardships tipping decidedly in its favor, *and* (2) a likelihood of irreparable harm if the requested relief is denied.

Section 43(a) of the Lanham Act provides, in pertinent part, that

[a]ny person who, on or in connection with any goods or services . . . uses in commerce . . . any . . . false or misleading description of fact, or false or misleading representation of fact, which—

. . . .

(B) in commercial advertising or promotion, misrepresents the nature, characteristics, qualities, or geographic origin of his or her or another person's goods, services, or commercial activities, shall be liable in a civil action by any person who believes that he or she is or is likely to be damaged by such act.

15 U.S.C. § 1125(a)(1). Two different theories of recovery are available to a plaintiff who brings a false advertising action under § 43(a). First, the plaintiff can demonstrate that the challenged advertisement is literally false, *i.e.*, false on its face. When an advertisement is shown to be literally or facially false, consumer deception is presumed and "the court may grant relief without reference to the advertisement's [actual] impact on the buying public." [Case citation omitted.] "This is because plaintiffs alleging a literal falsehood are claiming that a statement, on its face, conflicts with reality, a claim that is best supported by comparing the statement itself with the reality it purports to describe." [Case citation omitted.] Alternatively, a plaintiff can show that the advertisement, while not literally false, is nevertheless likely to mislead or confuse consumers. Therefore, whereas "plaintiffs seeking to establish a literal falsehood must generally show the substance of what is conveyed, . . . a district court *must* rely on extrinsic evidence [of consumer deception or confusion] to support a finding of an implicitly false message." [Case citation omitted.]

Here, TWC chose to pursue only the first path of literal falsity, and the District Court granted the preliminary injunction

against the television commercials on that basis. In this appeal, DIRECTV does not dispute that it would be a misrepresentation to claim that the picture quality of DIRECTV HD is superior to that of cable HD. Rather, it argues that neither commercial explicitly makes such a claim, and therefore cannot be literally false.

DIRECTV's argument is easily dismissed with respect to the Simpson commercial. In the critical lines, Simpson tells audiences, "You're just not gonna get the best picture out of some fancy big screen TV without DIRECTV. It's broadcast in 1080i." These statements make the explicit assertion that it is impossible to obtain "the best picture"—*i.e.*, a "1080i"-resolution picture—from any source other than DIRECTV. This claim is flatly untrue; the uncontroverted factual record establishes that viewers can, in fact, get the same "best picture" by ordering HD programming from their cable service provider. We therefore affirm the District Court's determination that the Simpson commercial's contention "that a viewer cannot 'get the best picture' without DIRECTV is . . . likely to be proven literally false."

The issue of whether the Shatner commercial is likely to be proven literally false requires more analysis. When interpreting the controversial statement [that] "[w]ith what Starfleet just ponied up for this big screen TV, settling for cable would be illogical," the District Court looked not only at that particular text, but also at the surrounding context. In light of Shatner's opening comment extolling the "amazing picture quality of . . . DIRECTV HD" and the announcer's closing remark highlighting the unbeatable "HD picture" provided by DIRECTV, the District Court found that the line in the middle—"settling for cable would be illogical"—clearly referred to cable's HD picture quality. Since it would only be "illogical" to "settle" for cable's HD picture if it was materially inferior to DIRECTV's HD picture, the District Court concluded that TWC was likely to establish that the statement was literally false.

DIRECTV argues that the District Court's ruling was clearly erroneous because the actual statement at issue, "settling for cable would be illogical," does not explicitly compare the picture quality of DIRECTV HD with that of cable HD, and indeed, does not mention HD at all. In DIRECTV's view, the District Court based its determination of literal falsity not on the words actually used, but on what it subjectively perceived to be the general message conveyed by the commercial as a whole. DIRECTV contends that this was plainly improper.

TWC, on the other hand, maintains that the District Court properly took context into account in interpreting the commercial. TWC argues that . . . an advertisement can be literally false even though no [statements in it are] untrue, if the clear meaning of the statement, considered in context, is false. Given the commercial's repeated references to "HD picture," TWC

contends that the District Court correctly found that "settling for cable would be illogical" literally made the false claim that cable's HD picture quality is inferior to DIRECTV's.

[A review of relevant decisions causes] us to now formally adopt what is known in other [circuit courts of appeal] as the "false by necessary implication" doctrine. Under this doctrine, a district court evaluating whether an advertisement is literally false "must analyze the message conveyed in full context," *i.e.*, it "must consider the advertisement in its entirety and not . . . engage in disputatious dissection." [Case citations omitted.] If the words or images, considered in context, necessarily imply a false message, the advertisement is literally false and no extrinsic evidence of consumer confusion is required. However, . . . if the language or graphic is susceptible to more than one reasonable interpretation, the advertisement cannot be literally false. [In that event, there] may still be a basis for a claim that the advertisement is misleading, but to resolve such a claim, the district court must look to consumer data to determine what "the person to whom the advertisement is addressed find[s] to be the message." [Case citation omitted.]

Here, the District Court found that Shatner's assertion that "settling for cable would be illogical," considered in light of the advertisement as a whole, unambiguously made the false claim that cable's HD picture quality is inferior to that of DIRECTV's. We cannot say that this finding was clearly erroneous, especially given that in the immediately preceding line, Shatner praises the "amazing picture clarity of . . . DIRECTV HD." We accordingly affirm the District Court's conclusion that TWC established a likelihood of success on its claim that the Shatner commercial is literally false.

[We now consider DIRECTV's Internet ads.] We had made clear that a district court must examine not only the words, but also the "visual images . . . to assess whether [the advertisement] is literally false." [Citation omitted.] It is uncontroverted that the images used in the Internet ads to represent cable are inaccurate depictions of the picture quality provided by cable's digital or analog service.

DIRECTV does not contest this point. Rather, it asserts that the images are so grossly distorted and exaggerated that no reasonable buyer would take them to be accurate depictions of how a consumer's television picture would look when connected to cable. Consequently, DIRECTV argues, the images are obviously just puffery, which cannot form the basis of a Lanham Act violation.

This Court has had little occasion to explore the concept of puffery in the false advertising context. In . . . one case where we discussed the subject in some depth, we characterized puffery as "[s]ubjective claims about products, which cannot be proven either true or false." [Case citation omitted.] We also cited to the Third Circuit's description of puffery in *Castrol, Inc. v.*

Pennzoil Co., 987 F.2d 939, 945 (3d Cir. 1993): “Puffery is an exaggeration or overstatement expressed in broad, vague, and commendatory language.” Such sales talk, “or puffing, as it is commonly called, is considered to be offered and understood as an expression of the seller’s opinion only, which is to be discounted as such by the buyer. . . . The puffing rule amounts to a seller’s privilege to lie his head off, so long as he says nothing specific.” W. Page Keeton et al., *Prosser and Keeton on the Law of Torts* § 109, at 756–57 (5th ed. 1984).

[The above] definition of puffery does not translate well into the world of images. Unlike words, images cannot be vague or broad. To the contrary, visual depictions of a product are generally specific and measurable, and can therefore be proven either true or false. Yet, if a visual representation is so grossly exaggerated that no reasonable buyer would take it at face value, there is no danger of consumer deception and hence, no basis for a false advertising claim.

Other circuits have recognized that puffery can come in at least two different forms. The first form [is] “a general claim of superiority over comparable products that is so vague that it can be understood as nothing more than a mere expression of opinion.” [Case citation omitted.] The second form of puffery . . . is “an exaggerated, blustering, and boasting statement upon which no reasonable buyer would be justified in relying.” [Case citation omitted.] We believe that this second conception of puffery is a better fit where, as here, the “statement” at issue is expressed not in words, but through images.

The District Court determined that the Internet Advertisements did not satisfy this alternative definition of puffery because DIRECTV’s own evidence showed that “many HDTV equipment purchasers are confused as to what image quality to expect when viewing non-HD broadcasts, as their prior experience with the equipment is often limited to viewing HD broadcasts or other digital images on floor model televisions at large retail chains.” Given this confusion, the District Court reasoned

that “consumers unfamiliar with HD equipment could be led to believe that using an HD television set with [a] cable feed might result in the sort of distorted images showcased in DIRECTV’s Internet Advertisements, especially since those advertisements make reference to ‘basic cable.’” *Id.*

Our review of the record persuades us that the District Court clearly erred in rejecting DIRECTV’s puffery defense. The “Other TV” images in the Internet Advertisements are . . . unwatchably blurry, distorted, and pixilated, and . . . nothing like the images a customer would ordinarily see using TWC’s cable service. [T]he Internet ads’ depictions of cable are not just inaccurate; they are not even remotely realistic. It is difficult to imagine that any consumer, whatever the level of sophistication, would actually be fooled by the Internet ads into thinking that cable’s picture quality is so poor that the image is nearly entirely obscured. As DIRECTV states in its brief, “even a person not acquainted with cable would realize TWC could not realistically supply an unwatchably blurry image and survive in the marketplace.” For these reasons, we conclude that the District Court exceeded its permissible discretion in preliminarily enjoining DIRECTV from disseminating the Internet ads.

A plaintiff seeking a preliminary injunction under the Lanham Act must persuade a court not only that it is likely to succeed on the merits, but also that it is likely to suffer irreparable harm in the absence of immediate relief. [Because the District Court properly concluded that the Simpson and Shatner commercials were literally false, it was also proper for the court, utilizing applicable precedent, to conclude that TWC would suffer irreparable harm because of its competitor’s literally false commercials.]

District Court’s grant of preliminary injunction regarding DIRECTV’s television commercials affirmed; preliminary injunction regarding Internet ads vacated; case remanded for further proceedings.

Problems and Problem Cases

1. Huey J. Rivet patented an “amphibious marsh craft” for hauling loads and laying pipeline in swamps. Rivet’s model could “walk” over stumps for extended periods while carrying heavy loads. Later, Robert Wilson, who had once worked for Rivet as a welder, began marketing a similar craft. The craft sold by Wilson differed from the craft described in the specification accompanying Rivet’s patent application in

several respects. Overall, though, the Wilson boat performed much the same functions about as effectively as the Rivet craft, and used much the same engineering techniques and concepts to do so. Has Wilson infringed Rivet’s patent?

2. Visual artist Jeff Koons created a painting called “Niagara.” The painting consisted of fragmentary images collaged against the backdrop of a landscape. It depicted four pairs of women’s feet and

lower legs dangling prominently over images of confections—a large chocolate fudge brownie topped with ice cream, a tray of donuts, and a tray of apple danish pastries—with a grassy field and Niagara Falls in the background. The images of the legs were placed side by side, each pair pointing vertically downward. Koons drew the images in “Niagara” from fashion magazines and advertisements. One of the pairs of legs in the painting was adapted from a copyrighted photograph taken by Andrea Blanch, an accomplished professional fashion and portrait photographer. The Blanch photograph used by Koons in “Niagara” was titled “Silk Sandals.” It appeared in the August 2000 issue of *Allure* magazine. While working on “Niagara” and other paintings, Koons saw “Silk Sandals” in *Allure*. In an affidavit submitted in the litigation referred to below, Koons stated that “certain physical features of the legs [in the photograph] represented for me a particular type of woman frequently presented in advertising.” He considered this typicality to further his purpose of commenting on the “commercial images . . . in our consumer culture.” Koons scanned the image of “Silk Sandals” into his computer and incorporated a version of the scanned image into “Niagara.” He omitted certain aspects of the scanned image from his painting and modified certain other aspects of the image, such as by making the woman’s legs angle downward rather than upward (the opposite of how they had appeared in Blanch’s photograph). Koons did not seek permission from Blanch before using her photograph. He later earned approximately \$125,000 from financial exploitation of “Niagara.” When Blanch sued Koons for copyright infringement, what defense would Koons have attempted to establish? Did Koons succeed with that defense?

3. Tom Forsythe, who does business as “Walking Mountain Productions,” produces photographs that have social and political overtones. Among Forsythe’s works is a 78-photograph series titled “Food Chain Barbie.” These photographs depict Mattel, Inc.’s famous “Barbie” doll in absurd positions and settings, many of which have sexual overtones. In some of the titles of individual photographs, Forsythe uses the “Barbie” name. Although the photographs vary in content, Forsythe generally depicts Barbie dolls juxtaposed with vintage kitchen appliances. For example, “Malted Barbie” features a nude Barbie placed on a malt machine. “Fondue a la Barbie” depicts Barbie heads in a fondue pot. “Barbie Enchiladas” shows a lit

oven and a pan containing four tortilla-wrapped, salsa-covered Barbies.

In a declaration accompanying his summary judgment motion in the litigation described below, Forsythe described his photographic series as an attempt to “critique the objectification of women associated with [Barbie], and [to] lambaste the conventional beauty myth and the societal acceptance of women as objects.” He said he parodied Barbie because he regards Barbie as “the most enduring of those products that feed on the insecurities of our beauty and perfection-obsessed consumer culture.” Forsythe also said he sought to communicate, through artistic expression, a serious message with an element of humor. Forsythe’s market success was limited. He displayed his works at two art festivals and several exhibitions. He printed 2,000 promotional postcards depicting the “Barbie Enchiladas” photograph, but only 500 postcards were circulated. Forsythe also produced 1,000 business cards, which depicted “Champagne Barbie.” His name and self-given title (“Artsurdist”) appeared on the cards. In addition, Forsythe had a Web site on which he depicted low-resolution images of his photographs. The Web site was not configured for online purchasing. “Tom Forsythe’s Artsurdist Statement,” in which he described his intent to critique and ridicule Barbie, was featured on the Web site. Prior to the lawsuit described below, Forsythe received only four or five unsolicited calls inquiring about his work. The “Food Chain Barbie” series earned him gross income of \$3,659—at least half of which stemmed from purchases by Mattel investigators. Mattel sued Forsythe in federal district court, contending that the “Food Chain Barbie” series violated Mattel’s copyright and trademark rights in regard to the Barbie doll’s appearance and name. The district court granted Forsythe’s motion for summary judgment. In so ruling, the court held that Forsythe’s use of Mattel’s copyrighted work was fair use and thus not copyright infringement. In addition, the court rejected Mattel’s trademark infringement and dilution claims. Mattel appealed to the U.S. Court of Appeals for the Ninth Circuit. Was the district court’s decision correct? How did the Ninth Circuit rule?

4. Qualitex Co. produces pads that dry-cleaning firms use on their presses. Since the 1950s, Qualitex has colored its press pads a shade of green-gold. In 1989, Jabcobson Products Co. began producing

press pads for sale to dry-cleaning firms. Jacobson colored its pads a green-gold resembling the shade used by Qualitex. Later in 1989, the United States Patent & Trademark Office granted Qualitex a trademark registration for the green-gold color (as used on press pads). Qualitex then added a trademark infringement claim to an unfair competition lawsuit it had previously filed against Jacobson. Qualitex won the case, but the Ninth Circuit Court of Appeals set aside the judgment on the trademark infringement claim. In the Ninth Circuit's view, the Lanham Act did not allow any party to have color alone registered as a trademark. The Supreme Court granted certiorari. How did the Supreme Court rule on the question whether color is a registrable trademark?

5. Peter Deptula owns a federal trademark registration on "Surfvivor," an amalgamation of the words "surf" and "survivor." Deptula has used the Surfvivor mark for a significant number of years on his many Hawaiian beach-themed products, which include sunscreen, T-shirts, and surfboards. Deptula's mark consists of the term "Surfvivor" in block or cursive writing, often accompanied by a stylized graphic such as a sun or a surfer. Deptula has advertised his products on local television and radio shows, on his Web site, and at local trade shows. Surfvivor goods are primarily sold in Hawaii through a local university, a drugstore chain, military outlets, and Hawaiian branches of major retailers. Deptula would like to expand Surfvivor's out-of-state presence, but has not made firm plans to do so. Several years after Deptula coined the "Surfvivor" name, the CBS television network and a television programming organization known as Survivor Productions began broadcasting a reality television show called *Survivor*. The *Survivor* program deals with the experiences of competitors who seek to survive in extreme outdoor conditions. The show has been a viewer favorite. Survivor Productions created a special *Survivor* logo for advertising and marketing purposes. As with the Surfvivor mark, the *Survivor* mark is emblazoned on a wide range of consumer merchandise, including T-shirts, shorts, and hats. The *Survivor* mark consists of the word "Survivor" in block script. It is often accompanied by the words "outwit[,] outplay[, and] outlast," or is superimposed on a stylized graphic suggesting the location of a particular series. When *Survivor*'s producers began their use of the *Survivor* name and mark, they were aware of Deptula's Surfvivor mark.
- After *Survivor* began airing on television, Deptula encountered a few persons who wondered whether his business was sponsored by the entities that produced and aired the television program. One retailer and one customer mistook *Survivor* sunscreen for Deptula's product, and one trade show attendee thought that Deptula's business was endorsed by *Survivor*'s producers. Survivor Productions and CBS never received any complaints from confused customers. A survey commissioned by Survivor Productions revealed that fewer than 2 percent of more than 400 sunscreen purchasers were confused by the two marks. None of Deptula's customers returned any Surfvivor goods because of a mistaken belief that the goods they purchased were produced or endorsed by the producers of *Survivor*. No merchant stopped doing business with Deptula on account of confusion between the product lines.
- Deptula filed a trademark infringement lawsuit against Survivor Productions and CBS on the basis of the facts set forth above. The federal district court granted summary judgment in favor of the defendants. Did the court rule correctly?
6. E. I. du Pont de Nemours & Co. was building a plant to develop a highly secret unpatented process for producing methanol. During the construction, some of its trade secrets were exposed to view from the air because the plant in which they were contained did not yet have a roof. These secrets were photographed from an airplane by two photographers who were hired by persons unknown to take pictures of the new construction. Did this action amount to a misappropriation of Du Pont's trade secrets?
 7. AT&T Corp. owns a patent on an apparatus for digitally encoding and compressing recorded speech. Microsoft Corp.'s Windows operating system includes software that will enable a computer to process speech in a manner covered by AT&T's patent. However, the patent would not be infringed unless and until Windows was installed on a computer and the computer would then be able to perform in the way contemplated by the patent. Microsoft sells Windows to computer manufacturers, some of which are foreign companies. The purchasing manufacturers install Windows on the computers they build and sell. To each of the foreign manufacturers, Microsoft sends a master version of Windows, either on a disk or in an encrypted electronic transmission.

The foreign manufacturers then use the master version of Windows to create copies of it. The copies of Windows—rather than the master version provided by Microsoft—are installed on the foreign manufacturers' computers, which are then sold to users outside the United States. In a U.S. district court, AT&T sued Microsoft for patent infringement on the basis of the above facts. Was Microsoft liable for patent infringement in regard to its dealings with the foreign manufacturers?

8. In February 1999, Bob D'Amato registered the domain name www.audisport.com. He posted content to his Web site in June 1999 and April 2000. Believing that employees of a dealership that sold Audi automobiles had given him verbal permission to use Audi trademarks on his Web site, D'Amato commissioned another party to create a logo that incorporated portions of an Audi trademark, the company's rings logo. He used the commissioned logo on his site and posted links to another party's site, www.audisportline.com, which sold Audi-related items. Other content posted on D'Amato's site used the Audi name and other Audi trademarks. The site also contained a statement that "[w]e are a cooperative with Audi of America, and will be providing the latest products for your [Audi automobiles]." Although he requested the dealership's written permission to use Audi trademarks, D'Amato never received the written permission. Audi's agreements with its dealerships forbade them from granting anyone permission to use Audi trademarks. D'Amato later ceased using the Audi trademarks on his Web site. He ended up earning no profits from the site. Even so, Audi sued him for trademark infringement and dilution when it learned of his activities. Was D'Amato liable for trademark infringement? Was he liable for trademark dilution?
9. David Hudesman leased commercial property housing the Red Dog Saloon to Don Harris, the saloon's owner and operator. The lease said that Harris could assign it to any subtenant or assignee who was financially responsible and would properly care for the premises. It also required that Hudesman consent to such an assignment, but added that this consent could not be withheld unreasonably. After Harris decided to relocate his business, he was contacted by Richard Stone, president of the RAN Corporation. Stone wanted to use the property for an artifacts gallery. Harris and Stone agreed that Harris would assign

the lease for \$15,000, conditional on Hudesman's approval.

About this time, a politically influential man named Jerry Reinwand contacted Hudesman about the property. In exchange for Reinwand's promise to help Hudesman secure government leases for a large building Hudesman owned, Hudesman promised Reinwand that if Harris relocated his business, Reinwand would be assigned the property. Then Hudesman told Harris that he would not consent to Harris's assignment of the lease to RAN, and that Harris would be "looking at litigation" if he tried to assign the lease to Stone. Therefore, Harris told Stone that the deal was off, returned his \$15,000 deposit, and assigned the lease to Reinwand for \$15,000.

RAN then sued in an effort to invalidate Reinwand's lease and enforce its assignment contract with Harris. After RAN settled with several defendants, its main remaining claims were interference with contractual relations and interference with prospective advantage claims against Hudesman. When both parties moved for summary judgment, the trial court held for Hudesman. RAN appealed. Was RAN entitled to win on appeal?

10. The Jefferson County, Colorado, School District decided to refinance part of its bonded indebtedness by issuing refunding bonds. The School District selected two firms other than Moody's Investor Services, Inc. (hereinafter, "Moody"), to rate the bonds, even though it had used Moody's services in the past. When the School District brought the bonds to market, they initially sold well. Less than two hours into the sales period, however, Moody published an article about the bonds on its "Rating News," an electronically distributed information service sent to subscribers and news services. Moody stated in the article that even though it had not been asked to rate the bonds, it intended to assign a rating after the sale. The article went on to discuss the bonds and the School District's financial condition, concluding that "the outlook on the district's general obligation debt is negative, reflecting the district's ongoing financial pressure due in part to the state's [Colorado's] past underfunding of the school finance act as well as legal uncertainties and financial constraints under Amendment I." Amendment I, a then-recent change in the Colorado Constitution, required voter approval of certain tax increases.

According to the School District, Moody's article adversely affected the sale of the bonds. Purchase orders ceased, several buyers canceled prior orders, and the School District found it necessary to reprice the bonds at a higher interest in order to sell them. As a result, the School District asserted, it suffered a net loss of more than \$700,000. Contending the statement in Moody's article falsely indicated that the School District was not in a creditworthy financial condition, the School District sued Moody for injurious falsehood. The federal district court dismissed the School District's claim for failure to state a claim on which relief could be granted. The court based its ruling on a conclusion that Moody's statement, rather than being demonstrably false, was a protected statement of opinion. Was the district court's decision correct?

11. American Italian Pasta Co. (American) sells dried pasta under numerous brand names, as does its competitor, New World Pasta Co. (New World). From 1997 to 2000, American manufactured Mueller's brand (Mueller's) dried pasta for Best Foods. In 2000, American purchased Mueller's and took on all packaging, distributing, pricing, and marketing for the brand. Since purchasing Mueller's, American has placed the phrase "America's Favorite Pasta" on Mueller's packaging. On different packages used for the Mueller's brand, the phrases "Quality Since 1867," "Made from 100% Semolina," or "Made with Semolina" accompany the phrase "America's Favorite Pasta." The packaging also contains a paragraph in which the phrase "America's Favorite Pasta" appears. The paragraph (1) states that pasta lovers have enjoyed Mueller's pasta for 130 years; (2) claims that Mueller's "pasta cooks to perfect tenderness every time," because Mueller's uses "100% pure semolina milled from the highest quality durum wheat"; and (3) encourages consumers to "taste why Mueller's is America's favorite pasta."

New World sent American a demand letter calling for American to cease and desist using the phrase "America's Favorite Pasta." Consequently, American filed a declaratory judgment action in federal court and named New World as the defendant. American asked the court to declare that its use of the phrase "America's Favorite Pasta" did not constitute false or misleading advertising under § 43(a) of the Lanham Act. New World counterclaimed, asserting that American's use of "America's Favorite Pasta" violated § 43(a). New World argued that American's use

of the phrase was false or misleading advertising, because, according to a consumer survey commissioned by New World, the phrase conveyed either of two inaccurate impressions: that Mueller's is a national pasta brand; or that Mueller's is the nation's number one selling pasta. American and New World agreed that American's brands (including Mueller's) are regional in nature and that a pasta producer other than American and New World sells the most dried pasta in the United States.

American argued that the phrase "America's Favorite Pasta" did not violate § 43(a) because the phrase constituted nonactionable puffery. The federal district court agreed with this argument by American and rejected New World's contention that the phrase "America's Favorite Pasta" made a deceptive factual claim. Therefore, the court ruled in favor of American on its request for declaratory relief and against New World on its counterclaim. Was the district court's ruling correct? Was "America's Favorite Pasta" mere puffery or, instead, a false statement of supposed fact?

INTRODUCTION TO CONTRACTS

The 2001 catalog that Gigantic State University Web site sent out to prospective students described a merit-based scholarship called the “Eagle Scholarship.” The catalog stated that GSU offers the Eagle Scholarship to all incoming students who are in the top 10 percent of their high school classes and have SAT scores of 1250 or above. Paul, a prospective student, read the 2001 catalog that GSU had sent to him. Money was tight for Paul, so he paid particular attention to the part of the catalog that described financial aid. He read about the Eagle Scholarship and realized that he qualified for the scholarship. Paul picked GSU over other schools in large part because of the Eagle Scholarship. He applied to GSU and GSU admitted him. Before his freshman orientation, Paul called GSU and checked to be sure that he met the requirements of the Eagle Scholarship, and the GSU representative that he talked to informed him that he did. When Paul arrived at GSU for freshman orientation, however, he received a copy of the 2002 catalog and learned that the qualifications for the Eagle Scholarship had changed and that he no longer qualified.

- Was there a contract between GSU and Paul for the Eagle Scholarship?
- If so, what kind of contract was it?
- What body of legal rules would apply to the contract?
- If it wasn’t a contract, is there any other basis for a legal obligation on the part of GSU?
- Would it be ethical for GSU not to honor its promise to Paul?

The Nature of Contracts

The law of contracts deals with the enforcement of promises. It is important to realize from the outset of your study of contracts that *not every promise is legally enforceable*. (If every promise were enforceable, this chapter could be one sentence long!) We have all made and broken promises without fear of being sued. If you promise to take a friend out to dinner and then fail to do so, you would be shocked to be sued for breach of contract. What separates such promises from legally enforceable contracts? The law of contracts sorts out what promises are enforceable, to what extent, and how they will be enforced.

The essence of a contract is that it is a *legally enforceable* promise or set of promises. In other words, when a set of promises has the status of *contract*, a person injured by a breach of that contract is entitled to call on the government (courts) to force the breaching party to honor the contract.

The Functions of Contracts Contracts give us the ability to enter into agreements with others with confidence that we may call on the *law*—not merely the good faith of the other party—to make sure that those agreements will be honored. Within limitations that you will study later, *contracting lets us create a type of private law*—the terms of the agreements we make—that governs our relations with others.

Contracts facilitate the planning that is necessary in a modern, industrialized society. Who would invest in a business if she could not rely on the fact that the builders and suppliers of the facilities and equipment, the suppliers of the raw materials necessary to manufacture products, and the customers who agree to purchase those products would all honor their commitments? How could we make loans, sell goods on credit, or rent property unless loan agreements, conditional sales agreements, and leases were backed by the force of the law? Contract, then, is necessary to the world as we know it. Like that

world, its particulars tend to change over time, while its general characteristics remain largely stable.

The Evolution of Contract Law The idea of contract is ancient. Thousands of years ago, Egyptians and Mesopotamians recognized devices like contracts; by the 15th century, the common law courts of England had developed a variety of theories to justify enforcing certain promises. Contract law did not, however, assume major importance in our legal system until the 19th century, when the Industrial Revolution created the necessity for greater private planning and certainty in commercial transactions.

The central principle of contract law that emerged from this period was *freedom of contract*. Freedom of contract is the idea that contracts should be enforced because they are the products of the free wills of their creators, who should, within broad limits, be free to determine the extent of their obligations. The proper role of the courts in such a system of contract was to enforce these freely made bargains but otherwise to adopt a hands-off stance. The freedom to make good deals carried with it the risk of making bad deals. As long as a person voluntarily entered a contract, it would generally be enforced against him, even if the result was grossly unfair. And since equal bargaining power tended to be assumed, the courts were usually unwilling to hear defenses based on unequal bargaining power. This judicial posture allowed the courts to create a pure contract law consisting of precise, clear, and technical rules that were capable of general, almost mechanical, application. Such a law of contract met the needs of the marketplace by affording the predictable and consistent results necessary to facilitate private planning.

The emergence of large business organizations after the Civil War produced obvious disparities of bargaining power in many contract situations, however. These large organizations found it more efficient to standardize their numerous transactions by employing standard form contracts, which also could be used to exploit their greater bargaining power by dictating the terms of their agreements.

Contract law evolved to reflect these changes in social reality. During the 20th century, there was a dramatic increase in government regulation of private contractual relationships. Think of all the statutes governing the terms of what were once purely private contractual relationships. Legislatures commonly dictate many of the basic terms of insurance contracts. Employment contracts are governed by a host of laws concerning maximum hours worked, minimum wages paid, employer liability for on-the-job injuries, unemployment compensation, and

retirement benefits. In some circumstances, product liability statutes impose liability on the manufacturers and sellers of products regardless of the terms of their sales contracts. The purpose of much of this regulation has been to protect persons who lack sufficient bargaining power to protect themselves.

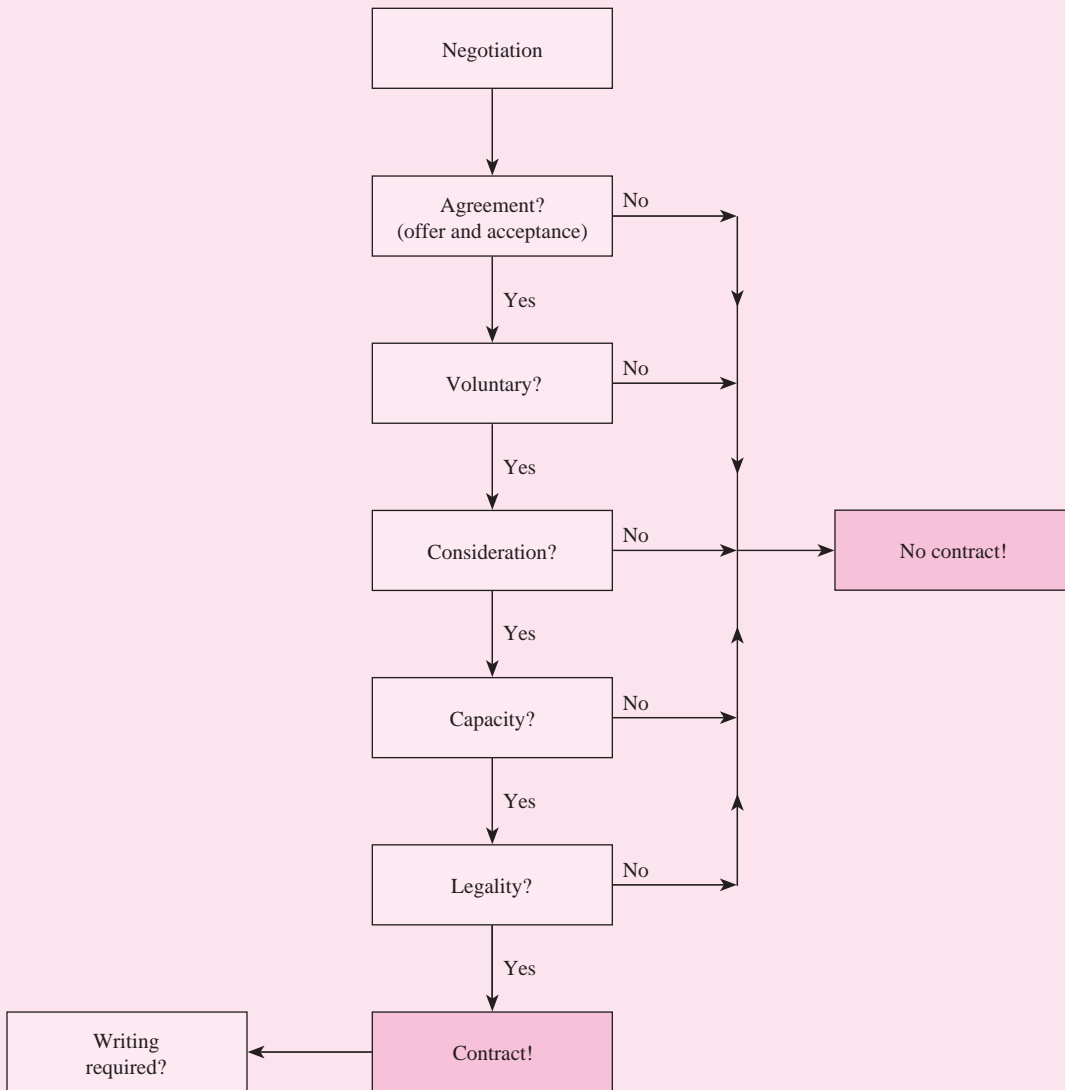

Courts have been increasingly concerned with creating contract rules that produce fair results. The precise, technical rules that characterized traditional common law contract have given way to permit some broader, imprecise standards such as good faith, injustice, reasonableness, and unconscionability. Despite the increased attention to fairness in contract law, the agreement between the parties is still the heart of every contract.

The Methods of Contracting Many students reading about contract law for the first time may have the idea that contracts must be in writing to be enforceable. Generally speaking, that is not true. There are some situations in which the law requires certain kinds of contracts to be evidenced by a writing to be enforced. The most common examples of those situations are covered in Chapter 16. Unless the law specifically requires a certain kind of contract to be in writing, an oral contract that can be proven is as legally enforceable as a written one.

Contracts can be and are made in many ways. When most of us imagine a contract, we envision two parties bargaining for a deal, then drafting a contract on paper and signing it or shaking hands. Some contracts are negotiated and formed in that way. Far more common today, both online and offline, is the use of **standardized form contracts**. Standardized form contracts are contracts that are preprinted by one party and presented to the other party for signing. In most situations, the party who drafts and presents the standardized contract is the party who has the most bargaining power and/or sophistication in the transaction. Frequently, the terms of standardized contracts are nonnegotiable. Such contracts have the advantage of providing an efficient method of standardizing common transactions. On the other hand, they present the dangers that the party who signs the contract will not know what he is agreeing to and that the party who drafts and presents the contract will take advantage of his bargaining power to include terms that are oppressive or abnormal in that kind of transaction.

Basic Elements of a Contract Over the years, the law has developed a number of requirements that a set of promises must meet before they are treated as a contract. To qualify as a contract, a set of promises must be based on a voluntary agreement, which is made up of

Figure 1 Getting to Contract

an **offer** and an **acceptance** of that offer. In addition, there usually must be **consideration** to support each party's promise. The contract must be between parties who have **capacity** to contract, and the objective and performance of the contract must be **legal**. (See Figure 1). Each of the elements of a contract will be discussed individually in subsequent chapters.

The elements of a contract can be found in all kinds of settings, from commercial dealings between strangers to agreements between family members. In determining whether a contract exists, courts scrutinize the parties' communications and conduct in light of the context in which the parties interacted. This process is illustrated by the following *Lambert v. Barron* case.

Lambert v. Barron

974 So.2d 198 (La. Ct. App. 2008)

Donald Lambert and Don Barron were friends. They had a long-standing professional relationship based on their public service together on the Louisiana State Board of Licensed Contractors from the 1980s. Lambert had been chairman of the state board, and had established his experience in resolving construction disputes. Barron is a commercial construction contractor doing business in Farmerville, Louisiana. In 1998, Barron's business began experiencing financial strain because five of his construction projects became mired in various difficulties. Barron and Lambert talked by phone during the summer of 1998 about Barron's personal problems and financial difficulties, and Lambert was concerned about his friend's depressed mental state.

On November 11, 1998, Lambert flew from New Orleans to Farmerville to meet with Barron. Prior to Lambert's flight, Barron's employee had faxed and overnighted copies of various construction contracts and correspondence relating to Barron's problematic construction projects for Lambert to review. Lambert contends that, while standing on the airport runway before he boarded the plane for his return trip home that day, he and Barron contracted for Lambert to provide consulting services for Barron. Lambert told Barron at that time that he customarily charged his clients \$3,100 per month, and the minimum term for his services was one year. He also charged 10 percent of any amount recouped by his clients in settlement.

In late 2000, Lambert billed Barron for a \$34,100 balance owed on the alleged oral contract. Lambert's letter dated October 30, 2000, requested payment and stated, "I have preformed (sic) my service for you and I must request that you pay me the balance due me of \$34,100." Two weeks later, Barron wrote Lambert back:

I received your bill last week and was very shocked. I do not know where you are coming from, and what you have done to think you deserve any kind of pay. I sent the plane down for you to come up and look over some paper work and later we sent you some documents for you to take a look at. For your service for a full day and the one to three hours it may have taken, I was planning to pay you \$2,000.00 and thought that would be around \$150.00 an hour. My people knew you had been here so they paid the \$3,100.00 invoice you sent. Then awhile later you called about money and I told you that we had paid you plenty and would not pay you any more. I remember you showing me a long list of people that paid you \$3,100.00 a month. I did not tell you I wanted to be on that list. I have not called for any advice since then. All my calls have been to return your call.

Lambert filed suit against Barron for breach of contract. The trial court dismissed Lambert's suit, and Lambert appealed.

Caraway, Judge

This case involves the disputed formation of a contract for consulting services. A contract is an agreement by the parties whereby obligations are created. A contract is bilateral when the parties obligate themselves reciprocally, so that the obligation of each party is correlative to the obligation of the other. Unless the law prescribes a certain formality for the intended contract, offer and acceptance may be made orally, in writing, or by action or inaction that under the circumstances is clearly indicative of consent.

The trial court's ruling credited Barron's testimony that he never orally accepted Lambert's offer for consulting services under the proposed one-year arrangement with \$3,100 per month payments. There was no writing reflecting the parties' consent. Nevertheless, the trial court's task was also to review Barron's alleged acceptance of the agreement from the implications of his actions or inaction. In this regard, Civil Code Article 1942 provides: "When, because of special

circumstances, the offeree's silence leads the offeror reasonably to believe that a contract has been formed, the offer is deemed accepted."

This case involves the special setting of parties with a prior friendship and the aid and advice freely given between friends that existed before Lambert first broached the subject of a consulting contract. In *Chaisson v. Chaisson*, this court found in a similar setting that an oral loan agreement had been reached between parents and their son. The son admittedly had understood his parents' intent for a loan for college expenses, but denied his acceptance of the loan agreement. Nevertheless, the son's actions in receiving the benefits of the loan proceeds in that setting and his subsequent partial payments on the loan were enough for this court to affirm the lower court's factual determination of a binding contract. A family setting or close friendship requires the finder-of-fact to determine the offeree's acceptance of an onerous contract and the offeror's reasonable belief that a contract has been formed, thus overcoming the

competing implications of a benefit extended by one to a friend for a gratuitous reason without obtaining any advantage in return.

From our review of the testimony of the two men, we also conclude that there was no clear agreement given by Barron on November 11, 1998, as Lambert boarded the plane to return to New Orleans. Absent a direct oral or written acceptance by Barron, Lambert's proof of the contract rests on his receipt of certain documentation of Barron's troubled construction projects and invoices for consulting fees sent to Barron. The bulk of the documentation regarding Barron's five construction projects was forwarded to Lambert days before the Farmerville meeting. Lambert's review of the details of those construction contracts and Barron's problems with the projects would have been performed in preparation for the Farmerville meeting without any contract binding his friend. More importantly, Barron provided Lambert that documentation without any indication that his friend's review of the projects would require compensation.

After Lambert expressed at the Farmerville airport his offer and desire for a consulting contract, some further documentation was provided to him between April and August 1999. These were transmitted by fax to Lambert without any request

for specific services. The faxed documents primarily concerned correspondence from Barron's attorney to Barron reflecting the scheduling of mediation and arbitration hearings. Significantly, Barron's attorney never consulted Lambert, and Lambert never responded in writing to Barron regarding any substance concerning the status of the construction project disputes during that time. Moreover, Barron never used the principal subject matter of Lambert's expertise, arbitration, to resolve disputed construction project issues during the year following the alleged oral contract.

From our review of this evidence, we find that the trial court could determine that no tacit acceptance of Lambert's offer for services was made by Barron. Particularly lacking from the record is evidence of any substantive business benefit realized by Barron from his consultant friend. The trial court ultimately held that the parties' relationship was that of a "friend helping a friend," such that Lambert could not have reasonably believed that a contract had been formed.

For the reasons expressed above, the trial court's determination that no contract was formed between the parties is affirmed.

Affirmed in favor of Barron.

CYBERLAW IN ACTION

Standardized contracts are common online as well as in the physical world. You have probably entered into online standardized contracts when you downloaded software from the Internet, joined an online service, initialized an e-mail account, or purchased goods online. The terms of standardized contracts online are usually presented in a manner that requires the viewer to click on an icon indicating agreement before he can proceed in the program. Standardized online contracts presented in this way are often called **clickwrap**

contracts. If you have purchased mass-marketed software in a package, you have probably noticed that the program disk is packaged in a sealed package with a notice that states that your opening the package constitutes agreement with the terms of a proposed standardized license agreement. These are called **shrinkwrap contracts** or **shrinkwrap licenses**, a name that refers to the practice of packaging software in shrinkwrapped packaging. The enforceability of clickwraps and shrinkwraps, which has been a controversial topic, will be discussed in Chapters 10 and 11.

LOG ON

For a helpful overview of the law of contracts, see Findlaw for Small Business, *Contract Law: The Basics*,

<http://smallbusiness.findlaw.com/business-forms-contracts/business-forms-contracts-overview.html>.

Basic Contract Concepts and Types

Bilateral and Unilateral Contracts Contracts have traditionally been classified as **bilateral** or **unilateral**, depending on whether one or both of the parties have made a promise. In unilateral contracts, only one

party makes a promise. For example, Perks Café issues “frequent buyer” cards to its customers, and stamps the cards each time a customer buys a cup of coffee. Perks promises to give any customer a free cup of coffee if the customer buys 10 cups of coffee and has his “frequent buyer” card stamped 10 times. In this case, Perks has made an offer for a unilateral contract, a contract that will be created with a customer only if and when the customer buys 10 cups of coffee and has his card stamped ten times. In a bilateral contract, by contrast, *both* parties exchange promises and the contract is formed as soon as the promises are exchanged. For example, if Perks Café promises to pay Willowtown Mall \$1,000 a month if Willowtown Mall will promise to lease a kiosk in the mall to Perks for the holiday season, Perks has made an offer for a bilateral contract because it is offering a promise in exchange for a promise. If Willowtown Mall makes the requested promise, a bilateral contract is formed at that point—even before the parties begin performing any of the acts that they have promised to do.

Valid, Unenforceable, Voidable, and Void Contracts A **valid contract** is one that meets all of the legal requirements for a binding contract. Valid contracts are, therefore, enforceable in court.

An **unenforceable contract** is one that meets the basic legal requirements for a contract but may not be enforceable because of some other legal rule. You’ll learn about an example of this in Chapter 16, which discusses the statute of frauds, a rule that requires certain kinds of contracts to be evidenced by a writing. If a contract is one of those for which the statute of frauds requires a writing, but no writing is made, the contract is said to be unenforceable. Another example of an unenforceable contract is an otherwise valid contract whose enforcement is barred by the applicable contract statute of limitations.

Voidable contracts are those in which one or more of the parties have the legal right to cancel their obligations under the contract. For example, a contract that is induced by fraud or duress is voidable (cancelable) at the election of the injured party. Other situations in which contracts are voidable are discussed in Chapters 13 and 14. The important feature of a voidable contract is that the injured party has the *right* to cancel the contract *if he chooses*. That right belongs only to the injured party, and if he does not cancel the contract, it can be enforced by either party.

Void contracts are agreements that create no legal obligations and for which no remedy will be given. Contracts to commit crimes, such as “hit” contracts, are classic examples of void contracts. Illegal contracts such as these are discussed in Chapter 15.

Express and Implied Contracts In an **express contract**, the parties have directly stated the terms of their contract orally or in writing at the time the contract was formed. However, the mutual agreement necessary to create a contract may also be demonstrated by the conduct of the parties. When the surrounding facts and circumstances indicate that an agreement has in fact been reached, an **implied contract** (also called a contract implied in fact) has been created. When you go to a doctor for treatment, for example, you do not ordinarily state the terms of your agreement in advance, although it is clear that you do, in fact, have an agreement. A court would infer a promise by your doctor to use reasonable care and skill in treating you and a return promise on your part to pay a reasonable fee for her services.

Executed and Executory Contracts A contract is **executed** when all of the parties have fully performed their contractual duties, and it is **executory** until such duties have been fully performed.

Any contract may be described using one or more of the above terms. For example, Eurocars, Inc., orders five new Mercedes-Benz 500 SLs from Mercedes. Mercedes sends Eurocars its standard acknowledgment form accepting the order. The parties have a *valid, express, bilateral* contract that will be *executory* until Mercedes delivers the cars and Eurocars pays for them.

Sources of Law Governing Contracts

Two bodies of law—Article 2 of the Uniform Commercial Code and the common law of contracts—govern contracts today. The Uniform Commercial Code, or UCC, is statutory law in every state. The common law of contracts is court-made law that, like all court-made law, is in a constant state of evolution. Determining what body of law applies to a contract problem is a very important first step in analyzing that problem.

The Uniform Commercial Code: Origin and Purposes The UCC was created by the American Law Institute and the National Conference of Commissioners on Uniform State Laws. All of the states have adopted it except Louisiana, which has adopted only part of the Code. The drafters of the Code had several purposes in mind, the most obvious of which was to establish a uniform set of rules to govern commercial

CYBERLAW IN ACTION

Currently, many courts are using the Uniform Commercial Code in cases involving disputes over software and other information contracts. However, the UCC was designed to deal with sales of goods and may not sufficiently address the concerns that parties have when making contracts to create or distribute information. During the 1990s, contract scholars, representatives of the affected information industries, consumer groups, and others worked as a drafting committee of the National Conference of Commissioners on Uniform State Laws to draft a uniform law that would be tailored to

“information contracts.” Internet access contracts and software licenses are two familiar examples of information contracts. Initially, this uniform statute was conceived of as a new article of the UCC. Later, however, attempts to fit the uniform law within the UCC were abandoned, and it was ultimately released as a proposed statute called the Uniform Computer Information Transactions Act, or UCITA. Several UCITA positions—notably those dealing with shrinkwrap and clickwrap licenses—have been quite controversial, and at the time of this writing, only two states have adopted UCITA in full as part of their state law.

transactions, which are often conducted across state lines.¹

In addition to promoting uniformity, the drafters of the Code sought to create a body of rules that would realistically and fairly solve the common problems occurring in everyday commercial transactions. Finally, the drafters tried to formulate rules that would promote fair dealing and higher standards in the marketplace.

The UCC contains nine articles, most of which are discussed in detail in Parts 4, 6, and 7 of this book. The most important Code article for our present purposes is Article 2, which deals with the sale of goods.

The UCC has changed and is in the process of continuing to change in response to changes in technology and business transactions. In some instances, the creation of new bodies of uniform law have been necessary to govern transactions that are similar to but different in significant ways from the sale of goods. For example, as leasing became a more common way of executing and financing transactions in goods, a separate UCC article, Article 2A, was enacted to govern the *lease* of goods. In 2003, the private organizations that draft and revise the Uniform Commercial Code—the National Conference of Commissioners on Uniform State Laws and the American Law Institute—approved revisions of Article 2 of the UCC. These revisions will not become law unless and until they are adopted by

legislatures. The revisions are meant to modernize the UCC to accommodate changes in business and technology, but they have been controversial. As this textbook is going to press, no states have adopted the new revisions.

Application of Article 2 Article 2 expressly applies only to *contracts for the sale of goods* [2-102] (the numbers in brackets refer to specific Code sections). The essence of the definition of goods in the UCC [1-105] is that *goods are tangible, movable, personal property*. So, contracts for the sale of such items as motor vehicles, books, appliances, and clothing are covered by Article 2.

Application of the Common Law of Contracts Article 2 of the UCC applies to contracts for the sale of goods, but it does *not* apply to contracts for the sale of real estate or intangibles such as stocks and bonds, because those kinds of property do not constitute goods. Article 2 also does not apply to *service* contracts. Contracts for the sale of real estate, services, and intangibles are governed by the common law of contracts.

Law Governing “Hybrid” Contracts Many contracts involve a hybrid of both goods and services. As the following *Pass* case discusses, the test that the courts most frequently use to determine whether Article 2 applies to such a contract is to ask which element, goods or services, *predominates* in the contract. Is the major purpose or thrust of the agreement the rendering of a service, or is it the sale of goods, with any services involved being merely incidental to that sale? This means that contracts calling for services that involve significant elements of personal skill or judgment in addition to goods probably are not governed by Article 2.

¹Despite the Code’s almost national adoption, however, complete uniformity has not been achieved. Many states have varied or amended the Code’s language in specific instances, and some Code provisions were drafted in alternative ways, giving the states more than one version of particular Code provisions to choose from. Also, the various state courts have reached different conclusions about the meaning of particular Code sections.

Pass v. Shelby Aviation

2000 Tenn. App. LEXIS 247 (Ct. App. Tenn. 2000)

Max Pass owned and piloted a single engine Piper airplane. On April 15, 1994, Pass and his wife, Martha Pass, left Plant City, Florida, in the plane, bound for Clarksville, Tennessee. Somewhere over Alabama, the couple flew into turbulence. Pass lost control of the plane and it crashed to the ground in Alabama, killing the Passes. The administrators of the Passes' estates brought a lawsuit for breach of express and implied warranty under the UCC against Shelby Aviation, which is a fixed-base operator that services aircraft at an airport in Tennessee. Four and a half months prior to the Passes' fatal flight, Pass took his plane to Shelby Aviation for inspection and service. In servicing the plane, Shelby Aviation replaced both rear wing attach point brackets. The Passes' estates claimed that the rear wing attach point brackets sold and installed by Shelby Aviation were defective because they lacked the bolts necessary to secure them to the plane. Their complaint stated that Shelby Aviation employees failed to provide and install the bolts and that the missing bolts resulted in a failure of both wings of the plane to withstand the torque applied to an aircraft during turbulence, leading to Pass's loss of control of the plane and ultimately causing the crash.

Shelby Aviation filed a motion to dismiss, arguing that its contract with Pass had been primarily for the sale of services, rather than goods, and so the transaction was not covered by Article 2 of the Uniform Commercial Code. The trial court ruled against Shelby Aviation and Shelby Aviation appealed.

Lillard, Judge

Article 2 of the Uniform Commercial Code governs the sale of goods. Many contracts, however, like the one at bar, involve a mixture of both goods and services. The problem in such "mixed" transactions is to determine whether Article 2 governs the contract. Most jurisdictions follow one of two different approaches to address the problem. The first approach, sometimes called the "gravamen test," looks to that portion of the transaction upon which the complaint is based, to determine if it involved goods or services. The other approach, known as the "predominant factor" test, looks at the transaction as a whole to determine whether its predominant purpose was the sale of goods or the provision of a service. In *Hudson v. Town and Country True Value Hardware*, a mixed transaction involving a contract for the sale of both goods and real estate, Tennessee elected to follow the predominant factor approach, finding it "preferable to adopt a test that views the transaction as a whole."

Under the predominant factor test, the transaction between Shelby Aviation and Pass is examined to determine whether its predominant purpose was the sale of goods or the sale of services. If it was predominantly a contract for the sale of goods, it falls under the UCC and the warranty provisions of Article 2 apply. If it was predominantly a contract for service, it falls outside the UCC, and the warranty provisions of Article 2 are inapplicable. To determine whether the predominant purpose of a mixed transaction is the sale of goods or the provision of a service, we examine the language of the parties' contract, the nature of the business of the supplier of the goods and services, the reason the parties entered into the contract (i.e., what each bargained to receive), and the respective amounts charged under the contract for goods and for services.

In this case, Shelby Aviation argues that the predominant factor, thrust, and purpose of its transaction with Pass was the sale of services, with the sale of goods incidentally involved. Shelby Aviation notes the language in the invoice, which refers to the plane being brought in for "repair" and "100 hour inspection." Shelby Aviation also observes that the nature of its business is primarily service.

The Passes' estates argue that the predominant factor was the sale of goods. In analyzing the costs of the goods and services, the estates argue that the cost to install the parts should be included within the cost of the parts. If it is, the estates assert that 75 percent of the total amount charged by Shelby Aviation was for the sale of goods. The written document evidencing the transaction is the invoice prepared by Shelby Aviation. The invoice is preprinted with a handwritten description of repairs performed and parts used. In the top left hand corner, blocked off from the rest of the writing, is a preprinted paragraph that states that the owner is authorizing "the following repair work to be done along with the necessary material." On the top right hand side, under a heading entitled "Description," the box stating "annual 100 hour periodic inspection" is checked. On the left side of the invoice, beneath the authorization for repair, is a section entitled "Part number and description" with a handwritten list of the parts used and the amount charged for each. The right hand lower side of the page, under the heading "Service Description" lists the service performed and the amount charged. Finally, the bottom left corner of the page contains a block for "owner's signature" acknowledging "acceptance of repaired plane." As a whole, the invoice clearly emphasizes the repair and inspection aspect of the transaction, indicating that the predominant purpose was the sale of service, with the sale of goods incidental to that service.

We must also consider the nature of Shelby Aviation's business. The estates' complaint asserts that Shelby Aviation is "in the business of maintenance, service, storage, and upkeep of aircraft." Shelby Aviation's president stated in his affidavit that the parts sold to Pass in conjunction with the service performed on his airplane were ordered specifically for his airplane. In addition, the invoice indicates that one part installed by the defendant, the right engine mag, was supplied by Pass. Shelby Aviation argues that if it were primarily in the business of selling parts, rather than service, it would not have permitted a customer to supply his own part to be installed. Overall, the nature of Shelby Aviation's business appears to be service rather than the sale of parts.

It is also clear that Pass took the plane to Shelby Aviation primarily to have a service performed, i.e., the annual inspection. What the purchaser sought to procure when he entered into the contract is a strong indication of the predominant purpose of the contract. The "final product" Pass "bargained to receive" appears to be the annual inspection of his airplane.

The last factor to be considered is the respective amounts charged under the contract for goods and services. By adding the labor charge to install the parts sold to the cost of the parts themselves, the estates calculate that 75 percent of the amount Shelby Aviation charged is attributable to the sale of goods rather than service. The estates cite no case law in support of

this method of calculation. Indeed, at least one case appears to indicate that the cost of labor for installing parts would *not* be included in the cost of the goods for purpose of ascertaining the purpose of the contract. If the cost of labor is not considered part of the cost of goods, the percentage of the invoice attributable to goods is 37 percent.

Regardless of how the percentage of the cost of goods is calculated, viewing the transaction as a whole, we must conclude that the predominant purpose of the transaction was the provision of a service rather than the sale of goods. The language of the invoice, the nature of the defendant's business, and the purpose for which Pass took his airplane to Shelby Aviation all indicate that service was the predominant factor in the transaction. Even where the cost of goods exceeds the cost of the services, the predominant purpose of the contract may still be deemed the provision of service where the other factors support such a finding. Therefore, we hold that the transaction between Shelby Aviation and Pass was predominantly a contract for service, with the sale of goods incidentally involved. As such, it is not subject to the warranty provisions of Article 2 of the UCC. Shelby Aviation is entitled to judgment as a matter of law on the UCC breach of warranty claims.

Reversed and remanded in favor of Shelby Aviation.

Relationship of the UCC and the Common Law of Contracts

Two important qualifications must be made concerning the application of Code contract principles. First, the Code does not change *all* of the traditional contract rules. Where no specific Code rule exists, traditional contract law rules apply to contracts for the sale of goods (see Figure 2). Second, and ultimately far more important, the courts have demonstrated a significant tendency to apply Code contract concepts by analogy to some contracts that are not technically covered by Article 2. For example, the Code concepts of good faith dealing and unconscionability have enjoyed wide application in cases that are technically outside the scope of Article 2. Thus, the Code is an important influence in shaping the evolution of contract law in general.

Basic Differences in the Nature of Article 2 and the Common Law of Contracts

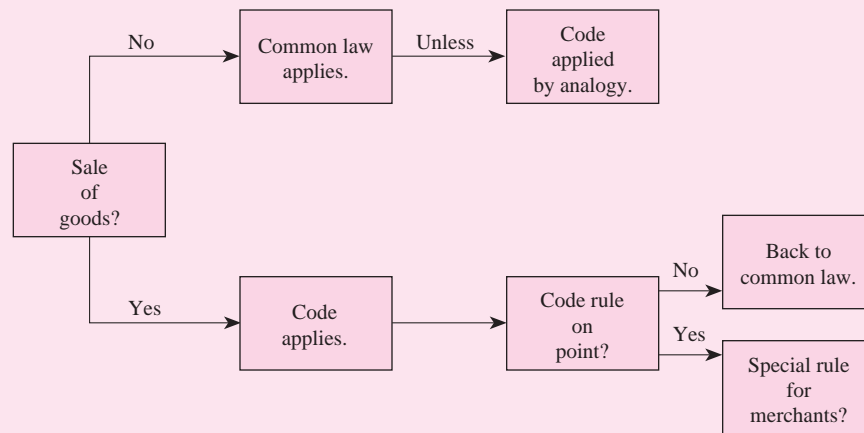

Many of the provisions of Article 2 differ from traditional common law rules in a variety of important ways. The Code is more concerned with rewarding people's legitimate expectations than with technical

rules, so it is generally more flexible than the common law of contracts. A court that applies the Code is more likely to find that the parties had a contract than is a court that applies the common law of contracts [2–204]. In some cases, the Code gives less weight to technical requirements such as consideration [2–205 and 2–209].

The drafters of the Code sought to create practical rules to deal with what people actually do in today's marketplace. We live in the day of the form contract, so some of the Code's rules try to deal fairly with that fact [2–205, 2–207, 2–209(2), and 2–302]. The words *reasonable*, *commercially reasonable*, and *seasonably* (within a reasonable time) are found throughout the Code. This reasonableness standard is different from the hypothetical reasonable person standard in tort law. A court that tries to decide what is reasonable under the Code is more likely to be concerned with what people really do in the marketplace than with what a nonexistent reasonable person would do.

The drafters of the Code wanted to promote fair dealing and higher standards in the marketplace, so they imposed a **duty of good faith** [1–203] in the performance

Figure 2 When the Uniform Commercial Code Applies

The Global Business Environment

Dealing with Contract Disputes in International Transactions

The **United Nations Convention on Contracts for the International Sale of Goods**, or **CISG**, is an international body of contract rules that harmonizes contract principles from many legal systems. Seventy-one countries, including the United States and Canada, have adopted the CISG to date. The CISG is intended to provide a uniform code for international commercial contracts in much the same way as the UCC provides uniformity for transactions among contracting parties in different states in the United States. Like the UCC, though, the CISG does not have provisions to cover every contract problem that might occur. It applies only to sales of goods, not services, and only to commercial parties, not consumers. When there is a contract for the sale of goods between commercial parties whose relevant places of business are located in two different countries that have agreed to the CISG, the CISG applies by default unless the parties have opted out of the CISG in their contract. Since the CISG emphasizes freedom of contract, it

does permit the parties to agree to exclude or vary any of the CISG rules or to opt out of the CISG completely by stating in their contract that some other body of law (such as the UCC) will apply to their contract.

Companies entering international transactions often protect themselves from disputes over what body of laws applies to their disputes by including a **choice of law clause** in their contracts. This is a provision that states the parties' agreement that a particular country or state's law will apply to their contract. (Of course, choice of law clauses are used extensively in domestic transactions as well.) In addition, it is very common for parties in international transactions to include an **arbitration clause** in their contracts, providing that future disputes between them will be resolved by arbitration.² Using arbitration gives the parties a relatively speedy and affordable dispute resolution process. An added benefit is that there are several international treaties that will enforce arbitration awards.

²Arbitration is discussed in more detail in Chapter 2.

and enforcement of every contract under the Code. Good faith means "honesty in fact," which is required of all parties to sales contracts [1–201(19)]. In addition, merchants are required to observe "reasonable commercial standards of fair dealing" [2–103(1)(b)]. The parties cannot alter this duty of good faith by agreement [1–102(3)]. Finally, the Code expressly recognizes the concept of an **unconscionable contract**, one that is grossly unfair or

one-sided, and it gives the courts broad discretionary powers to deal fairly with such contracts [2–302].³

The Code also recognizes that buyers tend to place more reliance on professional sellers and that professionals are generally more knowledgeable and better able to protect themselves than nonprofessionals. So, the

³Chapter 15 discusses unconscionability in detail.

Code distinguishes between **merchants** and nonmerchants by holding merchants to a higher standard in some cases [2–201(2), 2–205, and 2–207(2)]. The Code defines the term *merchant* [2–104(1)] on a case-by-case basis. If a person regularly deals in the kind of goods being sold, or pretends to have some special knowledge about the goods, or employed an agent in the sale who fits either of these two descriptions, that person is a merchant for the purposes of the contract in question. So, if you buy a used car from a used-car dealer, the dealer is a merchant for the purposes of your contract. But, if you buy a refrigerator from a used-car dealer, the dealer is probably not a merchant.

Influence of Restatement (Second) of Contracts In 1932, the American Law Institute published the first *Restatement of Contracts*,⁴ an attempt to codify and systematize the soundest principles of contract law gleaned from thousands of often conflicting judicial decisions. As the product of a private organization, the *Restatement* did not have the force of law, but as the considered judgment of some of the leading scholars of the legal profession, it was highly influential in shaping the evolution of contract law. The *Restatement (Second) of Contracts*, issued in 1979, is an attempt to reflect the significant changes that have occurred in contract law in the years following the birth of the first *Restatement*. The *Restatement (Second)* reflects the “shift from rules to standards” in modern contract law—the shift from precise, technical rules to broader, discretionary principles that produce just results.⁵ In fact, many *Restatement (Second)* provisions are virtually identical to their Code analogues. For example, the *Restatement (Second)* has explicitly embraced the Code concepts of *good faith*⁶ and *unconscionability*.⁷

⁴See Chapter 1 for a general discussion of the *Restatement* phenomenon.

⁵Speidel, “Restatement Second: Omitted Terms and Contract Method,” 67 *Cornell L. Rev.* 785, 786 (1982).

⁶*Restatement (Second) of Contracts* § 205 (1981).

⁷*Restatement (Second) of Contracts* § 208 (1981).

The *Restatement (Second)* does *not* have the force of law. Nonetheless, it can be and has been influential in shaping the evolution of contract law because courts have the option of adopting a *Restatement (Second)* approach to the contract issues presented in the cases that come before them. Particular approaches suggested by the *Restatement (Second)* will be mentioned in some of the following chapters.

“Noncontract” Obligations

Before we proceed to a discussion of the individual elements of contract law, there is one more group of introductory concepts to be considered. Although contract obligations normally require mutual agreement and an exchange of value, there are some circumstances in which the law enforces an obligation to pay for certain losses or benefits even in the absence of mutual agreement and exchange of value. We will refer to these circumstances as “noncontract” obligations because they impose the duty on a person to pay for a loss or benefit yet they do not meet the criteria for formation of a contract. These noncontract doctrines give a person who cannot establish the existence of a contract a chance to obtain compensation.

Quasi-Contract Requiring all the elements of a binding contract before contractual obligation is imposed can cause injustice in some cases. One person may have provided goods or services to another person who benefited from them but has no contractual obligation to pay for them because no facts exist that would justify a court in implying a promise to pay for them. Such a situation can also arise in cases where the parties contemplated entering into a binding contract but some legal defense exists that prevents the enforcement of the agreement. Consider the following examples:

1. Jones paints Smith’s house by mistake, thinking it belongs to Reed. Smith knows that Jones is painting his house but does not inform him of his error. There are no facts from which a court can infer that Jones and Smith have a contract because the parties have had no prior discussions or dealings.
2. Thomas Products fraudulently induces Perkins to buy a household products franchise by grossly misstating the average revenues of its franchisees. Perkins discovers the misrepresentation after he has resold some products that he has received but before he has paid Thomas for them. Perkins elects to rescind (cancel) the franchise contract on the basis of the fraud.

In the preceding examples, both Smith and Perkins have good defenses to contract liability; however, enabling Smith to get a free paint job and Perkins to avoid paying for the goods he resold would *unjustly enrich* them at the expense of Jones and Thomas. To deal with such cases and to prevent such unjust enrichment, the courts imply *as a matter of law* a promise by the benefited party to pay the *reasonable value* of the benefits he received. This idea is called **quasi-contract** (also called unjust enrichment or contract implied in law) because it represents an obligation imposed by law to avoid injustice, not a contractual obligation created by voluntary consent. Quasi-contract liability has been imposed in situations too numerous and

varied to detail. In general, however, quasi-contract liability is imposed when one party *confers a benefit* on another who *knowingly accepts it* and *retains it* under circumstances that make it *unjust* to do so without paying for it. So, if Jones painted Smith's house while Smith was away on vacation, Smith would probably not be liable for the reasonable value of the paint job because he did *not* knowingly accept it and because he has no way to return it to Jones. As a general rule, however, quasi-contract is not available when a valid contract covering the disputed subject matter exists between the parties. The following *Palese* case provides another example of the application of the concept "unjust enrichment."

Palese v. Delaware State Lottery Office 2006 Del. Ch. LEXIS 126 (Del. Chancery 2006)

On March 21, 2003, Robert Palese bought five Delaware State Lottery tickets from a liquor store in Newark, Delaware. To select his number for the game, Palese used a "play slip" that contained five game panels. Each panel had a selection grid with numbers 1 through 38, and Palese chose six numbers from each of these grids by manually filling in the grids. After purchasing the tickets, Palese placed them in his pants pocket and returned home. Several days later, Palese learned that someone had won the March 21, 2003, lottery but that the winner had not yet come forward. He searched for his ticket to see if he had selected the winning numbers, but was unable to find it. Eventually, he remembered that he had done laundry the evening he purchased the ticket; thus he concluded that the ticket—which had been left in his pants pocket—had probably been destroyed in the wash. Although the lottery ticket was gone, Palese still possessed the play slip he used when he purchased the ticket. He checked the numbers on the play slip and discovered that the numbers he selected on the play slip's fifth game panel—9, 13, 19, 24, 27, and 35—were the winning numbers for the March 21, 2003, lottery.

Reasoning that the play slip would satisfy the Lottery office that he had selected the winning numbers, Palese wrote the Lottery Office and described his predicament. The Lottery Office advised him that he would need to wait one year "before the Lottery can even review your claim. If no other claims are made to this winning prize by March 21, 2004, the Lottery will then determine whether it has the legal authority under the Lottery laws and regulations to consider your letter claiming the winning prize." About eleven months later, Palese read in the newspaper that the unclaimed lottery jackpot had been transferred to the State's General Fund. Palese immediately contacted the Lottery Office. He was asked to provide further information about the ticket he purchased and how it had been destroyed. Palese complied and again explained that, although the ticket itself had been inadvertently destroyed in the laundry, he still had the play slip. The Lottery Office took the position that Palese needed to produce the actual winning ticket, and it denied his claim.

Palese brought suit against the Lottery Office and others, seeking to collect the lottery jackpot. The defendants moved to dismiss the claim on the ground that Palese failed to state a claim for which relief can be granted.

Noble, Vice Chancellor

The Delaware Constitution of 1897 contained a general prohibition against gambling. In 1973, [this provision] was amended to permit, among other exceptions, a state-operated Lottery. Within a few months, enabling legislation (the "Lottery Act") was passed which created the State Lottery Office and the position of Director of the State Lottery Office. The Lottery Act delegated to the Director the authority "to promulgate such rules and regulations governing the establishment and

operation of the lottery." Pursuant to its mandate under the Lottery Act, the Lottery Office has promulgated rules and regulations that set forth the procedures for claiming prizes. These rules advance the Lottery Act's directive that payment of prizes be made to holders of winning tickets. As stated in Lottery Regulation 18, "[a]ll winning tickets will be validated. A winning ticket must not be counterfeit in whole or in part and *must be presented* by a person authorized to play the Lottery." Furthermore, Lottery Regulation 11.3 provides that the Lottery

“shall not be responsible for lost, stolen, or mutilated tickets after sale of same to the public.” Finally, under Lottery Regulation 19, “a lottery ticket which has been sold shall be owned by the *physical possessor* of said ticket.” Thus, in accordance with the Lottery Regulations, the winning ticket must be presented in order to claim the prize.

By purchasing a lottery ticket, Palese entered into a contractual relationship with the Lottery Office, one evidenced, in the first instance, by the lottery ticket. The majority rule in American jurisprudence is that the relationship between a lottery ticket holder and the state lottery agency is primarily contractual in nature, and the purchase of a ticket in the proper manner constitutes acceptance of an offer, forming a binding contract. The text on the back of the lottery ticket placed Palese on notice that his rights as player of the lottery would be subject to the following terms:

This ticket is a bearer instrument, therefore you should sign your ticket for safety. Valid only for date(s) shown. *Determination of winners and transactions are subject to Delaware State Lottery laws, rules, regulations and directives.* Void if mutilated, altered illegible or incomplete. Not responsible for torn or stolen tickets.

The ticket unequivocally stated that the right to payment is controlled by applicable laws and regulations (which, as discussed above, restrict payment of prizes to holders of winning tickets). Furthermore, the purchaser is advised to sign the back of the ticket because it is a “bearer instrument,” meaning it is “payable to the person who holds it rather than to the order of a specific person.” Just as the Court is bound to honor the plain language of the Lottery Act, it also must honor the express terms of the parties’ agreement. Under the plain language of the parties’ agreement, which Palese consented to when he purchased the ticket, payment of prize money is restricted to winning ticket holders.

Promissory Estoppel Another very important idea that courts have developed to deal with the unfairness that would sometimes result from the strict application of traditional contract principles is the doctrine of **promissory estoppel**. In numerous situations one person may *rely* on a promise made by another even though the promise and surrounding circumstances are not sufficient to justify the conclusion that a contract has been created because one or more of the required elements is missing. To allow the person who made such a promise (the promisor) to argue that no contract was created would sometimes work an injustice on the person who relied on the promise (the promisee). For example, in

Palese alleges that the State has been unjustly enriched by retaining a benefit to his detriment. He asks the Court to impose a quasi-contractual duty upon the defendants to pay the, allegedly, unjustly retained prize to him. Courts developed unjust enrichment, or quasi-contract, as a theory of recovery to remedy the absence of a formal contract. A party cannot seek recovery under an unjust enrichment theory if a contract is the measure of the plaintiff’s right. Palese is precluded from prevailing on his claim for unjust enrichment because a binding contract exists between the parties that addresses the particular subject matter—the procedure for claiming the prize money. Because an enforceable contract exists between the parties and that contract requires presentment of the ticket, Palese’s claim for unjust enrichment must be dismissed. Even if the express terms established under the contractual relationship between Palese and the Lottery Office were not dispositive, Palese would nonetheless be denied the equitable relief he seeks under the doctrine of unjust enrichment. The facts, as alleged by Palese, could support no such a finding here. Under Delaware law, only persons with a winning ticket are eligible to receive the prize money. The defendants denied Palese’s claim based on their interpretation—which the Court accepts—that the Delaware lottery laws and regulations require presentation of the winning ticket. As a consequence, not only is his claim defeated by a controlling contract term, it also is deficient because the Defendants’ conduct was not absent of justification; on the contrary, the defendants acted within the bounds of their prescribed legal authority and in conformity with the governing statute and regulations. Thus, Palese’s claim under the doctrine of unjust enrichment must be dismissed.

Palese’s complaint dismissed for failure to state a claim on which relief can be granted.

Ricketts v. Scothorn, a grandfather’s promise to pay his granddaughter interest on a demand note he gave her so that she would not have to work was enforced against him after she had quit her job in reliance on his promise.⁸ The Nebraska Supreme Court acknowledged that such promises were traditionally unenforceable because they were gratuitous and not supported by any consideration, but held that the granddaughter’s reliance prevented her grandfather from raising his lack of consideration defense. In the early decades of this century, many courts began to extend similar protection to relying promisees.

⁸57 Neb. 51, 77 N.W. 365 (1898).

They said that persons who made promises that produced such reliance were *estopped*, or equitably prevented, from raising any defense they had to the enforcement of their promise. Out of such cases grew the doctrine of promissory estoppel. Section 90 of the *Restatement (Second) of Contracts* states:

A promise which the promisor should reasonably expect to induce action or forbearance on the part of the promisee or a third person and which does induce such action or forbearance is binding if injustice can be avoided only by enforcement of the promise. The remedy granted for breach may be limited as justice requires.

Thus, the elements of promissory estoppel are a *promise* that the *promisor should foresee is likely to induce reliance*, *reliance* on the promise by the promisee, and *injustice* as a result of that reliance. (See Figure 3.) The following *Holt* case provides an example of promissory estoppel.

When you consider these elements, it is obvious that promissory estoppel is fundamentally different from traditional contract principles. Contract is traditionally thought of as protecting *agreements* or bargains. Promissory

Figure 3 Contract and Noncontract Theories of Recovery

| Theory | Key Concept | Remedy |
|---------------------|----------------------|--|
| Contract | Voluntary agreement | Enforce promise |
| Quasi-Contract | Unjust enrichment | Reasonable value of services |
| Promissory Estoppel | Foreseeable reliance | Enforce promise or recover reliance losses |

estoppel, on the other hand, protects *reliance*. Early promissory estoppel cases applied the doctrine only to gift promises like the one made by the grandfather in the previous example. As subsequent chapters demonstrate, however, promissory estoppel is now being used by the courts to prevent offerors from revoking their offers, to enforce indefinite promises, and to enforce oral promises that would ordinarily have to be in writing.

Holt v. Home Depot, U.S.A., Inc. 2004 U.S. Dist. LEXIS 824 (U.S. Dist Ct. D. Conn. 2004)

Bruce Holt worked as a manager for Home Depot from January 1995 to July 1999. Throughout those years, Home Depot assured employees through statements in the employee handbook and other means of communication that if they took advantage of the company's open-door procedure to complain to management about their supervisors, they would not be penalized. In March 1999, Home Depot moved Holt and his family to Connecticut so he could manage a new distribution center in Bloomfield. Soon after he started there, he began to have difficulties and disagreements with his immediate supervisor, Ms. Gray. In June, he contacted a senior manager, Brian Bender, regarding his problems with her. On July 3, he called Home Depot's Impact Line to ask that forms be sent to him so he could make a formal complaint. On July 9, two senior Home Depot managers went to the Bloomfield center accompanied by Gray and terminated Holt's employment. Holt sued Home Depot, claiming promissory estoppel. The jury found in favor of Holt and awarded him \$467,000 in compensatory damages. Home Depot moved for relief of several kinds, including judgment as a matter of law and a new trial.

Chatigny, District Judge

The jury was correctly charged that Holt could not prevail on this claim unless he proved the following: (1) Home Depot made a clear, definite promise that it would not retaliate against employees for using its internal complaint procedure; (2) Home Depot reasonably should have expected the plaintiff to rely on the promise; (3) he did reasonably rely on it; (4) his employment with Home Depot was terminated as a result; and (5) enforcement of the promise is necessary to prevent injustice.

Home Depot argues that it made no definite promise on which Holt could reasonably rely. While conceding that its

employee handbook contained an explicit promise that no employee would be penalized for using the open-door procedure, it contends that Holt could not reasonably rely on the promise because of disclaimers of contractual intent contained in the handbook and his employment application. I disagree. I think the jury could reasonably find that Home Depot's promise not to retaliate against employees for using the open-door procedure was so clear, emphatic, highly touted, and widely proclaimed that Holt could reasonably believe it was inviolable and thus not covered by general disclaimers in the handbook and application. Home Depot relies on cases in which similar

disclaimers precluded claims of promissory estoppel, but those cases are factually distinguishable.

Home Depot next argues that the jury could not reasonably find that Holt proved reliance because there is no evidence he used the open-door procedure to complain about Gray. Here again, I disagree. The evidence is sufficient to support the jury's finding that he undertook to complain about Gray in reliance on the no-retaliation guarantee.

Home Depot next argues that the jury could not reasonably find that Holt's employment was terminated because of any complaint he made about Gray. It argues that the persons who terminated his employment did not know about his attempts to

complain about her, and that he was terminated for incompetence, insubordination, and violating an ethics policy. It supports both arguments primarily with the testimony of the three people involved in the termination decision. The jury was entitled to reject their testimony as pretextual, particularly in light of the close temporal proximity between Holt's initial steps to complain to higher-ups about Gray and the termination of his employment, as well as the sequence of events immediately preceding the termination, which fit Holt's theory that he was the victim of a preemptive strike instigated by Gray.

Home Depot's motions denied in favor of Holt.

Ethics in Action

The idea that contracts should be enforced because they are voluntary agreements can obviously be justified on ethical grounds. But what about quasi-

contracts and promissory estoppel? What ethical justifications can you give for departing from the notion of voluntary agreement in quasi-contract and promissory estoppel cases?

Problems and Problem Cases

1. The Joswicks bought a mobile home manufactured by Brigadier Homes of North Carolina, Inc., from Chesapeake Mobile Homes, Inc., in March 1988. In February 1995, they noticed for the first time that the roof was leaking due to the fact that the shingles at the eaves had been improperly installed and did not permit sufficient overhang to allow rain water to drip off the roof. That condition caused water to back up and rot fascia boards and plywood, the repair of which would cost \$4,275. The leak also damaged the interior of the mobile home. The defect was present when Chesapeake delivered the mobile home to the Joswicks in 1988, which was a breach of the warranty that the Joswicks had received from Brigadier. The Joswicks sued Chesapeake and Brigadier for breach of warranty. The defendants argued that the UCC statute of limitations applied to the case and that the Joswicks had waited too long to bring their case. Did the UCC apply to this case?
2. Clarence Jackson went to the Snack Plus convenience store in Hamden, Connecticut, and bought a Connecticut Lotto "Quick Pick" ticket for the drawing of October 13, 1995. On the back of the ticket are

various provisions, including the admonition that "Prize must be claimed within one year from the drawing date. Determination of winners subject to DOSR rules and regulations." It also stated instructions for claiming the prize by presentment to any online agent or to "Lottery Claims" in Newington, Connecticut. The drawing was held on October 13, and the winning six-number combination was announced. One of the six-number combinations on Jackson's Lotto ticket matched the six-number combination drawn in the October 13 drawing, for a prize of \$5.8 million dollars. Jackson only learned of the match 15 minutes before the one-year deadline that he had won. Instead of claiming his prize online, Jackson waited several more days until after the Columbus Day holiday to present it in person at the Lottery Claims Center because he was under the impression that it had to be presented there. The Connecticut Lottery Corporation (CLC) denied Jackson's claim because the one-year presentment period had elapsed. Does contract law give Jackson the right to claim the prize under these circumstances?

3. Mill Creek, a design fabrication firm, prepared and presented preliminary designs, sketches, and budgets

for a museum display of a London street scene to the Jackson Foundation, which operated a museum. Mill Creek's employee, Cooper, had put in approximately 156 hours working on the project on Mill Creek's behalf when the Jackson Foundation hired Cooper to take the project "in house." Jackson Foundation used some of Cooper's design to build a small portion of the London street scene and the display remained as part of Cooper's workload as an employee of Jackson Foundation. Mill Creek sought recovery from Jackson Foundation under a quasi-contract theory. Will it be successful?

4. In July 2006, Hernandez was employed by Nestlé as an industrial engineer. Hernandez learned of a job opening at UPS Supply Chain Solutions, Inc., and applied for it. He interviewed with UPS representatives and received a written job offer from UPS for a management trainee position in the El Paso, Texas, Industrial Engineering Department. He was assured by UPS supervisors that the job was his, so he accepted the UPS offer and quit his job with Nestlé. Hernandez terminated the lease on his apartment, discarded his furniture, and incurred moving and traveling expenses by relocating his family to El Paso. When he arrived at UPS, he was informed that his starting date would be delayed, but was assured once again that he would be employed by UPS. Hernandez worked at UPS for three days, from September 5 through September 7, 2006. Hernandez's work duties consisted of attending UPS orientation for approximately two days and working at home one day. After the second day of orientation, a UPS supervisor told Hernandez that he should go home because he was not an official employee. The next week, a UPS human resources representative informed Hernandez that UPS would not honor the job offer. In addition, Hernandez was not paid for the hours worked from September 5 to September 7, 2006. Hernandez sued UPS on the ground of promissory estoppel to recover his out-of-pocket expenses. Will he win?
5. Chow arranged through a travel agent to fly from Indianapolis to Singapore on June 27, 1986. Singapore Airlines gave him a round-trip ticket that included a TWA flight to Los Angeles. Shortly before the trip, Chow's flight was rerouted so that he had to fly to St. Louis first and then to San Francisco. During the St. Louis stopover, the flight developed engine trouble, causing a substantial delay. TWA personnel assured Chow that if he missed his connecting flight, TWA would arrange for him to take the next Singapore flight out of San Francisco. After the engine problem was fixed, TWA delayed the flight's departure an additional two hours to board additional passengers. Chow was again assured that if he missed his scheduled flight, TWA would make arrangements for him. Chow missed his Singapore flight by minutes, and was housed overnight at TWA's expense in San Francisco after once more being assured that TWA would make arrangements to get him on the next Singapore flight. When he called Singapore Airlines the next morning to see whether TWA had made him a reservation, Chow was told that no arrangements had been made. When he contacted TWA, he was told TWA would make the arrangements immediately. After waiting several hours, Chow learned TWA had still not made the arrangements and was told that TWA could no longer help him. Because Singapore Airlines no longer had economy class seats available, Chow had to buy a business class seat at an additional cost of \$928. When he filed suit against TWA for that amount, TWA argued that the Conditions of Contract printed on Chow's ticket disclaimed any liability for failure to make connections. Did Chow have a valid claim against TWA?
6. Houston repeatedly promised his daughter, Allyson, that he would pay one-half of the costs of Allyson attending a private, historically African-American, college or university. Relying on this promise, Allyson applied to and was accepted into Clark Atlanta University. Houston reiterated this promise after Allyson's acceptance and specifically agreed to pay one-half of the costs of her tuition, room, board, books, and other expenses at Clark (less certain scholarship, work study, and grant monies). Allyson relied on this reiterated promise and, forgoing opportunities to apply to and enroll in other colleges or universities of significantly less cost, enrolled in Clark. Houston nevertheless refused to honor his commitment. Allyson sued her father alleging promissory estoppel. Does she have a good case for promissory estoppel?
7. Star Coach is in the business of converting sport utility vehicles and pickup trucks into custom vehicles. It performs the labor involved in installing parts supplied by other companies onto vehicles owned by dealers. Heart of Texas Dodge purchased a new

Dodge Durango from Chrysler Motors and entered into a contract with Star Coach for Star Coach to convert the Durango to a Shelby SP 360 custom performance vehicle and then return the converted vehicle to Heart of Texas Dodge. The manufacturer delivered the dealer's Durango to Star Coach and over a period of several months, Star Coach converted the vehicle using another company's parts. Several months later, Star Coach delivered the vehicle to Heart of Texas Dodge, which paid Star Coach the contract price of \$15,768 without inspecting the vehicle. When Heart of Texas Dodge inspected the vehicle several days later, it found the workmanship faulty. Heart of Texas Dodge stopped payment on its check and Star Coach filed suit. An important issue in the case was whether the remedies of the UCC apply. Does the UCC apply to this case?

8. Emergency Physicians Integrated Care (EPIC) is a company that provides billing and collection services to various emergency physicians around Utah. EPIC provided medical services to county inmates incarcerated in Salt Lake County. The county denied any legal responsibility to pay the physicians for the services. Would EPIC have a valid claim against the county under quasi-contract?
9. Stephen Gall and his family became ill after drinking contaminated water supplied to their home by the McKeesport Municipal Water Authority. They filed suit against the utility, arguing, among other things, that the utility had breached the UCC implied warranty of merchantability when it sold them contaminated water. The utility moved to dismiss their complaint, arguing that since water was not "goods," the UCC did not apply. Should the Galls' complaint be dismissed?
10. In 1994, Schumacher and his wife and their two daughters moved to Finland, Minnesota, to operate a bar and restaurant called the Trestle Inn, which was owned by his parents. Schumacher claims that his

parents induced him to leave his previous job and to make the move by orally agreeing to provide him a job managing the inn for life and to leave the business and a large parcel of land to him when his first parent died. Schumacher was given free reign in managing the inn and was allowed to retain all profits of the business but was not given any salary or wage. While he was operating the inn, Schumacher used his own funds to build a home for his family on his parents' land, install a well, buy equipment for the business, and develop various marketing tools for the business. In the fall of 1998, Schumacher suspected that his parents were about to sell the inn and the adjoining property. He brought suit for a restraining order to prevent them from doing so, claiming breach of contract and unjust enrichment, among other claims. In October 1998, the parents notified Schumacher that his employment at the inn and his right to possess the adjoining property were terminated. The parents moved for summary judgment. The trial court held that Schumacher's oral contract claim was invalid because the contract needed to be in writing under applicable Minnesota law. However, does Schumacher have a valid claim for unjust enrichment?

Online Research

Finding Sources of Contract Law

Find out which countries have signed the CISG (Contracts for International Sale of Goods). Create a hypothetical scenario in which the CISG would be applied to a contract. Use a CISG Web site such as Pace University School of Law's Database on the CISG and International Commercial Law, www.cisg.law.pace.edu/ or simply do a key word search on your favorite search engine.

chapter 10

THE AGREEMENT: OFFER

Jackson read an ad in the newspaper that had been placed by the owner of a local dog track. The ad stated that the Pic-6 Jackpot for the last evening of the racing season would be \$825,000. Jackson went to the track on that date, picked the winner in the six designated races, and won the jackpot. However, the owner of the track refused to pay Jackson more than \$25,000, stating that it had intended the amount of the jackpot to be \$25,000 and not \$825,000. The reason the newspaper ad said “\$825,000” was that a newspaper employee had misread the ad copy that the dog track owners had submitted to the newspaper, and had read the dollar sign in front of the 25,000 as an “8.”

- Was the ad an offer?
- Does the actual intent of the dog track owner determine whether the offered jackpot was \$25,000 or \$825,000?
- Did the dog track owner have the right to terminate the offer?
- Is it ethically wrong for Jackson to take advantage of the dog track owner’s mistake?

THE CONCEPT OF MUTUAL agreement lies at the heart of traditional contract law. Courts faced with deciding whether two or more persons entered into a contract look first for an *agreement* between the parties. Because the formation of an agreement is normally a two-step process by which one party makes a proposal and the other responds to the proposal, it is customary to analyze the agreement in two parts: *offer* and *acceptance*. This chapter, which concerns itself with the offer, and the next chapter, which covers acceptance, focus on the tools used by courts to determine whether the parties have reached the kind of agreement that becomes the foundation of a contract.

Requirements for an Offer

An **offer** is the critically important first step in the contract formation process. An offer says, in effect, “This is it—if you agree to these terms, we have a contract.” The person who makes an offer (**the offeror**) gives the person to whom she makes the offer (**the offeree**) the power to bind her to a contract simply by accepting the offer.

Not every proposal qualifies as an offer. Some proposals are vague, for example, or made in jest, or thrown out merely as a way of opening negotiations. To distinguish an offer, courts look for three requirements. First, they

look for some objective indication of a *present intent to contract* on the part of the offeror. Second, they look for specificity, or *definiteness*, in the terms of the alleged offer. Third, they look to see whether the alleged offer has been *communicated to the offeree*.

The preceding chapter discussed the fact that contracts for the sale of goods are governed by Article 2 of the UCC whereas contracts for services, real estate, and intangibles are generally governed by the common law of contracts. Common law and UCC standards for contract formation have a great deal in common, but they also differ somewhat. This chapter will point out those areas in which an offer for the sale of goods would be treated somewhat differently from an offer for services, real estate, and intangibles.

Intent to Contract For a proposal to be considered an offer, the offeror must indicate *present intent to contract*. Present intent means the intent to enter the contract upon acceptance. It signifies that the offeror is not joking, haggling, or equivocating. It makes sense that intent on the part of the offeror would be required for an offer—otherwise, an unwilling person might wrongly be bound to a contract. But what is meant by intent? Should courts look at what the offeror actually in his own mind (*subjectively*) intended? Or should intent be judged by

the impression that he has given to the rest of the world through words, acts, and circumstances that *objectively* indicate that intent?

The Objective Standard of Intent Early American courts took a subjective approach to contract formation, asking whether there was truly a “meeting of the minds” between the parties. This subjective standard, however, created uncertainty in the enforcement of contracts because it left every contract vulnerable to disputes about actual intent. The desire to meet the needs of the marketplace by affording predictable and consistent results in contracts cases dictated a shift toward an *objective theory of contracts*. By the middle of the 19th century, the objective approach to contract formation, which judges agreement by looking at the parties’ outward manifestations of intent, was firmly established in American law. Judge Learned Hand once described the effect of the objective contract theory as follows:

A contract has, strictly speaking, nothing to do with the personal, or individual, intent of the parties. A contract is

an obligation attached by the mere force of law to certain acts of the parties, usually words, which ordinarily accompany and represent a known intent. If however, it were proved by 20 bishops that either party when he used the words intended something else than the usual meaning which the law imposes on them, he would still be held, unless there were mutual mistake or something else of that sort.¹

Following the objective theory of contracts, then, an offeror’s intent will be judged by an objective standard—that is, what his words, acts, and the circumstances signify about his intent. If a reasonable person familiar with all the circumstances would be justified in believing that the offeror intended to contract, a court would find that the intent requirement of an offer was satisfied even if the offeror himself says that he did not intend to contract. The following *Meram v. MacDonald* case illustrates the objective standard of intent.

¹*Hotchkiss v. National City Bank*, 200 F.287, 293 (S.D.N.Y. 1911).

Meram v. MacDonald

2006 U.S. Dist. LEXIS 79069 (U.S. Dist. Ct. S.D. Cal.)

Allianz Sales invited Frank Meram to attend a presentation on September 29, 2005, to meet Robert MacDonald, who was promoting his new book, Cheat to Win. MacDonald was a multimillionaire who had started as an insurance agent and built LifeUSA, a billion dollar company, which was owned by Allianz at the time of the presentation. Meram attended the presentation along with approximately 100 other financial representatives.

At the beginning of the presentation, MacDonald announced that one of the attendees would leave that day with one million dollars. All that was required was to place a business card in the basket that was passed around, and to stay until the end of the presentation. At the end, MacDonald would select one card from the basket, and the person whose name was on the card would leave with a million dollars. Meram placed his business card in the basket and attended the presentation until the end. At the end of the presentation, MacDonald pulled Meram’s business card out of the basket. He congratulated Meram and then explained how “this works.” MacDonald said Meram would receive one dollar per year for a million years. He gave Meram \$100 in cash for the first 100 years. According to MacDonald, all Meram had to do was attend a presentation once a year to claim the rest of the million dollars. MacDonald then laughed and thanked everyone for coming.

Meram filed an action for breach of contract against MacDonald and Allianz, seeking the remainder of the promised one million dollars. The defendants moved to dismiss Meram’s case for failure to state a claim.

Lorenz, Judge

Defendants maintain no valid contract was created because MacDonald’s statements at the seminar did not constitute a valid offer. To establish an offer, the defendant must communicate to the plaintiff that he is willing to enter into a contract with the plaintiff, the communication must contain specific terms, and, based on the communication, the plaintiff could have reasonably concluded that a contract with these terms would result if he accepted the offer. The issue is whether, under the circumstances,

a reasonable person would conclude, from the words and conduct of each party, that there was an agreement. Defendants contend MacDonald’s alleged offer was too good to be true, and Meram could not have reasonably concluded the offer was for a million dollars.

Meram alleges he concluded the offer was genuine, since he was aware that MacDonald was a multi-millionaire, that Allianz was a billion dollar company, and that each had the financial means to pay the promised sum. More significantly, MacDonald

elaborated on the offer, and mentioned it at least twice. Based on these facts, Meram alleges he reasonably believed that defendants would pay the promised sum.

Reading the allegations in the light most favorable to the plaintiff, the allegations do not lead to an inescapable conclusion that the offer was a joke or that MacDonald meant anything other than what he said. Accordingly, the court cannot conclude that no reasonable person could conclude the offer was genuine. Meram therefore sufficiently alleged the offer and its terms.

Defendants next argue that there was no valid contract because the offer was too vague for failure to identify who would receive the million dollars or the terms of payment. To form an

enforceable contract, its terms must be clear enough that the parties could understand what each was required to do. By the alleged terms of the offer, the pool of potential winners was defined by the business cards placed in the basket. The winner's name was pulled out of the basket, and he or she would receive the prize so long as he or she also attended the presentation. Furthermore, MacDonald stated the winner would “walk out of here with a million dollars today.” Accordingly, the alleged offer is sufficiently definite to support formation of a contract.

Motion to dismiss the action for breach of contract denied in favor of Meram.

Definiteness of Terms If Smith says to Ford, “I’d like to buy your house,” and Ford responds, “You’ve got a deal,” has a contract been formed? An obvious problem here is lack of specificity. A proposal that fails to state specifically what the offeror is willing to do and what he asks in return for his performance is unlikely to be considered an offer. One reason for the requirement of definiteness is that definiteness and specificity in an offer tend to indicate an intent to contract, whereas indefiniteness and lack of specificity tend to indicate that the parties are still negotiating and have not yet reached agreement. In the conversation between Smith and Ford, Smith’s statement that he’d like to buy Ford’s house is merely an invitation to offer or an invitation to negotiate. It indicates a willingness to contract in the future if the parties can reach agreement on mutually acceptable terms, but not a present intent to contract. If, however,

Smith sends Ford a detailed and specific written document stating all of the material terms and conditions on which he is willing to buy the house and Ford writes back agreeing to Smith’s terms, the parties’ intent to contract would be objectively indicated and a contract probably would be created.

A second reason definiteness is important is that courts need to know the terms on which the parties agreed in order to determine if a breach of contract has occurred and calculate a remedy if it has. Keep in mind that the offer often contains all the terms of the parties’ contract. This is so because all that an offeree is allowed to do in most cases is to accept or reject the terms of the offer. If an agreement is too indefinite, a court would not have a basis for giving a remedy if one of the parties alleged that the “contract” was breached. The following *Armstrong* case raises the issue of definiteness.

Armstrong v. Rohm and Haas Company, Inc. 349 F. Supp. 2d 71 (U.S. Dist. Ct. D. Mass. 2004)

Robert Armstrong and Marc Pottle worked for Morton International as ceramic grinders at its facility in Spencer, Massachusetts. In 1999, Rohm and Haas (RH) acquired Morton and announced that it would close the Spencer facility. RH gave Morton employees one month to decide whether to accept a severance package and quit their jobs. Employees who chose instead to transfer to the Woburn facility would receive an incentive payment larger than the payment offered as part of the severance package.

Armstrong and Pottle wanted to remain with the company, but Thomas Payne, the plant manager at the Spencer facility, suggested that they could make substantially more money if they resigned, accepted the severance package, and started their own company to handle RH’s outsourced grinding work. At the time of Payne’s statements, the grinding work was being outsourced to a company called Chand Associates, and Payne indicated that the company wanted to end its dependence on Chand. Payne represented to Armstrong and Pottle that the company would give their new business “all the [outsourced grinding] work they could handle” and that the company “would like to” give the plaintiffs “all of its outsourced work in ceramic grinding, which had been in the neighborhood of \$10,000 per month.”

In reliance on Payne's representations, Armstrong and Pottle resigned from RH and accepted the severance package. After their resignations, Armstrong and Pottle invested in shop space and tools so that they could begin handling RH's outsourced work. During the first few months after the resignations of Armstrong and Pottle, RH gave them a small amount of work and assured them that it was all the work that was available because of a decrease in production. That trend continued into late 2001 when Pottle accepted a job with Chand due to the lack of work in his new business. When he began to work for Chand, he discovered that RH was still outsourcing large amounts of grinding work to Chand.

Armstrong and Pottle filed suit against RH on a number of grounds, including breach of contract. RH filed a motion to dismiss for failure to state a claim upon which relief can be granted.

Saylor, District Judge

In order to create an enforceable contract, "it is a necessary requirement that [the] agreement . . . be sufficiently definite to enable the courts to give it an exact meaning." *Williston on Contracts* § 4:18 (4th ed. 1990). While it is not required that parties specify *all* terms of an agreement, they must have progressed beyond the stage of imperfect negotiation. A lack of definiteness in an agreement might be based on a lack of specificity regarding the time of performance, price to be paid, work to be done, or property to be transferred. In determining whether such an agreement is nonetheless enforceable, courts should ask whether the parties intended to contract with one another and there is a reasonably certain basis for providing an appropriate remedy. That determination varies according to the facts of each case.

Here, defendant's alleged promise is too vague for this court to ascertain a reasonably certain basis for providing an appropriate remedy. As an initial matter, it is unclear what the volume of work was to be performed—that is, what the parties meant by the phrase "all the work" plaintiffs could "handle." How could this court determine what volume of work the two individual plaintiffs could handle? Was it the amount of work typically outsourced from the company to Chand? Was it the amount plaintiffs *wanted* to handle (i.e., did plaintiffs have the power to determine the volume)? Was it the amount that they *actually* could handle, in light of their apparent lack of experience in running a business? Was it an amount they *reasonably* should have been able to handle? What if the amount they could handle changed over time, as they gained experience? What if Morton's needs declined, increased, or fluctuated—how could the court take that into account? What was the nature and scope of the work? Was it all of the ceramic grinding work of the company? Only that work which had formerly gone to Chand?

Was it necessary to meet certain quality standards? Certain delivery times? Both? How could the court determine whether Armstrong and Pottle had performed their end of the bargain, that is, whether they had properly "handled" the work? What price would be paid for the work? Were there different prices for different types of work? When and how would Armstrong and Pottle be paid? What would be the duration of the contract? If it was terminable at will, how can plaintiffs make out a claim for breach? If it was not, what is its term?

Not all of these issues are insurmountable for Armstrong and Pottle, taken separately. The law provides a variety of mechanisms to fill in missing contractual details where appropriate to effectuate the intent of the parties to make a binding agreement. Taken together, however, the omissions are fatal. This court cannot supply the missing terms without writing a contract for the parties which they themselves did not make. RH's alleged promise is therefore unenforceable as a matter of law.

It should be obvious that there is not perfect congruence between the result that fairness might seem to dictate and the result dictated by law. The law strongly favors certainty and precision of contracts, even at the expense of occasional injustice, on the theory that a contrary rule would lead to even greater injustices. Thus, the law will refuse to enforce a simple and direct promise if it is unduly vague (e.g., "Don't worry, we'll take care of you") but insist on enforcing boilerplate contract language that neither party even read or understood. Of course, a person of principle and character would keep his word; but if his word is sufficiently imprecise, the law will not force him to do so. The alleged oral contract here is too imprecise to be enforceable as a matter of law. Armstrong and Pottle's claim for breach of oral contract will be dismissed for failure to state a claim.

Motion to dismiss granted in favor of RH.

Definiteness Standards under the Common Law

Classical contract law took the position that courts are contract enforcers, not contract makers. The prospect of enforcing an agreement in which the parties had omitted terms or left terms open for later agreement was

unthinkable to courts that took a traditional, hands-off approach to contracts. Traditionally, contract law required a relatively high standard of definiteness for offers, requiring that all the essential terms of a proposed contract be stated in the offer. The traditional insistence

on definiteness can serve useful ends. It can prevent a person from being held to an agreement when none was reached or from being bound by a contract term to which he never assented. Often, however, it can operate to frustrate the expectations of parties who intend to contract but, for whatever reason, fail to procure an agreement that specifies all the terms of the contract. The definiteness standard, like much of contract law, is constantly evolving. The trend of modern contract law is to tolerate a lower degree of specificity in agreements than classical contract law would have tolerated, although it is still unlikely that an agreement that leaves open important aspects of a transaction will be enforced.

Definiteness Standards under the UCC The UCC, with its increased emphasis on furthering people’s justifiable expectations and its encouragement of a hands-on approach by the courts, often creates contractual liability in situations where no contract would have resulted at common law. Perhaps no part of the Code better illustrates this basic difference between the UCC and classical common law than does the basic Code section on contract formation [2–204]. This section says that sales contracts under Article 2 can be created “in any manner sufficient to show agreement, including conduct which recognizes the existence of a contract” [2–204(1)]. So, if the parties are acting as though they have a contract by delivering or accepting goods or payment, for example, this may be enough to create a binding contract, even if it is impossible to point to a particular moment in time when the contract was created [2–204(2)]. The *Jannusch*

case, which follows, provides an example of these UCC standards.

An important difference between Code and classical common law standards for definiteness is that under the Code, the fact that the parties left open one or more terms of their agreement does not necessarily mean that their agreement is too indefinite to enforce. A sales contract is created if the court finds that the parties intended to make a contract and that their agreement is complete enough to allow the court to reach a fair settlement of their dispute (“a reasonably certain basis for giving an appropriate remedy” [2–204(3)]). If a term is left open in a contract that meets these two standards, that open term or “gap” can be “filled” by inserting a presumption found in the Code’s “gap-filling” rules. The gap-filling rules allow courts to fill contract terms left open on matters of price [2–305], quantity [2–306], delivery [2–307, 2–308, and 2–309(1)], and time for payment [2–310] when such terms have been left open by the parties.² Of course, if a term was left out because the parties were *unable* to reach agreement about it, this would indicate that the intent to contract was absent and no contract would result, even under the Code’s more liberal rules. *Intention is still at the heart of these modern contract rules*; the difference is that courts applying Code principles seek to further the parties’ *underlying* intent to contract even though the parties have failed to express their intention about specific aspects of their agreement.

²Chapter 19 discusses these Code provisions in detail.

Jannusch v. Naffziger

883 N.E.2d 711 (Ill. Ct. App. 2008)

Gene Jannusch and his wife, Martha, operated Festival Foods, a business that served concessions at festivals and events throughout Illinois and Indiana from late April to late October each year. The assets of the business included a truck and servicing trailer and equipment such as refrigerators and freezers, roasters, chairs and tables, fountain service, and signs and lighting equipment. Lindsey Naffziger and her mother, Louann, were interested in purchasing the business. They met several times with the Jannuschs and observed the business in operation. According to Gene, he and Martha had entered into an oral agreement on August 13, 2005, to sell Festival Foods to the Naffzigers for \$150,000. For the \$150,000, the Naffzigers would receive the truck and trailer, all necessary equipment, and the opportunity to work at event locations secured by the Jannuschs. The Naffzigers paid \$10,000 immediately, with the balance to be paid when they received their loan money from the bank. The Naffzigers took possession of Festival Foods the next day and operated Festival Foods for the remainder of the 2005 season. The insurance and titles to the truck and trailer remained in Gene’s name because he had not yet received the purchase price from the Naffzigers.

Louann acknowledged testifying during a deposition that an oral agreement to purchase Festival Foods for \$150,000 existed but later testified that she could not recall specifically making an oral agreement on any particular date. Lindsey testified that she and Louann met with the Jannuschs on August 13, 2005, and paid the \$10,000 for the right to continue to

purchase the business because the Jannuschs had another interested buyer. The parties agreed that the Naffzigers would run Festival Foods as they pursued buying the business. According to Lindsey, Gene suggested the parties sign something and she replied that they were “in no position to sign anything” because they had not received any loan money from the bank and did not have an attorney. The following week, Lindsey consulted with an attorney about the legal aspects of buying and owning a business. She asked the attorney to prepare a contract for the purchase. Ultimately, the bank approved the Naffzigers for a loan. Lindsey took possession of Festival Foods, receiving the income from the business, purchasing inventory, replacing equipment, paying taxes on the business, and paying employees.

The Naffzigers operated six events, three in Indiana and three in Illinois. Gene attended the first two festivals in Valparaiso and Auburn, Indiana, with the Naffzigers, who paid him \$10 an hour plus lodging. The Jannuschs’ minimal involvement with the operations after August 13 was in the nature of advisors to the Naffzigers, who were unfamiliar with this type of business. The income from Festival Foods was lower than the Naffzigers expected, and two days after the business season ended, they returned Festival Foods to the storage facility where Gene had stored it in the past. Gene had canceled his lease with the storage facility, however, telling the owner that he had sold his business. Someone at the storage facility called Gene and reported that Festival Foods had been returned. Gene then tried to sell Festival Foods, but was unsuccessful. The Jannuschs brought an action for breach of an oral contract against the Naffzigers. Following a bench trial, the trial court found in favor of the Naffzigers. The trial court then found that there was a contract formed but that the evidence was insufficient to establish that there was a meeting of the minds as to what that agreement was. The Jannuschs appealed.

Cook, Justice

The Naffzigers argue the UCC should not apply because this case involves the sale of a business rather than just the sale of goods. The “predominant purpose” test is used to determine whether a contract for both the sale of goods and the rendition of services falls within the scope of Article 2 of the UCC. A contract that is primarily for services, with the sale of goods being incidental, will not fall within the scope of Article 2 of the UCC. Certainly significant tangible assets were involved in this case. The evidence presented in this case was sufficient to support the conclusion that the proposed agreement was predominantly one for the sale of goods.

Under the UCC [section 2-204]:

- (1) A contract for sale of goods may be made in any manner sufficient to show agreement, including conduct by both parties which recognizes the existence of such a contract.
- (2) An agreement sufficient to constitute a contract for sale may be found even though the moment of its making is undetermined.
- (3) Even though one or more terms are left open a contract for sale does not fail for indefiniteness if the parties have intended to make a contract and there is a reasonably certain basis for giving an appropriate remedy.

The Naffzigers argue that nothing was said in the contract about allocating a price for good will, a covenant not to compete, allocating a price for the equipment, how to release liens, what would happen if there was no loan approval, and other issues. They argue these are essential terms for the sale of a business and the Internal Revenue Service requires that parties allocate the sales price. “None of these items were even discussed much

less agreed to. There is not an enforceable agreement when there are so many essential terms missing.”

A contract may be enforced even though some contract terms may be missing or left to be agreed upon, but if the essential terms are so uncertain that there is no basis for deciding whether the agreement has been kept or broken, there is no contract. The essential terms were agreed upon in this case. The purchase price was \$150,000, and the items to be transferred were specified. No essential terms remained to be agreed upon; the only action remaining was the performance of the contract. The Naffzigers took possession of the items to be transferred and used them as their own. They paid \$10,000 of the purchase price. The fact that the Naffzigers were disappointed in the income from the events they operated is not inconsistent with the existence of a contract.

The trial court noted that “the parties have very, very different views about what transpired in the course of the contract-formation discussions.” It is not necessary that the parties share a subjective understanding as to the terms of the contract; the parties’ conduct may indicate an agreement to the terms. The conduct in this case is clear. Parties discussing the sale of goods do not transfer those goods and allow them to be retained for a substantial period before reaching agreement. The Naffzigers replaced equipment, reported income, paid taxes, and paid Gene for his time and expenses, all of which is inconsistent with the idea that they were only “pursuing buying the business.” An agreement to make an agreement is not an agreement, but there was clearly more than that here. The trial court believed it was significant that Lindsey told Gene that defendants were “in no position to sign anything” because they had not received any loan money from the bank

and did not have any attorney. The fact that a formal written document is anticipated does not preclude enforcement of a specific preliminary promise. The Naffzigers' loan was eventually approved, they did consult with an attorney, and they remained in possession of and continued to operate Festival Foods. The parties' agreement could have been fleshed out with additional terms, but the essential terms were agreed upon. Louann admitted there was an agreement to purchase Festival Foods for \$150,000 but could not recall specifically making an oral agreement on any particular date. "An

agreement sufficient to constitute a contract for sale may be found even though the moment of its making is undetermined." 2-204(2). Returning the goods at the end of the season was not a rejection of the Jannuschs' offer to sell, it was a breach of contract.

We conclude there was an agreement to sell Festival Foods for the price of \$150,000 and that the Naffzigers breached that agreement.

Reversed and remanded in favor of the Jannuschs.

The Global Business Environment

Under the CISG, a proposal will be considered an offer to contract if it is addressed to one or more specific persons, is sufficiently definite, and indicates the intent of the offeror to be bound in case of acceptance. Unlike the

UCC, the CISG does not consider an offer to be sufficiently definite when the price term for goods is left open. The CISG states that the offer must indicate the goods and either expressly or impliedly make a provision for determining the quantity and price.

Communication to Offeree When an offeror communicates the terms of an offer to an offeree, he objectively indicates an intent to be bound by those terms. The fact that an offer has *not* been communicated, on the other hand, may be evidence that the offeror has not yet decided to enter into a binding agreement. For example, assume that Stevens and Meyer have been negotiating over the sale of Meyer's restaurant. Stevens confides in his friend Reilly that he plans to offer Meyer \$150,000 for the restaurant. Reilly goes to Meyer and tells Meyer that Stevens has decided to offer him \$150,000 for the restaurant and has drawn up a written offer to that effect. After learning the details of the offer from Reilly, Meyer telephones Stevens and says, "I accept your offer." Is Stevens now contractually obligated to buy the restaurant? No. Since *Stevens* did not communicate the proposal to Meyer, there was no offer for Meyer to accept.

Special Offer Problem Areas

Advertisements Generally speaking, advertisements for the sale of goods at specified prices are *not* considered to be offers. Rather, they are treated as being invitations to offer or negotiate. The same rule is generally applied to signs, handbills, catalogs, price lists, and price quotations. This rule is based on the presumed intent of the sellers involved. It is not reasonable to conclude that a seller who has a limited number of items to sell intends to give every person who sees her ad, sign, or catalog the power to bind her to contract. Thus, if Customer sees Retailer's advertisement of Whizbang XL laptop computers for \$2,000 and goes to Retailer's store indicating his intent to buy the computer, Customer is making an offer, which Retailer is free to accept or reject. This is so because *Customer* is manifesting a present intent to contract on the definite terms of the ad.

In some cases, however, particular ads have been held to amount to offers. Such ads limit the power of acceptance to one offeree or a small number of offerees, are highly specific about the nature and number of items offered for sale and what is requested in return, and they leave nothing further to be negotiated. This specificity precludes the possibility that the offeror could become contractually bound to an infinite number of offerees. In

LOG ON

Offers of employment are a kind of offer familiar to all of us. A variety of Web sites offer advice and tips about evaluating and drafting offers of employment. Check out Rensselaer Polytechnic Institute's *Evaluating Employment Offers* at www.rpi.edu/dept/cdc/handout/offers.html.

addition, many of the ads treated as offers have required some special performance by would-be buyers or have in some other way clearly indicated that immediate action by the buyer creates a binding agreement.

For example, in one classic case,³ a newspaper advertisement that stated, “Saturday 9 AM. . . 1 Black Lapin Stole Beautiful, worth \$139.50 . . . \$1.00 First Come First Served” was held to be an offer. The ad was clear and specific about what was being offered and asked for in exchange—one had to be the first one to appear at the seller’s place of business and pay \$1.00—and there were no terms left open for further discussion or negotiation. Moreover, the “first come first served” language limits the number of people who would have the power of acceptance. The potential for unfairness to those who attempt to accept such ads and their fundamental difference from ordinary ads justify treating them as offers.

Rewards Advertisements offering rewards for lost property, for information, or for the capture of criminals are generally treated as offers for unilateral contracts. To accept the offer and be entitled to the stated reward, offerees must perform the requested act—return the lost property, supply the requested information, or capture the wanted criminal. Some courts have held that only offerees who started performance with knowledge of the offer are entitled to the reward. Other courts, however, have indicated the only requirement is that the offeree know of the reward before completing performance. In reality, the result in most such cases probably reflects the court’s perception of what is fairer given the facts involved in the particular case at hand.

Auctions Sellers at auctions are generally treated as making an invitation to offer. Those who bid on offered goods are, therefore, treated as making offers that the owner of the goods may accept or reject. Acceptance occurs only when the auctioneer strikes the goods off to the highest bidder; the auctioneer may withdraw the goods at any time before acceptance. However, when an auction is advertised as being “without reserve,” the seller is treated as having made an offer to sell the goods to the highest bidder and the goods cannot be withdrawn after a call for bids has been made unless no bids are made within a reasonable time.⁴

³*Lefkowitz v. Great Minneapolis Surplus Store*, 86 N.W.2d 689 (Sup. Ct. Minn. 1957).

⁴These rules and others concerned with the sale of goods by auction are contained in section 2–328 of the UCC.

Bids The bidding process is a fertile source of contract disputes. Advertisements for bids are generally treated as invitations to offer. Those who submit bids are treated as offerors. According to general contract principles, bidders can withdraw their bids at any time prior to acceptance by the offeree inviting the bids and the offeree is free to accept or reject any bid. The previously announced terms of the bidding may alter these rules, however. For example, if the advertisement for bids unconditionally states that the contract will be awarded to the lowest responsible bidder, this will be treated as an offer that is accepted by the lowest bidder. Only proof by the offeror that the lowest bidder is not responsible can prevent the formation of a contract. Also, under some circumstances discussed later in this chapter, promissory estoppel may operate to prevent bidders from withdrawing their bids.

Bids for governmental contracts are generally covered by specific statutes rather than by general contract principles. Such statutes ordinarily establish the rules governing the bidding process, often require that the contract be awarded to the lowest bidder, and frequently establish special rules or penalties governing the withdrawal of bids.

Which Terms Are Included in the Offer?

After making a determination that an offer existed, a court must decide which terms were included in the offer so that it can determine the terms of the parties’ contract. Put another way, which terms of the offer are binding on the offeree who accepts it? Should offerees, for example, be bound by fine-print clauses or by clauses on the back of the contract? Originally, the courts tended to hold that offerees were bound by all the terms of the offer on the theory that every person had a duty to protect himself by reading agreements carefully before signing them.

In today’s world of lengthy, complex form contracts, however, people often sign agreements that they have not fully read or do not fully understand. Modern courts tend to recognize this fact by saying that offerees are bound only by terms of which they had actual or reasonable notice. If the offeree actually read the term in question, or if a reasonable person should have been aware of it, it will probably become part of the parties’ contract. A fine-print provision on the back of a theater ticket would probably not be binding on a theater patron, however, because a reasonable person would not normally expect such a ticket to contain contractual terms. By contrast, the terms printed on a multipage airline ticket might well be considered binding on the purchaser if such documents would be expected to contain terms of the contract.

CYBERLAW IN ACTION

One controversy regarding the terms that are included in the offer has been raised by the standardized contracting techniques that almost always accompany the transfer of computer software. For example, Stacy goes to Gigantic State University Bookstore and purchases software in a package. When Stacy opens the package, she finds that the CD containing the program is sealed in an envelope and that it bears a label stating that by opening the envelope, Stacy is accepting the terms of a license agreement that is contained somewhere in the packaging. The label states that if Stacy does not want to accept the terms of the license, she can return the software. The license contains a variety of terms that generally protect the software manufacturer. This method of contracting is often called **shrinkwrap** contracting. Stacy rips open the envelope without reading the license agreement and installs the software. If a conflict arises later concerning one of the terms of the license agreement, should the law hold that the terms of the license agreement are contractually binding? A critic of shrinkwrap contracting would argue that

the terms should not be part of the contract because the contract was formed when Stacy purchased the program from Gigantic State University Bookstore and Stacy did not know of the license or its terms at that point. Also, consumers like Stacy may not understand that by opening the sealed package they are entering a contract, the terms of which they are unlikely to have read and may not understand.

The early cases dealing with shrinkwrap contracts generally decided against the enforceability of shrinkwraps. Since the late 1990s, however, judicial opinion has tended toward the enforcement of shrinkwraps, but opinion is still mixed.

Other forms of standardized contracting online are familiar to us: the **clickwrap** agreement, which requires us to read terms presented online and click buttons indicating our agreement, and the so-called **browsewrap** agreement, which presents purported contract terms and conditions but does not require the reader to click to indicate agreement. The enforcement of browsewrap agreements depends on whether the Web site viewer knew or had reason to know of the terms and conditions.

Ethics in Action

Jerry, who was in the process of opening a new small business in Connecticut, ordered an expensive new computer system from ABC Computing. As part of this transaction, ABC presented Jerry with a contract of sale. The contract was written on lightweight paper that was difficult to read. The signature line was on the bottom of the first page, but there were more contract terms on the reverse side of the page. On the reverse side, under the heading “Warranty Service” was a provision that disclaimed all implied warranties and

stated that any dispute that might arise between the parties would be resolved by arbitration in California (where ABC is headquartered). Jerry signed the contract without reading the reverse side. The computer system was defective and never worked correctly. Jerry wants to sue ABC Computing but cannot afford to go to California to do so. Is it ethical for businesses who deal with consumers and other less sophisticated parties to “hide” contract terms under misleading headings, in small print, deep in a Web site, or on the reverse side of the contract?

Termination of Offers

After a court has determined the existence and content of an offer, it must determine the duration of the offer. Was the offer still in existence when the offeree attempted to accept it? If not, no contract was created and the offeree is treated as having made an offer that the original offeror is free to accept or reject. This is so because, by attempting to accept an offer that has terminated, the offeree has indicated a present intent to contract on the terms of the original offer though he lacks the power to bind the offeror to a contract due to the original offer’s termination.

Terms of the Offer The offeror is often said to be “the master of the offer.” This means that offerors have the power to determine the terms and conditions under which they are bound to a contract. An offeror may include terms in the offer that limit its effective life. These may be specific terms, such as “you must accept by December 5, 2010,” or “this offer is good for five days,” or more general terms such as “for immediate acceptance,” “prompt wire acceptance,” or “by return mail.” General time-limitation language in an offer can raise difficult problems of interpretation for courts trying to decide whether an offeree accepted before the offer terminated. Even

more specific language, such as “this offer is good for five days,” can cause problems if the offer does not specify whether the five-day period begins when the offer is sent or when the offeree receives it. Not all courts agree on such questions, so wise offerors should be as specific as possible in stating when their offers terminate.

Lapse of Time Offers that fail to provide a specific time for acceptance are valid for a reasonable time. What constitutes a reasonable time depends on the circumstances surrounding the offer. How long would a reasonable person in the offeree’s position believe she had to accept the offer? Offers involving things subject to rapid fluctuations in value, such as stocks, bonds, or commodities futures, have a very brief duration. The same is true for offers involving goods that may spoil, such as produce.

The context of the parties’ negotiations is another factor relevant to determining the duration of an offer. For example, most courts hold that when parties bargain face-to-face or over the telephone, the normal time for acceptance does not extend past the conclusion of their conversation unless the offeror indicates a contrary intention. Where negotiations are carried out by mail or telegram, the time for acceptance would ordinarily include at least the normal time for communicating the offer and a prompt response by the offeree. Finally, in cases where the parties have dealt with each other on a regular basis in the past, the timing of their prior transactions would be highly relevant in measuring the reasonable time for acceptance.

Revocation

General Rule: Offers Are Revocable As the masters of their offers, offerors can give offerees the power to bind them to contracts by making offers. They can also terminate that power by revoking their offers. The general common law rule on revocations is that offerors may revoke their offers at any time prior to acceptance, *even if they have promised to hold the offer open for a stated period of time.*

Exceptions to the General Rule In the following situations (summarized in Figure 1), however, offerors are *not* free to revoke their offers:

1. **Options.** An **option** is a separate contract in which an offeror agrees not to revoke her offer for a stated time in exchange for some valuable consideration. You can think of it as a contract in which an offeror sells her right to revoke her offer. For example, Jones, in

Figure 1 When Offerors Cannot Revoke

| | |
|-----------------------------------|---|
| Options | Offeror has promised to hold offer open and has received consideration for that promise. |
| Firm Offers | Merchant offeror makes written offer to buy or sell goods, giving assurances that the offer will be held open. |
| Unilateral Contract Offers | Offeree has started to perform requested act before offeror revokes. |
| Promissory Estoppel | Offeree foreseeably and reasonably relies on offer being held open, and will suffer injustice if it is revoked. |

exchange for \$5,000, agrees to give Dewey Development Co. a six-month option to purchase her farm for \$550,000. In this situation, Jones would not be free to revoke the offer during the six-month period of the option. The offeree, Dewey Development, has no obligation to accept Jones’s offer. In effect, it has merely purchased the right to consider the offer for the stated time without fear that Jones will revoke it.

2. **Offers for unilateral contracts.** Suppose Franklin makes the following offer for a unilateral contract to Waters: “If you mow my lawn, I’ll pay you \$25.” Given that an offeree in a unilateral contract must fully perform the requested act to accept the offer, can Franklin wait until Waters is almost finished mowing the lawn and then say “I revoke!”? Obviously, the application of the general rule that offerors can revoke at any time before acceptance creates the potential for injustice when applied to offers for unilateral contracts, because it would allow an offeror to revoke after the offeree has begun performance but before he has had a chance to complete it. To prevent injustice to offerees who rely on such offers by beginning performance, two basic approaches are available to modern courts.

Some courts have held that once the offeree has begun to perform, the offeror’s power to revoke is suspended for the amount of time reasonably necessary for the offeree to complete performance. Another approach to the unilateral contract dilemma is to hold that a bilateral contract is created once the offeree begins performance.

3. **Promissory estoppel.** In some cases in which the offeree *relies* on the offer being kept open, the doctrine

of promissory estoppel can operate to prevent offerors from revoking their offers prior to acceptance. Section 87(2) of the *Restatement (Second)* says:

An offer which the offeror should reasonably expect to induce action or forbearance of a substantial character on the part of the offeree before acceptance and which does induce such action or forbearance is binding as an option contract to the extent necessary to avoid injustice.

Many of the cases in which promissory estoppel has been used successfully to prevent revocation of offers involve the bidding process. For example, Gigantic General Contractor seeks to get the general contract to build a new high school gymnasium for Shadyside School District. It receives bids from subcontractors. Liny Electric submits the lowest bid to perform the electrical work on the job, and Gigantic uses Liny's bid in preparing its bid for the general contract. Here, Liny has made an offer to Gigantic, but Gigantic cannot accept that offer until it knows whether it has gotten the general contract. The school district awards the general contract to Gigantic. Before Gigantic can accept Liny's offer, however, Liny attempts to revoke it. In this situation, a court could use the doctrine of promissory estoppel to hold that the offer could not be revoked.

4. *Firm offers for the sale of goods* [Note: *This applies to offers for the sale of goods ONLY!*]. The Code makes a major change in the common law rules governing the revocability of offers by recognizing the concept of a **firm offer** [2–205]. Like an option, a firm offer is irrevocable for a period of time. In contrast to an option, however, a firm offer does not require consideration to be given in exchange for the offeror's promise to keep the offer open. Not all offers to buy or sell goods qualify as firm offers, however. To be a firm offer, an offer must:

- Be made by an offeror who is a *merchant*.
- Be contained in a signed writing.⁵
- Give assurances that the offer will be kept open.

An offer to buy or sell goods that fails to satisfy these three requirements is governed by the general common law rule and is revocable at any time prior to acceptance. If an offer *does* meet the requirements of a firm offer, however, it will be irrevocable for the time stated in the offer. If no specific time is stated in the offer, it will be irrevocable for a *reasonable* time. Regardless of the terms of the firm offer, the outer limit on a firm

offer's irrevocability is *three months*. For example, if Worldwide Widget makes an offer in a signed writing in which it proposes to sell a quantity of its XL Turbo Widget to Howell Hardware and gives assurances that the offer will be kept open for a year, the offer is a firm offer, but it can be revoked after three months if Howell Hardware has not yet accepted it.

In some cases, however, offerees are the true originators of an assurance term in an offer. When offerees have effective control of the terms of the offer by providing their customers with preprinted purchase order forms or order blanks, they may be tempted to take advantage of their merchant customers by placing an assurance term in their order forms. This would allow offerees to await market developments before deciding whether to fill the order, while their merchant customers, who may have signed the order without reading all of its terms, would be powerless to revoke. To prevent such unfairness, the Code requires that assurance terms on forms provided by offerees be separately signed by the offeror to effect a firm offer. For example, if Fashionable Mfg. Co. supplies its customer, Retailer, with preprinted order forms that contain a fine-print provision giving assurances that the customer's offer to purchase goods will be held open for one month, the purported promise to keep the offer open would not be enforceable unless Retailer separately signed that provision.

Time of Effectiveness of Revocations The question of *when* a revocation is effective to terminate an offer is often a critical issue in the contract formation process. For example, Davis offers to landscape Winter's property for \$1,500. Two days after making the offer, Davis changes his mind and mails Winter a letter revoking the offer. The next day, Winter, who has not received Davis's letter, telephones Davis and attempts to accept. Contract? Yes. The general rule on this point is that revocations are effective only when they are actually *received* by the offeree.

The only major exception to the general rule on effectiveness of revocations concerns offers to the general public. Because it would be impossible in most cases to reach every offeree with a revocation, it is generally held that a revocation made in the same manner as the offer is effective when published, without proof of communication to the offeree.

Rejection An offeree may expressly reject an offer by indicating that he is unwilling to accept it. He may also impliedly reject it by making a counteroffer, an offer to contract on terms materially different from the terms

⁵Under the UCC [1–201(39)], the word *signed* includes any symbol that a person makes or adopts with the intent to authenticate a writing.

CONCEPT REVIEW

What Terminates Offers?

- Their own terms
- Lapse of time
- Revocation
- Rejection
- Death or insanity of offeror or offeree
- Destruction of subject matter
- Intervening illegality

The Global Business Environment

Several of the kinds of factors that make offers irrevocable in the United States—such as consideration and, in the case of firm offers, writing—are not required to make offers irrevocable under the CISG. The CISG states that an offer cannot be revoked if it indicates that

it is irrevocable or if it was reasonable for the offeree to rely on the offer as being irrevocable and the offeree has acted in reliance on the offer. However, even when an offer is irrevocable, the CISG allows it to be revoked if the revocation reaches the offeree before or at the same time as the offer.

of the offer. As a general rule, either form of rejection by the offeree terminates his power to accept the offer. This is so because an offeror who receives a rejection may rely on the offeree's expressed desire not to accept the offer by making another offer to a different offeree.

One exception to the general rule that rejections terminate offers concerns offers that are the subject of an option contract. Some courts hold that a rejection does not terminate an option contract and that the offeree who rejects still has the power to accept the offer later, so long as the acceptance is effective within the option period.

Time of Effectiveness of Rejections As a general rule, rejections, like revocations, are effective only when actually received by the offeror. Therefore, an offeree who has mailed a rejection could still change her mind and accept if she communicates the acceptance before the offeror receives the rejection.⁶

Death or Insanity of Either Party The death or insanity of either party to an offer automatically terminates the offer without notice. A meeting of the minds is obviously impossible when one of the parties has died or become insane.⁷

⁶Chapter 11 discusses this subject in detail.

⁷Death or insanity of a party that occurs after a contract has been formed can excuse performance in contracts that call for personal services to be performed by the person who has died or become insane. This is discussed in Chapter 18.

Destruction of Subject Matter If, prior to an acceptance of an offer, the subject matter of a proposed contract is destroyed without the knowledge or fault of either party, the offer is terminated.⁸ So, if Marks offers to sell Wiggins his lakeside cottage and the cottage is destroyed by fire before Wiggins accepts, the offer was terminated on the destruction of the cottage. Subsequent acceptance by Wiggins would not create a contract. The following *Family Video Movie Club* case provides an illustration of lapse of time and destruction of the subject matter.

Intervening Illegality An offer is terminated if the performance of the contract it proposes becomes illegal before the offer is accepted. So, if a computer manufacturer offered to sell sophisticated computer equipment to another country, but two days later, before the offer was accepted, Congress placed an embargo on all sales to this country, the offer was terminated by the embargo.⁹

⁸In some circumstances, destruction of subject matter can also serve as a legal excuse for a party's failure to perform his obligations under an existing contract. Chapter 18 discusses this subject.

⁹In some circumstances, intervening illegality can also serve as a legal excuse for a party's failure to perform his obligations under an existing contract. Chapter 18 discusses this subject.

Family Video Movie Club v. Home Folks, Inc. 827 N.E.2d 582 (Ind. Ct. App. 2005)

Home Folks, Inc., operated a restaurant on property that it leased from the owner, whose son, Tony Spachtholz, acted as her agent. Family Video Movie Club contacted Spachtholz in 2002 about buying the property for use as a video store. Home Folks' lease ran through 2005. The lease also contained a term that permitted either Home Folks or the landlord to cancel the lease if the property was destroyed.

In mid-2002, Family Video began negotiating with Home Folks about buying out the lease at the same time it was negotiating with Spachtholz about purchasing the property. Late in 2002, Home Folks and Family Video agreed on some terms regarding a buyout, including \$35,000 that was to be paid to Home Folks. This was a partial oral agreement that was contingent and incomplete, and both parties knew that it was to be finalized in written form.

On November 25, 2002, Family Video sent a letter to Home Folks' operators, the Misners, outlining the proposed buyout. The letter said the following:

As discussed, Family Video Movie Club, Inc. has entered into a Purchase Agreement to purchase said premises. We have the right to confirm our ability to replat the property, properly zone the property, and perform due diligence.

Until a title has been delivered to us, and in the event we do not purchase said premises, you are obligated to fulfill the terms and conditions of your Lease Agreement with Anthony Spachtholtz [sic]. After closing, you will have ninety days (90) to vacate the premises. At such time that you vacate the premises and deliver possession to Family Video Movie Club, Inc., Family Video Movie Club, Inc. agrees to pay you the full sum of Thirty-five Thousand and 00/100 Dollars, (\$35,000.00).

The letter contained a space for the Misners to sign, indicating "I agree with the above terms and conditions." On February 1, 2003, the building housing Home Folks burned to the ground as a result of arson. At this point, the Misners still had not signed the written offer that Family Video had sent to them.

Two days after the fire, the Misners signed the offer letter they had received from Family Video the previous November, indicating that they "agreed with" the terms and conditions of the buyout proposed by Family Video. They signed the offer letter on the advice of their attorney. The next day, February 4, 2003, Home Folks' attorney wrote to Family Video's representative, indicating "we are cancelling the lease, conditioned upon payment of the agreed upon amount." The day after that, February 5, 2003, the Misners wrote Spachtholz to state that Home Folks was canceling the lease.

Home Folks sought payment of the \$35,000 from Family Video, but no payment occurred. Home Folks sued Family Video, alleging that a contract was formed and that Family Video should pay Home Folks the \$35,000 contemplated by the contract. After a bench trial, the trial court concluded that a contract existed and ordered Family Video to pay Home Folks \$35,000 in damages.

Vaidik, Judge

Unless an offer to form a contract specifically states how long it is open to acceptance, an offer is open only for a reasonable time. A reasonable time "is the time that a reasonable person in the exact position of the offeree would believe to be satisfactory to the offeror." 1 Joseph M. Perillo, *Corbin on Contracts* § 2.16, at 203–04 (rev. ed. 1995 & 2004 Supp.). How much time is reasonable for an offeree to accept an offer depends on the facts of each case. "The purpose of the offeror, to be attained by the making and performance of the contract, will affect the time allowed for acceptance, if it is or should be known to the offeree. In such case there is no power to accept after it is too late to attain that purpose." *Id.* at 211.

In this case, Family Video clearly bargained for Home Folks to abandon its interest in the leasehold well before Home Folks' lease would otherwise terminate. The fiery destruction of Home

Folks' building made it impossible for Family Video to get what it had bargained for. The unexpected and premature destruction of a significant portion of the subject matter of the offer made it unreasonable to continue the time for Home Folks to accept the offer. Also, because Home Folks knew Family Video's purpose in the making and performance of the contract, Home Folks was on notice that it was no longer a reasonable time to accept the offer once the structure ceased to exist. Moreover, "the power of acceptance may be terminated by the death or destruction of a person or thing essential for performance . . ." *Restatement (Second) of Contracts* § 36, cmt. c. In this case, the destruction by fire of the structure subject to Home Folks' leasehold terminated Home Folks' time to accept Family Video's offer. The structure's existence was essential for performance of the contract, and Home Folks lost its capacity to accept the offer from Family Video when it was destroyed by fire.

This principle is illustrated by *White v. Arizona Property & Casualty Insurance Guaranty Fund* (Ariz. 1997), where an insurance company became insolvent after offering to settle a particular claim. As a result of the insolvency, the company was under court order not to dispose of any assets. The court held that the insolvency order terminated the offeree's power of acceptance because it imposed a legal impediment to the insurer's ability to pay the settlement. *White* is similar to this case, where an event occurred after the offer but before the acceptance that terminated the offeree's power of accept-

ance because something essential to the contract's performance was destroyed. This conclusion is buttressed by the well-established line of cases holding that the offeree's power of acceptance is terminated by the death of the offeror. Because the structure, an element essential to the achievement of the purpose of the contract, was destroyed before Home Folks accepted the offer, the power of acceptance was terminated and no contract was formed.

Judgment reversed in favor of Family Video.

Problems and Problem Cases

1. In 1989, the New Jersey Highway Authority increased its tolls from 25 cents to 35 cents. In connection with this increase, it authorized the sale of tokens for a discounted price—\$10 for a roll of 40 tokens, a savings of \$4 per roll for customers—for a limited time. The authority advertised this sale through several media, including signs on the parkway itself. Shortly after the discount sale began, complaints were made that the tokens were not available. The authority explained that the shortage probably resulted from an unanticipated demand for the tokens resulting from purchasers hoarding them. The authority then began limiting the sales to certain days of the week, but even with that limitation, the demand could not be satisfied. Schlichtman, a motorist who used the toll roads, sued the authority for breach of contract after trying unsuccessfully, on five different occasions within the authorized sale dates and times, to buy the discounted tokens. What should the result be?
2. The Castagnas decided to sell their house. Through the Castagna's realtor, Baffone offered to purchase the house for \$2.1 million. As a sign that he was serious, he provided a \$50,000 deposit. The Castagnas rejected Baffone's offer, and, on August 19, 2004, they made a counteroffer, through the realtor, to sell the property to Baffone for \$2.3 million. Baffone told the realtor that he would buy the house for \$2.3 million, but only if the settlement date were December 31, 2004, and only if the Castagnas agreed to permit Baffone to settle at any time up to that date. The realtor told the Castagnas about this latest counteroffer, but they never responded either affirmatively or negatively. Baffone later made yet another offer to buy the house, this time offering \$2.5 million with no contingencies. The Castagnas never responded to this offer. Baffone later sued the Castagnas for breach of contract, claiming that he accepted the Castagnas' counteroffer to sell the property for \$2.3 million. Is this a good argument?
3. Rodziewicz was driving a 1999 Volvo conventional tractor-trailer on I-90 in Lake County, Indiana, when he struck a concrete barrier. His truck was stuck on top of the barrier, and the state police contacted Waffco Heavy Duty Towing to help in the recovery. Before Waffco began working, Rodziewicz asked how much it would cost to tow the truck. He was told that the fee would be \$275, and there was no discussion of labor or other costs. Rodziewicz instructed Waffco to take his truck to a Volvo dealership. After a few minutes of work, Waffco pulled Rodziewicz's truck off the barrier and towed the truck to its towing yard a few miles away. Subsequently, Waffco notified Rodziewicz that, in addition to the \$275 towing fee, he would have to pay \$4,070 in labor costs. Waffco calculated its labor charges as \$.11 cents per pound. Waffco would not release the truck until payment was made, so Rodziewicz paid the total amount. Was Rodziewicz contractually obligated to pay Waffco the \$4,070 labor fee?

4. Schiff, a self-styled tax rebel who had made a career out of his tax protest activities, appeared live on the February 7, 1983, CBS News *Nightwatch* program. During the course of the program, which had a viewer participant format, Schiff repeated his long-standing position that “there is nothing in the Internal Revenue Code which says anyone is legally required to pay the tax.” Later in the program, Schiff stated: “If anybody calls this show and cites any section of this Code that says an individual is required to file a tax return, I will pay them \$100,000.” Newman, an attorney, did not see Schiff live on *Nightwatch*, but saw a two-minute taped segment of the original *Nightwatch* interview several hours later on the *CBS Morning News*. Certain that Schiff’s statements were incorrect, Newman telephoned and wrote *CBS Morning News*, attempting to accept Schiff’s offer by citing Internal Revenue Code provisions requiring individuals to pay federal income tax. CBS forwarded Newman’s letter to Schiff, who refused to pay on the ground that Newman had not properly accepted his offer. Newman sued Schiff for breach of contract. Will Newman win?
5. Leonard saw a “Pepsi Stuff” commercial encouraging consumers to collect “Pepsi Points” from specially marked packages of Pepsi or Diet Pepsi and redeem these points for merchandise featuring the Pepsi logo. The commercial depicts a teenager preparing to leave for school, dressed in a shirt emblazoned with the Pepsi logo. The drumroll sounds as the subtitle “T-SHIRT 75 PEPSI POINTS” scrolled across the screen. The teenager strides down the hallway wearing a leather jacket, and the subtitle “LEATHER JACKET 1450 PEPSI POINTS” appears. The teenager opens the door of his house and puts on a pair of sunglasses. The drum roll then accompanies the subtitle “SHADES 175 PEPSI POINTS.” A voiceover then intones, “Introducing the new Pepsi Stuff catalog.” The scene then shifts to three young boys sitting in front of a high school building. The boy in the middle is intent on his Pepsi Stuff catalog, while the boys on either side are drinking Pepsi. The three boys gaze in awe at an object approaching overhead. The military music swelled, and the viewer senses the presence of a mighty plane as the extreme winds generated by its flight create a paper maelstrom in a classroom devoted to an otherwise dull physics lesson. Finally, a Harrier jet swings into view and lands by the side of the school building, next to a bicycle rack. Several students run for cover, and the velocity of the wind strips one faculty member down to his underwear. The voiceover announces, “Now the more Pepsi you drink, the more great stuff you’re gonna get.” The teenager opens the cockpit of the fighter and can be seen, holding a Pepsi. “Sure beats the bus,” he says. The military drum roll swells a final time and the following words appear: “HARRIER FIGHTER 7,000,000 PEPSI POINTS.” Inspired by the commercial, Leonard set out to get a Harrier jet. He consulted the Pepsi Stuff catalog, but it did not contain any entry or description of the Harrier jet. The amount of Pepsi Points necessary to get the listed merchandise ranged from 15 for a “jacket tattoo” to 3,300 for a mountain bike. The rear foldout pages of the catalog contained directions for redeeming Pepsi Points for merchandise. These directions note that merchandise may be ordered “only” with the original Order Form. The catalog notes that in the event that a consumer lacks enough Pepsi Points to obtain a desired item, additional Pepsi Points may be purchased for 10 cents each; however, at least 15 original Pepsi Points must accompany each order. Leonard initially set out to collect 7,000,000 Pepsi Points by consuming Pepsi products, but then switched to buying Pepsi Points. Leonard ultimately raised about \$700,000. In March 1996, Leonard submitted an Order Form, fifteen original Pepsi Points, and a check for \$700,008.50. At the bottom of the Order Form, Leonard wrote in “1 Harrier Jet” in the “Item” column and “7,000,000” in the “Total Points” column. In a letter accompanying his submission, he stated that the check was to purchase additional Pepsi Points for obtaining a new Harrier jet as advertised in the Pepsi Stuff commercial. Several months later, PepsiCo’s fulfillment house rejected Leonard’s submission and returned the check, explaining that the item he requested was not part of the Pepsi Stuff collection, and only catalog merchandise could be redeemed under this program. It also stated, “The Harrier jet in the Pepsi commercial is fanciful and is simply included to create a humorous and entertaining ad.” Leonard sued PepsiCo for breach of contract. Will he win?
6. Pernal owned a parcel of real estate adjacent to property owned by St. Nicholas Greek Orthodox Church. Pernal sent a letter to the church indicating that he was offering it for sale for “\$825,000 cash/mortgage,

'as is,' with no conditions, no contingencies related to zoning and 120 days post closing occupancy for the present tenants." This offer was dated June 3, 2003, and expressly provided that it would remain open for a two-week period. On the same day, Pernal also sent the same offer to sell the property on the same terms to another prospective purchaser, White Chapel Memorial Association Park Perpetual Care Trust. On June 4, the church sent a letter indicating that it accepted the terms of the offer that Pernal had set forth in his letter. However, the church's letter also referenced an attached purchase agreement. The purchase agreement agreed with Pernal's purchase price and the close occupancy period, but contrary to the offer, it contained additional terms. The church's president signed this attached purchase agreement, but defendant did not sign it. The offer by letter dated June 3, 2003, did not reference other potential purchasers. On June 10, White Chapel, by letter, offered to pay \$900,000 cash for the property, with no conditions or contingencies related to zoning and 180 days post closing occupancy rent free. On that same date (June 10), Pernal sent a letter to both potential purchasers. This letter indicated that "amended offers" had been received. The letter further provided that the offer would remain open for two weeks' time as provided in the initial offering letter. On June 13, the church sent a letter to Pernal, stating that the offer had been accepted on June 4, and that an enforceable contract was formed. The church sued Pernal for breach of contract. Will it win?

7. Calvin and Audrey Bones are the trustees of the Calvin R. and Audrey J. Bones Family Trust. The trust owned a ranch in Nebraska that the trust decided to sell. On June 11, 1997, the Boneses listed the ranch for sale with Agri Affiliates, a real estate agent. According to the listing agreement between the Boneses and Agri, if the listing sold to the current tenants, Lydic Brothers, the agent would receive only a 1 percent commission. On the other hand, if the listing sold to anyone else, the agent would receive a 6 percent commission. On July 17, 1997, Dean Keller submitted to Agri a written offer to buy the ranch for \$490,000. The offer also stated that it would be withdrawn if not accepted by July 21 at 5 PM. Paragraph 15 of the offer states in part that "upon execution by Seller, this agreement shall become a binding contract." At 4:53 PM on July 21, the Boneses faxed a signed copy of the offer to Agri. In addition, at 5:12 PM on July 21, Loren Johnson, Agri's representative, telephoned Keller and left a voicemail message to inform him of the Boneses' acceptance. On July 22, 1997, Don Lydic, a representative of Lydic Brothers, informed the Boneses and the agent that Lydic Brothers would match Keller's offer for the ranch. The Boneses wanted to accept Don Lydic's offer and sell the ranch to Lydic Brothers. Later that same day, Agri asked Keller if he would be willing to release the Boneses from the agreement and "back out" of the deal. Keller refused and asserted that he wanted to go forward with the sale. The Boneses unequivocally informed Keller on December 5, 1997, that they would not sell the ranch to him. After the Boneses failed to close, Keller brought suit against the Boneses, seeking relief for breach of contract. The Boneses asserted that no contract existed (1) because their acceptance was not communicated to the buyer within the time specified in the offer and the attempted acceptance thus became a counteroffer and (2) because the buyer did not communicate to the sellers that he accepted their counteroffer. Are they correct?
8. Mariah Carey is a famous entertainer. Vian, who was Carey's stepfather before she achieved stardom, was in the business of designing, producing, and marketing gift and novelty items. Vian claimed that Carey agreed orally to give him a license to produce "Mariah dolls," which would be statuettes of the singer that would play her most popular songs. Vian asserted that this right was given in exchange for his financial and emotional support of Carey, including picking her up from late-night recording sessions, providing her with the use of a car, paying for dental care, allowing her to use his boat for business meetings and rehearsals, and giving her various items to help furnish her apartment. Vian based his claim of an oral contract on three conversations, twice in the family car and once on Vian's boat. Vian said to Carey, "Don't forget about the Mariah dolls," and "I get the Mariah dolls." According to Vian, on one occasion Carey responded, "Okay" and on other occasions, she merely smiled and nodded. Although Carey admits that Vian mentioned the dolls two or three times, she testified that

she thought it was a joke. Claiming that Carey breached the contract to license dolls in her likeness, Vian brought this action for breach of contract. Was a contract formed?

9. In July 1985, Congress passed the Statue of Liberty–Ellis Island Commemorative Coin Act. The Act instructed the Secretary of the Treasury to mint and sell a stated number of coins. In November and December 1985, the U.S. Mint mailed advertising materials about the coins to people whose names were included on a list of previous customers/coin collectors. These materials described the various coins the issuance of which was authorized by the Act, and encouraged potential purchasers to forward early payment for commemorative coins. Payment could be made either by check, money order, or credit card. The Mint had not previously dealt with credit card sales and the processing of credit card orders. Directly above the space provided on this form for the customer’s signature on the order form was the following:

VERY IMPORTANT—PLEASE READ: YES, Please accept my order for the U.S. Liberty Coins I have indicated. I understand that all sales are final and not subject to refund. Verification of my order will be made by the Department of the Treasury, U.S. Mint. . . . If my order is received by December 31, 1985, I will be entitled to purchase the coins at the Pre-Issue Discount price shown. I have read, understand and agree to the above. . . .

Please allow 6 to 8 weeks for delivery after issue date of January 1, 1986. The U.S. Mint reserves the right to limit quantities shipped, subject to availability. Mint may discontinue accepting orders should bullion prices increase significantly. Credit card orders will be billed upon receipt by the U.S. Mint.

In November 1985, Mrs. Mesaros sent an order to the Mint for certain Statue of Liberty coins. She provided information about her husband’s credit card, reflecting that \$1,675 should be charged to Mr. Mesaros’s credit card account. Later in November, Mr. Mesaros sent additional orders for another 18 gold coins to the Mint. These orders were placed in the names of members of the Mesaros family, and were paid for with nine separate checks.

Demand for the coins far exceeded the Mint’s expectations, and there were not enough five-dollar

gold coins to fill all the orders of those who had responded to the Mint’s promotional materials. The last order for gold coins that was filled was accepted some time between December 31, 1985, and January 6, 1986. This exhausted the supply of the 500,000 gold coins that were authorized by the Act. These gold coins increased in value by approximately 200 percent within the first few months of 1986. In February 1986, the Mesaroses were informed by a form letter that the Mint “had tried but was unable” to process the Mesaroses’ November credit card order. The Mesaroses did receive the 18 coins that had been paid for by checks. Investigation revealed that the Mesaroses’ bank had given authorization to the Mellon Bank (responsible for processing credit card orders for the Mint) with respect to the coin order charged to Mr. Mesaros’s account. However, the Mint and the Mellon Bank were swamped with a deluge of 756,000 orders, of which 186,000 were credit card orders. Cash orders were filled fairly promptly by the Mint, but credit card orders before being filled had to be sent by the Mint to the Mellon Bank in Pittsburgh for verification, investigation, and determination of validity, which was a slow process. Credit card orders, when approved by the Mellon Bank were certified as valid and returned to the Mint to be filled. Before all of the 186,000 credit card orders could be verified by the Mellon Bank and thereafter filled by the Mint, all of the gold coins had been sold by the Mint in filling cash orders, and no more coins were available. As a result, 13,000 credit card orders could not be filled, and were rejected by the Mint. The Mesaros order was in this rejected group. The Mesaroses brought suit against the government for breach of contract. They claimed that the Mint’s promotional material and order form was an offer. Are they correct?

10. Jeff visited a car dealership and test-drove a used car. After discussing the price with the salesman, Jake, and learning that he could purchase the car for \$500 less than the sticker price, Jeff asked Jake to hold the car for him until 8:00 that evening so that he could bring his wife back to see the car. Jake agreed, writing out a note promising not to sell the car before 8:00 PM. The note was written on dealership stationery, but Jake did not sign his name. The dealership broke its promise and sold the car to Jones

before 8:00 PM. Was it free to revoke its offer to Jeff? Jones, the new purchaser of the car (and a nonmerchant), later offered in a signed writing to sell the car to Jill and to hold the car for her until she returned with her husband. Could Jones revoke this offer?

Online Research

Finding Offers on the Internet

1. Browse various commercial Web sites, classified sections of online newspapers, and other online commercial solicitations. Select an example of an ad or solicitation that would be considered an invitation to negotiate rather than an offer and one that would constitute an offer. Explain why the examples you have chosen would or would not constitute offers under the standards discussed in this chapter.
2. Browse an online auction Web site such as eBay (www.ebay.com), and determine under what circumstances a seller's listing of items for auction on that site constitutes an offer. That is, does the bidder form a contract by submitting the highest bid, or can the seller legally refuse to sell the item to the highest bidder? Tip: Be sure to check out the site's User Agreement and its instructions for sellers.

chapter II

THE AGREEMENT: ACCEPTANCE

On April 1, 2006, Carlos received a letter from Clear Creek School Corporation (CCSC) offering him a job as a high school mathematics teacher for the academic year 2007–08, at a salary of \$32,000. Carlos considered the offer for several days and then, on April 4, he sent CCSC a letter in which he stated that he accepted its offer. In this letter, Carlos also stated, “Is CCSC willing to pay me the \$2,000 signing bonus that many of my classmates are getting from other school districts?” On April 5, before CCSC had received Carlos’s letter, Carlos received a letter from CCSC’s superintendent stating that CCSC had decided to hire someone else and was revoking its offer to him.

- Did Carlos accept CCSC’s offer?
- If so, when was Carlos’s acceptance effective?
- Did CCSC have the legal right to revoke its offer?
- Was it ethical for CCSC to revoke its offer?

THE PRECEDING CHAPTER DISCUSSED the circumstances under which a proposal will constitute the first stage of an agreement: the offer. This chapter focuses on the final stage of forming an agreement: the acceptance. The acceptance is vitally important because it is with the acceptance that the contract is formed. This chapter discusses the requirements for making a valid acceptance as well as the rules concerning the time at which a contract comes into being.

What Is an Acceptance?

An **acceptance** is “a manifestation of assent to the terms [of the offer] made by the offeree in the manner invited or required by the offer.”¹ In determining if an offeree accepted an offer and created a contract, a court will look for evidence of three factors: (1) the offeree intended to

enter the contract, (2) the offeree accepted on the terms proposed by the offeror, and (3) the offeree communicated his acceptance to the offeror.

Intention to Accept In determining whether an offeree accepted an offer, the court is looking for the same *present intent to contract* on the part of the offeree that it found on the part of the offeror. And, as is true of intent to make an offer, intent to accept is judged by an objective standard. The difference is that the offeree must objectively indicate a present intent to contract on the terms of the offer for a contract to result. As the master of the offer, the offeror may specify in detail what behavior is required of the offeree to bind him to a contract. If the offeror does so, the offeree must ordinarily comply with all the terms of the offer before a contract results.

The following *Adsit* case analyzes how these concepts about manifestation of assent apply in the context of *clickwrap* contracts presented online.

¹*Restatement (Second) of Contracts* § 50(1)(1981).

Adsit Co. v. Gustin

874 N.E.2d 1018 (Ind. Ct. App. 2007)

Adsit is an Indiana-based retailer of new, used, and rebuilt parts and accessories for Mercedes-Benz automobiles. It does business over the phone and the Internet. Mary Gustin lives in Texas, and Julie Gustin, Mary's daughter-in-law, lives in Alabama. Julie's husband, Kevin, owned a classic 1967 Mercedes-Benz roadster. Mary wanted to buy leather seat covers and armrest covers for the car.

Prior to placing an online order on Adsit's Web site, a customer must click a button reading "I Accept," which is located at the bottom of a Web page describing the company policy. The policy stated that there would be absolutely no refunds or returns, that there was a warranty for 30 days on an exchange basis, and that all sales were final. The policy also included a forum selection clause:

AGREEMENT ON JURISDICTION TO DAMAGES:

[Adsit] and Customers agree that any suit, claim or legal proceedings of any nature between the parties must be filed and prosecuted in Delaware County, Indiana and shall be controlled by the laws of the State of Indiana then in effect. . . .

The page of Adsit's Web site regarding seat upholstery states that

[a]ll seat upholstery is manufactured using the original german leathers or mb tex vinyls to the original pattern for the correct look. Most original colors are available. If you have any questions about the color of your interior, please supply us with your vin# or send a sample of your old interior. All interior items are special order and nonreturnable so please order carefully.

On December 15, 2004, Mary placed an order on Adsit's Web site for two camel-colored leather seat covers and two camel-colored leather armrest covers. Mary also entered a vehicle identification number (VIN) on the Web site but wrote down an incorrect number. Consequently, when Adsit employees looked at the VIN, they dismissed it because it was not a VIN for a Mercedes-Benz vehicle. Originally, Mary placed the order on her credit card with instructions to ship the goods to Kevin and Julie. Two days later, an Adsit employee called Mary to inform her that because of a company policy, the credit card to which the order was billed needed to match the address to which it was shipped. Therefore, with Julie's permission, Mary provided Adsit with Julie's credit card number and information. Julie had no direct contact with Adsit. After verifying the order, Adsit placed an order for camel-colored leather seat and armrest covers from its supplier, German Auto Tops in North Hollywood, California. Because the factory was closed for the holidays, Julie and Kevin did not receive the goods until January 22, 2005. At that time, they discovered that the color of the seat covers did not match their vehicle's interior. Within six days of receiving the seat covers, Julie and Kevin returned them to the California address from which they were sent. They sent the seat covers via certified United States mail and received confirmation of delivery. They also reversed the charge on their credit card. A representative of Adsit testified that the company did not receive the goods.

On July 12, 2005, Adsit filed a breach of contract complaint against Julie, later adding Mary as a defendant. Following a bench trial, the trial court entered judgment for Adsit, but awarded a smaller amount of money than Adsit thought it was entitled to. Adsit and Mary and Julie appealed. Among the Gustins' arguments on appeal was that the Indiana court lacked jurisdiction over Mary and Julie, both of whom lived in other states.

Baker, Judge

As a threshold matter, we must consider whether the trial court properly exercised personal jurisdiction over the Gustins. Parties may consent by contract to the exercise of personal jurisdiction by courts that otherwise might not have such jurisdiction. Forum selection clauses—even those occurring in form contracts—are enforceable if they are reasonable and just under the circumstances and there is no evidence of fraud or overreaching. Additionally, the provision must have been freely negotiated. Thus, it is well settled that to determine the validity of a forum selection clause, we are to examine whether the clause is freely negotiated and just and reasonable under the circumstances.

Here, Adsit's policy contains a forum selection clause providing that "any suit, claim or legal proceedings of any nature between the parties must be filed and prosecuted in Delaware County Indiana and shall be controlled by the laws of the State of Indiana." To complete the transaction, Mary was required to click on a button reading "I Accept" that was placed at the bottom of the web-page containing the policy. This type of web-based contract is commonly referred to as a "clickwrap" agreement. A clickwrap agreement appears on an internet webpage and requires that a user consent to any terms and conditions by clicking on a dialog box on the screen in order to proceed with the internet transaction. Even though they are

electronic, clickwrap agreements are considered to be writings because they are printable and storable. To determine whether a clickwrap agreement is enforceable, courts presented with the issue apply traditional principles of contract law and focus on whether the plaintiffs had reasonable notice of and manifested assent to the clickwrap agreement.

Here, the Adsit policy gave reasonable notice of its terms. To complete a transaction, a user must accept the policy, the text of which is immediately visible to the user. The user is required to take affirmative action by clicking on the “I Accept” button; if the user refuses to agree to the terms, she cannot engage in the transaction. The entire policy is essentially three short paragraphs—one-half of a page. Moreover, the paragraph that contains the forum selection clause begins with the following heading, which is bolded and in all capital letters: **“AGREEMENT ON JURISDICTION TO DAMAGES.”**

Under these circumstances, we find that Mary had reasonable notice of and manifested assent to the clickwrap agreement containing the forum selection clause. We also find that she was capable of understanding its terms, consented to them, and could have rejected the agreement with impunity. Finally, we note that Mary was not deprived of her day in court, inasmuch as she and Julie retained counsel, requested and obtained permission to participate telephonically in hearings, and did, in

fact, participate telephonically. Given these facts, we find that the forum selection clause contained in Adsit’s clickwrap agreement was valid, enforceable, and binding on Mary.

Whether the forum selection clause also binds Julie is a closer call. Julie’s only role in the transaction was to provide Mary with her credit card number after Adsit informed Mary that company policy required that a customer’s shipping and billing addresses be the same. Mary then placed the order, using Julie’s credit card number and address to complete the transaction. Thus, Julie did not personally accept Adsit’s policy, including the forum selection clause. If Mary was acting as Julie’s agent, however, then Julie is bound to the terms of the contract, including the forum selection clause. Although the record does not reveal the precise nature of the communication between Mary and Julie regarding the purchase from Adsit, it is undisputed that Julie did, in fact, provide Mary with her credit card number so that Mary could complete the purchase. We find that under these circumstances, Julie’s conduct was sufficient to give Mary actual authority to engage in the transaction on her behalf. Consequently, Julie is likewise bound by Adsit’s forum selection clause. In sum, we find that the trial court properly exercised personal jurisdiction over Mary and Julie.

Affirmed in favor of Adsit.

Intent and Acceptance on the Offeror’s Terms

Common Law: Traditional “Mirror Image” Rule The traditional contract law rule is that an acceptance must be the *mirror image* of the offer. Attempts by offerees to change the terms of the offer or to add new terms to it are treated as counteroffers because they impliedly indicate an intent by the offeree to reject the offer instead of being bound by its terms. However, recent years have witnessed a judicial tendency to apply the mirror image rule in a more liberal fashion by holding that only *material* (important) variances between an offer and a

purported acceptance result in an implied rejection of the offer.

Even under the mirror image rule, no rejection is implied if an offeree merely asks about the terms of the offer without indicating its rejection (an *inquiry regarding terms*), or accepts the offer’s terms while complaining about them (a *grumbling acceptance*). Distinguishing among a counteroffer, an inquiry regarding terms, and a grumbling acceptance is often a difficult task. The fundamental issue, however, remains the same: Did the offeree objectively indicate a present intent to be bound by the terms of the offer? You will see an application of the traditional mirror image rule in the following *Finnin* case.

Finnin v. Bob Lindsay, Inc.

852 N.E.2d 446 (Ill. Ct. App. 2006)

In March 2002, plaintiffs Michael Finnin, D. J. McPherson, and David Wright approached Bob Lindsay about selling his Honda-Toyota dealership. Negotiations continued over the next few months, and the agreement was drafted in writing. Both parties then made several suggestions, modifications, and counterproposals to the draft. On August 13, 2002, a few final changes to the agreement were discussed between the lawyers for both parties. On August 13 or 14, the legal assistant who worked for Lindsay’s lawyer sent a letter to the plaintiffs’ attorney enclosing a revised agreement for the sale of Lindsay’s stock. This copy contained all of the corrections previously discussed and Lindsay signed it.

Upon receipt of the agreement, the plaintiffs' attorney noticed two errors that did not conform to the parties' intent. The parties had previously agreed that the plaintiffs would pay \$1.1 million for the stock. The purchase price provision of the agreement stated the correct amount. However, Exhibit A to the agreement still stated that the purchase price was \$700,000. Second, the agreement made reference to another agreement for the sale of goodwill between the parties that had since been incorporated into the agreement for the sale of stock. The plaintiffs' attorney contacted Lindsay's attorneys, and they discussed the errors. On August 19, 2002, Lindsay's attorney wrote to the plaintiffs' lawyer, suggesting that plaintiffs' lawyer send the draft back and he would send the plaintiffs a corrected version of the agreement. However, the plaintiffs' lawyer never returned the contract.

On the morning of August 22, Lindsay telephoned Finin and informed him that he had received another offer from a third party. The plaintiffs' attorney recommended that the three partners sign the agreement and return it. Finin called Lindsay and told him that the plaintiffs intended to go through with the deal. That same day, the plaintiffs' attorney made the previously discussed changes to the written agreement by striking out the incorrect purchase price and inserting the correct amount of money in Exhibit A and by removing all references to the "agreement for the sale of goodwill." The plaintiffs then initialed the corrections, signed the agreement, and returned the contract to Lindsay's attorney.

Lindsay refused to sell the dealership to the plaintiffs. They then filed a breach of contract complaint against Lindsay. The trial court granted summary judgment in favor of Lindsay. The plaintiffs appealed. They maintained that the modifications made after Lindsay signed the agreement were simply corrections to errors in the writing and did not change the terms agreed to by the parties; thus, a valid contract was formed.

Lytton, Justice

It is well settled that in order to constitute a contract by offer and acceptance, the acceptance must conform exactly to the offer. Under Illinois contract law, an acceptance requiring any modification or change in terms constitutes a rejection of the original offer and becomes a counteroffer that must be accepted by the original offeror before a valid contract is formed. Our supreme court [has] held that any changes to an offer, even minor changes, constitute a counteroffer rather than an acceptance.

Illinois' strict compliance rule of law was recently noted and applied by the Seventh Circuit in *Venture Associates Corp. v. Zenith Data Systems, Corp.* In that case, plaintiff and defendant were attempting to negotiate the sale of defendant's subsidiary company. The parties exchanged several drafts of a proposed agreement. After months of negotiations, the plaintiff returned a proposed purchase agreement "with minor, non-substantive changes on it in writing." The defendant seller eventually refused to proceed, and the sale was never completed. The plaintiff filed suit in federal court, alleging that the parties had entered into a binding agreement when it returned the agreement with only minor changes. The district court granted defendant's motion to dismiss. On appeal, the Seventh Circuit held that the plaintiff's conduct did not create a binding contract between the parties. The court concluded: "Because Illinois law demands that an acceptance comply

strictly with the terms of the offer, [Plaintiff's] modifications of [defendant's] proposed agreement, however minor, precluded formation of a contract at that point. Indeed, [plaintiff's] changes created a counteroffer which [defendant] never accepted."

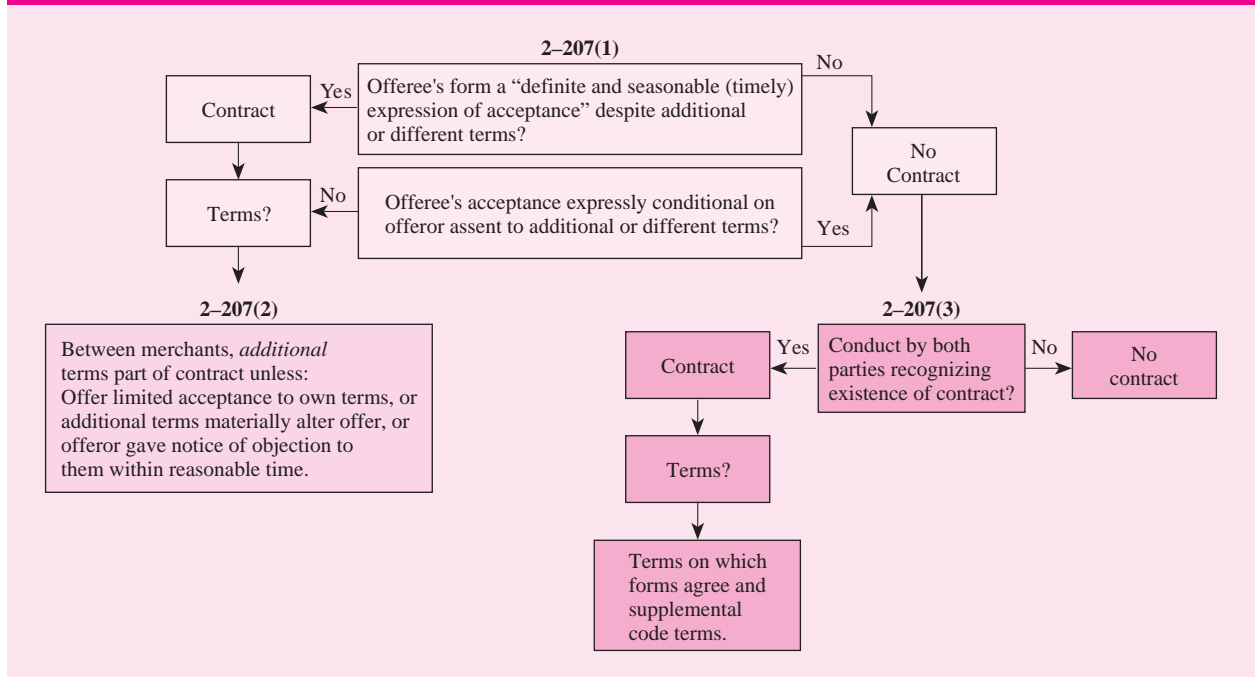

Here, plaintiffs argue that they made only non-substantive, typographical modifications to the proposed agreement for the sale of stock. We agree that plaintiffs' changes were minor and that they apparently conformed to the agreement of the parties. Nevertheless, Illinois case law clearly mandates that any modification, however slight, prevents the creation of a valid contract. Plaintiffs attempt to correct or modify the terms of the agreement formed a counteroffer that Lindsay refused to accept. We recognize that many courts in other jurisdictions disagree with our disposition. Other states have found that immaterial or minor differences or variances between the offer and acceptance do not prevent the formation of a contract. Those courts have concluded that a modification of an offer constitutes a counteroffer only if the modification is a material one. Although the material modification analysis may be more appropriately applied to the facts of this case, Illinois has yet to adopt that rule. Therefore, the trial court properly granted summary judgment in favor of Lindsay.

Affirmed in favor of Lindsay.

UCC Standard for Acceptance on the Offeror's Terms: The "Battle of the Forms" Strictly applying the mirror image rule to modern commercial transactions, most of which are carried out by using preprinted

form contracts, would often result in frustrating the parties' true intent. Offerors use standard order forms prepared by their lawyers, and offerees use standard acceptance or acknowledgment forms drafted by their

Figure 1 The “Battle of the Forms”—A Section 2–207 Flowchart

counsel. The odds that these forms will agree in every detail are slight, as are the odds that the parties will read each other's forms in their entirety. Instead, the parties to such transactions are likely to read only crucial provisions concerning the goods ordered, the price, and the delivery date called for, and if these terms are agreeable, believe that they have a contract.

If a dispute arose before the parties started to perform, a court strictly applying the mirror image rule would hold that no contract resulted because the offer and acceptance forms did not match exactly. If a dispute arose after performance had commenced, the court would probably hold that the offeror had impliedly accepted the offeree's counteroffer and was bound by its terms.

Because neither of these results is very satisfactory, the Code, in a very controversial provision often called the “Battle of the Forms” section [2–207] (see Figure 1), has changed the mirror image rule for contracts involving the sale of goods. UCC section 2–207 allows the formation of a contract even when there is some variance between the terms of the offer and the terms of the acceptance. It also makes it possible, under *some* circumstances, for a term contained in the acceptance form to become part of the contract. The Code provides that a *definite and timely expression of acceptance* creates a contract, even if it includes terms that are *different from*

those stated in the offer or even if it states *additional terms* that the offer did not address [2–207(1)]. An attempted acceptance that *was expressly conditioned* on the offeror's agreement to the offeree's terms would *not* be a valid acceptance, however [2–207(1)]. You will see an example of the operation of 2–207 in the following *Standard Bent Glass* case.

What are the terms of a contract created by the exchange of standardized forms? The *additional* terms contained in the offeree's form are treated as “proposals for addition to the contract.” If the parties are both *merchants*, the additional terms become part of the contract *unless*:

1. The offer *expressly limited acceptance* to its own terms.
2. The new terms would *materially alter* the offer, or
3. The offeror gives notice of objection to the new terms within a reasonable time after receiving the acceptance [2–207(2)].

When the offeree has made his acceptance expressly conditional on the offeror's agreement to the new terms or when the offeree's response to the offer is clearly not “an expression of acceptance” (e.g., an express rejection), no contract is created under section 2–207(1). A contract

will only result in such cases if the parties engage in conduct that “recognizes the existence of a contract,” such as an exchange of performance. Unlike her counterpart under traditional contract principles, however, the offeror who accepts performance in the face of an express rejection or expressly conditional acceptance is not thereby bound to all of the terms contained in the offeree’s response. Instead, the Code provides that the terms of a contract created by such performance are

those on which the parties’ writings agree, supplemented by appropriate gap-filling provisions from the Code [2–207(3)].

That same approach is used by the majority of courts when there is an acceptance that contains terms that are *different* from (not merely additional to) the terms of the offer. That is, the contract will consist of those terms on which the parties’ writings agree *plus* any appropriate gap-filling presumptions of the Code.

Standard Bent Glass Corporation v. Glassrobots Oy

333 F.3d 440 (3rd Cir. 2003)

Standard Bent Glass, a Pennsylvania corporation, wanted to buy a machine for its factory that would produce cut glass. In March 1998, it started negotiations with Glassrobots Oy, a Finnish corporation. By February 1999, negotiations had reached a critical juncture. On February 1, Standard Bent Glass faxed an offer to purchase a glass fabricating system from Glassrobots. The offer sheet began, “Please find below our terms and conditions related to ORDER #DKH2199,” and defined the items to be purchased; the quantity; the price of \$1.1 million; the payment terms; and installation specifics, instructions, and warranties. The letter concluded, “Please sign this ORDER and fax to us if it is agreeable.” On February 2, Glassrobots responded with a cover letter, invoice, and standard sales agreement. The cover letter recited: “Attached you’ll find our standard sales agreement. Please read it through and let me know if there is anything you want to change. If not, I’ll send 2 originals, which will be signed.” The contract included an arbitration clause and several references to arbitration. Glassrobots did not return, nor refer to, Standard Bent Glass’s order.

Later that day, Standard Bent Glass faxed a return letter that began, “Please find our changes to the Sales Agreement,” by which it meant Glassrobots’s standard sales agreement. This letter apparently accepted Glassrobots’s standard sales agreement as a template and requested five specific changes. The letter closed, “Please call me if the above is not agreeable. If it is we will start the wire today.” On February 4, Standard Bent Glass wired the down payment to Glassrobots, and on February 8, the wire transfer cleared Glassrobots’s bank account.

On February 5, Glassrobots sent Standard Bent Glass a revised sales agreement that incorporated almost all of the requested changes. Glassrobots’s cover letter stated, “Attached you’ll find the revised sales agreement. . . . Please return one signed to us; the other one is for your files.” A provision of this agreement stated that “this Agreement shall come into force when signed by both parties.” Standard Bent Glass never signed the agreement. On February 9, Standard Bent Glass sent another fax to Glassrobots in which it stated, “Just noticed on our sales agreement that the power is 440 ± 5. We must have 480 ± 5 on both pieces of equipment.” There was no further written correspondence after February 9 and no contract was ever signed by both parties. Nevertheless, both parties continued to perform. Glassrobots installed the glass fabricating system and Standard Bent Glass made its final payment to Glassrobots.

Standard Bent Glass noticed defects in the equipment, and the parties disputed the cause of the defects. Standard Bent Glass sued Glassrobots. Glassrobots filed a motion to compel arbitration under an appendix to the standard sales agreement that Standard Bent Glass claims it never received. The trial court granted Glassrobots’s motion and Standard Bent Glass appealed.

Scirica, Chief Judge

At issue is whether there was a valid agreement and whether that agreement contained a binding arbitration clause. Glassrobots’s standard sales agreement contained a reference to binding arbitration. Because this dispute involves the sale of goods, the Uniform Commercial Code applies, specifically section 2–207.

Under UCC section 2–207(1), the offeree’s expression of acceptance or transmission of a written confirmation generally results in the formation of a contract. This is true unless the

offeree makes that expression or confirmation “expressly conditional” on the offeror’s assent to the proposed additional or different terms. The flexibility permitted under section 2–207 allows parties to begin performance expediently rather than wait for all contract details to be resolved. This structure is well suited to the fast-paced environment of commercial dealings. Where parties perform but do not explicitly agree on a single uniform document, sections 2–207(2) and (3) govern proposed additional or different terms to the contract.

Here, Standard Bent Glass initiated written negotiations between the parties on February 1. This exchange represented an offer from Standard Bent Glass to purchase the glass fabricating machine from Glassrobots. The Standard Bent Glass offer contained a set of terms and conditions. On February 2, Glassrobots responded by enclosing its standard sales agreement, which contained a different set of terms and conditions. Later that day, Standard Bent Glass sent its own response, accepting the terms of the Glassrobots standard sales agreement and proposing five specific modifications. Referring to the Glassrobots agreement, the Standard Bent Glass letter began, “Please find our changes to the Sales Agreement.”

This communication from Standard Bent Glass constituted either: (1) a definite and seasonable expression of acceptance under section 2–207(1); (2) a counteroffer; or (3) a rejection followed by conduct by both parties sufficient to recognize a valid contract under section 2–207(3). By using the Glassrobots standard sales agreement as a template and by authorizing a wire transfer of the down payment, Standard Bent Glass demonstrated its intent to perform under the essential terms of

Glassrobots’s standard sales agreement. Accordingly, its response was a definite and seasonable expression of acceptance of Glassrobots’s offer. Noteworthy was Standard Bent Glass’s own immediate performance on the February 2 agreement. On February 4, Standard Bent Glass initiated a wire transfer to Glassrobots for the down payment. The following day, Glassrobots adopted most, but not all, of the proposed modifications, and began to perform on the agreement. This was the last significant exchange of written documents between the parties. The parties continued to perform, with Glassrobots constructing and installing the desired equipment and Standard Bent Glass timely paying for it.

In sum, Standard Bent Glass’s conduct constituted a definite and seasonable expression of acceptance that evinced the formation of a contract rather than a counteroffer or rejection. For these reasons, there was a valid contract on the Glassrobots terms of February 2 that incorporated any nonmaterial additions proposed by Standard Bent Glass.

Affirmed in favor of Glassrobots.

LOG ON

This helpful site leads a student through a §2–207 analysis: Professor Bell, *A Brief Working Guide to UCC §2–207*, www.tomwbell.com/teaching/UCC2-207.html.

Communication of Acceptance To accept an offer for a bilateral contract, the offeree must make the promise requested by the offer. In Chapter 10, you learned that an offeror must communicate the terms of his proposal to the offeree before an offer results. This is so because communication is a necessary component of the present intent to contract required for the creation of an offer. For similar reasons, it is generally held that an offeree must communicate his intent to be bound by the offer before a contract can be created. To accept an offer for a unilateral contract, however, the offeree must perform the requested act. The traditional contract law rule on this point assumes that the offeror will learn of the offeree’s performance and holds that no further notice from the offeree is necessary to create a contract unless the offeror specifically requests notice.

Manner of Communication The offeror, as the master of the offer, has the power to specify the precise time,

place, and manner in which acceptance must be communicated. This is called a *stipulation*. If the offeror stipulates a particular manner of acceptance, the offeree must respond in this way to form a valid acceptance. Suppose Prompt Printing makes an offer to Jackson and the offer states that Jackson must respond by certified mail. If Jackson deviates from the offer’s instructions in any significant way, no contract results unless Prompt Printing indicates a willingness to be bound by the deviating acceptance. If, however, the offer merely *suggests* a method or place of communication or is *silent* on such matters, the offeree may accept within a *reasonable time* by *any reasonable means* of communication. So, if Prompt Printing’s offer did not *require* any particular manner of accepting the offer, Jackson could accept the offer by any reasonable manner of communication within a reasonable time.

When Is Acceptance Communicated?

Acceptances by Instantaneous Forms of Communication When the parties are dealing face-to-face, by telephone, or by other means of communication that are virtually instantaneous, there are few problems determining when the acceptance was

communicated. As soon as the offeree says, “I accept,” or words to that effect, a contract is created, assuming that the offer is still in existence.

Acceptances by Noninstantaneous Forms of Communication

Suppose the circumstances under which the offer was made reasonably led the offeree to believe that acceptance by some noninstantaneous form of communication is acceptable, and the offeree responds by using mail, telegraph, or some other means of communication that creates a time lag between the dispatching of the acceptance and its actual receipt by the offeror. The practical problems involving the timing of acceptance multiply in such transactions. The offeror may be attempting to revoke the offer while the offeree is attempting to accept it. An acceptance may get lost and never be received by the offeror. The time limit for accepting the offer may be rapidly approaching. Was the offer accepted before a revocation was received or before the offer expired? Does a lost acceptance create a contract when it is dispatched, or is it totally ineffective?

Under the so-called *mailbox rule*, properly addressed and dispatched acceptances can become effective when they are *dispatched*, even if they are lost and never received by the offeror. The mailbox rule, which is discussed further in the following *Okosa* case, protects the offeree’s reasonable belief that a binding contract was created when the acceptance was dispatched. By the same token, it exposes the offeror to the risk of being bound by an acceptance that she has never received. The offeror, however, has the ability to minimize this risk by stipulating in her offer that she must actually receive the acceptance for it to be effective. Offerors who do this maximize the time that they have to revoke their offers

and ensure that they will never be bound by an acceptance that they have not received.

Operation of the Mailbox Rule: Common Law of Contracts As traditionally applied by the common law of contracts, the mailbox rule would make acceptances effective upon dispatch when the offeree used a manner of communication that was expressly or impliedly **authorized** (invited) by the offeror. Any manner of communication *suggested* by the offeror (e.g., “You may respond by mail”) would be expressly authorized, resulting in an acceptance sent by the suggested means being effective on dispatch. Unless circumstances indicated to the contrary, a manner of communication *used by the offeror in making the offer* would be impliedly authorized (e.g., an offer sent by mail would impliedly authorize an acceptance by mail), as would a manner of communication common in the parties’ trade or business (e.g., a trade usage in the parties’ business that offers are made by mail and accepted by telegram would authorize an acceptance by telegram). Conversely, an improperly dispatched acceptance or one that was sent by some means of communication that was *nonauthorized* would be effective when *received*, assuming that the offer was still open at that time. This placed on the offeree the risk of the offer being revoked or the acceptance being lost. The following *Okosa* case illustrates the operation of the mailbox rule.

The mailbox rule is often applied more liberally by courts today. A modern version of the mailbox rule that is sanctioned by the *Restatement (Second)* holds that an offer that does not indicate otherwise is considered to invite acceptance by *any reasonable means* of communication, and a properly dispatched acceptance sent by a reasonable means of communication within a reasonable time is effective on dispatch.

Okosa v. Hall

718 A.2d 1223 (N.J. Super. Ct., App. Div. 1998)

Obianuju Okosa and her husband, Peter, were insured under an automobile policy with New Jersey Citizens United Reciprocal Exchange. The Okosas’ policy required a quarterly premium payment to be made on February 28, 1994. At the close of business on February 28, 1994, the insurance carrier wrote a letter to the Okosas, which it posted on March 1, 1994. The letter advised the Okosas that they had failed to pay the \$347.50 installment that was due and that their policy would be automatically canceled at 12:01 AM on March 16, 1994, unless payment was made by that date. The letter further advised the Okosas:

If we receive payment on or before the cancellation date, we will continue your policy with no interruption in the protection it affords. If you’ve recently mailed your payment, please disregard this notice.

On March 15, 1994, while the policy was still in effect, the Okosas mailed, by certified mail, a check for the required payment. The very next day, Okosa was involved in an accident with Tawn D. Hall, who was uninsured. It is not known exactly

when the Okosas' check was received, but the insurance carrier deposited and cashed the check on March 22, 1994. The Okosas sought Personal Injury Protection (PIP) benefits pursuant to their policy, but the insurance carrier rejected their claim on the ground that the policy had been canceled prior to the accident. The Okosas brought an action against Hall and the insurance carrier. The insurance carrier moved for and was granted summary judgment, and the Okosas' claim was dismissed. The Okosas appealed.

Kimmelman, J.A.D.

The Okosas contend that the so-called "Mailbox Rule" applies to the facts of this case and that the installment payment mailed on March 15, 1994, constituted a timely payment made prior to 12:01 AM on March 16, 1994. Generally speaking, the Mailbox Rule sanctions the formation or completion of a contractual undertaking upon the act of mailing where the use of the mail is authorized by the other party as the medium for response. The rule is succinctly set forth as follows:

Where parties are at distance from one another, and an offer is sent by mail, it is universally held in this country that the reply accepting the offer may be sent through the same medium, and, if it is so sent, the contract will be complete when the acceptance is mailed, . . . and beyond the acceptor's control; the theory being that, when one makes an offer through the mail, he authorizes the acceptance to be made through the same medium, and constitutes that medium his agent to receive his acceptance; that the acceptance, when mailed, is then constructively communicated to the offeror.

Dickey v. Hurd.

There is no question in this case that the carrier addressed the Okosas by mail concerning their tardy payment. Its letter of February 28, 1994, posted March 1, 1994, invited the Okosas' response with payment by mail. In so responding, the Okosas did so by means of certified mail. The use of certified mail by the Okosas was perspicacious because it insured proof of mailing and its use avoided the thorny issue which would arise from a fraudulent response by them that post-dated the accident.

In *Rugala v. New Jersey Ins. Underwriting Ass'n*, we recognized the factual mechanics underlying in the Mailbox Rule without mentioning the rule itself. However, we rejected its applicability to the facts of that case. Plaintiffs in *Rugala* had sent their payment to renew an insurance policy by regular mail. Plaintiffs suffered a fire loss on the next day and the insurer did not receive plaintiffs' renewal check until the following day. It was held that the policy had expired at 12:01 AM on the previous day because the renewal payment had not been received prior to the expiration. The mailing of payment by regular mail was not deemed a renewal because the insured's contractual documents drew a distinction between certified mail and regular mail. The contract specifically provided that if regular mail was used instead of certified mail, the carrier would be bound only from the date on which the payment was actually received. The payment was received on the day after the fire loss occurred. In permitting the contractual distinction between regular and certified mail, we held that certified mailing was deemed sufficient because that method enabled the sender to obtain proof of the date of mailing and guarded against a fraudulent back-dated submission.

We have completely reviewed the record and are satisfied that by authorizing the use of mail as a means of paying premiums, the carrier constituted the postal authorities as its agent. Accordingly, the decision in this matter is controlled by the Mailbox Rule. As a consequence, the entry of summary judgment in favor of the carrier is reversed.

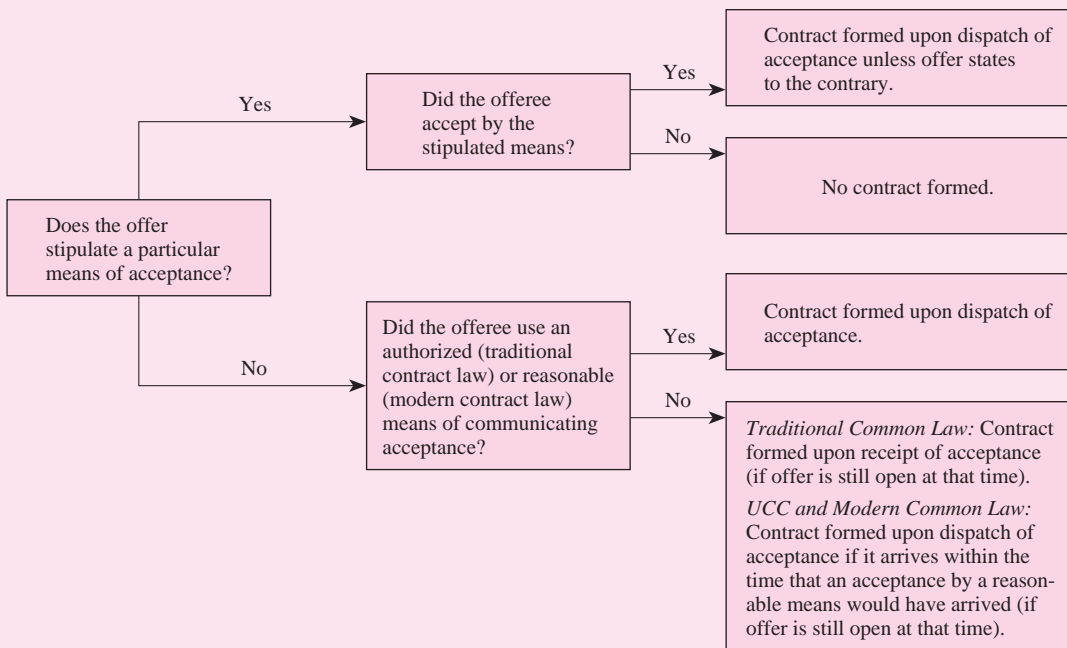

Reversed and remanded in favor of the Okosas.

Operation of the Mailbox Rule: UCC The UCC, like the *Restatement (Second)*, provides that an offer that does not specify a particular means of acceptance is considered to invite acceptance by *any reasonable means* of communication. It also provides that a properly dispatched acceptance sent by a reasonable means of communication within a reasonable time is effective on dispatch. What is reasonable depends on the circumstances in which the offer was made. These include the speed and reliability of the means used by the offeree, the nature of the transaction (e.g., does the agreement involve goods subject to rapid price fluctuations?), the existence of any trade

usage governing the transaction, and the existence of prior dealings between the parties (e.g., has the offeree previously used the mail to accept telegraphed offers from the offeror?). So, under proper circumstances, a mailed response to a telegraphed offer or a telegraphed response to a mailed offer might be considered reasonable and therefore effective on dispatch.

What if an offeree attempts to accept the offer by some means that is *unreasonable* under the circumstances or if the acceptance is not properly addressed or dispatched (e.g., misaddressed or accompanied by insufficient postage)? The UCC rejects the traditional rule

Figure 2 Time of Acceptance

that such acceptances cannot be effective until received. It provides that an acceptance sent by an unreasonable means would be effective on dispatch *if* it is received within the time that an acceptance by a reasonable means would normally have arrived.

Stipulated Means of Communication

As we discussed earlier, an offer may stipulate the means of communication that the offeree must use to accept by saying, in effect: “You must accept by mail.” An acceptance by the stipulated means of communication is effective on dispatch, just like an acceptance by any other reasonable or authorized means of communication (see Figure 2). The difference is that an acceptance by other than the stipulated means does not create a contract because it is an acceptance at variance with the terms of the offer.

Special Acceptance Problem Areas

Acceptance in Unilateral Contracts A unilateral contract involves the exchange of a promise for an act. To accept an offer to enter such a contract, the offeree must perform the requested act. As you learned in the last chapter, however, courts applying modern contract rules may prevent an offeror from revoking such an offer once the offeree has begun performance. This is achieved by holding either that a bilateral contract is created by the beginning of performance or that the offeror’s power to revoke is suspended for the period of time reasonably necessary for the offeree to complete performance.

Acceptance in Bilateral Contracts A bilateral contract involves the exchange of a promise for a promise. As a general rule, to accept an offer to enter such a contract, an offeree must *make the promise requested by the offer*. This may be done in a variety of ways. For example, Wallace sends Stevens a detailed offer for the purchase of Stevens’s business. Within the time period prescribed by the offer, Stevens sends Wallace a letter that says, “I accept your offer.” Stevens has *expressly* accepted

LOG ON

For a thorough outline of the mailbox rule complete with some helpful diagrams and examples, see

Tom W. Bell, *The Mailbox Rule and Related Rules*,
www.tomwbell.com/teaching/KMailbox.html.

Wallace's offer, creating a contract on the terms of the offer. Acceptance, however, can be *implied* as well as expressed. Offerees who take action that objectively indicates agreement risk the formation of a contract. For example, offerees who act in a manner that is inconsistent with an offeror's ownership of offered property are commonly held to have accepted the offeror's terms. So, if Arnold, a farmer, leaves 10 bushels of corn with Porter, the owner of a grocery store, saying, "Look this corn over. If you want it, it's \$5 a bushel," and Porter sells the corn, he has impliedly accepted Arnold's offer. But what if Porter just let the corn sit and, when Arnold returned a week later, Porter told Arnold that he did not want it? Could Porter's failure to act ever amount to an acceptance?

Silence as Acceptance Since contract law generally requires some objective indication that an offeree intends to contract, the general rule is that an offeree's silence, without more, is *not* an acceptance. In addition, it is generally held that an offeror cannot impose on the offeree a duty to respond to the offer. So, even if Arnold made an offer to sell corn to Porter and said, "If I don't hear from you in three days, I'll assume you're buying the corn," Porter's silence would still not amount to acceptance.

On the other hand, the circumstances of a case sometimes impose a duty on the offeree to reject the offer affirmatively or be bound by its terms. These are cases in which the offeree's silence objectively indicates an intent to accept. Customary trade practice or prior dealings between the parties may indicate that silence signals acceptance. So, if Arnold and Porter had dealt with each other on numerous occasions and Porter had always promptly returned items that he did not want, Porter's silent retention of the goods for a week would probably constitute an acceptance. Likewise, an offeree's silence can also operate as an acceptance if the offeree has indicated that it will. For example, Porter (the *offeree*) tells Arnold, "If you don't hear from me in three days, I accept."

Finally, it is generally held that offerees who accept an offeror's performance knowing what the offeror expects in return for his performance have impliedly accepted the offeror's terms. So, if Apex Paving Corporation offers to do the paving work on a new subdivision being developed by Majestic Homes Corporation, and Majestic fails to respond to Apex's offer but allows Apex to do the work, most courts would hold that Majestic is bound by the terms of Apex's offer.

The application of this exception is analyzed in the context of an employment contract in the following case, *McGurn v. Bell Microproducts, Inc.*

McGurn v. Bell Microproducts, Inc.

284 F.3d 86 (1st Cir. 2002)

Donald Bell, President of Bell Microproducts, met with George McGurn and discussed with him the position of Vice President for the Eastern Region. At this meeting, McGurn said that if he came to work for Bell, he would require a written contract that included a termination clause stipulating that he would receive six months salary and half his commissions in the event that he was fired. After several discussions with a Bell official, Bell extended an offer of employment to McGurn, but this initial offer had no termination clause in it, and the parties held further discussions about a termination clause. During one of these conversations, McGurn said that he would consider a termination clause that was limited to the first 24 months of his employment, and according to McGurn, Bell said that this would be acceptable. Bell issued another offer containing a termination clause, but McGurn did not agree with its termination clause. Finally, Bell sent a third offer, dated July 3, 1997. This offer contained the following termination clause:

The Company may terminate your employment without cause. In the event that this occurs within your first twelve months of employment, you will continue to receive your base salary for a period of six (6) months following your termination of employment, [and] you will receive an additional lump-sum amount equal to \$40,000 or 50 percent of annual incentive.

The letter ended with the request that McGurn "sign an acknowledgment of this offer of employment and return to me for our files." The following appeared under the signature of Bell's Director of Human Resources:

I acknowledge my acceptance of the offer as described above and my start date will be_____.

Signed_____ Date_____

McGurn signed his name and entered "7-8-97" in the other two blank spaces. In addition, he crossed out the word twelve in the termination clause, inserted "twenty-four" directly above it, and initialed the change. The alteration was in the center

of the second page of the two-page letter, five inches above McGurn's signatures. McGurn returned the letter and began work on July 8, 1997. McGurn did not tell anyone at Bell that he had modified the offer letter, and Bell officials denied having viewed the letter upon its return. Bell's Human Resources Department did receive the letter and kept it in its files.

In April 1998, McGurn's supervisor began to be dissatisfied with his performance, and on August 3, 1998, he fired McGurn. At some point after becoming dissatisfied with McGurn's performance but before firing him, McGurn's supervisor learned of McGurn's alteration of his offer letter. When he learned of his termination, approximately 13 months after McGurn began work at Bell, McGurn advised Bell officials that he believed his contract included a two-year termination clause. Bell refused to pay, and McGurn sued Bell for breach of contract. The district court granted summary judgment for McGurn and entered judgment for him in the amount of \$120,000. Bell appealed.

Lipez, Circuit Judge

The parties agree that McGurn's alteration of Bell's offer letter constituted a rejection of that offer and created a counteroffer. What is in dispute is whether Bell accepted McGurn's counteroffer. As a general rule, silence in response to an offer to enter into a contract does not constitute an acceptance of the offer. There is, however, an exception to the rule against acceptance by silence where an offeree takes the benefit of offered services with reasonable opportunity to reject them and reason to know that they were offered with the expectation of compensation. *Restatement (Second) of Contracts* §69.

In *Gateway C. v. Charlotte Theatres, Inc.*, a case similar to this one, the defendant had sent the plaintiff two copies of a document which reduced to writing an oral agreement for the defendant to install air conditioning in the plaintiff's movie theater, with one copy to be countersigned and returned. The plaintiff signed, but also inserted a provision that the work would be performed by a certain date. The plaintiff returned the countersigned contract with a cover letter noting its understanding that the work would be performed by that date (although the letter made no reference to the alteration of the contract itself). We stated that "in the absence of actual knowledge [of the alteration of the contract], the test is whether there was reason for [the defendant] to suppose that such addition might have been made." We held that because of the cover letter flagging the issue, defendant's silence could constitute acceptance of plaintiff's counteroffer.

Importantly, we also noted in *Gateway* that "absent the [cover] letter, the case would seem more like" *Kidder v. Greenman*. In *Kidder*, a tenant had signed and returned a lease to her landlord with the understanding that the landlord would fill in certain blank spaces pursuant to an oral agreement. The landlord then completed the lease so as to include a term contrary to the oral understanding, signed it, and returned it to the tenant, who "did not look at the lease at the time she received it." The court declined to enforce the disputed term against the tenant on the ground that she had no reason to think that the [landlord] had not completed the lease in the authorized manner and, therefore, [had] no occasion to examine it, when it was returned to her, to see if he had done so.

We distill from the *Restatement* and the *Gateway* and *Kidder* precedents the legal rule in Massachusetts that silence in response to an offer may constitute an acceptance if an offeree who takes the benefit of offered services knew or had reason to know of the existence of the offer, and had a reasonable opportunity to reject it. We turn now to the application of that rule in this case.

The relevant question is why, as a matter of law, Bell should be expected to re-read an offer it had written and signed, upon its return with McGurn's countersignature. In response to that question the district court declared that "[a] presumably sophisticated employer who receives a signed letter of engagement from a prospective employee and fails to read the letter, particularly after weeks of negotiation, does so at its own peril." Although the logic of this generalization has some appeal, its generality is an insurmountable problem. Unless the record establishes that Bell knew or had reason to know that McGurn had modified what Bell had written—and the district court points to no facts in the record that would support such a conclusion—we cannot say that Bell's silence, as a matter of law, constituted an acceptance of McGurn's counteroffer.

We have stated that ordinarily the question of whether a contract has been made is for the jury, except where the words and actions that allegedly formed a contract are so clear themselves that reasonable people could not differ over their meaning. When, as is the case here, the facts support plausible but conflicting inferences on a pivotal issue in the case, the judge may not choose between those inferences at the summary judgment stage. In sum, we cannot say that the facts in the record compel a conclusion that Bell noticed or should have noticed McGurn's modification of Bell's offer letter, and that its silence, therefore, constituted acceptance of McGurn's offer. Instead, those issues must be resolved by the factfinder at trial.

Judgment vacated in favor of Bell and remanded for further proceedings consistent with this opinion.

Selya, Circuit Judge (dubitante)

There is no hint here of chicanery on McGurn's part, and I doubt that ignorance induced by a party's own negligence or

lassitude is a basis for escaping from contractual obligations. To the contrary, the acceptance of offered services, under circumstances in which the beneficiary of those services ought to know that the provider expected to be compensated for them in a certain way, is the functional equivalent of express assent. I believe that a party should not be able to insulate itself from contract liability by professing that it neglected to read the very

document essential for the formation of the contract, especially when that document has reposed in its own files at all relevant times. Were the law otherwise and the majority's view taken to its logical extreme, an offeree could completely redefine its own responsibilities by the simple expedient of claiming that it was not aware of what its own records plainly showed. Given this doubt, I respectfully decline to join the court's opinion.

Acceptance When a Writing Is Anticipated

Frequently, the parties to a contract intend to prepare a written draft of their agreement for both parties to sign. This is a good idea not only because the law requires written evidence of some contracts,² but also because it provides written evidence of the terms of the agreement if a dispute arises at a later date. If a dispute arises before such a writing has been prepared or signed, however, a question may arise concerning whether the signing of the agreement was a necessary condition to the creation of a contract. A party to the agreement who now wants out of the deal may argue that the parties did not intend to be bound until both parties signed the writing. A clear expression of such an intent by the parties during the negotiation process prevents the formation of a contract until both parties have signed. However, in the absence of such a clear expression of intent, the courts ask whether a reasonable person familiar with all the circumstances of the parties' negotiations would conclude that the parties intended to be bound only when a formal agreement was signed. If it appears that the parties had concluded their negotiations and reached agreement on all the essential aspects of the transaction, most courts would probably find a contract at the time

agreement was reached, even though no formal agreement had been signed.

Acceptance of Ambiguous Offers

Although offerors have the power to specify the manner in which their offers can be accepted by requiring that the offeree make a return promise (a bilateral contract) or perform a specific act (a unilateral contract), often an offer is unclear about which form of acceptance is necessary to create a contract. In such a case, the offer may be accepted in any manner that is *reasonable* in light of the circumstances surrounding the offer. Thus, either a promise to perform or performance, if reasonable, creates a contract.

Acceptance by Shipment

The Code specifically elaborates on the rule stated in the preceding section by stating that an order requesting prompt or current shipment of goods may be accepted either by a *prompt promise to ship* or by a *prompt or current shipment* of the goods [2-206(1)(b)]. So, if Ampex Corporation orders 500 IBM personal computers from Marks Office Supply, to be shipped immediately, Marks could accept either by promptly promising to ship the goods or by promptly shipping them. If Marks accepts by shipping, any subsequent attempt by Ampex to revoke the order will be ineffective.

²Chapter 16 discusses this subject in detail.

Ethics in Action

Marble Publications is a publisher of various magazines and newsletters. Samantha has a subscription to one of Marble's publications, *Parent's World*. In 2003, Marble sends Samantha a complimentary copy of another of its publications, *Gardens Unlimited*, along with a letter that states that Samantha will receive *Gardens Unlimited* free of charge for three months, but if she does not want to receive any further copies of *Gardens*

Unlimited, she must contact Marble and cancel. The letter states that if Samantha fails to contact Marble, she will be subscribed for one year at a cost of \$24.95. Samantha does not read the letter carefully and never contacts Marble. After three months, she receives a bill for \$24.95. Is this an ethical way of marketing *Gardens Unlimited*? What ethical problems might arise if silence were generally considered to constitute acceptance?

The Global Business Environment

Under the CISG, as under U.S. law, statements or other conduct by the offeree that shows assent is an acceptance, and silence alone generally does not suffice as acceptance. And, as is true under U.S. law, a contract is concluded when an acceptance of an offer becomes effective. There are several notable differences between acceptance doctrines under U.S. law and the CISG, however. For one, the “battle of the forms,” as it is formulated under the Uniform Commercial Code, does not exist under the CISG. Rather, under the CISG, a reply to an offer purports to be an acceptance

but in fact contains new or different terms or limitations that are *material* is a rejection and *not* an acceptance. Examples of terms that would be considered material are terms relating to price, payment, quality, the extent of a party’s liability, and settlement of disputes (such as arbitration clauses). However, a reply purporting to be an acceptance that contains *nonmaterial* new or different terms can be an acceptance. Another major difference between U.S. law and the CISG is that, unlike the U.S. “mailbox rule,” the CISG generally holds acceptances to be effective when they are received.

What if Marks did not have 500 IBMs in stock and Marks knew that Ampex desperately needed the goods? Marks might be tempted to ship another brand of computers (that is, *nonconforming goods*—goods different from what the buyer ordered), hoping that Ampex would be forced by its circumstances to accept them because by the time they arrived it would be too late to get the correct goods elsewhere. Marks would argue that by shipping the wrong goods it had made a counteroffer because it had not performed the act requested by Ampex’s order. If Ampex accepts the goods, Marks could argue that Ampex has impliedly accepted the counteroffer. If Ampex rejects the goods, Marks would arguably have no liability since it did not accept the order.

The Code prevents such a result by providing that prompt shipment of either conforming goods (what the order asked for) or nonconforming goods (something else) operates as an acceptance of the order [2–206(1)(b)]. This protects buyers such as Ampex because sellers who ship the wrong goods have simultaneously accepted their offers and breached the contract by sending the wrong merchandise.³

³Chapter 19 discusses the rights and responsibilities of the buyer and seller following the shipment of nonconforming goods.

But what if Marks is an honest seller merely trying to help out a customer that has placed a rush order? Must Marks expose itself to liability for breach of contract in the process? The Code prevents such a result by providing that no contract is created if the seller notifies the buyer within a reasonable time that the shipment of nonconforming goods is intended as an accommodation (an attempt to help the buyer) [2–206(1)(b)]. In this case, the shipment is merely a counteroffer that the buyer is free to accept or reject and the seller’s notification gives the buyer the opportunity to seek the goods he needs elsewhere.

Who Can Accept an Offer? As the masters of their offers, offerees have the right to determine who can bind them to a contract. So, the only person with the legal power to accept an offer and create a contract is the *original offeree*. An attempt to accept by anyone other than the offeree is treated as an offer, because the party attempting to accept is indicating a present intent to contract on the original offer’s terms. For example, Price offers to sell his car to Waterhouse for \$5,000. Anderson learns of the offer, calls Price, and attempts to accept. Anderson has made an offer that Price is free to accept or reject.

Problems and Problem Cases

1. In December 1999, Wilson applied for a Citibank credit card and signed an acceptance certificate in which she agreed to be bound by the terms and conditions of the credit card agreement. Citibank then issued a credit card to her, which Wilson began

using. In July 2001, Citibank mailed Wilson her credit card statement, which informed her that it was modifying the terms of the original agreement. This revised agreement was enclosed with the credit card statement. After the July 2001 statement was made to her, Wilson continued using her credit card and

made monthly payments on her account balance. Wilson made her last payment to Citibank in March 2002 and failed to make payments thereafter. Citibank then filed suit against her to collect her overdue balance, which was \$12,272.84. In this action, Citibank attempted to enforce the revised agreement rather than the original agreement. Wilson argued that she never accepted the revised agreement. Is this a good argument?

2. First Texas Savings Association promoted a "\$5,000 Scoreboard Challenge" contest. Contestants who completed an entry form and deposited it with First Texas were eligible for a random drawing. The winner was to receive an \$80 savings account with First Texas, plus four tickets to a Dallas Mavericks home basketball game chosen by First Texas. If the Mavericks held their opponent in the chosen game to 89 or fewer points, the winner was to receive an additional \$5,000 money market certificate. In October 1982, Jergins deposited a completed entry form with First Texas. On November 1, 1982, First tried to amend the contest rules by posting notice at its branches that the Mavericks would have to hold their opponent to 85 or fewer points before the contest winner would receive the \$5,000. In late December, Jergins was notified that she had won the \$80 savings account and tickets to the January 22, 1983, game against the Utah Jazz. The notice contained the revised contest terms. The Mavericks held the Jazz to 88 points. Was Jergins entitled to the \$5,000?
3. In 1997, Rubbermaid launched its "Tidal Wave Project" to introduce into the marketplace new and improved sponge mops named for a wave pattern that would be cut into the sponges. This included a "butterfly" mop that was assembled for Rubbermaid by an independent corporation, New Knight, and a roller mop that was produced "in house" by Rubbermaid. Target Stores had agreed to stock Tidal Wave sponge mop line at its stores nationwide. Rubbermaid contacted Reilly Foam to see if it could fulfill its needs. Reilly Foam was able to deliver the needed products in time, and Rubbermaid began talking with Reilly Foam about a longer-term relationship. Reilly Foam needed to retool its equipment and license technology to produce the "tidal wave" sponges, and Reilly Foam was concerned that its profits on the contract would permit it to recoup its costs. On March 26, 1999, Reilly Foam sent a letter to Rubbermaid. The letter stated that it related to the

two laminates that Reilly Foam was currently working on, the roller mop and the butterfly mop, and three other products produced by New Knight. It referred to and attached a list of price quotations and quantities for these products, listing annual quantities for three products that were identified as "Other Affected Products": 340,000 for the brown sponge, 350,000 for the yellow ester with wave pattern sponge, and 300,000 for the yellow ester and white "scrubmate." The letter proposed that Rubbermaid commit to two million pieces of product under the subheading "Other Affected Products" over a period of two years and that the price include a surcharge of \$.015 per part to amortize the cost of tooling for the wave pattern. It also proposed that Rubbermaid commit to buying all of its butterfly and roller mop laminates from Reilly Foam. On March 30, 1999, Tony Ferrante, a Rubbermaid product manager, responded by a letter that stated in part:

This letter is to serve as Rubbermaid's commitment and authorization to procure tooling so that Reilly Foam will be in a position to make sponge products with Rubbermaid's patent pending Tidal Wave TM design. I understand that \$.015 will be added to the cost of the sponge purchase price until we have made purchases of 2 million sponges, thereby covering the tooling cost of \$30,000.

Referencing the attached quotation, our commitment is as follows:

1. Any sponge mop product produced by New Knight, Inc. on behalf of Rubbermaid will source the sponge component from Reilly Foam. This includes the current product offering, as referenced in your quotation, as well as any future new products that New Knight will produce for us. . . .

Attached to this letter was Reilly Foam's price list, marked "Approved" and signed by Ferrante. After this exchange, Rubbermaid instructed New Knight to purchase sponges solely from Reilly Foam. Rubbermaid itself made purchases of sponges listed under the "other affected products" category. At the same time, Rubbermaid continued to purchase sponges from another supplier for use in the Tidal Wave line of mops. Moreover, Rubbermaid did not purchase 2 million sponges within the two-year window that Reilly Foam sought. Reilly Foam sued Rubbermaid for breach of contract. Will it be successful?

4. Ellefson and Mustaine are original members of the heavy metal rock band, Megadeth. The band was

initially formed in 1983, with Mustaine as the lead guitarist, lead vocalist, and lead songwriter, and Ellefson as the band's bassist. In 1990, they formed a formal corporation, Megadeth, Inc., with Mustaine receiving 80 percent of the stock and Ellefson 20 percent. Years later, Ellefson claimed that Mustaine, Megadeth, Inc., and others ("the Megadeth defendants") had defrauded him out of his share of the corporation's profits. Beginning in October 2003, Ellefson and the Megadeth defendants entered into negotiations to settle their disputes. On April 16, Ellefson's attorney, Abdo, received an initial draft of a proposed "Settlement and General Release," whereby Ellefson's interest in the corporation and various other licensing/recording agreements would be purchased. Negotiations over this proposed settlement continued uneventfully over the next four weeks as the attorneys incorporated various comments and changes. The pace of negotiations accelerated in May, however, because Mustaine imposed a deadline of five o'clock on Friday, May 14, 2004, for completion of the settlement. To that end, the parties' attorneys began working in earnest to put together a final draft of the agreement by the end of the week. On the morning of Thursday, May 13, Abdo received an e-mail reminding him "that Dave Mustaine has instructed us to pull the offer to Ellefson off the table and to terminate this deal as of 5 PM PST on Friday 5/14/04, if we do not have a signed agreement in hand." The following day, Friday, May 15, attorneys for both sides worked to finalize a draft of the agreement in time to meet the five o'clock deadline. After an exchange of e-mails between the attorneys, Abdo e-mailed Lurie, the Megadeth defendants' lawyer, that he was faxing his final comments, and that Lurie should "make the changes and we are done." At 4:45 PM PST, 15 minutes prior to expiration of the offer, Lurie sent Abdo a finalized copy of the agreement. In a covering document to the final agreement, Lurie stated that "attached is an execution copy of the above-referenced Settlement Agreement," reiterated the five o'clock deadline, and stated that defendants reserved "the right to make further changes pending our finalizing Exhibits A and B and the full execution of the agreement early next week." In the final e-mail of the day between the attorneys, sent on Friday, May 14, 2004, 5:16 PM, Abdo e-mailed Lurie and stated that "Dave Ellefson told me he signed and faxed the signature page to you. Thanks for the drafting work." Ellefson did sign and fax a completed

signature page shortly after receiving the final agreement at 4:45 PM on Friday, but there was no evidence that the fax was sent prior to the 5 PM deadline. On Thursday, May 20, 2004, four business days after Ellefson's signature fax was received, the Megadeth defendants' attorney, Lurie, sent all the parties fully executed copies of the agreement by regular mail. On May 24, four days after Lurie had mailed the agreement and 10 days after Ellefson had faxed the signed signature page, Lurie received an e-mail from Abdo stating that Ellefson "withdraws from these negotiations and withdraws all proposals." In response to this e-mail, Lurie stated, "we are not certain what you are talking about, but, as you know, there is a signed settlement agreement in place, which Dave [Ellefson] faxed to us more than a week ago." Finally, nine days later, on June 2, 2004, Abdo received the finalized agreement that Lurie had mailed on May 20, 2004. Ellefson filed suit against the Megadeth defendants. The Megadeth defendants moved to enforce the settlement agreement and dismiss Ellefson's action, arguing that any and all disputes between the parties were resolved by an agreement entitled "Settlement and General Release" and signed by all of the parties. Are they correct?

5. Netscape offered its SmartDownload software free of charge on its Web site. Visitors who wished to obtain SmartDownload from Netscape's Web site arrived at a page pertaining to the download of the software. On this page, there appeared a tinted box labeled "Download." By clicking on the box, a visitor initiated the download. The sole reference on this page to the License Agreement appeared in text that was visible only if a visitor scrolled down through the page to the next screen. If a visitor did so, he or she would see the following invitation to review the License Agreement: "Please review and agree to the terms of the Netscape SmartDownload software license agreement before downloading and using the software." Visitors were not required affirmatively to indicate their assent to the License Agreement by clicking on it, or even to view the License Agreement, before proceeding with a download of the software. But if a visitor chose to click on the underlined text in the invitation, a hypertext link would take the visitor to a Web page entitled "License & Support Agreements." The first paragraph on this page read in pertinent part: "The use of each Netscape software product is governed by a license

agreement. You must read and agree to the license agreement terms BEFORE acquiring a product. Please click on the appropriate link below to review the current license agreement for the product of interest to you before acquisition. For products available for download, you must read and agree to the license agreement terms BEFORE you install the software. If you do not agree to the license terms, do not download, install or use the software. . . .” A further click would be required before the visitor was brought to another Web page containing the full text of the License Agreement. Among the terms of the License Agreement was a term requiring that virtually all disputes be submitted to arbitration in Santa Clara County, California, with the losing party paying all costs of arbitration. Several people who downloaded SmartDownload filed suit against Netscape because of a privacy issue with the software. Netscape moved to compel arbitration, claiming that the arbitration clause in the License Agreement was valid and enforceable. Was Netscape correct?

6. Parker agreed to buy real estate that was jointly owned by Mr. and Mrs. Glosson. A written contract was prepared for the parties’ signatures. One clause of the agreement stated: “This Agreement shall become an enforceable contract when a fully executed copy has been communicated to both parties.” Although both Mr. and Mrs. Glosson were listed in the document as “Sellers,” only Mr. Glosson signed the contract and Mrs. Glosson never signed it. The Glossons did not sell the property to Parker, and Parker sued them for breach of contract. Was there a valid contract to sell the property?
7. Cantu was hired as a special education teacher by the San Benito Consolidated Independent School District under a one-year contract for the 1990–91 school year. On August 18, 1990, shortly before the start of the school year, Cantu hand-delivered to her supervisor a letter of resignation, effective August 17, 1990. In this letter, Cantu requested that her final paycheck be forwarded to an address in McAllen, Texas, some 50 miles from the San Benito office where she tendered the resignation. The San Benito superintendent of schools, the only official authorized to accept resignations on behalf of the school district, received Cantu’s resignation on Monday, August 20. The superintendent wrote a letter accepting Cantu’s resignation the same day and deposited the letter, properly stamped and addressed, in the mail at approximately 5:15 PM that afternoon. At about 8:00 AM the next morning, August 21, Cantu hand-delivered to the superintendent’s office a letter withdrawing her resignation. This letter contained a San Benito return address. In response, the superintendent hand-delivered that same day a copy of his letter mailed the previous day to inform Cantu that her resignation had been accepted and could not be withdrawn. The dispute was taken to the state commissioner of education, who concluded that the school district’s refusal to honor Cantu’s contract was lawful, because the school district’s acceptance of Cantu’s resignation was effective when mailed, which resulted in the formation of an agreement to rescind Cantu’s employment contract. Cantu argued that the mailbox rule should not apply because her offer was made in person and the superintendent was not authorized to accept by using mail. Is this a good argument?
8. The Montgomerys owned a house that was listed for sale. English submitted an offer to pay the Montgomerys \$272,000 for their home. English included in her offer a request to purchase several items of the Montgomerys’ personal property and also indicated on the offer that an “As Is” rider was applicable to the transaction. After the Montgomerys received English’s offer, they made several changes to the document, including (1) deleting certain items from the personal property section of the contract; (2) deleting a provision regarding latent defects; (3) deleting a provision regarding building inspections; and (4) adding a specific “As Is” rider. The Montgomerys signed their counteroffer and delivered it to English’s real estate agent. The agent took the counteroffer to English later that same day. English initialed some, but not all, of the Montgomerys’ suggested changes. Specifically, English did not initial the changes set forth by the Montgomerys in the personal property section of the document or explicitly confirm her acceptance of those terms by cover letter or otherwise. English’s real estate agent thereafter faxed the document to the Montgomerys’ attorney. Was an enforceable contract formed in this case?
9. In 1985, State Farm Mutual Insurance issued Casto an automobile insurance policy on her Jaguar. Casto also insured a second car, a Porsche, with State Farm. Some time in September or early October 1987, Casto received two renewal notices for her policy on

the Jaguar, indicating that the next premium was due on October 10, 1987. State Farm sent a notice of cancellation on October 15, indicating that the policy would be canceled on October 29. Casto denied having received this notice. On October 20, Casto placed two checks, one for the Jaguar and one for the Porsche, in two preaddressed envelopes that had been supplied by State Farm. She gave these envelopes to Donald Dick, who mailed them on the same day. The envelope containing the Porsche payment was timely delivered to State Farm, but State Farm never received the Jaguar payment, and that policy was canceled. Casto was involved in an accident on November 20 while driving the Jaguar. When she made a claim with State Farm, she learned that the policy had been canceled. After the accident, the envelope containing the Jaguar payment was returned to her stamped, "Returned for postage." The envelope did not bear any postage when returned to Casto. Casto brought a declaratory judgment action seeking a declaration that her insurance policy was in effect as of the date of the accident. Was it?

10. Paulaner is an importer of German beer, and Domanik Sales Company was one of Paulaner's distributors. The distributorship agreement provided that Paulaner could terminate the agreement if a default in payment by Domanik remained uncured five days after Domanik received a demand for payment. The contract also gave Paulaner the right to establish the terms of payment. Because of a previous default, Paulaner had placed Domanik on "COD status" and refused to afford it further credit. On March 10, 1998, Paulaner delivered a shipment of beer to Domanik. On March 18, 1998, Paulaner notified Domanik that the payment for the March 10 shipment was past due, that the amount due was \$23,842.54, that payment was to be received no later than March 25, 1998, and that the agreement would

be terminated if payment was not received by that date. The invoice for the March 10 delivery was sent by fax to Domanik on March 18, arriving after receipt of the default notice. Domanik wrote a check for the full amount due on Friday, March 20, 1998, and placed the payment in the mail. The envelope was postmarked Monday, March 23, 1998. Payment was not received by Paulaner in its Colorado offices until March 26, 1998. The distributorship agreement was terminated by Paulaner that same day, since payment had not been received as required by the default notice. Domanik contends that placing the payment in the mail constituted payment under the mailbox rule. Is it correct?

chapter 12

CONSIDERATION

The Valley Area Anti-Smoking Foundation (VAAF) offered to pay any Valley Area resident \$500 if he or she would refrain from smoking for one year. Chad, a Valley Area resident, decided to accept this offer. He quit smoking immediately and did not smoke for a whole year. When Chad contacted VAAF to inform it of his success and collect his \$500, VAAF informed him that it was only able to pay \$250 because so many Valley Area residents had taken advantage of its offer. Chad reluctantly agreed to accept \$250 instead of \$500.

- Was VAAF contractually obligated to pay Chad for refraining from smoking?
- Was there consideration to support its promise to pay \$500?
- Are there other facts you need to know to make that determination?
- Is Chad entitled to receive the entire \$500 or only \$250?
- Was VAAF ethically required to pay the entire \$500?

ONE OF THE THINGS that separates a contract from an unenforceable social promise is that a contract requires voluntary agreement by two or more parties. Not all agreements, however, are enforceable contracts. At a fairly early point in the development of classical contract law, the common law courts decided not to enforce gratuitous (free) promises. Instead, only promises supported by consideration were enforceable in a court of law. This was consistent with the notion that the purpose of contract law was to enforce freely made bargains. As one 19th-century work on contracts put it: “The common law . . . gives effect only to contracts that are founded on the mutual exigencies of men, and does not compel the performance of any merely gratuitous agreements.”¹ The concept of consideration distinguishes agreements that the law will enforce from gratuitous promises, which are normally unenforceable. This chapter focuses on the concept of consideration.

Elements of Consideration

A common definition of **consideration** is *legal value, bargained for and given in exchange for an act or a promise*. Thus, a promise generally cannot be enforced

against the person who made it (the *promisor*) unless the person to whom the promise was made (the *promisee*) has given up something of legal value in exchange for the promise. In effect, the requirement of consideration means that a promisee must pay the price that the promisor asked to gain the right to enforce the promisor’s promise. So, if the promisor did not ask for anything in exchange for making her promise or if what the promisor asked for did not have legal value (e.g., because it was something to which she was already entitled), her promise is not enforceable against her because it is not supported by consideration.

Consider the early case of *Thorne v. Deas*, in which the part owner of a sailing ship named the *Sea Nymph* promised his co-owners that he would insure the ship for an upcoming voyage.² He failed to do so, and when the ship was lost at sea, the court found that he was not liable to his co-owners for breaching his promise to insure the ship. Why? Because his promise was purely gratuitous; he had neither asked for nor received anything in exchange for making it. Therefore, it was unenforceable because it was not supported by consideration.

This early example illustrates two important aspects of the consideration requirement. First, the requirement *tended to limit the scope of a promisor’s liability for his*

¹T. Metcalf, *Principles of the Law of Contracts* (1874), p. 161.

²Johns. 84 (N.Y. 1809).

promises by insulating him from liability for gratuitous promises and by protecting him against liability for reliance on such promises. Second, the mechanical application of the requirement *often produced unfair results*. This potential for unfairness has produced considerable dissatisfaction with the consideration concept. As the rest of this chapter indicates, the relative importance of consideration in modern contract law has been somewhat eroded by numerous exceptions to the consideration requirement and by judicial applications of consideration principles designed to produce fair results.

Legal Value Consideration can be an act in the case of a unilateral contract or a promise in the case of a bilateral contract. An act or a promise can have legal value in one of two ways. If, in exchange for the promisor's promise, the promisee does, or agrees to do, something he had no prior legal duty to do, that provides legal value. If, in exchange for the promisor's promise, the promisee refrains from doing, or agrees not to do, something she has a legal right to do, that also provides legal value. Note that this definition does not require that an act or a promise have monetary (economic) value to amount to consideration. Thus, in a famous 19th-century case, *Hamer v. Sidway*,³ an uncle's promise to pay his nephew \$5,000 if he refrained from using tobacco, drinking, swearing, and playing cards or billiards for money until his 21st birthday was held to be supported by consideration. Indeed, the nephew had refrained from doing any of these acts, even though he may have benefited from so refraining. He had a legal right to indulge in such activities, yet he had refrained from doing so at his uncle's request and in exchange for his uncle's promise. This was all that was required for consideration.

Adequacy of Consideration The point that the legal value requirement is not concerned with actual value is further borne out by the fact that the courts generally will not concern themselves with questions regarding the adequacy of the consideration that the promisee gave. This means that as long as the promisee's act or promise satisfies the legal value test, the courts do not ask whether that act or promise was worth what the promisor gave, or promised to give, in return for it. This rule on adequacy of consideration reflects the *laissez-faire* assumptions underlying classical contract law. Freedom of contract includes the freedom to make bad bargains as well as good ones, so promisors' promises are enforceable if they got

what they asked for in exchange for making their promises, even if what they asked for was not nearly so valuable in worldly terms as what they promised in return. Also, a court taking a hands-off stance concerning private contracts would be reluctant to step in and second-guess the parties by setting aside a transaction that both parties at one time considered satisfactory. Finally, the rule against considering the adequacy of consideration can promote certainty and predictability in commercial transactions by denying legal effect to what would otherwise be a possible basis for challenging the enforceability of a contract—the inequality of the exchange.

Several qualifications must be made concerning the general rule on adequacy of consideration. First, if the inadequacy of consideration is apparent on the face of the agreement, most courts conclude that the agreement was a disguised gift rather than an enforceable bargain. Thus, an agreement calling for an unequal exchange of money (e.g., \$500 for \$1,000) or identical goods (20 business law textbooks for 40 identical business law textbooks) and containing no other terms would probably be unenforceable. Gross inadequacy of consideration may also give rise to an inference of fraud, duress,⁴ lack of capacity,⁵ unconscionability,⁶ or some other independent basis for setting aside a contract. However, inadequacy of consideration, standing alone, is never sufficient to prove lack of true consent or contractual capacity. Although gross inadequacy of consideration is not, by itself, ordinarily a sufficient reason to set aside a contract, the courts may refuse to grant specific performance or other equitable remedies to persons seeking to enforce unfair bargains.

Finally, some agreements recite “\$1,” or “\$1 and other valuable consideration,” or some other small amount as consideration for a promise. If no other consideration is actually exchanged, this is called *nominal consideration*. Often, such agreements are attempts to make gratuitous promises look like true bargains by reciting a nonexistent consideration. Most courts refuse to enforce such agreements unless they find that the stated consideration was truly bargained for.

Bargained-For Exchange Up to this point, we have focused on the legal value component of our consideration definition. But the fact that a promisee's act or promise provides legal value is not, in itself, a sufficient

³27 N.E. 256 (N.Y.Ct. App. 1891).

⁴Fraud and duress are discussed in Chapter 13.

⁵Lack of capacity is discussed in Chapter 14.

⁶Chapter 15 discusses unconscionability in detail.

basis for finding that it amounted to consideration. In addition, the promisee's act or promise must have been bargained for and given in exchange for the promisor's promise. In effect, it must be the price that the promisor asked for in exchange for making his promise. Over a hundred years ago, Oliver Wendell Holmes, one of our most renowned jurists, expressed this idea when he said,

"It is the essence of a consideration that, by the terms of the agreement, it is given and accepted as the motive or inducement of the promise."⁷

The following *Gottlieb* case illustrates the concept of bargained-for legal value.

⁷O. W. Holmes, *The Common Law* (1881), p. 239.

Gottlieb v. Tropicana Hotel and Casino 109 F. Supp. 2d 324 (U.S. Dist. Ct. E.D. Pa. 2000)

During the summer of 1999, Rena and Sheldon Gottlieb were vacationing in Atlantic City, New Jersey, and on July 24, they visited the Tropicana casino. Tropicana offers people membership in its "Diamond Club." To become a Diamond Club member, an individual must visit a promotional booth in the casino, obtain and fill out an application form, and show identification. There is no charge. The application form lists the person's name, address, telephone number, and e-mail address, and this information is entered into the casino's computer database. Each member receives a Diamond Club card that has a unique identification number. The member then presents or "swipes" the card in a machine each time he or she plays a game at the casino, and the casino obtains information about the member's gambling habits. The casino's marketing department then uses that information to tailor its promotions.

Rena Gottlieb was, and had been for a number of years, a member of the Diamond Club. When she entered the casino on July 24, she immediately went to the Fun House Million Dollar Wheel Promotion, which offers participants the chance to win a grand prize of \$1 million. Diamond Club members were entitled to one free spin of the Million Dollar Wheel each day. She presented her Diamond Club card, a casino operator swiped it through the card reader, she pressed a button to activate the wheel, and the wheel began spinning. Gottlieb claims that the wheel landed on the \$1 million grand prize, but when it did so, the casino attendant immediately swiped another card through the machine, reactivated the wheel, and the wheel landed on a prize of two show tickets. Tropicana denies that its attendant intervened and reactivated the wheel, and contends that the wheel simply landed on the lesser prize. Ms. Gottlieb sued Tropicana for breach of contract, among other theories, and Tropicana moved for summary judgment.

Bartle, III, Judge

According to Tropicana, participation in a promotion such as the Million Dollar Wheel cannot constitute consideration that would support the formation of an enforceable contract. We find the decision of the New Jersey Supreme Court in *Lucky Calendar Co. v. Cohen* to be on point. There, an advertising company brought a declaratory judgment action, seeking a determination that its promotional advertisement campaign for Acme Super Markets did not violate New Jersey's Lottery Act. The centerpiece of the campaign was a calendar that had Acme coupons bordering it, which was distributed by mass mailings. The calendar contained an explanation of the "Lucky Calendar Prize Contest." Entrants had the opportunity to win prizes in monthly drawings. All they had to do to enter was tear the entry form off the calendar, enter a name, address, and phone number, and have the form deposited in a box at any Acme store. There was no charge, and they were not required to be present for the drawing. The question in *Lucky Calendar* was whether there had been consideration for participation in the drawings.

The Supreme Court of New Jersey noted that, assuming consideration was required in order for something to qualify as an illegal lottery, it need only be the minimum consideration that is necessary to form a contract. It explained:

The consideration in a lottery, as in any form of simple contract, need not be money or the promise of money. Nor need it be of intrinsic value; "a rose, a hawk or a peppercorn" will suffice, provided it is what is asked for by the promisor and is not illegal . . . Whether a "peppercorn" or the filling in and delivering of a coupon is sufficient consideration for a promise depends only on whether it was the requested detriment to the promisee induced by the promise.

The court determined that consideration was present "both in the form of a detriment or inconvenience to the promisee at the request of the promisor and of a benefit to the promisor. . . . Completing the coupon and arranging for the deposit of it in the box" at the store was the detriment to the promisee, and the "increase in volume of business" was the benefit to the promisor and its customer, the owner of the Acme stores. As the court

pointed out, “The motives of the plaintiff and its customer [in offering the Lucky Calendar Prize Contest] . . . are in nowise altruistic.”

In *Cobaugh v. Klick-Lewis, Inc.*, the Superior Court of Pennsylvania decided that there was adequate consideration to form a binding contract where a golfer, who was participating in a tournament, shot a hole-in-one after seeing a contest announcement offering a new car to anyone who could ace the particular hole. The court noted that the promisor benefited from the publicity of the promotional advertising, and the golfer performed an act that he was under no legal obligation to perform.

Ms. Gottlieb had to go to the casino to participate in the promotion. She had to wait in line to spin the wheel. By presenting her Diamond Club card to the casino attendant and allowing it to be swiped into the casino’s machine, she was permitting the casino to gather information about her gambling habits. Additionally, by participating in the game, she was a part of the entertainment that casinos, by their very nature,

are designed to offer to all of those present. All of these detriments to Ms. Gottlieb were the requested detriments to the promisee induced by the promise of Tropicana to offer her a chance to win \$1 million. Tropicana’s motives in offering the promotion were “in nowise altruistic.” It offered the promotion in order to generate patronage of and excitement within the casino. In short, Ms. Gottlieb provided adequate consideration to form a contract with Tropicana.

Tropicana further challenges Ms. Gottlieb’s breach of contract claim on the grounds that it is clear as a matter of law that she did not win the \$1 million prize. Tropicana points to computer records in support of its position that Ms. Gottlieb did not win the grand prize. Ms. Gottlieb relies in part on her own testimony and the testimony of her husband, who witnessed her spin of the promotional wheel. It is for the jury, and not for the court, to resolve this factual dispute.

Motion for summary judgment on the contract claim denied in favor of Ms. Gottlieb.

Exchanges That Fail to Meet Consideration Requirements

Illusory Promises For a promise to serve as consideration in a bilateral contract, the promisee must have promised to do, or to refrain from doing, something at the promisor’s request. It seems obvious, therefore, that if the promisee’s promise is illusory because it really does not bind the promisee to do or refrain from doing anything, such a promise could not serve as consideration. Such agreements are often said to lack the mutuality of

obligation required for an agreement to be enforceable. So, a promisee’s promise to buy “all the sugar that I want” or to “paint your house if I feel like it” would not be sufficient consideration for a promisor’s return promise to sell sugar or hire a painter. In neither case has the promisee given the promisor anything of legal value in exchange for the promisor’s promise. The following *Heye* case provides an example of an illusory promise. Remember, though: So long as the promisee has given legal value, the agreement will be enforceable even though what the promisee gave is worth substantially less than what the promisor promised in return.

Heye v. American Golf Corporation, Inc.

80 P.3d 495 (N.M. Ct. App. 2003)

In March 1999, American Golf Corporation (AGC) hired Melissa Heye for a job in the pro shop at the Paradise Hills Golf Course, a club that it managed. On March 19, 1999, after Heye was hired but before she began working, AGC gave Heye a number of documents, including the Co-Worker Alliance Handbook.

On page 20 of the handbook was a reference to arbitration that essentially stated that binding arbitration would be the exclusive means of resolving all disputes about unlawful harassment, discrimination, wrongful discharge, and other causes of action and that the employee was agreeing to waive her right to pursue such claims in court. Page 23 of the handbook contained the following acknowledgment:

My signature below indicates that I have read this AGC Co-Worker Alliance agreement and handbook and promise and agree to abide by its terms and conditions.

I further understand that the Company reserves the right to amend, supplement, rescind or revise any policy, practice, or benefit described in this handbook—other than employment at-will provisions—as it deems appropriate.

I acknowledge that my employment is at-will, which means that either the Company or I have the absolute right to end the employment relationship at any time with or without notice or reason. I further understand that the president of American Golf Corporation is the only authorized representative of the Company who can modify this at-will employment relationship and the contents of this handbook, and that any such modifications must be made in writing.

I further acknowledge that I have read and agree to be bound by the arbitration policy set forth on page 20 of this handbook.

Heye signed the acknowledgment

Heye worked for AGC until January 2000. She later sued AGC on a variety of grounds, including sex discrimination and sexual harassment. AGC moved to compel arbitration under the acknowledgment form that Heye signed. The trial court initially granted this motion, but after Heye filed a motion for reconsideration, the trial court denied AGC's motion. AGC appealed.

Castillo, Judge

We interpret an arbitration agreement under the rules of state contract law. For a contract to be legally valid and enforceable, it must be factually supported by an offer, an acceptance, consideration, and mutual assent. AGC asserts that the arbitration agreement is supported by consideration in the form of AGC's agreement to arbitrate and in Heye's employment or continued employment. We first look to AGC's agreement to arbitrate.

A valid contract must possess mutuality of obligation. Mutuality means both sides must provide consideration. Consideration consists of a promise to do something that a party is under no legal obligation to do or to forbear from doing something he has a legal right to do. Furthermore, a promise must be binding. When a promise puts no constraints on what a party may do in the future—in other words, when a promise, in reality, promises nothing—it is illusory, and it is not consideration. AGC points to language on page 20 of the handbook, stating that arbitration is the “exclusive means of resolving any dispute(s),” and argues that this language does not allow AGC to modify or ignore the agreement to arbitrate. Heye counters that the language on page 20 conflicts with that of the acknowledgment form on page 23; the language on page 23 provides “that the Company reserves the right to amend, supplement, rescind

or revise any policy, practice, or benefit described in this handbook—other than employment at-will provisions—as it deems appropriate.” As a result, Heye contends, AGC is “free to amend, supplement, rescind or revise the policy regarding arbitration at its whim.” Heye concludes that “at best, [AGC] is left with conflicting, and therefore ambiguous, terms regarding its ability to unilaterally change the contract.”

We disagree with AGC that it was “equally obligated to . . . arbitrate all claims.” To the contrary, the agreement provided in effect that only one thing would remain unchangeable, namely, Heye's at-will employment status. It expressly reserved for itself the “right to amend, supplement, rescind or revise any policy, practice, or benefit described in this handbook—other than employment at-will provisions—as it deems appropriate.” The agreement, in essence, gives AGC unfettered discretion to terminate arbitration at any time, while binding Heye to arbitration. AGC remains free to selectively abide by its promise to arbitrate; the promise, therefore, is illusory. Thus, AGC's promise to arbitrate does not provide the consideration necessary to enforce the arbitration agreement.

Denial of motion to compel arbitration affirmed in favor of Heye.

Effect of Cancellation or Termination Clauses The fact that an agreement allows one or both of the parties to cancel or terminate their contractual obligations does not necessarily mean that the party (or parties) with the power to cancel has given an illusory promise. Such provisions are a common and necessary part of many business relationships. The central issue in such cases concerns whether a promise subject to cancellation or termination actually represents a binding obligation. A right to cancel or terminate at any time, for any reason, and without any notice would clearly render illusory any other promise by the party possessing such a right. However,

limits on the circumstances under which cancellation may occur (such as a dealer's failure to live up to dealership obligations), or the time in which cancellation may occur (such as no cancellations for the first 90 days), or a requirement of advance notice of cancellation (such as a 30-day notice requirement) would all effectively remove a promise from the illusory category. This is so because in each case the party making such a promise has bound himself to do *something* in exchange for the other party's promise. A party's duty of good faith and fair dealing can also limit the right to terminate and prevent its promise from being considered illusory.

Effect of Output and Requirements Contracts Contracts in which one party to the agreement agrees to buy all of the other party's production of a particular commodity (*output* contracts) or to supply all of another party's needs for a particular commodity (*requirements* contracts) are common business transactions that serve legitimate business purposes. They can reduce a seller's selling costs and provide buyers with a secure source of supply. Prior to the enactment of the UCC, however, many common law courts used to refuse to enforce such agreements on the ground that their failure to specify the quantity of goods to be produced or purchased rendered them illusory. The courts also feared that a party to such an agreement might be tempted to exploit the other party. For example, subsequent market conditions could make it profitable for the seller in an output contract or the buyer in a requirements contract to demand that the other party buy or provide more of the particular commodity than the other party had actually intended to buy or sell. The Code legitimizes requirements and output contracts. It addresses the concern about the potential for exploitation by limiting a party's demands to those quantity needs that occur in *good faith* and are not unreasonably disproportionate to any quantity estimate contained in the contract, or to any normal prior output or requirements if no estimate is stated [2-306(1)]. Chapter 19, Formation and Terms of Sales Contracts, discusses this subject in greater detail.

Effect of Exclusive Dealing Contracts When a manufacturer of goods enters an agreement giving a distributor the exclusive right to sell the manufacturer's products in a particular territory, does such an agreement impose sufficient obligations on both parties to meet the legal value test? Put another way, does the distributor have any duty to sell the manufacturer's products and does the manufacturer have any duty to supply any particular number of products? Such agreements are commonly encountered in today's business world, and they can serve the legitimate interests of both parties. The Code recognizes this fact by providing that, unless the parties agree to the contrary, an exclusive dealing contract imposes a duty on the distributor to use her best efforts to sell the goods and imposes a reciprocal duty on the manufacturer to use his best efforts to supply the goods [2-306(2)].

Preexisting Duties The legal value component of our consideration definition requires that promises do, or promise to do, something in exchange for a

promisor's promise that they had no prior legal duty to do. Thus, as a general rule, performing or agreeing to perform a preexisting duty is not consideration. This seems fair because the promisor in such a case has effectively made a gratuitous promise, since she was already entitled to the promisee's performance.

Preexisting Public Duties Every member of society has a duty to obey the law and refrain from committing crimes or torts. Therefore, a promisee's promise not to commit such an act can never be consideration. So, Thomas's promise to pay Brown \$100 a year in exchange for Brown's promise not to burn Thomas's barn would not be enforceable against Thomas. Since Brown has a preexisting duty not to burn Thomas's barn, his promise lacks legal value.

Similarly, public officials, by virtue of their offices, have a preexisting legal duty to perform their public responsibilities. For example, Smith, the owner of a liquor store, promises to pay Fawcett, a police officer whose beat includes Smith's store, \$50 a week to keep an eye on the store while walking her beat. Smith's promise is unenforceable because Fawcett has agreed to do something that she already has a duty to do.

Preexisting Contractual Duties and Modifications of Contracts under the Common Law The most important preexisting duty cases are those involving preexisting *contractual* duties. These cases generally occur when the parties to an existing contract agree to *modify* that contract. The general common law rule on contract modifications holds that an agreement to modify an existing contract requires *some new consideration* to be binding.

For example, Turner enters into a contract with Acme Construction Company for the construction of a new office building for \$350,000. When the construction is partially completed, Acme tells Turner that due to rising labor and materials costs it will stop construction unless Turner agrees to pay an extra \$50,000. Turner, having already entered into contracts to lease office space in the new building, promises to pay the extra amount. When the construction is finished, Turner refuses to pay more than \$350,000. Is Turner's promise to pay the extra \$50,000 enforceable against him? No. All Acme has done in exchange for Turner's promise to pay more is build the building, something that Acme had a preexisting contractual duty to do. Therefore, Acme's performance is not consideration for Turner's promise to pay more.

Although the result in the preceding example seems fair (why should Turner have to pay \$400,000 for something he had a right to receive for \$350,000?) and is consistent with consideration theory, the application of the preexisting duty rule to contract modifications has generated a great deal of criticism. Plainly, the rule can protect a party to a contract such as Turner from being pressured into paying more because the other party to the contract is trying to take advantage of his situation by demanding an additional amount for performance. However, mechanical application of the rule could also produce unfair results when the parties have freely agreed to a fair modification of their contract. Some critics argue that the purpose of contract modification law should be to enforce freely made modifications of existing contracts and to deny enforcement to coerced modifications. Such critics commonly suggest that general principles such as good faith and unconscionability, rather than technical consideration rules, should be used to police contract modifications.

Other observers argue that most courts in fact apply the preexisting duty rule in a manner calculated to reach fair results, because several exceptions to the rule can be used to enforce a fair modification agreement. For example, any new consideration furnished by the promisee provides sufficient consideration to support a promise to modify an existing contract. So, if Acme had promised to finish construction a week before the completion date called for in the original contract, or had promised to make some change in the original contract specifications such as to install a

better grade of carpet, Acme would have done something that it had no legal duty to do in exchange for Turner's new promise. Turner's promise to pay more would then be enforceable because it would be supported by new consideration.

Many courts also enforce an agreement to modify an existing contract if the modification resulted from *unforeseen circumstances* that a party could not reasonably be expected to have foreseen, and which made that party's performance far more difficult than the parties originally anticipated. For example, if Acme had requested the extra payment because abnormal subsurface rock formations made excavation on the construction site far more costly and time-consuming than could have been reasonably expected, many courts would enforce Turner's promise to pay more.

Courts can also enforce fair modification agreements by holding that the parties mutually agreed to terminate their original contract and then entered a new one. Because contracts are created by the will of the parties, they can be terminated in the same fashion. Each party agrees to release the other party from his contractual obligations in exchange for the other party's promise to do the same. Because such a mutual agreement terminates all duties owed under the original agreement, any subsequent agreement by the parties would not be subject to the preexisting duty rule. A court is likely to take this approach, however, only when it is convinced that the modification agreement was fair and free from coercion. The following *Ross* case illustrates the common law approach to modification of contracts.

Ross v. May Company

880 N.E.2d 210 (Ill. Ct. App. 2007)

Gary Ross was employed by May Company. When Ross went to work for May in 1968, he was given an employee handbook that described particular steps that had to be taken before an employee could be fired. In addition, a May manager told Ross that he would have a job as long as he wanted to work. Later on, however, in 1987 or 1989, May published a new handbook that contained disclaimers of any rights to continued employment that its employees might have.

After working for May for more than 40 years, Ross got in trouble for drawing stick figures depicting a female co-worker being electrocuted, boiled, guillotined, run over by a train, shot out of a cannon, tied to a rocket, and standing precariously under a 10,000-pound weight. The co-worker's son brought the pictures to the attention of May. May suspended Ross and told him to see a psychologist. Ross alleged that after two visits, the psychologist found he was not a threatening individual and determined that he required no treatment other than perhaps treatment for depression resulting from the suspension and possible job loss. Shortly thereafter, May fired Ross. Ross claimed he was terminated without cause and was not afforded procedures described in the 1968 handbook, such as an appeal or review of the decision. He sued May under a theory of breach of contract based upon the 1968 employee handbook. The trial court dismissed Ross's claim, and Ross appealed.

Hall, Justice

Under Illinois law, an employee hired without a fixed term is presumed to be an at-will employee whose employment may be terminated for any cause or reason, provided the employer does not violate clearly mandated public policy. Our supreme court crafted an exception to this rule where an employee handbook or other policy statement creates enforceable contractual rights if the traditional requirements for contract formation are present. Three requirements must be met for an employee handbook or policy statement to form an employee contract. First, the language of the policy statement must contain a promise clear enough that an employee would reasonably believe that an offer has been made. Second, the statement must be disseminated to the employee in such a manner that the employee is aware of its contents and reasonably believes it to be an offer. Third, the employee must accept the offer by commencing or continuing to work after learning of the policy statement. When these requirements are met, the employee's continued work constitutes consideration for the promises contained in the statement, and under traditional principles a valid contract is formed.

In this case, the trial court determined that promissory language set forth in the 1968 employee handbook defendant issued to Ross along with oral assurances of job security by May's agent created an employment contract between May and Ross, altering Ross's at-will status and binding May to certain procedures before it could terminate plaintiff's employment. However, the court went on to dismiss Ross's breach of contract claim, finding that disclaimers contained in revised employee handbooks issued to May served to invalidate his previously existing employment contract. May maintains that disclaimers set forth in employee handbooks issued to Ross in the late 1980s unilaterally modified May's employment contract, converting him to an at-will employee. May counters that the disclaimers did not modify his employment status because they were not supported by consideration.

The trial court determined that new benefits May offered to Ross and his coemployees in 1990 constituted consideration for the unilateral modification of Ross's employment contract. The new benefits consisted of paid personal days, short- and long-term disability, an insurance reimbursement plan, and a supplemental retirement savings plan. Ross accepted the new benefits and enrolled in the new long-term disability plan and in the enhanced supplemental retirement savings plan. Ross acknowledges that he experienced a benefit by receiving the enhanced pension and other new benefits. However, he maintains that the new benefits he received from May did not serve as consideration supporting the unilateral modification of his employment contract because they were offered to all eligible employees and

there was never any bargained-for exchange between him and May in which he agreed to modify or terminate his contract rights in exchange for the benefits. We agree.

Modification of a contract is a change in one or more respects that introduces new elements into the details of the contract and cancels others, but leaves the general purpose and effect undisturbed. No contract can be modified or amended in *ex parte* fashion by one of the contracting parties without the knowledge and consent of the remaining party to the agreement. A valid modification must satisfy all criteria essential for a valid contract, including offer, acceptance, and consideration.

The essential element of consideration is a bargained-for exchange of promises or performances that may consist of a promise, an act, a forbearance, or the creation, modification, or destruction of a legal relation. A bargained-for exchange exists if one party's promise induces the other party's promise or performance. A performance or return promise is bargained for if it is sought by the promisor in exchange for his promise and is given by the promisee in exchange for that promise. In the employer-employee context, consideration will be found when an employer and its employees make a bargained-for exchange to support the employees' relinquishment of the protections they were entitled to under the existing contract. Here, May does not contend that it bargained for Ross to modify his employment status and become an at-will employee. In this case, there was no bargained-for exchange, and no promises were made where Ross agreed to relinquish his contractual rights in exchange for the new benefits. The additional benefits, which were offered in 1990, were in no way related to, bargained for, or referenced to any preexisting contractual rights; the benefits were offered to all eligible employees whether or not they possessed contractual rights. May acted unilaterally, not in a bargained-for exchange, when it offered the additional benefits to its employees. No consideration flowed from May to Ross to compensate him for relinquishing the protections he enjoyed under the 1968 employee handbook. Under these circumstances, the additional benefits May offered Ross and his coemployees did not constitute consideration for the unilateral modification of Ross's employment contract.

In the typical bargain, the consideration and the promise "bear a reciprocal relation of motive or inducement: the consideration induces the making of the promise and the promise induces the furnishing of the consideration." *Restatement (Second) of Contracts* § 71, Comment *b*, at 173 (1981). Here, there was no reciprocal agreement or consideration. When May distributed the 1987/1989 revised handbooks containing the disclaimers allowing for the unilateral modification or termination of Ross's employment contract, it did not bargain with him or other

pre-1987 employees who had contractual rights under the old employee handbooks, did not ask for or obtain their assent, and did not purport to provide any consideration other than their continued employment. However, our courts have determined that mere continued employment, standing alone, does not constitute consideration supporting the unilateral modification of an existing employment contract. In sum, the trial court erred in dismissing Ross's breach of contract claim.

Before leaving this issue, we note that May has expressed concern that adopting Ross's arguments would lead to a

logistical nightmare for employers where they would be required to individually bargain with each employee anytime they wished to change policies or give better benefits. May's concerns are exaggerated. Our decision is not novel. It is well settled that a contract, once made, must be performed according to its terms and that any modification of those terms must be made by mutual assent and for consideration.

Reversed in favor of Ross.

Preexisting Duty and Contract Modification under the UCC The drafters of the Code sought to avoid many of the problems caused by the consideration requirement by dispensing with it in two important situations: As discussed in Chapter 10, The Agreement: Offer, the Code does not require consideration for firm offers [2-205]. The Code also provides that an agreement to modify a contract for the sale of goods needs *no consideration* to be binding [2-209(1)]. For example, Electronics World orders 200 XYZ televisions at \$150 per unit from XYZ Corp. Electronics World later seeks to cancel its order, but XYZ refuses to agree to cancellation. Instead, XYZ seeks to mollify a valued customer by offering to reduce the price to \$100 per unit. Electronics World agrees, but when the televisions arrive, XYZ bills Electronics World for \$150 per unit. Under classical contract principles, XYZ's promise to reduce the price of the goods would not be enforceable because Electronics World has furnished no new consideration in exchange for XYZ's promise. Under the Code, no new consideration is necessary and the agreement to modify the contract is enforceable.

Several things should be made clear about the operation of this Code rule. First, XYZ had no duty to agree to a modification and could have insisted on payment of \$150 per unit. Second, modification agreements under the Code are still subject to scrutiny under the general Code principles of good faith and unconscionability, so

unfair agreements or agreements that are the product of coercion are unlikely to be enforced. Finally, the Code contains two provisions to protect people from fictitious claims that an agreement has been modified. If the original agreement requires any modification to be in writing, an oral modification is unenforceable [2-209(2)]. Regardless of what the original agreement says, if the price of the goods in the modified contract is \$500 or more, the modification is unenforceable unless the requirements of the Code's statute of frauds section [2-201] are satisfied [2-209(3)].⁸

Preexisting Duty and Agreements to Settle Debts

One special variant of the preexisting duty rule that causes considerable confusion occurs when a debtor offers to pay a creditor a sum less than the creditor is demanding in exchange for the creditor's promise to accept the part payment as full payment of the debt. If the creditor later sues for the balance of the debt, is the creditor's promise to take less enforceable? The answer depends on the nature of the debt and on the circumstances of the debtor's payment.

Liquidated Debts A **liquidated debt** is a debt that is both due and certain; that is, the parties have no good faith dispute about either the existence or the amount of

⁸Chapter 16 discusses § 2-201 of the Code in detail.

The Global Business Environment

Like the UCC, the CISG does not require new consideration to modify a contract. The CISG states that contracts can be modified by the "mere agreement" of the parties. Another similarity between the

UCC and CISG is that under the CISG, a term in a written contract stating that modifications of that contract can only be made in writing will generally preclude oral modifications.

the original debt. If a debtor does nothing more than pay less than an amount he clearly owes, how could this be consideration for a creditor's promise to take less? Such a debtor has actually done less than he had a preexisting legal duty to do—namely, to pay the full amount of the debt. For this reason, the creditor's promise to discharge a liquidated debt for part payment of the debt at or after its due date is *unenforceable* for lack of consideration.

For example, Connor borrows \$10,000 from Friendly Finance Company, payable in one year. On the day payment is due, Connor sends Friendly a check for \$9,000 marked: "Payment in full for all claims Friendly Finance has against me." Friendly cashes Connor's check, thus impliedly promising to accept it as full payment by cashing it, and later sues Connor for \$1,000. Friendly is entitled to the \$1,000 because Connor has given no consideration to support Friendly's implied promise to accept \$9,000 as full payment.

However, had Connor done something he had no preexisting duty to do in exchange for Friendly's promise to settle for part payment, he could enforce Friendly's promise and avoid paying the \$1,000. For example, if Connor had paid early, before the loan contract called for payment, or in a different medium of exchange from that called for in the loan contract (such as \$4,000 in cash and a car worth \$5,000), he would have given consideration for Friendly's promise to accept early or different payment as full payment.

Unliquidated Debts A good faith dispute about either the existence or the amount of a debt makes the debt an **unliquidated debt**. The settlement of an unliquidated debt is called an **accord and satisfaction**.⁹ When an accord and satisfaction has occurred, the creditor cannot maintain an action to recover the remainder of the debt that he alleges is due. For example, Computer Corner, a retailer, orders 50 personal computers and associated software packages from Computech for \$75,000. After receiving the goods, Computer Corner refuses to pay Computech the full \$75,000, arguing that some of the computers were defective and that some of the software it received did not conform to its order. Computer Corner sends Computech a check for \$60,000 marked: "Payment in full for all goods received from Computech." A creditor in Computech's position obviously faces a real dilemma. If Computech cashes Computer Corner's check, it will be held to have impliedly promised to accept \$60,000 as full payment. Computech's promise to accept part payment as full payment would be enforceable because Computer

Corner has given consideration to support it: Computer Corner has given up its right to have a court determine the amount it owes Computech. This is something that Computer Corner had no duty to do; by giving up this right and the \$60,000 in exchange for Computech's implied promise, the consideration requirement is satisfied. The result in this case is supported not only by consideration theory but also by a strong public policy in favor of encouraging parties to settle their disputes out of court. Who would bother to settle disputed claims out of court if settlement agreements were unenforceable?

Computech could refuse to accept Computer Corner's settlement offer and sue for the full \$75,000, but doing so involves several risks. A court may decide that Computer Corner's arguments are valid and award Computech less than \$60,000. Even if Computech is successful, it may take years to resolve the case in the courts through the expensive and time-consuming litigation process. In addition, there is always the chance that Computer Corner may file for bankruptcy before any judgment can be collected. Faced with such risks, Computech may feel that it has no practical alternative other than to cash Computer Corner's check.¹⁰

Composition Agreements Composition agreements are agreements between a debtor and two or more creditors who agree to accept as full payment a stated percentage of their liquidated claims against the debtor at or after the date on which those claims are payable. Composition agreements are generally enforced by the courts despite the fact that enforcement appears to be contrary to the general rule on part payment of liquidated debts. Many courts have justified enforcing composition agreements on the ground that the creditors' mutual agreement to accept less than the amount due them provides the necessary consideration. The main reason why creditors agree to compositions is that they fear that their failure to do so may force the debtor into bankruptcy proceedings, in which case they might ultimately recover a smaller percentage of their claims than that agreed to in the composition.

Forbearance to Sue An agreement by a promisee to refrain, or forbear, from pursuing a legal claim against a promisor can be valid consideration to support a return promise—usually to pay a sum of money—by a promisor. The promisee has agreed not to file suit, something that

⁹Accord and satisfaction is also discussed in Chapter 18.

¹⁰A provision of Article 3 of the Uniform Commercial Code, section 3-311, covers accord and satisfaction by use of an instrument such as a "full payment" check. With a few exceptions, the basic provisions of section 3-311 parallel the common law rules regarding accord and satisfaction that are described in this chapter and Chapter 18.

she has a legal right to do, in exchange for the promisor's promise. The courts do not wish to sanction extortion by allowing people to threaten to file spurious claims against others in the hope that those threatened will agree to some payment to avoid the expense or embarrassment associated with defending a lawsuit. On the other hand, we have a strong public policy favoring private settlement of disputes. Therefore, it is generally said that the promisee must have a good faith belief in the validity of his or her claim before forbearance amounts to consideration.

Past Consideration *Past consideration*—despite its name—is not consideration at all. Past consideration is an act or other benefit given in the past that was *not* given in exchange for the promise in question. Because the past act was not given in exchange for the present

promise, it cannot be consideration. Consider again the facts of the famous case of *Hamer v. Sidway*, discussed earlier in this chapter. There, an uncle's promise to pay his nephew \$5,000 for refraining from smoking, drinking, swearing, and other delightful pastimes until his 21st birthday was supported by consideration because the nephew had given legal value by refraining from participating in the prohibited activities. However, what if the uncle had said to his nephew on the eve of his 21st birthday: "Your mother tells me you've been a good lad and abstained from tobacco, hard drink, foul language, and gambling. Such goodness should be rewarded. Tomorrow, I'll give you a check for \$5,000." Should the uncle's promise be enforceable against him? Clearly not, because although his nephew's behavior still passes the legal value test, in this case it was not bargained for and given in exchange for the uncle's promise.

Ethics in Action

Rex Roofing contracted with the O'Neills to install a new roof on their house for \$2,500. Rex began the work and soon realized that he had underbid the job. He informed the O'Neills that he would not do the job for \$2,500 after all, but that he would complete the work for \$3,200. The O'Neills promised to pay him \$3,200. Assuming

that there were no unforeseen conditions that affected the roof and no obvious mistakes in the bid calculations, was it ethical for Rex Roofing to refuse to do the job at the agreed-upon price? Since the O'Neills agreed to pay the higher price, are they ethically obligated to do so, even if the law does not require them to pay more than the originally agreed-upon price?

CONCEPT REVIEW

Consideration

Consideration*

Doing something you had no preexisting duty to do
 Promising to do something you had no preexisting duty to do
 Paying part of a liquidated debt prior to the date the debt is due
 Paying a liquidated debt in a different medium of exchange than originally agreed to
 Agreeing to settle an unliquidated debt
 Agreeing not to file suit when you have a good faith belief in your claim's validity

Not Consideration

Doing something you had a preexisting duty to do
 Promising to do something you had a preexisting duty to do
 Nominal consideration (unless actually bargained for)
 Paying part of a liquidated debt at or after the date the debt is due
 Making an illusory promise
 Past consideration
 Preexisting moral obligation

*Assuming bargained for.

Moral Obligation As a general rule, promises made to satisfy a preexisting moral obligation are unenforceable for lack of consideration. The fact that a promisor or some member of the promisor's family, for example, has received some benefit from the promisee in the past (e.g., food and lodging, or emergency care) would not constitute consideration for a promisor's promise to pay for that benefit, due to the absence of the bargain element. Some courts find this result distressing and enforce such promises despite the absence of consideration. In addition, a few states have passed statutes making promises to pay for past benefits enforceable if such a promise is contained in a writing that clearly expresses the promisor's intent to be bound.

Exceptions to the Consideration Requirement

The consideration requirement is a classic example of a traditional contract law rule. It is precise, abstract, and capable of almost mechanical application. It can also, in some instances, result in significant injustice. Modern courts and legislatures have responded to this potential for injustice by carving out numerous exceptions to the requirement of consideration. Some of these exceptions (for example, the Code firm offer and contract modification rules) have already been discussed in this and preceding chapters. In the remaining portion of this chapter, we focus on several other important exceptions to the consideration requirement.

Promissory Estoppel As discussed in Chapter 9, Introduction to Contracts, the doctrine of promissory estoppel first emerged from attempts by courts around the turn of this century to reach just results in donative (gift) promise cases. Classical contract consideration principles did not recognize a promisee's reliance

on a donative promise as a sufficient basis for enforcing the promise against the promisor. Instead, donative promises were unenforceable because they were not supported by consideration. In fact, the essence of a donative promise is that it does not seek or require any bargained-for exchange. Yet people continued to act in reliance on donative promises, often to their considerable disadvantage.

Refer to the facts of *Thorne v. Deas*, discussed earlier in this chapter. The co-owners of the *Sea Nymph* clearly relied on their fellow co-owner's promise to get insurance for the ship. Some courts in the early years of this century began to protect such relying promisees by *estopping* promisors from raising the defense that their promises were not supported by consideration. In a wide variety of cases involving gratuitous agency promises (as in *Thorne v. Deas*), promises of bonuses or pensions made to employees, and promises of gifts of land, courts began to use a promisee's detrimental (harmful) reliance on a donative promise as, in effect, a *substitute* for consideration.

In 1932, the first *Restatement of Contracts* legitimized these cases by expressly recognizing promissory estoppel in section 90. The elements of promissory estoppel were then essentially the same as they are today: a *promise* that the promisor should reasonably expect to induce reliance, *reliance* on the promise by the promisee, and *injustice* to the promisee as a result of that reliance. Promissory estoppel is now widely used as a consideration substitute, not only in donative promise cases but also in cases involving commercial promises contemplating a bargained-for exchange. The construction contract bid cases discussed in Chapter 10 are another example of this expansion of promissory estoppel's reach. In fact, promissory estoppel has expanded far beyond its initial role as a consideration substitute into other areas of contract law.

The following *Skebba* case applies promissory estoppel and discusses the remedies that might be given in cases of promissory estoppel.

Skebba v. Kasch

724 N.W.2d 408 (Wis. Ct. App. 2006)

Jeffrey Kasch, with his brother, owned M.W. Kasch Co. Kasch hired William Skebba as a sales representative. Kasch's father was the original owner of the business, and had hired Skebba's father. Skebba's father mentored Kasch. Over the years, Kasch promoted Skebba to account manager, then to customer service manager, field sales manager, vice president of sales, senior vice president of sales and purchasing, and finally to vice president of sales. When M.W. Kasch Co. experienced serious financial problems in 1993, another company solicited Skebba to leave Kasch and work for it. When Skebba told Kasch he was accepting the new opportunity, Kasch asked what it would take to get him to stay, and noted that Skebba's leaving at this time would be viewed very negatively within the industry. Shortly thereafter, Skebba told Kasch that he needed security for his retirement and family and would stay if Kasch agreed to pay Skebba \$250,000 if one of these three conditions

occurred: (1) the company was sold; (2) Skebba was lawfully terminated; or (3) Skebba retired. Kasch agreed to this proposal and Kasch promised to have the agreement drawn up. Skebba turned down the job opportunity and stayed with Kasch from December 1993 (when this discussion occurred) through 1999 when the company assets were sold.

Over the years, Skebba repeatedly asked Kasch for a written summary of this agreement; however, none was forthcoming. Eventually, Kasch sold the business. Kasch received \$5.1 million dollars for his 51 percent share of the business when it was sold. Upon the sale of the business, Skebba asked Kasch for the \$250,000 Kasch had previously promised to him, but Kasch refused, and denied ever having made such an agreement. Instead, Kasch gave Skebba a severance agreement that had been drafted by Kasch's lawyers in 1993. This agreement promised two years of salary continuation on the sale of the company, but only if Skebba was not hired by the successor company and the severance agreement required a set off against the salary continuation of any sums Skebba earned from any activity during the two years of the severance agreement. Skebba sued Kasch, alleging breach of contract and promissory estoppel.

The case went to trial. The jury found there was no contract, but that Kasch had made a promise upon which Skebba relied to his detriment, that the reliance was foreseeable, and that Skebba was damaged in the amount of \$250,000. The trial court ruled against Skebba, however, on the ground that applicable case law did not allow the court to order Kasch to pay the sum that he had promised. Instead, it took the position that Skebba had not proved his damages because he had not proved how much he would have earned if he had taken the job that he turned down. Skebba appealed.

Kessler, Judge

The purpose of promissory estoppel is to enforce promises where the failure to do so is unjust. *Hoffman v. Red Owl Food Stores* was the first case in Wisconsin to adopt promissory estoppel. The facts in *Hoffman* present a long and complex history of Red Owl Food Stores inducing Mr. Hoffman to do a number of things (sell his bakery; sell his grocery store; move to another city to get larger grocery store management experience; commit to investing ever increasing sums of money in order to get a Red Owl store; buy a lot on which the store would be built, then sell the same lot; and other activities) in order to own a Red Owl grocery store to be built in the future. Mr. Hoffman did all of the things required, but finally balked at the last demand for increased capital. Although there was never a specific contract between Mr. Hoffman and Red Owl, yet Mr. Hoffman had obviously changed position in a number of ways in reliance on Red Owl's promise of a store, the court was faced with the need to provide a remedy to Mr. Hoffman and the impracticality of enforcing the promise of a store against Red Owl. In that context, the *Hoffman* court explained its adoption of a cause of action based on promissory estoppel. The conditions imposed are:

- (1) Was the promise one which the promisor should reasonably expect to induce action or forbearance of a definite and substantial character on the part of the promisee?
- (2) Did the promise induce such action or forbearance?
- (3) Can injustice be avoided only by enforcement of the promise?

The *Hoffman* court explains that the first two of these requirements are facts to be found by a jury or other factfinder, while the third is a policy decision to be made by the court. In making

this policy decision, a court must consider a number of factors in determining whether injustice can only be avoided by enforcement of the promise. A court, in fashioning a remedy, can consider any remedy which will prevent injustice.

In this case, Skebba performed—he remained at M.W. Kasch—in reliance on Kasch's promise to pay \$250,000 to him if one of three conditions occurred. Kasch enjoyed the fruits of Skebba's reliance—he kept on a top salesperson to help the company through tough financial times and he avoided the damage that he believed Skebba's leaving could have had on M.W. Kasch's reputation in the industry. Accordingly, to prevent injustice, the remedy for Skebba to receive is Kasch's specific performance promised—payment of the \$250,000. Otherwise Kasch will enjoy all of the benefits of induced reliance while Skebba will be deprived of that which he was promised, with no other available remedy to substitute fairly for the promised reward. Skebba did not spend money in reliance on the promise, so neither restitution nor cancellation of an obligation Skebba incurred would be relevant to these facts.

“The definite and substantial character of the action or forbearance in relation to the remedy sought” supports enforcing the promise. Skebba's forbearance of other employment for six years from the 1993 promise the jury found occurred was both definite and substantial. “The reasonableness of the action or forbearance” and “the extent to which the action or forbearance was foreseeable by the promisor” is supported by the undisputed fact that Kasch knew Skebba had another job opportunity in 1993, that Kasch believed Skebba's leaving would damage the company in the industry, and that Kasch wanted Skebba to stay. Kasch's promise achieved Kasch's objectives: Skebba stayed even though the company was in severe financial difficulties. In short, every factor this court requires to be

considered supports enforcement of the promise through promissory estoppel.

Skebba's loss has nothing to do with what he might have earned on another job. Income from the rejected job was never a part of the calculus of the promise made and relied upon. Kasch never proposed to better the salary or bonus offered. Neither Kasch nor Skebba mention any discussion about a way for Kasch to retain Skebba other than the now disputed payment.

Promises to Pay Debts Barred by Statutes of Limitations

Statutes of limitations set an express statutory time limit on a person's ability to pursue any legal claim. A creditor who fails to file suit to collect a debt within the time prescribed by the appropriate statute of limitations loses the right to collect it. Many states, however, enforce a new promise by a debtor to pay such a debt, even though technically such promises are not supported by consideration because the creditor has given nothing in exchange for the new promise. Most states afford debtors some protection in such cases, however, by requiring that the new promise be in writing to be enforceable.

Promises to Pay Debts Barred by Bankruptcy Discharge

Once a bankrupt debtor is granted a discharge,¹¹ creditors no longer have the legal right to collect discharged debts. Most states enforce a new promise by the debtor to pay (reaffirm) the debt

¹¹Chapter 30 discusses bankruptcy in detail.

Hence, the damage calculation required by the trial court, which might be appropriate in other cases, has no reasonable application to the facts here. In this case, specific performance *is* the *necessary* enforcement mechanism to prevent injustice for Skebba's reliance on the promise the jury found Kasch had made to him.

Reversed and remanded in favor of Skebba.

regardless of whether the creditor has given any consideration to support it. To reduce creditor attempts to pressure debtors to reaffirm, the Bankruptcy Reform Act of 1978 made it much more difficult for debtors to reaffirm debts discharged in bankruptcy proceedings. The act requires that a reaffirmation promise be made prior to the date of the discharge and gives the debtor the right to revoke his promise within 30 days after it becomes enforceable. This act also requires the Bankruptcy Court to counsel individual (as opposed to corporate) debtors about the legal effects of reaffirmation and requires Bankruptcy Court approval of reaffirmations by individual debtors. In addition, a few states require reaffirmation promises to be in writing to be enforceable.

Charitable Subscriptions

Promises to make gifts for charitable or educational purposes are often enforced, despite the absence of consideration, when the institution or organization to which the promise was made has acted in reliance on the promised gift. This result is usually justified on the basis of either promissory estoppel or public policy.

Problems and Problem Cases

1. Calabro's parents were divorced, and she lived with her mother in Oklahoma while her father lived in Tennessee. Calabro had an excellent academic record in high school. During her senior year, her father offered to pay her expenses to attend a distinguished, private university if she received at least \$10,000 in financial aid. At the time that Calabro was applying to colleges, she knew that she was eligible to attend the University of Oklahoma and receive a full scholarship, sufficient to pay tuition, room, board, books, and student activity fee. Knowing that her father would be willing to finance her college education at a

private college if she received \$10,000 in financial aid, Calabro applied to and was accepted at a number of private schools, including Vanderbilt University. In the fall of 1991, Calabro enrolled in Vanderbilt University with her father paying expenses that exceeded her scholarship. During the Christmas break of 1992, however, Calabro's father informed her that he was no longer willing to pay for her college expenses. At that time he had prepaid her tuition for the spring of 1993 at Vanderbilt. Calabro continued to attend Vanderbilt and completed her course by taking out student loans that became due upon her graduation. Calabro brought an action for promissory estoppel

against her father, but the trial court granted a summary judgment in favor of her father. Was this a correct decision by the court?

2. On February 1, 2004, Zhang entered into a contract with Sorichetti to buy Sorichetti's Las Vegas home for \$532,500. The contract listed a March closing date and a few household furnishings as part of the sale. On February 3, Sorichetti told Zhang that he was terminating the sale "to stay in the house a little longer," and (incorrectly) that Nevada law allows the rescission of real property purchase agreements within three days of contracting. Sorichetti stated that he would sell the home, however, if Zhang paid more money. Zhang agreed. Another contract was drafted, reciting a new sales price, \$578,000. This contract added to the included household furnishings drapes that were not listed in the February 1 agreement, and set an April, rather than March, closing date. Was this a valid modification of the contract?
3. On April 25, 2005, Poux hired Hernandez to sell organic produce for her sole proprietorship, Access Organics Sales. In July 2005, Hernandez was promoted to sales manager. On August 29, 2005, four months after his employment began, Hernandez signed a noncompete agreement and a nondisclosure agreement. The noncompete agreement provided in relevant part: "For good consideration and as an inducement for Access Organics (the Company) to employ Andy Hernandez, the undersigned Employee hereby agrees not to directly or indirectly compete with the business of the Company and its successors and assigns during the period of employment and for a period of two years following termination of employment. . . ." Shortly thereafter, Access Organics began experiencing financial difficulties and laid off Hernandez and several other employees. Hernandez voluntarily returned to the company on a part-time basis but resigned a short time later. Hernandez then entered into business with another former Access Organics employee. Full Circle Sales, Hernandez's new company, was located in the Kalispell area and dealt in both organic and conventional produce. Access Organics brought suit to enforce the noncompete and nondisclosure agreements signed by Hernandez. Was the noncompete and nondisclosure agreement a valid contract that was supported by consideration?
4. In April 1997, Buchholz entered into a written contract with Schneider's Milling to provide between

500 and 590 segregated early weaned (SEW) pigs every three weeks beginning October 15, 1997. The parties agreed to a price of \$36.50 per pig. The contract was to continue for a period of 48 months. Because Buchholz was just starting a SEW pig program, the parties recognized that the number of pigs could vary in the first four months. Even after the first four months passed, however, Buchholz was unable to provide at least 500 pigs every three weeks. At the same time, the market price for pigs decreased significantly. In September 1998, a representative of Schneider's discussed reducing the price to \$28 per pig. After some discussion, Buchholz proposed a price of \$30 per pig. On October 8, 1998, the parties agreed to a price of \$30 per pig and that Buchholz would produce at least 500 pigs every three weeks until April 1, 1999, or the contract would be terminated. Buchholz had two deliveries of over 500 pigs, but the other deliveries were less than 500 pigs. In February 1999, Schneider's terminated its agreement with Buchholz. Buchholz filed suit against Schneider's for breach of contract, claiming Schneider's had failed to pay the full contract price for the pigs, which was \$36.50 per pig. Schneider's asserted that the contract had been modified in October 1998 to reduce the price to \$30 per pig. Was this modification enforceable?

5. Approximately four years before his death, Dr. Martin Luther King, Jr., gave Boston University possession of some of his correspondence, manuscripts, and other papers. He did this pursuant to a letter, which read as follows:

On this 16th day of July, 1964, I name the Boston University Library the Repository of my correspondence, manuscripts, and other papers, along with a few of my awards and other material which may come to be of interest in historical and other research.

In accordance with this action I have authorized the removal of most of the above-mentioned papers and other objects to Boston University, including most correspondence through 1961, at once. It is my intention that after the end of each calendar year, similar files of materials for an additional year should be sent to Boston University.

All papers and other objects which thus pass into the custody of Boston University remain my legal property until otherwise indicated, according to the statements below. However, if, despite scrupulous care, any such materials are damaged or lost while in custody of Boston University, I absolve Boston University of responsibility to me for such damage or loss.

I intend each year to indicate a portion of the materials deposited with Boston University to become the absolute property of Boston University as an outright gift from me, until all shall have been thus given to the University. In the event of my death, all such materials deposited with the University shall become from that date the absolute property of Boston University.

Sincerely,
Martin Luther King, Jr.

Acting in her capacity as administrator of Dr. King's estate, his widow, Coretta Scott King, sued Boston University, alleging that the King Estate, not BU, owned the papers that had been housed in the BU Library's special collection since the 1964 delivery of them. BU contended that it owned them because Dr. King had made an enforceable charitable pledge to give them to BU. Was Dr. King's promise to give ownership of his papers to BU enforceable?

6. Smith hired Jones Construction to build a detached garage on her property according to certain specifications for \$15,000. The contract called for Smith to pay Jones \$5,000 "up front," to disburse an additional \$7,000 at various stages of the construction, and to make a final payment of \$3,000 at the completion of construction. Jones built the garage, but Smith complained that Jones's workmanship was substandard and that Jones had failed to build the garage to the specifications provided in the contract. Smith refused to make the final \$3,000 payment. After Jones threatened to sue Smith for the \$3,000, the parties came to an agreement that Smith would pay Jones \$1,500 and Jones would accept the \$1,500 as full payment of the contract. Smith paid Jones \$1,500, making clear that it was for full payment of the contract, and Jones accepted the payment. However, Jones continued to try to collect the additional \$1,500 provided for in the original contract, and when Smith refused to pay it, ultimately filed suit against Smith in small claims court. Is Smith legally obligated to pay the additional \$1,500?
7. Ruth and Bryan Davis owned seven acres of land in Warren, Massachusetts. On August 19, 1997, Ruth and Bryan conveyed one and one-half acres of that parcel to Bryan's mother, Corinne, for "\$1.00 in valuable consideration." Corinne built a house on the property and lived there for the next seven years. In the spring of 2004, Corinne decided to sell her house. She marketed her home herself, arranging five showings, negotiating a sales price,

and satisfactorily performing other tasks involved in selling the house and moving. Apparently prompted by Corinne's sales activity, Ruth drafted the following typewritten document:

As promised, I will give the amount of \$40,000.00 to Ruth and Bryan Davis, for the value of the land at 1388 Brimfield Road.

Sincerely,
Corinne Davis.

Ruth and Bryan requested that Corinne sign it. On May 2, 2004, Bryan took the document to his mother's home and told her that if she signed it, it "might save his marriage." Corinne signed the document that day and Ruth and Bryan signed it sometime thereafter. When Corinne sold the home, she did not pay \$40,000 of the sale proceeds to Bryan and Ruth. Ruth sued Corinne for breach of contract. Was there consideration to support Corinne's promise to pay part of the proceeds to Bryan and Ruth?

8. Brads became pastor of the First Baptist Church in January 1958. In June 1971, Brads had a heart attack. While he was recuperating, an officer of the church told Brads that the church had voted to pay his full salary for the remainder of his lifetime. That promise was unperformed because Brads later recovered and returned to work. In April 1980, Brads again had heart problems. On the advice of his doctor, Brads approached the deacons of the church about retirement. Brads proposed that his salary be reduced after retirement through a series of gradual step-downs to an amount approximately one-third the salary he was then receiving. Brads's proposal was accepted by the deacons. Under the terms of the agreement, the church placed Brads on disability retirement status, conferred an honorary title on him, gave him office space in the church, and allotted him retirement benefits according to the step-down schedule. Brads was required to aid, assist, and advise whomever the church called as a new pastor, to the extent Brads's health would allow. Brads and the church deacons jointly recommended to the congregation that it adopt the agreement, which the congregation did, unanimously. Brads then left his position as pastor and his benefits commenced. In 1985, the congregation was advised by a church officer that the benefits paid to Brads under the 1980 agreement should continue for Brads's lifetime. The congregation once again unanimously approved and reaffirmed the

agreement. Brads received his benefits from 1980 through early July 1990, when he was notified by church officials that he had been dismissed from the membership of the church and that no more payments would be made to him. Other benefits, such as free office space, were also discontinued. Brads sued the church, contending that it breached its contract. The church contended that there was no consideration to support its promise to pay retirement benefits to Brads for life. Is the church correct?

9. In October 2002, real estate developer Lotus Property entered into a contract with the Greers to purchase 148 acres of land. The contract contained a section entitled “Other Terms,” which included the following statement: “Property shall be granted a zoning by the Henry County Board of Commissioners.” Further, the contract was contingent upon Lotus obtaining sufficient financing and securing sewage easements to run sewage pipes to the property. The closing date under the contract was to be on or before January 10, 2003. In November 2002, the Greers sent a request to the Henry County Planning Commission asking it to rezone the property, and the Greers authorized an officer of Lotus to represent them at the commission’s hearing. By early January 2003, however, the county had not approved the rezoning request. Further, Lotus had not yet secured financing for the project, obtained the sewage easements, or applied for any building permits. On January 9, 2003, the day before the sales contract expired, the parties signed an extension of the contract allowing Lotus to close on the property “on or before 30 days after rezoning has been approved” by the county. It is undisputed that Lotus did not pay any additional compensation to the Greers in exchange for the execution of the extension

agreement. It is also undisputed that Lotus was not ready and willing to close on the property on or before January 10, 2003, because the property had not been rezoned. Was this a valid modification of the contract?

10. Tinker Construction had a contract with Scroge to build a factory addition for Scroge by a particular date. The contract contained a penalty clause exacting daily penalties for late performance, and Tinker was working hard to complete the building on time. Because prompt completion of the addition was so important to Scroge, however, Scroge offered Tinker a bonus if it completed the factory addition on time. Scroge also learned that the supplier of parts for machinery that he had contracted for had called and said that it could not deliver the parts on Scroge’s schedule for the price it had agreed to. Because there was no other supplier, Scroge promised to pay the requested higher price. The factory addition was completed on time and the parts arrived on time. Scroge then refused to pay both the bonus to Tinker and the higher price for the parts. Were these promises enforceable?

chapter 13

REALITY OF CONSENT

In August of 2002, Duncan went to Smith Motors to look for a used car to buy. He test-drove a 1995 Corvette with an odometer reading of 52,000. Duncan assumed that the heater worked, but he did not turn it on to test it because it was so hot outside. The salesperson assured him that the car was in “mint condition.” Duncan decided to buy the car. He later learned that the heater was broken, the radio would not work, the car would not start when the temperature dropped below 40 degrees, and that the car really had 152,000—not 52,000—miles on it.

- Can Duncan get out of this contract and get his money back?
- Did Smith Motors have a duty to disclose the defects in the car?
- Was the statement that the car was in “mint condition” a misrepresentation?
- Did Duncan have the obligation to investigate the car more thoroughly?
- What are the ethical concerns involved in this situation?

IN A COMPLEX ECONOMY that depends on planning for the future, it is crucial that the law can be counted on to enforce contracts. In some situations, however, there are compelling reasons for permitting people to escape or *avoid* their contracts. An agreement obtained by force, trickery, unfair persuasion, or error is not the product of mutual and voluntary consent. A person who has made an agreement under these circumstances will be able to avoid it because his consent was not *real*.

This chapter discusses five doctrines that permit people to avoid their contracts because of the absence of real consent: misrepresentation, fraud, mistake, duress, and undue influence. Doctrines that involve similar considerations will be discussed in Chapter 14, Capacity to Contract, and in Chapter 15, Illegality.

Effect of Doctrines Discussed in This Chapter

Contracts induced by misrepresentation, fraud, mistake, duress, or undue influence are generally considered to be **voidable**. This means that the person whose consent was

not real has the power to **rescind** (cancel) the contract. A person who rescinds a contract is entitled to the return of anything he gave the other party. By the same token, he must offer to return anything he has received from the other party.

Necessity for Prompt and Unequivocal Rescission Suppose Johnson, who recently bought a car from Sims Motors, learns that Sims Motors made fraudulent statements to her to induce her to buy the car. She believes the contract was induced by fraud and wants to rescind it. How does she act to protect her rights? To rescind a contract based on fraud or any of the other doctrines discussed in this chapter, she must act promptly and unequivocally. She must object promptly upon learning the facts that give her the right to rescind and must clearly express her intent to cancel the contract. She must also avoid any behavior that would suggest that she affirms or **ratifies** the contract. (Ratification of a voidable contract means that a person who had the right to rescind has elected not to do so. Ratification ends the right to rescind.) This means that she should avoid unreasonable delay in notifying the

other party of her rescission, because unreasonable delay communicates that she has ratified the contract. She should also avoid any conduct that would send a “mixed message,” such as continuing to accept benefits from the other party or behaving in any other way that is inconsistent with her expressed intent to rescind. You will see an example of ratification in the *Cabot Corporation v. AVX Corporation* case, which appears later in this chapter.

Misrepresentation and Fraud

Relationship between Misrepresentation and Fraud

A misrepresentation is an assertion that is not in accord with the truth. When a person enters a contract because of his justifiable reliance on a misrepresentation about some important fact, the contract is voidable.

It is not necessary that the misrepresentation be intentionally deceptive. Misrepresentations can be either “innocent” (not intentionally deceptive) or “fraudulent” (made with knowledge of falsity and intent to deceive). A contract may be voidable even if the person making the misrepresentation believes in good faith that what he says is true. Either innocent misrepresentation or fraud gives the complaining party the right to rescind a contract.

Fraud is the type of misrepresentation that is committed knowingly, with the intent to deceive. The legal term for this knowledge of falsity, which distinguishes fraud from innocent misrepresentation, is **scienter**. A person making a misrepresentation would be considered to do so “knowingly” if she knew that her statement was false, if she knew that she did not have a basis for making the statement, or even if she just made the statement without being confident that it was true. The intent to deceive can be inferred from the fact that the defendant knowingly made a misstatement of fact to a person who was likely to rely on it.

As is true for innocent misrepresentation, the contract remedy for fraudulent misrepresentation is rescission. The tort liability of a person who commits fraud is different from that of a person who commits innocent misrepresentation, however. A person who commits fraud may be liable for damages, possibly including punitive damages, for the tort of **deceit**.¹ As you will learn in following

sections, innocent misrepresentation and fraud share a common core of elements.

Election of Remedies In some states, a person injured by fraud cannot rescind the contract *and* sue for damages for deceit; he must elect (choose) between these remedies. In other states, however, an injured party may pursue both rescission and damage remedies and does not have to elect between them.²

Requirements for Rescission on the Ground of Misrepresentation

The fact that one of the parties has made an untrue assertion does not in itself make the contract voidable. Courts do not want to permit people who have exercised poor business judgment or poor common sense to avoid their contractual obligations, nor do they want to grant rescission of a contract when there have been only minor and unintentional misstatements of relatively unimportant details. A drastic remedy such as rescission should be used only when a person has been seriously misled about a fact important to the contract by someone he had the right to rely on. A person seeking to rescind a contract on the ground of innocent or fraudulent misrepresentation must be able to establish each of the following elements:

1. An untrue assertion of fact was made.
2. The fact asserted was material *or* the assertion was fraudulent.
3. The complaining party entered the contract because of his reliance on the assertion.
4. The reliance of the complaining party was reasonable.

In tort actions in which the plaintiff is seeking to recover damages for deceit, the plaintiff would have to establish a *fifth* element: injury. He would have to prove that he had suffered actual economic injury because of his reliance on the fraudulent assertion. In cases in which the injured person seeks only rescission of the contract, however, proof of economic injury usually is not required.

Untrue Assertion of Fact To have misrepresentation, one of the parties must have made an untrue assertion of fact or engaged in some conduct that is the equivalent of

²Under every state’s law, however, a person injured by fraud in a contract for the *sale of goods* can both rescind the contract and sue for damages. This is made clear by section 2–721 of the Uniform Commercial Code, which specifically states that no election of remedies is required in contracts for the sale of goods.

¹The tort of deceit is discussed in Chapter 6, Intentional Torts.

an untrue assertion of fact. The fact asserted must be a *past or existing fact*, as distinguished from an opinion or a promise or prediction about some future happening.

The **concealment** of a fact through some active conduct intended to prevent the other party from discovering the fact is considered to be the equivalent of an assertion. Like a false statement of fact, concealment can be the basis for a claim of misrepresentation or fraud. For example, if Summers is offering his house for sale and paints the ceilings to conceal the fact that the roof leaks, his active concealment constitutes an assertion of fact.

Nondisclosure can also be the equivalent of an assertion of fact. Nondisclosure differs from concealment in that concealment involves the active hiding of a fact, while nondisclosure is the failure to volunteer information. Disclosure of a fact—even a fact that will harm the speaker’s bargaining position—is required in a number of situations, such as when the person has already offered *some* information but further information is needed to give the other party an accurate picture, or when there is a relationship of trust and confidence between the parties. In recent years, courts and legislatures have tended to impose a duty to disclose when a party has access to information that is not readily available to the other party. This is consistent with modern contract law’s emphasis on influencing ethical standards of conduct and achieving fair results. Transactions involving the sale of real estate are among the most common situations in which this duty to disclose arises. Most states now hold that a seller who knows about a latent (hidden) defect that materially affects the value of the property he is selling has the obligation to speak up about this defect.

Materiality If the misrepresentation was innocent, the person seeking to rescind the contract must establish that the fact asserted was **material**. A fact will be considered to be material if it is likely to play a significant role in inducing a reasonable person to enter the contract or if the person asserting the fact knows that the other person is likely to rely on the fact. For example, Rogers, who is trying to sell his car to Ferguson and knows that Ferguson idolizes professional bowlers, tells Ferguson that a professional bowler once rode in the car. Relying on that representation, Ferguson buys the car. Although the fact Rogers asserted might not be important to most people, it would be material here because Rogers knew that his representation would be likely to induce Ferguson to enter the contract.

Even if the fact asserted was not material, the contract may be rescinded if the misrepresentation was *fraudulent*. The rationale for this rule is that a person who fraudulently misrepresents a fact, even one that is not material under the standards previously discussed, should not be able to profit from his intentionally deceptive conduct.

Actual Reliance Reliance means that a person pursues some course of action because of his faith in an assertion made to him. For misrepresentation to exist, there must have been a causal connection between the assertion and the complaining party’s decision to enter the contract. If the complaining party knew that the assertion was false or was not aware that an assertion had been made, there has been no reliance.

Justifiable Reliance Courts also scrutinize the reasonableness of the behavior of the complaining party by requiring that his reliance be *justifiable*. A person does not act justifiably if he relies on an assertion that is obviously false or not to be taken seriously.

One problem involving the justifiable reliance element is determining the extent to which the relying party is responsible for investigating the accuracy of the statement on which he relies. Classical contract law held that a person who did not attempt to discover readily discoverable facts generally was not justified in relying on the other party’s statements about them. For example, under traditional law, a person would not be entitled to rely on the other party’s assertions about facts that are a matter of public record or that could be discovered through a reasonable inspection of available documents or records. The extent of the responsibility placed on a relying party to conduct an independent investigation has declined in modern contract law, however. Today, a court might be more likely to follow the approach of section 172 of the *Restatement*, which provides that a relying party’s failure to discover facts before entering the contract does not make his reliance unjustifiable unless the degree of his fault was so extreme as to amount to a failure to act in good faith and in accordance with reasonable standards of fair dealing. Thus, today’s courts tend to place a greater degree of accountability on the person who makes the assertion rather than the person who relies on the assertion.

You will see a discussion of the elements of misrepresentation (in this case, allegedly fraudulent misrepresentation) in the following *Jordan* case.

Jordan v. Knafel**378 Ill. App.3d 219 (Ill. Ct. App. 2007)**

In the spring of 1989, Karla Knafel, a singer, was performing in a band at a hotel in Indianapolis, Indiana. The Chicago Bulls were also in town to play the Indiana Pacers. After her performance, Knafel was approached by a National Basketball Association referee, who eventually introduced her to Michael Jordan over the telephone. Although Knafel declined Jordan's invitations to meet during the spring and summer of 1989, she and Jordan continued long-distance telephone conversations during that time.

In December 1989, three months after Jordan had married his wife, Knafel traveled to Chicago to meet Jordan, where they had unprotected sex. Thereafter, in November 1990, Knafel stayed with Jordan in Phoenix, Arizona, where they again had unprotected sex. In early 1991, Knafel learned that she was pregnant. Knafel "was convinced that she was carrying Jordan's baby," but kept silent about the pregnancy for some time. The Bulls were on their way to their first NBA championship and Jordan was earning large sums of money in product endorsements. Knafel alleged that as a result, Jordan was "troubled" when she told him "she was pregnant with his child" in the spring of 1991. He was worried about destroying his public image, which he and his agent had carefully cultivated, and was concerned about the loss of future endorsements. Knafel further alleged that Jordan demanded that she abort the baby, but because of her personal beliefs, she refused.

According to Knafel, during several conversations about the impending birth of the baby, she and Jordan discussed possible resolutions of their dilemma. In the spring of 1991, Jordan offered, and urged Knafel to accept, his proposed settlement agreement to "resolve their problems." Jordan offered to pay her \$5 million when he retired from professional basketball in return for her agreement not to file a paternity suit against him and for her agreement to keep their romantic involvement publicly confidential. Knafel accepted Jordan's offer. In consideration for his promise to pay her, she agreed to forbear filing a public paternity action against him and agreed to keep their romantic relationship confidential.

In July 1991, Knafel's child was born. Jordan paid certain hospital bills and medical costs and paid Knafel \$250,000 for "her mental pain and anguish arising from her relationship with him." Knafel did not file a paternity suit against Jordan and she kept their relationship confidential. A month after Knafel's baby's birth, a physician collected blood samples from Jordan, Knafel, and the baby and concluded that the "test exclude[d] Mr. Jordan from being the father" of the baby.

In October 1993, Jordan announced his retirement from the Bulls, but in March 1995, he returned again to the NBA to play for the Bulls. Knafel had not contacted Jordan to demand her payment of the \$5 million which he had allegedly promised her until the summer of 1998, amid public speculation that Jordan would soon retire again. In September 1998, Knafel approached Jordan while he was vacationing in Las Vegas. During their conversation, Knafel reminded Jordan of his obligation to pay her the money under their agreement. Knafel alleged that Jordan reaffirmed his agreement to pay her the \$5 million. A few months later, Jordan again retired from professional basketball.

Two years later, after Jordan had failed to pay the \$5 million under the alleged agreement, Knafel's counsel contacted Jordan's counsel to resolve their contract dispute. Jordan filed for a declaratory judgment alleging that Knafel was attempting to extort \$5 million from him and that, even if an agreement was made, the agreement was unenforceable because of fraud and mutual mistake. Knafel filed a counterclaim for breach of contract and Jordan filed a motion to dismiss this claim. The trial court dismissed Jordan's complaint and also dismissed Knafel's counterclaim. Both parties appealed.

The Illinois Court of Appeals reversed and remanded the case to the trial court for further proceedings. On remand, Jordan filed an amended complaint and motion for summary judgment on Knafel's counterclaim. In support, he attached an affidavit of the doctor who had done the genetic testing on Knafel's baby. Knafel filed an affidavit stating that she had believed in good faith that she was pregnant with Jordan's child, that she had informed Jordan throughout their relationship that she was having sex with another man, and that she had never told Jordan that she was using birth control. She also included a signed and dated office note from her physician, Dr. Grisanti, that stated that the baby was conceived on November 19 or 20, 1990, which is the same time period that she was with Jordan in Phoenix. After a hearing, the trial court granted Jordan's motion for summary judgment. Knafel appealed.

Theis, Justice

We must now consider what impact the paternity evidence has on the enforceability of the alleged agreement. Knafel argues that Jordan's actual paternity is irrelevant to the enforceability

of the alleged settlement agreement as long as she has alleged a good-faith belief at the time of contracting that she was pregnant with Jordan's child. Jordan maintains that, based upon the uncontroverted evidence that he is not the father of Knafel's

child, her statement to him at the time of the alleged settlement that “she was pregnant with his child” is a fraudulent misrepresentation as a matter of law which makes the contract voidable, permitting rescission.

Fraud in the inducement of a contract is a defense that renders the contract voidable at the election of the injured party. In order for a representation to constitute fraud that would permit a court to set aside a contract, the party seeking such relief must establish that the representation was: (1) one of material fact; (2) made for the purpose of inducing the other party to act; (3) known to be false by the maker, or not actually believed by him on reasonable grounds to be true, but reasonably believed to be true by the other party; and (4) was relied upon by the other party to his detriment.

Knafel asserts that there is a genuine issue of fact as to whether her affirmative representation to Jordan that “she was pregnant with his child” was material to the alleged settlement agreement and induced Jordan to act. Specifically, she argues that Jordan’s actual paternity (1) was not a subject of discussion when they reached their settlement agreement; (2) it was not a term or contingent condition of their settlement agreement; and (3) Jordan has never actually stated that it was material to the agreement. Additionally, she maintains that she is entitled to an inference that Jordan’s only motive was to preserve his image and protect his lucrative endorsements. A misrepresentation is “material” if the party seeking rescission would have acted differently had he been aware of the fact or if it concerned the type of information upon which he would be expected to rely when making his decision to act. To be material, the representation need not have been the “paramount or decisive inducement, so long as it was a substantial factor.” R. Lord, *Williston on Contracts* § 69:12.

Contrary to Knafel’s assertions, her own allegations establish that paternity was material to the alleged settlement agreement and was made for the purposes of inducing Jordan to act. Knafel alleged that in the spring of 1991, when she told Jordan “she was pregnant with his child,” Jordan “became worried” and they “discussed possible resolutions of their dilemma.” When she refused to get an abortion, Jordan then “proposed a settlement agreement which would resolve their problems.” In her verified statement, she asserted that it was not until “after [she] told Jordan of [her] pregnancy” that “Jordan said he was troubled at the prospect of destroying his public image” and he agreed to the alleged settlement. Thus, although a general fear of public exposure of their relationship may well have been a factor when Jordan proposed the alleged settlement, it was not Jordan’s only inducement. Rather, by Knafel’s own account, her statement to Jordan that he was the father of her child was indeed material and a substantial factor in inducing Jordan to act. To hold otherwise would render her agreement not to file a

paternity claim to have been a mere pretense to extort money. If Jordan’s paternity was immaterial to the parties’ settlement agreement, then her claim that she had a good-faith basis for a paternity action against Jordan would be unfounded. Without a good-faith basis, they would have lacked the necessary consideration for their bargain. Since consideration is a material element of a contract, Jordan’s paternity must have been material to a good-faith settlement of her paternity claim.

Next, we consider whether there is a genuine issue of fact as to whether Knafel’s representation was known to be false or not reasonably believed by her to be true at the time of the alleged agreement. Jordan argues that because Knafel represented to him with certainty that “she was pregnant with his child,” yet paternity testing ultimately revealed that someone else was the father, it necessarily follows that at the time she told Jordan he was the father, she must have lacked certainty about the paternity of the child. Therefore, Knafel’s knowledge of her uncertainty regarding paternity satisfies the “knowledge” element of fraudulent misrepresentation. When a party claims to know a material fact with certainty, yet knows that she does not have that certainty, the assertion constitutes a fraudulent misrepresentation. As applied to this context, when a woman categorically represents to a man that he is the father of her child, it is implicit in her representation that during the period of conception she had only one sexual partner. If the man is actually not the father, that representation is categorically false, and constitutes a fraudulent misrepresentation.

Here, at the time of contract formation, Knafel represented with certainty that she knew Jordan was the father of her child. However, the paternity tests reveal that it was also the case that she was having sexual relations with someone other than Jordan around the time of conception. Therefore, the evidence presented establishes that she knew that she lacked the certainty about the paternity of the child or, at least, knew that she did not have the basis that she stated or implied for that categorical representation, thus making it fraudulent.

To rebut that finding, Knafel asserts that she believed she had certainty about the paternity of her child, and in support of that state of mind, she relies on Dr. Grisanti’s office memo regarding the timing of conception. However, the memo is insufficient to defeat summary judgment. Knafel merely states that the doctor’s information regarding the dates of conception coincided with the dates she was with Jordan in Phoenix. That assertion does not discount that she knew she was also with another partner around that same time period. Although one could contemplate a situation where a pregnant woman could be subjectively certain about paternity, Knafel has presented no such affirmative evidence to support an adequate basis for her certainty. Additionally, Knafel argues that she indeed disclosed to Jordan throughout their relationship that she was having sex

with another man. Nevertheless, the question is not whether she told him about her relationships with other men at some previous time, but whether she failed to disclose material information in the process of contract formation that would render the contract voidable.

Here, at the time of negotiating the settlement, Knafel was not forthcoming that she had sex with another partner at the time of conception. Instead, she made an affirmative representation with certainty that she was pregnant with Jordan's child. Her failure to disclose the information when she alone had access to that information amounts to a failure to act in good faith and in accordance with reasonable standards of fair dealing.

Finally, with respect to the element of reliance, Knafel initially argues that Jordan's failure to state that he relied upon Knafel's representation precludes summary judgment. However, "[w]here representations have been made in regard to a material matter and action has been taken, in the absence of evidence showing the contrary, it will be presumed that the representations were relied on." R. Lord, *Williston on Contracts* § 69:32. Knafel argues that Jordan's statements to her in 1998, that he remembered their agreement and would still pay her, despite his knowledge that he was not the child's father, supports an inference that, at the time he entered into the contract, he never relied on her representation that he was the father of the child. However, as stated previously, if the alleged agreement had nothing to do with his paternity, then the agreement was merely an agreement to keep their romantic relationship confidential and could no longer be construed as a settlement of her paternity claim with a confidentiality provision. Accordingly, based upon Knafel's own allegations, Jordan must have relied on the representation or the alleged settlement agreement was otherwise untenable. Furthermore, Jordan had a right to

rely upon the categorical representation by Knafel that he was the father because [i]t would make little sense to compel a putative father to conduct an independent investigation in the face of a clear and categorical representation of a mother (who is also his sexual partner) as to his parentage. Additionally, we find no merit to Knafel's contention that Jordan should not have relied on the representation. Accordingly, for all of the foregoing reasons, the alleged settlement agreement was premised on a fraudulent misrepresentation and, therefore, was voidable by Jordan.

Alternatively, we consider Jordan's defense of mutual mistake of fact. Mutual mistake of fact provides that if a mistake by both parties "as to a basic assumption on which the contract was made has a material effect on the agreed exchange of performances, the contract is voidable by the adversely affected party unless he bears the risk of the mistake." *Restatement (Second) of Contracts* section 152. Here, even if Knafel's representation was not fraudulent and was made in good faith, her representation regarding paternity was ultimately mistaken as Jordan was not the father of the child. As we have already held, the issue of paternity went to a basic assumption upon which the contract was made because it was the consideration for the alleged settlement of her paternity claim. Knafel's certainty regarding Jordan's paternity had a material effect on the agreed exchange of performances, and Jordan did not bear the risk of mistake as a matter of law as he was not obligated to infer that Knafel had another sexual partner at the time of conception in the face of Knafel's categorical representation that Jordan was the father. Accordingly, Jordan is entitled to rescission based upon a mutual mistake of fact regarding paternity and summary judgment was properly granted in his favor on that basis.

Affirmed in favor of Jordan.

LOG ON

A number of useful sites provide information about the nature of Internet fraud and how to reduce the chances of being victimized. Some even provide a method of reporting Internet fraud. Here are a few examples:

Mistake

Nature of Mistake Anyone who enters a contract does so on the basis of his understanding of the facts that are relevant to the contract. His decision about what he is willing to exchange with the other party is based on this understanding. If the parties are wrong about an important fact, the exchange that they make is likely to be quite different than what they contemplated when they entered the contract, and this difference is due to simple error rather than to any external events such as an increase in market price. For example, Fox contracts to sell to Ward a half-carat stone, which both believe to be a tourmaline, at a price of \$65. If they are

Justifiable reliance 4. Economic loss (in a tort action for damages) |

wrong and the stone is actually a diamond worth at least \$2,500, Fox will have suffered an unexpected loss and Ward will have reaped an unexpected gain. The contract would not have been made at a price of \$65 if the parties' belief about the nature of the stone had been in accord with the facts. In such cases, the person adversely affected by the mistake can avoid the contract under the doctrine of mistake. The purpose of the doctrine of mistake is to prevent unexpected and unbargained for losses that result when the parties are mistaken about a fact central to their contract.

What Is a Mistake? In ordinary conversation, we may use the term *mistake* to mean an error in judgment or an unfortunate act. In contract law, however, a mistake is a *belief* about a fact that is *not in accord with the truth*.³ The mistake must relate to facts as they exist at the time the contract is created. An erroneous belief or prediction about facts that might occur in the future would not qualify as a mistake.

As in misrepresentation cases, the complaining party in a mistake case enters a contract because of a belief that is at variance with the actual facts. Mistake is unlike misrepresentation, however, in that the erroneous belief is not the result of the other party's untrue statements.

Mistakes of Law A number of the older mistake cases state that mistake about a principle of law will not justify rescission. The rationale for this view was

that everyone was presumed to know the law. More modern cases, however, have granted relief even when the mistake is an erroneous belief about some aspect of law.

Negligence and the Right to Avoid for Mistake Although courts sometimes state that relief will not be granted when a person's mistake was caused by his own negligence, they often have granted rescission even when the mistaken party was somewhat negligent. Section 157 of the *Restatement (Second) of Contracts* focuses on the *degree* of a party's negligence in making the mistake. It states that a person's fault in failing to know or discover facts before entering the contract will not bar relief unless his fault amounted to a failure to act in good faith.

Effect of Mistake The mere fact that the contracting parties have made a mistake is not, standing alone, a sufficient ground for avoidance of the contract. The right to avoid a contract because of mistake depends on several factors that are discussed in following sections. One important factor that affects the right to avoid is whether the mistake was made by just one of the parties (**unilateral mistake**) or by both parties (**mutual mistake**).

Mutual Mistakes in Drafting Writings Sometimes, mutual mistake takes the form of erroneous *expression* of an agreement, frequently caused by a clerical error in drafting or typing a contract, deed, or other document. In such cases, the remedy is *reformation* of the writing

³*Restatement (Second) of Contracts* § 151.

rather than avoidance of the contract. Reformation means modification of the written instrument to express the agreement that the parties made but failed to express correctly. Suppose Arnold agrees to sell Barber a vacant lot next to Arnold's home. The vacant lot is "Lot 3, block 1"; Arnold's home is on "Lot 2, block 1." The person typing the contract strikes the wrong key, and the contract reads, "Lot 2, block 1." Neither Arnold nor Barber notices this error when they read and sign the contract, yet clearly they did not intend to have Arnold sell the lot on which his house stands. In such a case, a court will reform the contract to conform to Arnold and Barber's true agreement.

Requirements for Mutual Mistake A mutual mistake exists when both parties to the contract have erroneous assumptions about the same fact. When *both* parties are mistaken, the resulting contract can be avoided if the three following elements are present:

1. The mistake relates to a basic assumption on which the contract was made.
2. The mistake has a material effect on the agreed-upon exchange.
3. The party adversely affected by the mistake does not bear the risk of the mistake.⁴

Note that the *Jordan* case, which appeared earlier in this chapter in the discussion of misrepresentation, also applied the doctrine of mutual mistake.

Mistake about a Basic Assumption Even if the mistake is mutual, the adversely affected party will not have the right to avoid the contract unless the mistake concerns a basic assumption on which the contract was based. Assumptions about the identity, existence, quality, or quantity of the subject matter of the contract are among the basic assumptions on which contracts typically are founded. It is not necessary that the parties be consciously aware of the assumption; an assumption may be so basic that they take it for granted. For example, if Peterson contracts to buy a house from Tharp, it is likely that both of them assume at the time of contracting that the house is in existence and that it is legally permissible for the house to be used as a residence.

An assumption would not be considered a basic assumption if it concerns a matter that bears an indirect or collateral relationship to the subject matter of the contract. For example, mistakes about matters such as a party's financial ability or market conditions usually would not give rise to avoidance of the contract.

Material Effect on Agreed-Upon Exchange It is not enough for a person claiming mistake to show that the exchange is something different from what he expected. He must show that the imbalance caused by the mistake is so severe that it would be unfair for the law to require him to perform the contract. He will have a better chance of establishing this element if he can show not only that the contract is *less* desirable for him because of the mistake but also that the other party has received an unbargained-for advantage.

Party Harmed by Mistake Did Not Bear the Risk of Mistake Even if the first two elements are present, the person who is harmed by the mistake cannot avoid the contract if he is considered to bear the risk of mistake.⁵ Courts have the power to allocate the risk of a mistake to the adversely affected person whenever it is reasonable under the circumstances to do so.

One situation in which an adversely affected person would bear the risk of mistake is when he has expressly contracted to do so. For example, if Buyer contracted to accept property "as is," he may be considered to have accepted the risk that his assumption about the quality of the property may be erroneous.

The adversely affected party also bears the risk of mistake when he contracts with *conscious awareness* that he is ignorant or has limited information about a fact—in other words, he *knows that he does not know* the true state of affairs about a particular fact but he binds himself to perform anyway. Suppose someone gives you an old, locked safe. Without trying to open it, you sell it and "all of its contents" to one of your friends for \$25. When your friend succeeds in opening the safe, he finds \$10,000 in cash. In this case, you would not be able to rescind the contract because, in essence, you gambled on your limited knowledge . . . and lost. *Estate of Nelson v. Rice*, which follows, illustrates the effect of conscious awareness and contractual assignments of risk.

⁴Restatement (Second) of Contracts § 152.

⁵Restatement (Second) of Contracts § 154.

Estate of Nelson v. Rice

12 P.3d 238 (Ariz. Ct. App. 2000)

Martha Nelson died in 1996, and Kenneth Newman and Edward Franz were appointed co-personal representatives of her estate. Newman and Franz hired Judith McKenzie-Larson to appraise the estate's personal property in preparation for an estate sale. McKenzie-Larson told them that she did not appraise fine art, and that if she saw any, they would need to hire an additional appraiser. McKenzie-Larson did not report finding any fine art, and relying on her silence and her appraisal, Newman and Franz priced the personal property and held an estate sale.

Carl Rice responded to the newspaper advertisement for the sale and attended it. At the sale he bought two oil paintings, paying the asking price of \$60 for the two paintings. Rice had bought and sold some art, but he was not an educated purchaser, had never made more than \$55 on any single piece, and had bought many pieces that turned out to be frauds, forgeries, or the work of lesser artists. Rice assumed that the paintings were not originals, given their price and the fact that the estate was managed by professionals. At home, he compared the signatures on the paintings to those in a book of artists' signatures, noticing that they appeared to be similar to that of Martin Johnson Heade. As they had done in the past, Rice and his wife sent pictures of the paintings to Christie's in New York, hoping that they might be Heade's work. Christie's authenticated the paintings, Magnolia Blossoms on Blue Velvet and Cherokee Roses, as paintings by Heade and offered to sell them on consignment. Christie's subsequently sold the paintings at auction for \$1,072,000. After subtracting the buyer's premium and the commission, the Rices realized \$911,780 from the sale.

Newman and Franz learned about the sale in February 1997 and sued McKenzie-Larson on behalf of the estate, believing that she was responsible for the estate's loss. The following November, they settled the lawsuit because McKenzie-Larson had no assets. In January 1998, the estate sued the Rices, alleging that the sale contract should be rescinded or reformed because of mistake and unconscionability. The estate moved for summary judgment, arguing that the parties were not aware that the transaction had involved fine art, believing instead that the paintings were relatively valueless decorations. The Rices filed a cross-motion for summary judgment arguing that the estate bore the risk of the mistake. The trial court denied the estate's motion for summary judgment and granted the Rices' cross-motion. The estate's motion for a new trial was denied, and the estate appealed.

Espinosa, Chief Judge

A contract may be rescinded on the ground of mutual mistake as to a basic assumption on which both parties made the contract. Furthermore, the parties' mutual mistake must have had such a material effect on the agreed exchange of performances as to upset the very bases of the contract. However, the mistake must not be one on which the party seeking relief bears the risk under the rules stated in § 154(b) of the Restatement. In concluding that the estate was not entitled to rescind the sale, the trial court found that, although a mistake had existed as to the value of the paintings, the estate bore the risk of that mistake under § 154(b) of the Restatement. Section 154(b) states that a party bears the risk of mistake when he is aware, at the time the contract is made, that he has only limited knowledge with respect to the facts to which the mistake relates but treats his limited knowledge as sufficient. In explaining that provision, the Washington Supreme Court stated, "In such a situation there is no mistake. Instead, there is an awareness of uncertainty or conscious ignorance of the future."

The estate contends neither party bore the risk of mistake. Through its personal representatives, the estate hired two appraisers, McKenzie-Larson and an Indian art expert, to evaluate the estate's collection of Indian art and artifacts. McKenzie-Larson

specifically told Newman that she did not appraise fine art. In his deposition, Newman testified that he had not been concerned that McKenzie-Larson had no expertise in fine art, believing the estate contained nothing of "significant value" except the house and the Indian art collection. Despite the knowledge that the estate contained framed art other than the Indian art, and that McKenzie-Larson was not qualified to appraise fine art, the personal representatives relied on her to notify them of any fine art or whether a fine arts appraiser was needed. Because McKenzie-Larson did not say they needed an additional appraiser, Newman and Franz did not hire anyone qualified to appraise fine art. By relying on the opinion of someone who was admittedly unqualified to appraise fine art to determine its existence, the personal representatives consciously ignored the possibility that the estate's assets might include fine art, thus assuming that risk. See *Klas v. Van Wagoner* (real estate buyers not entitled to rescind sale contract because they bore risk of mistake as to property's value; by hiring architects, decorators, and electricians to examine realty, but failing to have it appraised, purchasers executed sale contract knowing they had only limited knowledge with respect to the value of the home). Accordingly, the trial court correctly found that the estate bore the risk of mistake as to the paintings' value.

The estate asserts that the facts here are similar to those in *Renner [v. Kehl]*, in which real estate buyers sued to rescind a contract for acreage upon which they wished to commercially grow jojoba after discovering the water supply was inadequate for that purpose. The Supreme Court concluded that the buyers could rescind the contract based upon mutual mistake because both the buyers and the sellers had believed there was an adequate water supply, a basic assumption underlying formation of the contract. The parties' failure to thoroughly investigate the water supply did not preclude rescission when the risk of mistake was not allocated among the parties. The estate's reliance on *Renner* is unavailing because, as stated above, the estate bore the risk of mistake based on its own conscious ignorance.

Furthermore, under Restatement § 154(c), the court may allocate the risk of mistake to one party "on the ground that it is reasonable in the circumstances to do so." In making this determination, "the court will consider the purposes of the parties and will have recourse to its own general knowledge of human behavior in bargain transactions." Here, the estate had had ample opportunity to discover what it was selling and failed to do so; instead, it ignored the possibility that the paintings were valuable and attempted to take action only after learning of their worth as a result of the efforts of the Rices. Under these circumstances, the estate was a victim of its own folly and it was reasonable for the court to allocate to it the burden of its mistake.

Affirmed in favor of the Rices.

Requirements for Unilateral Mistake A unilateral mistake exists when only one of the parties makes a mistake about a basic assumption on which he made the contract. For example, Plummer contracts to buy from Taylor 25 shares of Worthwright Enterprises, Inc., mistakenly believing that he is buying 25 shares of the much more valuable Worthwrite Industries. Taylor knows that the contract is for the sale of shares of Worthwright. Taylor (the "nonmistaken party") is correct in his belief about the identity of the stock he is selling; only Plummer (the "mistaken party") is mistaken in his assumption about the identity of the stock. Does Plummer's unilateral mistake give him the right to avoid the contract? Courts are more likely to allow avoidance of a contract when both parties are mistaken than when only one is mistaken. The rationale for this tendency is that in cases of unilateral mistake, at least one party's assumption about the facts was correct, and allowing avoidance disappoints the reasonable expectations of that nonmistaken party.

It is possible to avoid contracts for unilateral mistake, but to do so, proving the elements necessary for mutual mistake is just a starting point. *In addition to* proving the elements of mistake discussed earlier, a person trying to avoid on the ground of unilateral mistake must show *either* one of the following:

1. *The nonmistaken party caused or had reason to know of the mistake.* Courts permit avoidance in cases of unilateral mistake if the nonmistaken party caused the mistake, knew of the mistake, or even if the mistake was so obvious that the nonmistaken party had reason to

realize that a mistake had been made.⁶ For example, Ace Electrical Company makes an error when preparing a bid that it submits to Gorge General Contracting. If the mistake in Ace's bid was so obvious that Gorge knew about it when it accepted Ace's offer, Ace could avoid the contract even though Ace is the only party who was mistaken. The reasoning behind this rule is that the nonmistaken person could have prevented the loss by acting in good faith and informing the person in error that he had made a mistake. It also reflects the judgment that people should not take advantage of the mistakes of others. *Or*

2. *It would be unconscionable to enforce the contract.* A court could also permit avoidance because of unilateral mistake when the effect of the mistake was such that it would be unconscionable to enforce the contract. To show that it would be unconscionable to enforce the contract, the mistaken party would have to show that the consequences of the mistake were severe enough that it would be unreasonably harsh or oppressive to enforce the contract.⁷ In the example above, Ace Electrical Company made an error when preparing a bid that it submits to Gorge General Contracting. Suppose that Gorge had no reason to realize that a mistake had been made, and accepted the bid. Ace might show that it would be unconscionable to enforce the contract by showing that not only will its profit margin not be what Ace contemplated when it made its offer, but also that it would suffer a grave loss by having to perform at the mistaken price.

⁶Restatement (Second) of Contracts § 153.

⁷The concept of unconscionability is developed more fully in Chapter 15.

Duress

Nature of Duress Duress is wrongful coercion that induces a person to enter or modify a contract. One kind of duress is physical compulsion to enter a contract. For example, Thorp overpowers Grimes, grasps his hand, and forces him to sign a contract. This kind of duress is rare, but when it occurs, a court would find that the contract was void. A far more common type of duress occurs when a person is induced to enter a contract by a *threat* of physical, emotional, or economic harm. In these cases, the contract is considered *voidable* at the option of the victimized person. This is the form of duress addressed in this chapter.

The elements of duress have undergone dramatic changes. Classical contract law took a very narrow view of the type of coercion that constituted duress, limiting duress to threats of imprisonment or serious physical harm. Today, however, courts take a much broader view of the types of coercion that will constitute duress. For example, modern courts recognize that threats to a person's economic interests can be duress.

Requirements for Duress To rescind a contract because of duress, one must be able to establish both of the following elements:

1. The contract was induced by an improper threat.
2. The victim had no reasonable alternative but to enter the contract.

Improper Threat It would not be desirable for courts to hold that every kind of threat constituted duress. If they did, the enforceability of all contracts would be in question, because every contract negotiation involves at least the implied threat that a person will not enter into the transaction unless her demands are met. What degree of wrongfulness, then, is required for a threat to constitute duress? Traditionally, a person would have to threaten to do something she was not legally entitled to do—such as threaten to commit a crime or a tort—for that threat to be duress. Some courts still follow that rule. Other courts today follow the *Restatement* position that, to be duress, the threat need not be wrongful or illegal but must be *improper*—that is, improper to use as leverage to induce a contract.

Under some circumstances, threats to institute legal actions can be considered improper threats that will constitute duress. A threat to file either a civil or a criminal suit without a legal basis for doing so would clearly be improper. What of a threat to file a well-founded lawsuit or prosecution? Generally, if there is a good faith dispute over a matter, a person's threat to file a lawsuit to resolve that dispute is *not* considered to be improper. Otherwise, every person who settled a suit out of court could later claim duress. However, if the threat to sue is made in bad faith and for a purpose unrelated to the issues in the lawsuit, the threat can be considered improper. In one case, for example, duress was found when a husband who was in the process of divorcing his wife threatened to sue for custody of their children—something he had the right to

CYBERLAW IN ACTION

Pricing Glitches on the Web: Legal, Ethical, and Marketing Issues

The accidental advertisement of a mistaken price for a product or service occurs sometimes in bricks-and-mortar businesses. But when e-tailers make price glitches, the impact is likely to be far greater, because news of extremely low prices travels fast on the Web through various bargain hunter Web sites and online bulletin boards, and by the time the company learns of and repairs the error, it may have confirmed hundreds of orders for the product or service. Amazon.com, United Air Lines, and Staples.com are a few of the e-commerce leaders that have experienced pricing glitches. In one widely reported incident, for example, United Air Lines' Web site accidentally listed mistaken fares to Paris and various other cities—\$24.98 for a flight from San Francisco to Paris—for five hours on one day, and in that time, more than 140 people had booked trips based on the mistaken fares.⁸

Legally, the doctrine of mistake presents at least a possible avenue for avoidance of contracts that are formed based on a mistaken price, but this would depend on factors such as the size and obviousness of the discrepancy between the mistaken price and the intended price. Of equal or greater concern to the e-tailer is likely to be the issue of how to maintain good customer relations. Should it sell the product at the advertised price and absorb the loss? Refuse to honor the mistaken deal and perhaps offer the customer something else of value to preserve goodwill? Some commercial Web sites have a provision in their "Terms and Conditions" link that notifies customers of the possibility of pricing mistakes and purports to protect the company in cases of price glitches.

Ethical issues are also present in these situations. Is it ethical for an e-tailer to refuse to honor a contract that is based on a mistaken price? Is it ethical for a customer to insist on a contract that is based on a mistaken price?

⁸Frank Hayes, *A Deal's a Deal: Should Pricing Glitches Be Honored?* *Computerworld* 2/26/01, www.itworld.com/Tech/2403/CWSTO58053.

do—unless the wife transferred to him stock that she owned in his company.⁹

Victim Had No Reasonable Alternative The person complaining of duress must be able to prove that the coercive nature of the improper threat was such that he had no reasonable alternative but to enter or modify the contract. Classical contract law applied an objective standard of coercion, which required that the degree of coercion exercised had to be sufficient to overcome the will of a person of ordinary courage. The more modern standard for coercion focuses on the alternatives open to the complaining party. For example, Barry, a traveling salesman, takes his car to Cheatum Motors for repair. Barry pays Cheatum the full amount previously agreed upon for the repair, but Cheatum refuses to return Barry's car to him unless Barry agrees to pay substantially more than the contract price for the repairs. Because of his urgent need for the return of his car, Barry agrees to do this. In this case, Barry technically had the alternative of filing a legal action to recover his car. However, this would not be a *reasonable alternative* for someone who needs the car urgently because of the time, expense, and uncertainty involved in pursuing a lawsuit. Thus, Barry

could avoid his agreement to pay more money under a theory of duress.

Economic Duress Today, the doctrine of duress is often applied in a business context. *Economic duress*, or *business compulsion*, are terms commonly used to describe situations in which one person induces the formation or modification of a contract by threatening another person's economic interests. A common coercive strategy is to threaten to breach the contract unless the other party agrees to modify its terms. For example, Moore, who has contracted to sell goods to Stephens, knows that Stephens needs timely delivery of the goods. Moore threatens to withhold delivery unless Stephens agrees to pay a higher price. Another common situation involving economic duress occurs when one of the parties offers a disproportionately small amount of money in settlement of a debt and refuses to pay more. Such a strategy can exert great economic pressure on a creditor who is in a desperate financial situation to accept the settlement because he cannot afford the time and expense of bringing a lawsuit.

When are negotiation tactics improper and coercive and when they are merely hard but permissible bargaining? The following *Cabot Corporation* case concerns that question.

⁹*Link v. Link*, 179 S.E.2d 697 (1971).

Cabot Corporation v. AVX Corporation 863 N.E.2d 503 (Sup. Jud. Ct. Mass. 2007)

AVX Corporation manufactures capacitors for electronic products. Tantalum, an elemental metal as rare in nature as uranium, is used in the manufacture of AVX's products. Cabot Corporation is a major supplier of tantalum powder and wire and supplied AVX with tantalum products for many years.

The market for tantalum has been volatile. In the late 1990s, the tantalum market favored buyers and AVX purchased tantalum from Cabot at preferable prices without entering binding, long-term contracts. Each year, the parties signed "letters of intent," setting forth estimates of AVX's anticipated needs and agreed-on prices for each type of product. Cabot attempted to convince AVX to enter into long-term supply or "take or pay" contracts—contracts that set forth a mandatory amount of product to be purchased and require a buyer to pay for the product even if the buyer does not take it—but AVX resisted this alteration to their relationship.

By April 2000, Cabot was supplying about 20 percent of AVX's total tantalum requirements. Later in 2000, a worldwide shortage of tantalum developed and demand for electronic products using tantalum capacitors reached unprecedented levels. Orders from some of AVX's customers increased by more than 200 percent and AVX announced a dramatic increase in sales over prior years. Supplies of raw tantalum were severely limited. Cabot and other tantalum product manufacturers found it difficult to satisfy the rising demand for tantalum products, resulting in a steep rise in its price throughout the industry.

In August 2000, Cabot notified all of its customers that, in the future, it proposed to commit its limited production capacity to those customers who were prepared to enter into binding, long-term supply contracts. Between August and November 2000, Cabot and AVX negotiated the terms of a binding, long-term supply contract. Proposals and counterproposals were exchanged. Both parties were represented by highly competent legal counsel throughout the process. Cabot and AVX memorialized the terms of a basic agreement to a binding, five-year contract, under which AVX would purchase specified quantities of tantalum powder and wire at stated prices. In an e-mail sent to a Cabot executive regarding the agreed terms, the president and chief executive officer of AVX wrote, "I think we have a fair agreement for both parties . . . hope you agree." The prices agreed to were no higher than the then-current market prices for tantalum products. Cabot agreed to AVX's demand of "most favored customer" protection. AVX also obtained a right to purchase additional tantalum products in the event that Cabot was to expand its plant capacity. In addition, the parties agreed that the agreement would supersede all prior agreements (including the letters of intent) and released each other from all claims arising under any prior agreements. The supply contract was signed and effective as of January 1, 2001. During the first half of 2001, demand for tantalum products and capacitors remained high. AVX insisted that Cabot make deliveries of tantalum products in strict compliance with the terms of the supply contract. When Cabot fell behind on shipments because of production constraints, AVX pressed Cabot "to catch up on the contract." Throughout the supply contract's five-year term, both AVX and Cabot performed under its terms.

In July 2002, more than 20 months after the supply contract was negotiated, and more than 18 months after it was signed, AVX filed an action against Cabot in federal court. AVX alleged that the 2000 letters of intent were binding contracts and that the supply contract was void because it had been executed by AVX under economic duress. AVX asserted that in the negotiation of the supply contract, Cabot had pursued a strategy of starving it of product and threatening to breach the existing short-term agreement unless AVX agreed to its terms. This action was dismissed for lack of jurisdiction. Cabot then filed an action for a declaratory judgment, seeking a declaration that the supply contract was a valid and binding contract, and that the 2000 letters of intent were not binding contracts, and were, in any event, superseded by the supply contract. In its answer, AVX asserted economic duress with regard to the supply contract, and filed various counterclaims. Cabot filed a motion for partial summary judgment, which the trial court granted. AVX appealed.

Cordy, Judge

It is well established that a contract entered into under duress is voidable. Such duress need not be physical; it may be economic in nature. To show economic duress (1) a party must show that he has been the victim of a wrongful or unlawful act or threat, and (2) such act or threat must be one which deprives the victim of his unfettered will. To show duress, a victim "must go

beyond the mere showing of a reluctance to accept [and] financial embarrassment" and show that acts of the other party produced these factors. S. 28 Williston, *Contracts*, at § 71:7. Thus, in order to substantiate the allegation of economic duress or business compulsion, there must be a showing of acts on the part of the defendant which produced [the financial embarrassment]. The assertion of duress must be proved by evidence that

the duress resulted from defendant's wrongful and oppressive conduct and not by plaintiff's necessities.

AVX bears the burden of proving that the supply contract it entered into with Cabot was executed under economic duress. AVX and Cabot are sophisticated and substantial commercial parties. They were represented by highly competent counsel in their negotiations of a contract that was to govern their commercial relationship over the long term, and to settle their differences over the validity of prior agreements, purchase orders, and letters of intent. In these circumstances, we will strictly construe the requirements of economic duress against the party asserting it, so as not to undercut the well-established public policy favoring the private settlement of disputes.

There is no dispute that the strength of Cabot's bargaining position in negotiating the supply contract, as well as AVX's weakened position, were the result of a worldwide shortage of the rare tantalum product, at a time when AVX was facing a rapidly growing demand from its customers for the type of capacitors it manufactured. Cabot did not create the situation—it merely took advantage of it. The parties also acknowledge, as they must, that it is not infrequent that when two commercial parties enter into an agreement, one of them has a decided economic advantage over the other, and that the weaker party often must enter into the bargain because of his economic circumstances, a disparity in bargaining power to his disadvantage, or some combination of the two. Because an element of economic duress is thus present when many contracts are formed or releases given, the ability of a party to disown his obligations under a contract or release on that basis is reserved for extreme and extraordinary cases. Hard bargaining is not unlawful.

Absent any legally cognizable restraint, Cabot was free to drive whatever bargain the market would bear. AVX contends, however, that Cabot did not just engage in hard bargaining, it acted wrongfully in threatening to withhold tantalum deliveries to AVX in violation of the terms of the letters of intent, in order to coerce AVX into signing the supply contract. Of course, if the letters of intent were not binding contracts, it would not have been wrongful for Cabot to have declined to abide by them. Nor would it have been wrongful (in the sense of economic duress) if there was a good faith belief by Cabot that its position represented a plausible one under the letters of intent. The language in the letters of intent that “[i]t is AVX's intention to purchase the following materials” is not a binding commitment by AVX to make any purchases at all. There is no evidence in the record that Cabot threatened to withhold this product in the fall of 2000 in an attempt to coerce AVX into signing the supply contract.

In addition to establishing that Cabot acted wrongfully in order to coerce AVX into signing the supply contract, AVX must also prove that it had no feasible alternative in the face of

this wrongful conduct but to enter into the supply contract. If AVX believed that Cabot was threatening to commit a breach of a binding contract by withholding a scarce product critical to its business in order to coerce a disproportionate bargain, AVX could have gone immediately to court and sought preliminary injunctive relief followed by declaratory relief on the merits of its claim. While recourse to courts of law may not be an adequate remedy if it is not quick enough to save the victim's business or property interests, that is not the case here. Such relief is ordinarily granted, if meritorious, within ten days of the filing of a complaint in State or Federal court. In contrast, the negotiations prompted by Cabot's threats took almost four months to complete.

Even if we were to conclude that material facts regarding the existence of economic duress remain in dispute, Cabot nonetheless would be entitled to summary judgment because AVX ratified the contract by its actions. A contract that is voidable for duress may be ratified and affirmed. A party must complain promptly of coercive acts that allegedly forced it into the contract or the defense of duress is waived, and the contract ratified. The requirement that the party claiming duress disclaim the contract or release about which he is complaining promptly or be held to have forfeited his right to do so protects the stability and reliability of such agreements by denying the weaker party the “heads I win, tails you lose” option of waiting to see how the arrangement works out and then deciding whether to seek to undo it. A party may ratify an agreement entered into under duress in a number of different ways: first, by intentionally accepting benefits under the contract; second, by remaining silent or acquiescing in the contract for a period of time after he has the opportunity to avoid it; and third, by recognizing its validity by acting upon it, performing under it, or by affirmatively acknowledging it.

The supply agreement was executed in January 2001, and the first time AVX asserted duress was in July 2002. This lengthy period of silence is powerful (if not conclusive) evidence of ratification. Ratification is further evidenced by AVX's performance under the contract. During 2001, while the market for electronic capacitors remained strong, AVX accepted the benefits afforded it under the terms of the supply contract, purchased Cabot's tantalum products necessary to its manufacture of capacitors, and demanded that Cabot deliver those products in the quantities and in the time frames specified therein. AVX cannot simply accept the terms of a supply contract favorable to it, obtain the supply it needs, and claim it did not intend to ratify the contract because some terms were unfavorable to it. Stated otherwise, it cannot wait to see how the arrangement works out and then decide whether to seek to undo it.

Judgment affirmed in favor of Cabot.

CONCEPT REVIEW

Wrongful Pressure in the Bargaining Process

| | Duress | Undue Influence |
|---------------------------|--|--|
| Nature of Pressure | Coercion | Unfair persuasion of susceptible individual |
| Elements | <ol style="list-style-type: none"> 1. Contract induced by improper threat 2. Threat leaves party no reasonable alternative but to enter or modify contract | <ol style="list-style-type: none"> 1. Relationship of trust and confidence or dominance 2. Unfair persuasion |

Undue Influence

Nature of Undue Influence Undue influence is unfair persuasion. Like duress, undue influence involves wrongful pressure exerted on a person during the bargaining process. In undue influence, however, the pressure is exerted through *persuasion* rather than through coercion. The doctrine of undue influence was developed to give relief to persons who are unfairly persuaded to enter a contract while in a position of weakness that makes them particularly vulnerable to being preyed upon by those they trust or fear. A large proportion of undue influence cases arise after the death of the person who has been the subject of undue influence, when his relatives seek to set aside that person's contracts or wills.

Determining Undue Influence All contracts are based on persuasion. There is no precise dividing line between permissible persuasion and impermissible persuasion. Nevertheless, several hallmarks of undue influence cases can be identified. Undue influence cases normally involve both of the following elements:

1. The relationship between the parties is either one of trust and confidence or one in which the person exercising the persuasion dominates the person being persuaded.
2. The persuasion is unfair.¹⁰

Relation between the Parties Undue influence cases involve people who, though they have capacity to enter a contract, are in a position of particular vulnerability in relationship to the other party to the contract. This

relationship can be one of trust and confidence, in which the person being influenced justifiably believes that the other party is looking out for his interests, or at least that he would not do anything contrary to his welfare. Examples of such relationships would include parent and child, husband and wife, or lawyer and client.

The relationship also can be one in which one of the parties holds dominant psychological power that is not derived from a confidential relationship. For example, Royce, an elderly man, is dependent on his housekeeper, Smith, to care for him. Smith persuades Royce to withdraw most of his life savings from the bank and make an interest-free loan to her. If the persuasion Smith used was unfair, the transaction could be voided because of undue influence.

Unfair Persuasion The mere existence of a close or dependent relationship between the parties that results in economic advantage to one of them is not sufficient for undue influence. It must also appear that the weaker person entered the contract because he was subjected to unfair methods of persuasion. In determining this, a court will look at all of the surrounding facts and circumstances. Was the person isolated and rushed into the contract, or did he have access to outsiders for advice and time to consider his alternatives? Was the contract discussed and consummated in the usual time and place that would be expected for such a transaction, or was it discussed or consummated at an unusual time or in an unusual place? Was the contract a reasonably fair one that a person might have entered voluntarily, or was it so lopsided and unfair that one could infer that he probably would not have entered it unless he had been unduly influenced by the other party? The answers to these and similar questions help determine whether the line between permissible and impermissible persuasion has been crossed.

¹⁰Restatement (Second) of Contracts § 177.

Problems and Problem Cases

1. Mestrovic, the widow of an internationally known sculptor and artist, owned a large number of works of art created by her late husband. Mestrovic died, leaving a will in which she directed that all the works of art created by her husband were to be sold and the proceeds distributed to surviving members of the Mestrovic family. Mestrovic also owned real estate at the time of her death. 1st Source Bank, as the personal representative of the Mestrovic estate, entered into a contract to sell this real estate to the Wilkins. After taking possession of the property, the Wilkins complained to the bank that the property was left in a cluttered condition and would require substantial cleaning efforts. The trust officer of the bank offered the Wilkins two options: Either the bank would get a rubbish removal service to clean the property or the Wilkins could clean the property and keep any items of personal property they wanted. The Wilkins opted to clean the property themselves. At the time these arrangements were made, neither the bank nor the Wilkins suspected that any works of art remained on the property. During the cleanup efforts, the Wilkins found eight drawings apparently created by Mestrovic's husband. They also found a plaster sculpture of the figure of Christ with three small children. The Wilkins claimed ownership of these works of art by virtue of their agreement with the bank. The bank claimed that there was no agreement for the sale of the artwork and that there had been mutual mistake. Is the bank correct?
2. In 2001, Turner applied for a life insurance policy from Alfa Life Insurance through Eddins, an Alfa agent. Eddins read the questions to Turner, and he recorded her answers on the application. The application specifically provided: "IF ANY ANSWER TO THE FOLLOWING QUESTIONS IS 'YES,' THE PROPOSED INSURED IS NOT ELIGIBLE FOR COVERAGE." Question 12 following this statement was: "Have you ever been diagnosed with insulin-dependent diabetes?" Question 14 was: "In the past 24 months have you been diagnosed WITH or hospitalized for Congestive Heart Failure?" The application also contained the following:

AGREEMENT: The foregoing answers are complete and true to the best of my knowledge and belief.

I HAVE TRULY ANSWERED THE ABOVE QUESTIONS AND I HAVE READ OR HAD

READ TO ME, THE COMPLETE APPLICATION. I REALIZE THAT MY FALSE STATEMENTS OR MISREPRESENTATIONS OR CONCEALMENTS WHICH WOULD AFFECT THE ACCEPTANCE OF THE RISK ASSUMED MAY RESULT IN LOSS OF COVERAGE . . .

Turner signed the application completed by Eddins. This application indicated a negative response to questions 12 and 14. Alfa issued the policy, naming Turner's daughter, Lewis, as the owner and the beneficiary of the policy. In March 2002, Turner died. Shortly thereafter, Lewis submitted a Request for Insurance Benefits. In that request, Lewis indicated that the cause of Turner's death was congestive heart failure. Alfa began an investigation into Lewis's request for benefits and, as part of that investigation, obtained Turner's medical records from her physician. Upon reviewing those medical records, Alfa learned that Turner had been an insulin-dependent diabetic before the date on which Turner completed the application for life insurance. Turner's medical records also indicated that she had been diagnosed with congestive heart failure within the 24 months preceding her filing the application for life insurance with Alfa. Turner's primary treating physician listed on Alfa's Attending Physician Statement that the immediate cause of Turner's death was a pulmonary embolus, but congestive heart failure and diabetes were contributory causes of her death. Upon learning this information, Alfa sought to rescind the life insurance policy issued to Turner, arguing that the incorrect statements provided on the application regarding Turner's health were material to its acceptance of the risk and to the amount and cost of the policy coverage. Lewis argued that during the application process, Turner had told Eddins she was a diabetic and that she had previously been on insulin but that she "now took pills instead." Lewis and Phillips also attested that Eddins responded that the fact that Turner was diabetic could be a problem but that he would "put [the application] through." Lewis also claimed that neither Turner nor any of her family members had ever been told of her physician's diagnosis of congestive heart failure. Lewis asserted that Turner answered question 14 (regarding congestive heart failure) to the best of her ability and knowledge and that Turner could not provide information to Alfa that she did not have. Did Alfa have the right to rescind the insurance contract based on misrepresentation?

3. Rodi was recruited to the defendant law school, which had provisional accreditation, by statements indicating that accreditation would be forthcoming.

(However, the school's catalog, which was sent to Rodi, stated that it made no representations about accreditation.) After his first year, the school was still unaccredited and he considered transfer. Accreditation was essential for him to sit for the New Jersey bar. The acting dean of the school learned of Rodi's intentions and wrote him that there was "no cause for pessimism" about accreditation. In fact, however, the school had strayed farther away from accreditation standards. The school was not accredited by the time Rodi graduated, and he was unable to sit for the New Jersey bar. He sued the acting dean and the law school for fraud. Should his complaint be dismissed?

4. Odorizzi, an elementary school teacher, was arrested on criminal charges involving illegal sexual activity. After he was arrested, questioned by police, booked, and released on bail, and had gone 40 hours without sleep, he was visited in his home by the superintendent of the school district and the principal of his school. They told him that they were trying to help him and that they had his best interests at heart. They advised him to resign immediately, stating that there was no time to consult an attorney. They said that if he did not resign immediately, the district would dismiss him and publicize the proceedings, but that if he resigned at once, the incident would not be publicized and would not jeopardize his chances of securing employment as a teacher elsewhere. Odorizzi gave them a written letter of resignation, which they accepted. The criminal charges against Odorizzi were later dismissed, and he sought to resume his employment. When the school district refused to reinstate him, Odorizzi attempted to rescind his letter of resignation on several grounds, including undue influence. (He also alleged duress, but the facts of his case did not constitute duress under applicable state law.) Can Odorizzi avoid the contract on the ground of undue influence?
5. The Cherrys bought a home from the McCalls. After the Cherrys bought the home, they discovered a walled-in room in the basement. The room was filled with trash, including rusty plumbing fixtures, bathtubs, sinks, commodes, boards, pipes, rocks, and used building materials. The trash was damp and contaminated with mold. In the sales contract with the McCalls, the Cherrys contracted to accept the property "in its present condition," or "as is." The Cherrys claim that the walled-in room constitutes a mutual mistake justifying rescission. Are they correct?
6. Boskett, a part-time coin dealer, paid \$450 for a dime purportedly minted in 1916 at Denver and two additional coins of relatively small value. After carefully examining the dime, Beachcomber Coins, a retail coin dealer, bought the coin from Boskett for \$500. Beachcomber then received an offer from a third party to purchase the dime for \$700, subject to certification of its genuineness from the American Numismatic Society. That organization labeled the coin a counterfeit. Can Beachcomber rescind the contract with Boskett on the ground of mistake?
7. Retailer opened a baseball card store in vacant premises next to an existing store. The card shop was very busy on opening day, so Retailer got a clerk from the adjacent store to help out. The clerk knew nothing about baseball cards. A boy who had a large baseball card collection asked to see an Ernie Banks rookie card, which was in a plastic case with an adhesive dot attached that read "1200." The boy asked the salesclerk, "Is it really worth \$12?" The salesclerk responded, "I guess so," or "I'm sure it is." The boy bought the card for \$12. In fact, the true price intended by Retailer was \$1,200. Can Retailer get the card back from the boy?
8. Keith contracted to build a house for Radford. Shortly before the closing, he met with Radford, accused her of fraud, and threatened to prevent the deal from closing. During the meeting, Keith's associate stood outside the door for two hours to prevent her from leaving. He gave her the choice of signing a Note and Deed of Trust promising to pay him more money or of going to court to settle the matter. Radford signed the agreement, but later sought to rescind it. Should she be able to rescind the agreement?
9. The Fritzes owned a home and five acres of land. They decided to move and rent the house, placing it with a rental agent to manage the property as a rental. The rental agent rented the house to a group of tenants who used the house for illegal drug activity. They used the rear deck and hot tub of the house as a methamphetamine lab and the basement as a marijuana growing operation. These activities were discovered by the local Narcotics Task Force, and two of the tenants were charged with manufacturing methamphetamine. The local newspaper published

an article in which it identified the property and the people involved in the illegal activity. The Fritzes learned from law enforcement that the task force had confiscated a marijuana growing operation and implements of a methamphetamine lab from their property. The tenants were evicted and the Fritzes subsequently decided to sell the property. In preparation for the sale, they cleaned the house, painted it, and changed the floor coverings. The Bloors moved to the area in 2004 and began looking for a home to purchase. When they were shown the Fritzes' property, they decided to make an offer to buy it. Mr. Fritz completed a seller's disclosure statement in which he represented that the property had never been used as an illegal drug manufacturing site. Although there was evidence that the real estate broker who represented both the Fritzes and the Bloors knew that the drug task force had discovered a marijuana growing operation and methamphetamine lab on the property, he did not disclose it to the Bloors. The Fritzes accepted the Bloors' offer, and the Bloors moved into the house in August 2004. In September, the Bloors' son heard from a member of the community that the property was known as a "drug house." The Bloors then began investigating and found an online version of the news article about the drug bust. Mrs. Bloor contacted the drug task force and learned that the task force had confiscated a methamphetamine lab at the property. In October, the County Health Department notified the Bloors that the property was contaminated by the methamphetamine manufacturing and was not fit for occupancy. Occupancy of buildings contaminated by methamphetamine manufacturing is dangerous to the health and safety of occupants. The Bloors were not even allowed to remove their personal property from the house because of the risk of cross-contamination. They left the house, leaving nearly all of their personal belongings in the house and garage. The health department posted an order prohibiting use of the property. The order stated that the Bloors were financially responsible for the cost of remediation, that a certified decontamination contractor would

have to perform the remediation, and that use of the property was subject to criminal charges. The Bloors stayed with relatives until they could secure a place to live, eventually moving to another city. They had to repurchase clothing, bedding, furniture, and other necessities. They were unable to both support themselves and make their monthly mortgage payments. Do the Bloors have grounds for rescinding the purchase of the house?

10. Stambovsky, a resident of New York City, contracted to buy a house in the Village of Nyack, New York, from Ackley. The house was widely reputed to be possessed by poltergeists, which Ackley and members of her family had reportedly seen and reported to both *Reader's Digest* and the local press. In 1989, the house was included in a five-home walking tour of Nyack and described in a newspaper article as a "riverfront Victorian (with ghost)." Ackley did not tell Stambovsky about the poltergeists before he bought the house. When Stambovsky learned of the house's reputation, however, he promptly sued for rescission. Will he be successful?

chapter 14

CAPACITY TO CONTRACT

In a state in which the age of majority for contracting purposes is 18, 17-year-old Daniel was married, employed, and living with his wife in their own apartment. Daniel and his wife went to Mattox Motors, a used car dealership, and purchased a used car for \$500 cash. After driving the car for several months, Daniel was involved in a serious collision and damaged the car. He was one week over the age of 18 at this time. The next day, Daniel sent a letter to Mattox Motors stating that he was disaffirming the sales contract because he was underage at the time he entered the contract, and that he wanted his money back.

- Does Daniel have the right to get out of his contract?
- Does Mattox Motors have to give him his money back?
- Would it make a difference if Daniel had used the car to earn a living?
- If, instead of being a minor at the time the contract was made, Daniel had been mentally disabled or intoxicated, would he have the right to get out of the contract?
- Is it ethical for Daniel to disaffirm the contract after having wrecked the car?

ONE OF THE MAJOR justifications for enforcing a contract is that the parties voluntarily consented to be bound by it. It follows, then, that a person must have the *ability* to give consent before he can be legally bound to an agreement. For truly voluntary agreements to exist, this ability to give consent must involve more than the mere physical ability to say yes or shake hands or sign one's name. Rather, the person's maturity and mental ability must be such that it is fair to presume that he is capable of representing his own interests effectively. This concept is embodied in the legal term *capacity*.

What Is Capacity?

Capacity means the ability to incur legal obligations and acquire legal rights. Today, the primary classes of people who are considered to lack capacity are minors (who, in legal terms, are known as *infants*), persons suffering from mental illnesses or defects, and intoxicated persons.¹ Contract law gives them the right to *avoid* (escape) contracts that they enter during incapacity. This rule provides

¹In times past, married women, convicts, and aliens were also among the classes of persons who lacked capacity to contract. These limitations on capacity have been removed by statute and court rule, however.

a means of protecting people who, because of mental impairment, intoxication, or youth and inexperience, are disadvantaged in the normal give-and-take of the bargaining process.

Usually, lack of capacity to contract comes up in court in one of two ways. In some cases, it is asserted by a plaintiff as the basis of a lawsuit for the money or other benefits that he gave the other party under their contract. In others, it arises as a defense to the enforcement of a contract when the defendant is the party who lacked capacity. The responsibility for alleging and proving incapacity is placed on the person who bases his claim or defense on his lack of capacity.

Effect of Lack of Capacity Normally, a contract in which one or both parties lack capacity because of infancy, mental impairment, or intoxication is considered to be voidable. People whose capacity is impaired in any of these ways are able to enter a contract and enforce it if they wish, but they also have the right to avoid the contract. There are, however, some individuals whose capacity is so impaired that they do not have the ability to form even a voidable contract. A bargain is considered to be void if, at the time of formation of the bargain, a court had already **adjudicated** (adjudged or decreed) one or more of the parties to be mentally incompetent or one or

more of the parties was so impaired that he could not even manifest assent (for example, he was comatose or unconscious).

Capacity of Minors

Minors' Right to Disaffirm Courts have long recognized that minors are in a vulnerable position in their dealings with adults. Courts granted minors the right to avoid contracts as a means of protecting against their own improvidence and against overreaching by adults. The exercise of this right to avoid a contract is called **disaffirmance**. The right to disaffirm is personal to the minor. That is, only the minor or a legal representative

such as a guardian may disaffirm the contract. No formal act or written statement is required to make a valid disaffirmance. Any words or acts that effectively communicate the minor's desire to cancel the contract can constitute disaffirmance.

If, on the other hand, the minor wishes to enforce the contract instead of disaffirming it, the adult party must perform. You can see that the minor's right to disaffirm puts any adult contracting with a minor in an undesirable position: He is bound on the contract unless it is to the minor's advantage to disaffirm it. The right to disaffirm has the effect of discouraging adults from dealing with minors.

The following *Stroupes* case illustrates the application of the minor's right to disaffirm.

Stroupes v. The Finish Line, Inc. 2005 U.S. Dist. LEXIS 6975 (U.S. Dist. Ct. E.D. Tenn. 2005)

In the spring of 2003, Lindsey Stroupes was 16 years old and a sophomore in high school. While Lindsey was working at the Cookie Company, a store in Northgate Mall, Anthony Bradley, the manager of Finish Line's retail store in the mall, approached Lindsey and invited her to apply for a position at Finish Line. Lindsey accepted this invitation and applied for a position as a sales associate at Finish Line. Finish Line and Bradley hired Lindsey for this position. At some point, Lindsey signed an employment application. Part of this required that all claims against Finish Line be submitted to binding arbitration. Lindsey claims that Bradley sexually harassed her and committed assault, battery, and outrageous conduct. She and her parents (as her guardians) sued both Finish Line and Bradley. Both defendants moved to dismiss her suit and compel arbitration based on the arbitration clause in the employment application that Lindsey signed, which became part of her contract of employment.

R. Allan Edgar, Chief U.S. District Judge

In determining whether there is a valid arbitration agreement "courts . . . should apply ordinary state-law principles that govern formation of contracts." *First Options of Chicago, Inc. v. Kaplan* (1995). The general law in Tennessee regarding the validity of minor's contracts is clear: A minor's contracts, generally speaking, are voidable. The minor can repudiate such contracts or can elect to claim their advantage. Based on this infancy doctrine, the plaintiffs contend that, because Lindsey was sixteen years old when she began working for Finish Line, her Finish Line employment contract was voidable, and Lindsey effectively voided the contract by filing the instant action.

Essentially, the defendants urge this court to hold that the infancy doctrine does not apply to minor's employment contracts. To support the proposition that minors cannot void employment contracts, the defendants point to *Sheller v. Frank's Nursery & Crafts, Inc.* (N.D. Ill. 1997). In *Sheller* the district court considered whether minors pursuing sexual harassment claims against their employer must submit their claims to arbitration pursuant to an arbitration agreement in their employment contract. The minors argued that their employment contracts, including the

arbitration agreement, were voidable under Illinois' infancy doctrine. The district court rejected the minors' argument, finding that the employment contracts were not voidable under the infancy doctrine. As a basis for its holding, the court relied on three public policy rationales.

Because *Sheller* is an opinion of the Northern District of Illinois involving Illinois law, it is of limited precedential value here. Further, the court disagrees with the reasoning in that case. As its first support, *Sheller* relies on the policy rationale that the infancy doctrine "is to be used as a shield and not as a sword." However, this limitation is inapplicable to the instant situation. Lindsey is not using her minority as a sword to injure the defendants. Indeed, the only issue affected by Lindsey's use of the infancy doctrine is the appropriate forum to adjudicate her claims.

As a second basis for its holding, *Sheller* notes that the infancy "doctrine is to protect the inexperienced minor in their dealings with others." Applying this policy to the facts, *Sheller* reasoned that the plaintiffs' status as "minors was irrelevant to their signing of the employment application agreeing to arbitrate all claims against the company. Indeed, defendant required all of

its employees, including adults, to sign the same agreement.” Based in part on this reasoning, *Sheller* prohibited the minors from using the infancy doctrine to disaffirm their employment contracts. If *Sheller*’s reasoning in this regard were extended, it would eviscerate the infancy doctrine altogether. For example, under *Sheller*, any employment contract in which minors and adults alike must sign is not voidable by minors, because adults are bound by the same agreement. To extend the example to the consumer context, any contract for the purchase of an automobile signed by minors and adults alike is not voidable by minors, because adults are bound by the same agreement. If such were true, the infancy doctrine, permitting minors to disaffirm their contracts, would cease to exist.

As its final point, *Sheller* notes that “the minor is not entitled to retain an advantage from a transaction which he repudiates.” Applying this policy to prohibit minors from disaffirming their employment contracts with the infancy doctrine, *Sheller* reasoned as follows:

The fundamental reason Plaintiffs are able to bring this lawsuit is because they were employed by Defendant. Had they not been employed by Defendant, they would not be eligible to maintain the instant Title VII suit, obviously. Had they not signed the employment application which contained the arbitration clause, they would not have been hired by Defendant. Thus, if the Court were to allow the minor Plaintiffs to disaffirm the contract, Plaintiffs would be retaining the advantage of employment—

which entitled them to bring the instant Title VII suit—while repudiating their entire basis of, employment—the employment application.

Here *Sheller* seems to be saying that a minor cannot both disaffirm a contract and sue on the contract. That is not what is happening here. A minor suing an employer for sexual harassment is not suing on the contract. As *Sheller* recognizes, a minor suing an employer for sexual harassment could not maintain the suit but for the employment, which requires signing the employment contract. However, this fact does not morph a suit for sexual harassment against an employer into a suit on the employment contract. There are other cases which reach a different conclusion from that reached in *Sheller*. Most recently, in considering whether a minor must arbitrate his claims pursuant to an arbitration provision in the purchase contract, the Alabama Supreme Court recognized that infancy is a valid defense to the enforcement of a properly supported motion to compel arbitration. Facing a similar issue, a federal district court in North Carolina refused to require arbitration on the ground that plaintiff, as a minor, is not bound by the arbitration provision.

The court concludes that, under Tennessee law, a minor’s employment contracts, including arbitration agreements, are voidable by the minor. The court finds that Lindsey’s employment contract with Finish Line was voidable by Lindsey, and was voided by filing this action.

Motion denied in favor of Lindsey.

Exceptions to the Minor’s Right to Disaffirm Not every contract involving a minor is voidable, however. State law often creates statutory exceptions to the minor’s right to disaffirm. These statutes prevent minors from disaffirming such transactions as marriage, agreements to support their children, educational loans, life and medical insurance contracts, contracts for transportation by common carriers, and certain types of contracts approved by a court (such as contracts to employ a child actor).

Are you interested in the way in which concepts about capacity of minors are applied to professional child actors, athletes, and performers? In a number of states, special statutes have been enacted that create a procedure for judicial approval of such contracts. Check out this Web site for more information: Wallace Collins, *A Guide to Judicial Approval of Contracts for Services of Minors*, <http://wallacecollins.com/minors.html>.

If you’d like to learn about some of the special considerations that may apply when one of the parties to a lawsuit is a minor, see John J. Davis, “Kid Law”: *Problems and Issues in Defending against the Minor Plaintiff*, <http://library.findlaw.com/1999/Nov/1/126318.html>.

Period of Minority At common law, the age of majority was 21. However, the ratification in 1971 of the Twenty-sixth Amendment to the Constitution giving 18-year-olds the right to vote stimulated a trend toward reducing the age of majority. The age of majority has been lowered by 49 states. In almost all of these states, the age of majority for contracting purposes is now 18.

Emancipation **Emancipation** is the termination of a parent’s right to control a child and receive services and wages from him. There are no formal requirements

for emancipation. It can occur by the parent's express or implied consent or by the occurrence of some events such as the marriage of the child. In most states, the mere fact that a minor is emancipated does *not* give him capacity to contract. A person younger than the legal age of majority is generally held to lack capacity to enter a contract, even if he is married and employed full time.

Time of Disaffirmance Contracts entered during minority that affect title to *real estate* cannot be disaffirmed until majority. This rule is apparently based on the special importance of real estate and on the need to protect a minor from improvidently disaffirming a transaction (such as a mortgage or conveyance) involving real estate. All other contracts entered during minority may be disaffirmed as soon as the contract is formed. The minor's power to avoid his contracts does not end on the day he reaches the age of majority. It continues for a period of time after he reaches majority.

How long after reaching majority does a person retain the right to disaffirm the contracts he made while a minor? A few states have statutes that prescribe a definite time limit on the power of avoidance. In Oklahoma, for example, a person who wishes to disaffirm a contract must do so within one year after reaching majority.² In most states, however, there is no set limit on the time during which a person may disaffirm after reaching majority. In determining whether a person has the right to disaffirm, a major factor that courts consider is whether the adult has rendered performance under the contract or relied on the contract. If the adult has relied on the contract or has given something of value to the minor, the minor must disaffirm within a reasonable time after reaching majority. If he delays longer than a period of time that is considered to be reasonable under the circumstances, he will run the risk of *ratifying* (affirming) the contract. (The concept and consequences of ratification are discussed in the next section.) If the adult has neither performed nor relied on the contract, however, the former minor is likely to be accorded a longer period of time in which to disaffirm, sometimes even years after he has reached majority.

Ratification Though a person has the right to disaffirm contracts made during minority, this right can be given up after the person reaches the age of majority. When a person who has reached majority indicates that he intends to be bound by a contract that he made while

still a minor, he surrenders his right to disaffirm. This act of affirming the contract and surrendering the right to avoid the contract is known as **ratification**. Ratification makes a contract valid from its inception. Because ratification represents the former minor's election to be bound by the contract, he cannot later disaffirm. Ratification can be done effectively only after the minor reaches majority. Otherwise, it would be as voidable as the initial contract.
